TOBACCO PRODUCTS

Ser. No. 542,076. BROWN & WILLIAMSON TOBACCO CORPORATION, Louisville, Ky. Filed Nov. 24, 1947. Under section 2f of the act of 1946.

KOOL

Applicant claims ownership of registration No. 300,817.
FOR CIGARETTES.
Claims use since Nov. 20, 1931.

Ser. No. 542,077. BROWN & WILLIAMSON TOBACCO CORPORATION, Louisville, Ky. Filed Nov. 24, 1947. Under section 2f of the act of 1946.

Filtip

Applicant claims ownership of registration No. 344,348.
FOR CIGARS, CIGARETTES, SMOKING TOBACCO, CHEWING TOBACCO, AND SNUFF.
Claims use since Jan. 7, 1936.

Ser. No. 552,314. R. H. MACY & CO., INC., New York, N. Y. Filed Dec. 2, 1947.

LAKEWOOD

Applicant claims ownership of registration No. 228,822.
FOR SMOKING TOBACCO.
Claims use since 1902.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 537,446. GERTZ & COOK, INC., Los Angeles, Calif. Filed Oct. 10, 1947.

"Linoleum Louie"

"I'll Floor You"

No claim is made to the word "Linoleum" or to the words "I'll Floor You" apart from the mark as shown.
FOR INLAID LINOLEUM IN TILE FORM AND ASPHALT TILE FOR FLOOR COVERINGS.
Claims use since July 1947.

Ser. No. 543,823. MANNINGTON MILLS, INC., Salem, N. J. Filed Dec. 9, 1947.

PINE-TEX

Applicant claims ownership of registrations Nos. 322,231, 322,232, and 382,311.
FOR FELT BASE FLOOR COVERINGS.
Claims use since Nov. 17, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 485,324. THE GEORGE W. BORG CORPORATION, Chicago, Ill., and Delavan, Wis. Filed June 12, 1948. Under section 2f of the act of 1946 as to "Gibbs."

The words "Precision Potentiometers" are disclaimed apart from the mark.
FOR POTENTIOMETERS FOR USE IN PRODUCING VARIABLE ELECTRICAL POTENTIALS.
Claims use since May 25, 1945.

Ser. No. 521,342. LINE MATERIAL COMPANY, Milwaukee, Wis. Filed July 5, 1947.

CONTROLITE

FOR ELECTRIC LUMINAIRES.
Claims use since Oct. 30, 1940.

Ser. No. 529,069. LOSEE PRODUCTS COMPANY, Hebron, Ill. Filed July 21, 1947.

COMFY-AIRE

No claim is made to the exclusive right to use the term "Aire" apart from the mark. Applicant claims ownership of registration No. 340,241.
FOR ELECTRIC FANS.
Claims use since 1932.

Ser. No. 532,707. KILLARK ELECTRIC MANUFACTURING COMPANY, St. Louis, Mo. Filed Aug. 28, 1947. Under section 2f of the act of 1946 with respect to "Killark."

No claim is made to the words "St. Louis" apart from the mark.
FOR ELECTRIC FUSES.
Claims use since 1913.

Ser. No. 533,081. TELEX INC., Minneapolis, Minn. Filed Sept. 2, 1947.

TELEWIRE

FOR ELECTRICAL WIRE SOUND RECORDING AND REPRODUCING APPARATUS.
Claims use since Aug. 10, 1947.

Ser. No. 534,501. AMERICAN ELECTRICAL HEATER COMPANY, Detroit, Mich. Filed Sept. 15, 1947.

American Beauty

Applicant claims ownership of registration No. 137,088.
FOR ELECTRICAL GOODS—NAMELY, ELECTRIC FLAT IRONS, SOLDERING IRONS, TEMPERATURE

REGULATING STANDS FOR FLAT IRONS, BRANDING IRONS, MELTING CUPS AND ELECTRICAL CONDUCTOR CORDS.
Claims use since Jan. 1, 1911.

Ser. No. 534,651. MOTOR EXPORT MANUFACTURING CO., Chicago, Ill. Filed Sept. 16, 1947.

Fleet Line

FOR ELECTRIC MOTORS.
Claims use since Aug. 25, 1947.

Ser. No. 534,833. THE SWARTZBAUGH MANUFACTURING COMPANY, Toledo, Ohio. Filed Sept. 17, 1947.

Applicant claims ownership of registration No. 439,399.
FOR MOBILE ELECTRIC FOOD CONVEYING AND SERVING UTILITY TRUCKS.
Claims use since August 1947.

Ser. No. 538,232. BIRTMAN ELECTRIC COMPANY, Chicago, Ill. Filed Oct. 18, 1947.

MAGNETIC

The trade-mark comprises the word "Magnetic." Applicant claims ownership of registrations Nos. 158,388 and 418,322.
FOR ELECTRIC DOMESTIC VACUUM CLEANERS, ELECTRIC SPACE HEATERS AND ELECTRIC IRONS.
Claims use since Jan. 19, 1922, on electric vacuum cleaners; and since October 1931 on electric space heaters and electric irons.

Ser. No. 538,385. THE EMERSON ELECTRIC MANUFACTURING COMPANY, St. Louis, Mo. Filed Oct. 20, 1947. Under section 2f of the act of 1946.

EMERSON ELECTRIC

No claim is made to the word "Electric" apart from the mark. Applicant claims ownership of registrations Nos. 111,931 and 379,516.
FOR ELECTRIC MOTORS, ELECTRIC DESK FANS, ELECTRIC CEILING FANS, ELECTRIC GENERATORS, ELECTRIC MOTOR GENERATORS, ELECTRIC WELDERS, ELECTRIC FLAT IRONS, ELECTRIC ARC WELDERS, ELECTRIC AIR HEATERS, ELECTRIC AIR CIRCULATORS, ELECTRIC EXHAUST FANS, AND ELECTRIC MOTOR CONTROLLERS FOR THE STARTING, STOPPING, AND REVERSING OF ELECTRIC MOTORS.
Claims use since February 1936.

Ser. No. 538,386. THE EMERSON ELECTRIC MANUFACTURING COMPANY, St. Louis, Mo. Filed Oct. 20, 1947. Under section 2f of the act of 1946.

EMERSON

Applicant claims ownership of registrations Nos. 111,931 and 379,516.
FOR ELECTRIC MOTORS, ELECTRIC DESK FANS, ELECTRIC CEILING FANS, ELECTRIC GENERATORS, ELECTRIC MOTOR GENERATORS, ELECTRIC WELDERS, ELECTRIC FLAT IRONS, ELECTRIC ARC WELDERS, ELECTRIC AIR HEATERS, ELECTRIC AIR CIRCULATORS, ELECTRIC EXHAUST FANS, AND ELECTRIC MOTOR CONTROLLERS FOR THE STARTING, STOPPING, AND REVERSING OF ELECTRIC MOTORS.
Claims use since 1890.

Ser. No. 540,060. FARGO MFG. COMPANY, INC., Poughkeepsie, N. Y. Filed Nov. 4, 1947.

FARGO

Applicant claims ownership of registration No. 255,003.
FOR SOLDERLESS COLD-WELD CONNECTORS FOR ELECTRIC WIRES AND CABLES, CURRENT-GROUNDING DEVICES, ELECTRIC WIRE AND CABLE CLAMPS AND CONNECTORS; RAILWAY, SIGNAL, AND ELECTRICAL APPLIANCES CONSISTING OF ELECTRIC-RAILWAY TRACK BONDS AND ELECTRICAL WIRE AND CABLE CLAMPS (ALL OF THE ABOVE GOODS RELATING TO MECHANICAL CLAMPING DEVICES FOR HOLDING OR JOINING ONE OR MORE WIRES OR OTHER ELECTRICAL CONDUCTORS TOGETHER).
Claims use since July 8, 1914.

Ser. No. 540,256. COLUMBIA SALES CORPORATION, Pittsburgh, Pa. Filed Nov. 6, 1947.

union

FOR STORAGE BATTERIES.
Claims use since Aug. 14, 1947.

Ser. No. 541,115. ELECTRONICS, INCORPORATED, Dubuque, Iowa. Filed Nov. 14, 1947.

LAMILEK

FOR RADIO AND BATTERY SOCKETS, ELECTRICAL SOCKETS, PLUGS, TERMINAL STRIPS AND RADIO TERMINAL BOARDS AND MOUNTING BRACKETS.
Claims use since July 1, 1947.

Ser. No. 541,155. MIMAR PRODUCTS, INC., Brooklyn, N. Y. Filed Nov. 14, 1947.

MIMAR

Applicant claims ownership of registration No. 429,392.
FOR ELECTRIC ROOM HEATERS WITH OR WITHOUT ENFORCED AIR CIRCULATION MEANS, PORTABLE ELECTRIC FAN AND HEATER COMBINATIONS, AND ELECTRIC FANS.
Claims use since Nov. 1, 1945.

Ser. No. 541,156. MIMAR PRODUCTS, INC., Brooklyn, N. Y. Filed Nov. 14, 1947.

mp

Applicant claims ownership of registration No. 429,393.
FOR ELECTRIC ROOM HEATERS WITH OR WITHOUT ENFORCED AIR CIRCULATION MEANS, PORTABLE ELECTRIC FAN AND HEATER COMBINATIONS, AND ELECTRIC FANS.
Claims use since Nov. 1, 1945.

Ser. No. 541,688. LIGHTCO INC., Los Angeles, Calif. Filed Nov. 19, 1947.

The words "Mix" and "All-purpose Mixer" and the representation of the goods are disclaimed apart from the mark.
FOR ELECTRIC FOOD AND/OR BEVERAGE MIXERS.
Claims use since Sept. 8, 1947.

Ser. No. 541,918. CONTINENTAL CARBON, INC., Cleveland, Ohio. Filed Nov. 21, 1947.

"NOBLEWATT"

Applicant claims ownership of registration No. 412,552.
FOR ELECTRICAL RESISTORS.
Claims use since Nov. 4, 1947.

Ser. No. 542,914. THE ELWELL-PARKER ELECTRIC COMPANY, Cleveland, Ohio. Filed Dec. 2, 1947.

E.P.E.
ROLOTAC
CONTROLLER

No claim is made to the word "Controller" apart from the mark as shown.
FOR TRAVEL CONTROLLERS OF SPEED AND DIRECTION OF ELECTRIC MOTORS FOR USE IN ELECTRIC POWER INDUSTRIAL TRUCKS AND OTHER ELECTRIC POWER VEHICLES.
Claims use since June 1947.

Ser. No. 543,541. THE STAR PORCELAIN COMPANY, Trenton, N. J. Filed Dec. 5, 1947. Under section 2f of the act of 1946.

NU-BLAC

Applicant claims ownership of registration No. 207,104.
FOR ELECTRICAL INSULATING COMPOUND IN POWDER FORM.
Claims use since Sept. 12, 1923.

Ser. No. 543,548. VIDEO TELEVISION, INC., New York, N. Y. Filed Dec. 5, 1947.

ORACO

FOR TELEVISION ANTENNA AND ANTENNA MOUNTS, CLAMPS, AND STANDOFFS.
Claims use since Nov. 5, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 490,638. CHEERIO TOYS & GAMES INCORPORATED, Lockport, N. Y., assignee of Cheerio Toys & Games Limited. Filed Dec. 5, 1947.

CHEERIO

FOR TOYS AND GAMES—NAMELY, TOPS OF THE BANDALORE TYPE (YO-YO), PADDLE BALLS, TOY AIRPLANES, TOY WAR TANKS, TOY TRUCKS, TOY AUTOMOBILES, TOY FILM VIEWERS, PUZZLES OF THE JIG-SAW TYPE, CHINESE PUZZLES, TOY WHISTLES, TOY KAZOOS, TOY SLIDE WHISTLES, TOY TRUMPETS, TOY BUGLES; TOY FURNITURE—NAMELY, TOY BEDS, TOY DRESSERS, TOY CHAIRS, TOY TABLES, TOY CHESTERFIELDS, TOY WASH BASINS, TOY TUBS, TOY KITCHEN CABINETS; TOY COMB AND BRUSH SETS, TOY SHIPS, TOY GUNS, TOY ANIMALS, TOY SOLDIERS, TOY DISHES, AND TOY RATTLES.
Claims use since Jan. 1, 1932.

Ser. No. 529,113. TRIO MANUFACTURING COMPANY, Elyria, Ohio. Filed July 21, 1947.

Spin-Jac

The word "Spin" is disclaimed apart from the mark as shown.
FOR SPINNING TOYS WHICH MAY BE SPUN IN TOP-LIKE MANNER AND ARE ADAPTED TO BOUNCE.
Claims use since Jan. 6, 1947.

Ser. No. 530,031. SPARKLINO PRODUCTS CO., Mexico, Maine. Filed July 30, 1947.

No claim is made to the word "Genuine" and the representation of the fish, apart from the mark as shown.
FOR ARTIFICIAL FISHING LURES.
Claims use since Jan. 23, 1947.

Ser. No. 540,159. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Nov. 5, 1947.

ARISTOCRAT

FOR LEATHER SHAKE BOTTLES.
Claims use since Apr. 21, 1947.

Ser. No. 540,262. D. M. DESIDERIO NOVELTY MANUFACTURING SHOP, McKees Rocks, Pa. Filed Nov. 6, 1947.

DOM/DOM

FOR BALANCING TOY IN THE NATURE OF AN EQUILIBRIST STANDING ON A PEDASTAL AND CARRYING A BALANCING BAR.
Claims use since June 10, 1947.

Ser. No. 546,629. FRED VARNEY AND CO., St. Louis, Mo. Filed Jan. 9, 1948.

VARCO

FOR SOFT BALLS, SOFT BALL BATS, AND POKER CHIPS.
Claims use since July 15, 1937.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 531,733. SNIVELY VENDING AND SALES COMPANY, INC., Winter Haven, Fla. Filed Aug. 18, 1947.

DISPENS-O-LATOR

FOR ELECTRICALLY OPERATED, COIN-CONTROLLED, JUICE VENDING MACHINE.
Claims use since Apr. 17, 1947.

CLASS 25

LOCKS AND SAFES

Ser. No. 532,745. THE MERRIAM MANUFACTURING COMPANY, Durham, Conn. Filed Aug. 28, 1947. Under section 2f of the act of 1946.

Merriam

FOR BOXES FORMED OF BASE METAL FOR HOLDING BONDS, CASH, STAMPS, JEWELRY, DOCUMENTS, AND OTHER DESIRED ITEMS.
Claims use since Aug. 3, 1940.

Ser. No. 537,605. ANGEL MARTIN MOLINA, Mexico City, Mexico. Filed Oct. 11, 1947.

Applicant claims ownership of Mexican registration No. 40,210 dated Nov. 11, 1939.
FOR CHESTLOCKS, PADLOCKS, LOCKBOLTS, AND LOCKS.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 526,649. SELAS CORPORATION OF AMERICA, Philadelphia, Pa. Filed July 5, 1947.

Flo-Scope

The word "Flo" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 438,372.
FOR METER FOR MEASURING AND INDICATING THE FLOW OF FLUIDS.
Claims use since July 2, 1936.

Ser. No. 527,670. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 5, 1947.

Applicant does not claim the exclusive right to the words "Electric Heating" or to any representation of the goods apart from the mark. Applicant claims ownership of registration No. 332,587.
FOR TEMPERATURE INDICATORS, TEMPERATURE RECORDERS, THERMOSTATS, THERMO-SWITCHES, AND THERMO-RESPONSIVE ELECTRIC CIRCUIT CONTROLS.
Claims use since 1927.

Ser. No. 527,816. MINNEAPOLIS HONEYWELL REGULATOR COMPANY, Minneapolis, Minn. Filed July 5, 1947.

GRAD-U-RELAY

The word "Relay" is disclaimed apart from the mark.
FOR PRESSURE RESPONSIVE CONTROLS FOR REGULATING HEATING OR AIR CONDITIONING SYSTEMS.
Claims use since September 1938.

Ser. No. 538,329. WESIX ELECTRIC HEATER CO., San Francisco, Calif. Filed Oct. 18, 1947. Under section 2f of the act of 1946.

ECONOMIZER

Applicant claims ownership of registration No. 379,487.
FOR ELECTRIC THERMOSTATS FOR ELECTRIC HEATERS.
Claims use since Oct. 1, 1931.

Ser. No. 540,562. OPTIQUE & PRECISION DE LEVALLOIS, Levallois-Perret, France. Filed Nov. 8, 1947.

OPLEX

Applicant claims ownership of French registration No. 372,077.
FOR PHOTOGRAPHIC CAMERA.

Ser. No. 540,563. OPTIQUE & PRECISION DE LEVALLOIS, Levallois-Perret, France. Filed Nov. 8, 1947.

OPLAR

Applicant claims ownership of French registration No. 372,079.
FOR CAMERA LENS ATTACHMENT.

Ser. No. 540,564. OPTIQUE & PRECISION DE LEVALLOIS, Levallois-Perret, France. Filed Nov. 8, 1947.

AUTOPLEX

Applicant claims ownership of French registration No. 372,076.
FOR ENLARGING PHOTOGRAPHIC APPARATUS.

Ser. No. 542,188. THE WEBB CORPORATION, Webb City, Mo. Filed Nov. 24, 1947. Under section 2f of the act of 1946.

WEBB

FOR WEIGHING SCALES.
Claims use since 1881.

Ser. No. 543,430. FISH-SCHURMAN CORPORATION, New York, N. Y. Filed Dec. 5, 1947.

ZIRCONARC

FOR LIGHT RADIATION PROJECTORS.
Claims use since July 10, 1947.

Ser. No. 543,983. OHMER CORPORATION, Dayton, Ohio. Filed Dec. 10, 1947. Under section 2f of the act of 1946.

Ohmer

Applicant claims ownership of registrations Nos. 50,823, 171,651, 214,490, 214,510, 221,940, 239,342 and 337,637.
FOR TAXIMETERS, FARE REGISTERS AND CASH REGISTERS.
Claims use since 1902.

Ser. No. 549,407. ARMSTRONG CORK COMPANY, Lancaster, Pa. Filed Feb. 11, 1948.

PHENIX

FOR GRADUATES.
Claims use since 1928.

Ser. No. 549,487. AMERICAN OPTICAL COMPANY, Southbridge, Mass. Filed Feb. 12, 1948.

PHANTONE

FOR OPHTHALMIC FRAMES AND MOUNTINGS.
Claims use since Dec. 10, 1947.

Ser. No. 549,859. ZYLITE OPTICAL CO. INC., New York, N. Y. Filed Feb. 16, 1948.

PLAYBOY

FOR EYEGLASS FRAMES.
Claims use since Feb. 5, 1948.

Ser. No. 550,090. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 18, 1948.

Maid of Honor

FOR HOUSEHOLD SCALES.
Claims use since Jan. 15, 1946.

Ser. No. 550,647. ANDERSON-FLUKE ENGINEERING COMPANY, Springdale, Stamford, Conn. Filed Feb. 27, 1948.

VAW

FOR ELECTRONIC MEASURING INSTRUMENTS, SPECIFICALLY WATTMETERS WITH ASSOCIATED VOLTAGE AND CURRENT MEASURING, AMPLIFYING, AND INDICATING CIRCUITS.
Claims use since Dec. 15, 1947.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 541,700. THE PRECIOUS METALS SPECIALTIES COMPANY, INC., Newark, N. J. Filed Nov. 19, 1947.

PREMESCO
"GEM"

The word "Gem" is disclaimed apart from the mark shown.
FOR JEWELRY SETTINGS AND FINDINGS.
Claims use since Mar. 31, 1947.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 510,735. STAR BEDDING COMPANY, St. Louis, Mo. Filed Aug. 1, 1947.

star ★

FOR FEATHER PILLOWS AND MATTRESSES.
Claims use since November 1884 on feather pillows; and since Nov. 1, 1908, on mattresses.

Ser. No. 533,215. TY-MASTER CORPORATION, New York, N. Y. Filed Sept. 3, 1947.

Ty-Master

The word "Ty" is disclaimed apart from the mark as shown:
FOR TIE RACKS.
Claims use since December 1939.

Ser. No. 533,453. THE LAND-O-NOD COMPANY, Minneapolis, Minn. Filed July 16, 1947.

LAND-O-BEAUTY

Applicant disclaims the portion "Beauty" of the mark apart from the mark as shown.
FOR MATTRESSES.
Claims use since Aug. 1, 1942.

Ser. No. 534,813. PULLMAN COUCH COMPANY, Chicago, Ill. Filed Sept. 17, 1947. Under section 2f of the act of 1946.

PULLMAN

Applicant claims ownership of registration No. 372,686.
FOR UPHOLSTERED FURNITURE—VIZ., SOFAS, COUCHES, CHAISE LOUNGES, DAVENPORTS, DIVANS, LOVE SEATS, LOUNGES, SETTEES, SOFA BEDS, DUAL PURPOSE SLEEPING EQUIPMENT, DAY-BEDS, CHAIRS, ROCKERS AND OTTOMANS, AND MATTRESSES AND PADS.
Claims use since June 1906.

Ser. No. 538,313. THE L. B. PRICE MERCANTILE COMPANY, St. Louis, Mo. Filed Oct. 18, 1947.

SOUTHERN BEAUTY

The word "Beauty" is disclaimed apart from the mark.
FOR PILLOWS.
Claims use since Aug. 16, 1943.

Ser. No. 539,033. THE DELPHOS BENDING COMPANY, Delphos, Ohio. Filed Oct. 25, 1947. Under section 2f of the act of 1946.

DELPHOS

FOR WOOD FURNITURE—NAMELY, TABLES, CHAIRS, SETTEES, BABY ROCKERS, AND HIGH CHAIRS.
Claims use since May 10, 1912.

Ser. No. 549,282. SIMMONS COMPANY, New York, N. Y. Filed Feb. 10, 1948.

"Luxyowry"

Applicant claims ownership of registration No. 81,005
FOR MATTRESSES AND BOX SPRINGS.
Claims use since Jan. 10, 1907.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 508,834. THE PHARIS TIRE AND RUBBER COMPANY, Newark, Ohio, assignee of Carlisle Tire & Rubber Company. Filed Jan. 5, 1948. Under section 2f of the act of 1946.

CARLISLE

Applicant claims ownership of registration No. 324,877.
FOR OUTER CASINGS OF PNEUMATIC TIRES AND TUBES FOR AUTOMOTIVE VEHICLES AND BICYCLES.
Claims use since Dec. 12, 1934.

Ser. No. 550,348. RANDALL PRODUCTS CO., Berkeley, Mich. Filed Feb. 21, 1948.

SUR-SPARE

The term "Spare" is disclaimed apart from the mark.
FOR RUBBER HOSE TO BE USED FOR AN AIR EXTENSION TO THE SPARE TIRES OF AUTOMOBILES.
Claims use since Feb. 2, 1948.

Ser. No. 550,377. ATLAS SUPPLY COMPANY, Newark, N. J. Filed Feb. 24, 1948.

ATLAS

Applicant claims ownership of registration No. 331,672.
FOR VULCANIZING PATCH UNITS FOR REPAIRING RUBBER TUBES CONSISTING OF A PARTIALLY CURED RUBBER PATCH AND A METALLIC PAN OR TUBE CONTAINING A FUEL ELEMENT TO FURNISH HEAT TO VULCANIZE THE PATCH TO THE TUBE.
Claims use since Jan. 30, 1948.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 528,649. OSCAR SCHMIDT-INTERNATIONAL, INCORPORATED, Jersey City, N. J. Filed July 15, 1947. Under section 2f of the act of 1946.

TREMOLOA

FOR MUSICAL INSTRUMENT OF THE ZITHER TYPE PLAYED WITH A STEEL ROLLER AND A FINGER PICK.
Claims use since 1931.

CLASS 37

PAPER AND STATIONERY

Ser. No. 519,677. MONTAG BROTHERS, INC., Atlanta, Ga. Filed Nov. 29, 1947.

The words "Montag's" and "Rag Content" are disclaimed in this registration, apart from the mark as shown.
FOR WRITING PAPER.
Claims use since 1927.

Ser. No. 527,454. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich. Filed July 5, 1947. Under section 2f of the act of 1946.

Burroughs

Applicant claims ownership of registrations Nos 66,134, 333,110, 335,153, 335,607, 343,430, and 343,467.
FOR STATIONERY AND SUPPLIES—NAMELY, ROLL AND FLAT SHEET PAPER, JOURNAL FORMS, STATEMENT FORMS, LEDGER FORMS, AND BUSINESS FORMS FOR USE IN BUSINESS MACHINES.
Claims use since 1905.

Ser. No. 528,140. RHINELANDER PAPER COMPANY, Rhinelander, Wis. Filed July 8, 1947.

AQUA-TUF

The word "Tuf" is disclaimed apart from the mark as shown.
FOR GREASEPROOF PAPER.
Claims use since May 3, 1947.

Ser. No. 533,128. BOORUM & PEASE COMPANY, Brooklyn, N. Y. Filed Sept. 3, 1947. Under section 2f of the act of 1946.

STA-OPEN

FOR SPRING-BACK MEMORANDUM SHEET HOLDERS.
Claims use since April 1931.

Ser. No. 536,529. HORDER'S, INCORPORATED, Chicago, Ill. Filed Oct. 2, 1947. Under section 2f of the act of 1946.

COLE

LEGAL RECORD

No claim is made herein to the words "Legal Record" except in the association shown.
FOR LEGAL BLANK FORMS.
Claims use since Feb. 11, 1944.

Ser. No. 537,897. A. KIMBALL COMPANY, New York, N. Y. Filed Oct. 15, 1947. Under section 2f of the act of 1946.

KIMBALL

Applicant claims ownership of registrations Nos. 68,716 and 68,986.
FOR BLANK, PARTIALLY PRINTED, OR PRINTED PIN TICKETS, TAGS, LABELS, AND METAL REENFORCED PAPER STRIPS OF SHORT LENGTH USED AS TICKETS, TAGS, OR LABELS.
Claims use since 1905.

Ser. No. 543,570. CROWN ZELLERBACH CORPORATION, doing business as The National Paper Products Sales Company, San Francisco, Calif. Filed Dec. 6, 1947.

Blu-Stripe

FOR INTERFOLDED TOILET TISSUE.
Claims use since Aug. 24, 1932.

Ser. No. 552,337. BROOKS BANK NOTE COMPANY, Springfield, Mass. Filed Dec. 13, 1947. Under section 2f of the act of 1946.

BRITECOTE

Applicant claims ownership of registration No. 408,899.
FOR WRITING AND PRINTING PAPER.
Claims use since July 1933.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 478,945. BROWN & BIGELOW, St. Paul, Minn. Filed July 5, 1947.

Hot-Cha

FOR PRINTED ART MATERIALS IN THE FORM OF ART PRINTS, PICTURES, CUT-OUT SILHOUETTES, AND CALENDARS SOLD AS SUCH.
Claims use since June 1933.

Ser. No. 512,871. TERRYTOONS, INC., New Rochelle, N. Y. Filed Dec. 24, 1947.

HECKLE AND JECKLE
THE TALKING MAGPIES

The stippling on the drawing is for shading only.
FOR COMIC STRIPS IN COMIC MAGAZINES.
Claims use since July 22, 1946.

Ser. No. 532,320. METAL SPECIALTIES MANUFACTURING CO., Chicago, Ill. Filed Aug. 25, 1947.

Champion

FOR PRINTED TAPE AND LABELS.
Claims use since July 1, 1926.

Ser. No. 535,178. PARADE PUBLICATION, INC., New York, N. Y. Filed Sept. 20, 1947.

parade

The drawing is lined for the color red. Applicant claims ownership of registrations Nos. 285,284, 290,796, 323,070, 393,911, and 400,739.
FOR SUNDAY PICTURE MAGAZINE.
Claims use since Mar. 30, 1947.

Ser. No. 536,437. THE PENTON PUBLISHING COMPANY, Cleveland, Ohio. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

PENTON'S FOUNDRY LIST

FOR PUBLICATION PUBLISHED YEARLY OR FROM TIME TO TIME, THE SUBJECT MATTER OF WHICH IS A DIRECTORY OF GRAY IRON, MALLEABLE IRON, STEEL, BRASS, BRONZE, ALUMINUM, AND MAGNESIUM FOUNDRIES IN THE UNITED STATES AND CANADA, INCLUDING ALSO THE PATTERN SHOPS, MACHINE SHOPS, AND LABORATORIES OPERATED AS DEPARTMENTS OF THESE PLANTS.
Claims use since Mar. 1, 1906.

Ser. No. 536,438. THE PENTON PUBLISHING COMPANY, Cleveland, Ohio. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

THE FOUNDRY

Applicant claims ownership of registration No. 138,085.
FOR PUBLICATION PUBLISHED MONTHLY OR FROM TIME TO TIME, THE SUBJECT MATTER OF WHICH IS DIRECTED TO OPERATIONS AND PROCEDURES WHEREIN METALS ARE CAST.
Claims use since Oct. 1, 1913.

Ser. No. 536,439. THE PENTON PUBLISHING COMPANY, Cleveland, Ohio. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

STEEL

Applicant claims ownership of registrations Nos. 277,897 and 389,958.
FOR PUBLICATION PUBLISHED WEEKLY OR FROM TIME TO TIME, THE SUBJECT MATTER OF WHICH IS DIRECTED TO METALWORKING AND METALPRODUCING.
Claims use since Oct. 1, 1930.

Special

The word "Special" is disclaimed apart from the mark as shown.
FOR COTTON BATTING.
Claims use since Mar. 17, 1925.

Reg. No. 250,308. Registered Dec. 4, 1928. J. E. RHOADS & SONS, Philadelphia, Pa., a firm. Republished by registrant.

FOR LACE LEATHER IN THE PIECE.
Claims use since June 11, 1904.

Reg. No. 312,172. Registered Apr. 17, 1934. SUSQUEHANNA COLLIERIES COMPANY, Cleveland, Ohio. Republished by The M. A. Hanna Company, Cleveland, Ohio, a corporation of Ohio.

FRANKLIN

FOR ANTHRACITE COAL.
Claims use since 1873.

Reg. No. 349,247. Registered Aug. 24, 1937. FERRY-MORSE SEED CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

FERRY'S

FOR SEEDS, PARTICULARLY VEGETABLE, FLOWER, AND GRASS SEEDS.
Claims use since 1867.

Reg. No. 349,469. Registered Aug. 31, 1937. FERRY-MORSE SEED CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The lining is shown to indicate "yellow." The representation of the package which appears in the drawing is disclaimed apart from the mark claimed.
FOR SEEDS, PARTICULARLY VEGETABLE, FLOWER AND GRASS SEEDS.
Claims use since November 1935.

Reg. No. 369,106. Registered July 18, 1939. SUSQUEHANNA COLLIERIES COMPANY, Cleveland, Ohio. Republished by The M. A. Hanna Company, Cleveland, Ohio, a corporation of Ohio.

The words "Glen Lyon" are disclaimed apart from the mark as shown.
FOR ANTHRACITE COAL.
Claims use since Sept. 23, 1937.

Reg. No. 397,497. Registered Sept. 8, 1942. THE STEARNS & FOSTER COMANY, Lockland, Ohio, a corporation of Ohio. Republished by registrant.

PACKIT

FOR COTTON WADDING.
Claims use since July 1, 1941.

Reg. No. 403,878. Registered Oct. 19, 1943. R. WOLFENDEN & SONS, Attleboro, Mass., a firm. Republished by registrant.

WOLFENIZED

FOR FIBRES, SLIVER SLUBBING, AND ROVING.
Claims use since July 1, 1942.

Reg. No. 422,975. Registered Aug. 20, 1946. FERRY-MORSE SEED CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

MORSE'S

FOR SEEDS, PARTICULARLY VEGETABLE, FLOWER, AND GRASS SEEDS.
Claims use since 1888.

Reg. No. 425,249. Registered Nov. 12, 1946. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

The word "Product" is disclaimed apart from the mark as shown.
FOR MONOFILAMENTS MADE FROM POLYMERIC VINYLIDENE CHLORIDE AND COPOLYMERS THEREOF DESIGNED FOR A VARIETY OF NON-ASSOCIATED USES.
Claims use since Feb. 12, 1945.

Reg. No. 427,298. Registered Feb. 4, 1947. FERRY-MORSE SEED CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

The lining on drawing is for purposes of shading only.
FOR SEEDS, PARTICULARLY VEGETABLE AND FLOWER SEEDS.
Claims use since early in December 1945.

Reg. No. 428,508. Registered Mar. 25, 1947. FERRY-MORSE SEED CO., Detroit, Mich., a corporation of Michigan. Republished by registrant.

F-M

FOR SEEDS, PARTICULARLY VEGETABLE AND FLOWER SEEDS.
Claims use since Apr. 8, 1946.

Reg. No. 428,736. Registered Apr. 1, 1947. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

VISKING PRODUCT

The word "Product" is disclaimed apart from the mark as shown.
FOR FLEXIBLE THIN-WALLED PLASTIC TUBING FOR USE FOR VARIOUS PURPOSES IN THE INDUSTRIAL ARTS.
Claims use since Feb. 12, 1945.

Reg. No. 429,440. Registered Apr. 29, 1947. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant, present locations Richmond, Va., and Chicago, Ill.

VISKORD

FOR MONOFILAMENTS MADE FROM VINYL RESINS AND MONOFILAMENTS MADE FROM POLYMERIC VINYLIDENE CHLORIDE AND COPOLYMERS THEREOF DESIGNED FOR A VARIETY OF NON-ASSOCIATED USES.
Claims use since May 14, 1946.

Reg. No. 431,463. Registered July 22, 1947. WYOMING MINING CORPORATION, Philadelphia, Pa. Republished by Crozer Coal and Land Company, Philadelphia, Pa., a corporation of West Virginia.

LYNCO

FOR COAL.
Claims use since July 10, 1946.

CLASS 2

RECEPTACLES

Reg. No. 309,754. Registered Jan. 30, 1934. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

PATTETTES

FOR SAUSAGE AND HAMBURGER CASINGS.
Claims use since Sept. 19, 1933.

Reg. No. 310,467. Registered Feb. 27, 1934. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

VISKING CASING

The word "Casing" is disclaimed apart from the mark as shown.
FOR SAUSAGE CASINGS.
Claims use since June 1, 1930.

Reg. No. 379,873. Registered July 30, 1940. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

"ZEPHYR"

FOR ARTIFICIAL SAUSAGE CASINGS MADE OF CELLULOSE.
Claims use since Jan. 9, 1940.

Reg. No. 388,424. Registered June 24, 1941. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant, present locations Richmond, Va., and Chicago, Ill.

"Visking"

FOR MERCHANDISE PROTECTORS — NAMELY, SEAMLESS CELLULOSE TUBES AND ARTIFICIAL SAUSAGE CASINGS MADE OF CELLULOSE.
Claims use since June 1, 1928.

Reg. No. 388,425. Registered June 24, 1941. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

VISKING CASING

The word "Casing" is disclaimed apart from the mark as shown.
FOR ARTIFICIAL SAUSAGE CASINGS MADE OF CELLULOSE.
Claims use since June 1, 1930.

Reg. No. 397,794. Registered Sept. 22, 1942. SUPERIOR METAL PRODUCTS COMPANY, St. Paul, Minn., a corporation of Delaware. Republished by registrant.

DARMET

FOR MILK CANS, MILK PAILS, ICE CREAM CANS, CHEESE CANS, AND ICE CREAM MOLDS.
Claims use since Mar. 27, 1942.

Reg. No. 417,447. Registered Oct. 30, 1945. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

NoJax

FOR CELLULOSE SAUSAGE CASINGS.
Claims use since Apr. 7, 1928.

Reg. No. 422,073. Registered July 2, 1946. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

VISKING PRODUCT

The word "Product" is disclaimed apart from the mark as shown.
FOR TUBES IN THE NATURE OF CONTAINERS AND BAGS MADE FROM PLASTIC.
Claims use since Mar. 8, 1945.

Reg. No. 425,530. Registered Nov. 26, 1946. THE VISKING CORPORATION, Chicago, Ill., a corporation of Virginia. Republished by registrant.

VISKING

FOR CELLULOSE CASINGS AND TUBING USED AS CONTAINERS.
Claims use since Aug. 14, 1945.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 51,240. Registered Apr. 10, 1906. J. A. WRIGHT & Co., Keene, N. H., a corporation of New Hampshire. Republished by registrant.

SILVER CREAM

FOR POLISHES IN POWDER AND LIQUID FORM FOR USE IN CLEANING METAL AND GLASSWARE.
Claims use since about Jan. 1, 1886.

Reg. No. 330,843. Registered Dec. 17, 1935. THE SHEFFIELD COMPANY, doing business as K-T-S Products, New York, N. Y., and New London, Conn., a corporation of Connecticut. Republished by registrant, present address New London, Conn.

The drawing is lined for shading only.
FOR SOAPS AND SHAVING CREAMS.
Claims use since Mar. 15, 1935.

CLASS 5

ADHESIVES

Reg. No. 164,438. Registered Feb. 20, 1923. ROBERT J. SISK, doing business as R. J. Sisk Company, New London, Conn. Republished by The R. J. Sisk Company, New London, Conn., a corporation of Connecticut.

LIN-O-TACK

FOR PIGMENT LINOLEUM CEMENT.
Claims use since September 1915.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 66,521. Registered Dec. 10, 1907. POLK MILLER DRUG CO., Richmond, Va. Republished by Polk Miller Products Corp., Richmond, Va., a corporation of Virginia.

SERGEANT'S

FOR FOLLOWING-NAMED DOG REMEDIES—CONDITION-PILLS ARSENIC AND IRON PILLS, SOFT CARBOLIC SOAP, MANGE-OINTMENT, REMEDY FOR FLEAS, CANKER-WASH, REMEDY FOR WORMS, RHEUMATIC TABLETS, AND CONSTIPATION CURE.
Claims use since December 1885.

Reg. No. 79,549. Registered Sept. 20, 1910. BIRD-ARCHER COMPANY, New York, N. Y. Republished by The Bird-Archer Company, New York, N. Y., a corporation of New York.

FOR CHEMICAL COMPOUNDS FOR THE REMOVAL OF GREASE, OIL, AND SCALE FROM BOILERS, AND THE PREVENTION OF THE FORMATION OF NEW SCALE, ETC., IN BOILERS.
Claims use since May 1905.

Reg. No. 110,955. Registered June 20, 1916. EDWARD A. GILLANS, Amsterdam, N. Y. Republished by Robert Z. Lindsay, New York, N. Y.

THE LITTLE
OLD DUTCH DOCTOR'S
CROUP
MEDICINE

FOR CROUP REMEDY.
Claims use since about 1877.

Reg. No. 144,063. Registered June 21, 1921. STEARNS' ELECTRIC PASTE CO., Chicago, Ill. Republished by Stearns' Electric Paste Co., Chicago, Ill., a co-partnership.

FOR RAT AND ROACH PASTE.
Claims use since 1893.

Reg. No. 150,361. Registered Jan. 3, 1922. DANIEL A. FLOOD, Okmulgee, Okla. Republished by Jean German and Myrtle Flood Mitchell, Okmulgee, Okla., a partnership.

FLOOD'S OINTMENT

D. A. Flood

The word "Ointment" is disclaimed apart from the mark as shown.
FOR OINTMENT HAVING MEDICINAL PROPERTIES AND ESPECIALLY USEFUL IN THE TREATMENT OF CUTS, BURNS, BOILS, STINGS, INSECT BITES, OLD SORES, FELONS, SCALDS, AND WOUNDS.
Claims use since Jan. 1, 1907.

Reg. No. 185,717. Registered June 24, 1924. CHARLES W. YOUNG, doing business as Mineral Clay Products Company, Omaha, Nebr. Republished by Raymond G. Young, Omaha, Nebr.

Curo Mineral Clay

The words "Mineral Clay" are disclaimed apart from the mark as shown.
FOR NATURAL MINERAL CLAY PRODUCT PREPARED FOR USE AS AN OINTMENT TO BE APPLIED EXTERNALLY IN THE TREATMENT OF SPRAINS, BRUISES, INFLAMMATION, RHEUMATISM, AND SIMILAR AILMENTS.
Claims use since Sept. 1, 1923.

Reg. No. 198,851. Registered May 26, 1925. PRICE FLAVORING EXTRACT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DR. PRICE'S

FOR FOOD COLORINGS.
Claims use since May 1871.

Reg. No. 201,615. Registered Aug. 4, 1925. GARRATT-CALLAHAN CO., San Francisco, Calif. Republished by Garratt-Callahan Company of California, San Francisco, Calif., a corporation of California.

Fluff-foe

FOR COMPOUND USED FOR HOT-WATER CIRCULATING SYSTEMS, AUTOMOBILE RADIATORS, AND DEVICES OF LIKE CHARACTER FOR PREVENTING FORMATION OF FLUFF, SCALE, OR RUST.
Claims use since Jan. 1, 1910.

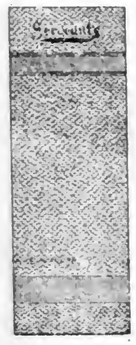
Reg. No. 225,080. Registered Mar. 8, 1927. WESTERN PHARMACAL COMPANY, Salt Lake City, Utah. Republished by Karl Maeser Pack, Salt Lake City, Utah, assignor to Western Pharmacal Company, a partnership.

NEO-SAL

FOR GRANULAR EFFERVESCENT BLOOD SALTS.
Claims use since Sept. 10, 1926.

Reg. No. 244,561. Registered July 24, 1928. WASHING FLUID CHEMICAL CO., Pittsburgh, Pa. Republished by Hood Chemical Co., Inc., Pittsburgh, Pa., a corporation of New York.

MOON-SHINE
WASHING FLUID



The words "Washing Fluid" are disclaimed apart from the mark as shown.
FOR CHEMICAL BLEACHING AND WASHING FLUID.
Claims use since April 1926.

Reg. No. 261,540. Registered Sept. 17, 1929. THE BARBASOL COMPANY, Indianapolis, Ind. Republished by The Barbasol Company (1947), Indianapolis, Ind., a corporation of Delaware.

PER-OD-EX

FOR OINTMENT DEODORANT USED FOR CHECKING PERSPIRATION AND ELIMINATING BODY ODORS.
Claims use since Apr. 20, 1929.

Reg. No. 300,694. Registered Jan. 31, 1933. POLK MILLER PRODUCTS CORP., Richmond, Va., a corporation of Virginia. Republished by registrant.

The drawing is lined for red and yellow.
FOR PREPARATION USED AS AN ANTISEPTIC, GERMICIDE, DISINFECTANT, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since 1919.

Reg. No. 308,786. Registered Dec. 19, 1933. R. D. FRAWLEY, doing business as Num Specialty Company, Pittsburgh, Pa. Republished by registrant.

DENT
NUM

FOR SURFACE ANESTHETICS AND ANTISEPTICS.
Claims use since July 1, 1933.

Reg. No. 311,431. Registered Mar. 20, 1934. THE THOMAS CHEMICAL CO., INC., Lynchburg, Va., a corporation of Virginia. Republished by registrant.

CUREN

FOR OINTMENT FOR THE TREATMENT OF ECZEMA AND OTHER SKIN DISORDERS.
Claims use since Oct. 15, 1931.

Reg. No. 314,603. Registered July 3, 1934. J. R. BRUNDAGE, INC., New York, N. Y. Republished by The Sheffield Company, New London, Conn., a corporation of Connecticut.

FOR TOOTH PASTE.
Claims use since Aug. 28, 1933.

Reg. No. 322,366. Registered Mar. 5, 1935. J. R. BRUNDAGE, INC., New York, N. Y. Republished by The Sheffield Company, New London, Conn., a corporation of Connecticut.

TRIPLE MINT

The words "Triple-Mint" are disclaimed apart from the mark as shown.
FOR TOOTH PASTE.
Claims use since Aug. 28, 1933.

Reg. No. 329,522. Registered Nov. 5, 1935. R. D. FRAWLEY, doing business as Num Specialty Company, Pittsburgh, Pa. Republished by registrant.

THUM

FOR PREPARATION FOR THE PREVENTION OF NAIL-BITING AND THUMB-SUCKING OF INFANTS.
Claims use since Jan. 1, 1935.

Reg. No. 345,838. Registered May 11, 1937. SCHNEFEL BROS. CORPORATION, Newark, N. J., a corporation of New Jersey. Republished by registrant.

NAILGROOM

FOR BEAUTIFIER FOR USE ON NAILS AND CUTICLES.
Claims use since June 8, 1936.

Reg. No. 348,590. Registered Aug. 3, 1937. MULFORD COLLOID LABORATORIES, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

VITACOL

FOR SOLUTION OF CERTAIN METALLIC COLLOIDS, INCLUDING IRON AND MANGANESE FOR USE AS A GENERAL FERRUGINOUS TONIC AND IN THE TREATMENT OF CHLOROSIS, PRIMARY AND SECONDARY ANEMIAS, GENERAL DEBILITY, WASTING DISEASES AND TO HASTEN CONVALESCENCE FOLLOWING OPERATIONS AND AFTER EXHAUSTIVE ILLNESS, AND FOR INCREASING THE QUALITY OF MILK DURING LACTATION.
Claims use since on or before Sept. 1, 1921.

Reg. No. 351,544. Registered Nov. 2, 1937. WALGREEN Co., doing business as Valentine Laboratories, Inc., Chicago, Ill. Republished by Carrel, Ltd., Chicago, Ill., a corporation of Illinois.

Amelita

FOR COSMETIC PREPARATIONS—NAMELY, SCENTS, FACE POWDER, COLD CREAM, TALCUM POWDER, AND TOILET WATER.
Claims use since November 1924.

Reg. No. 356,353. Registered Apr. 26, 1938. EDWIN M. FREEMAN, Denver, Colo. Republished by registrant.

PORCELAINIZE

FOR JELLY-LIKE MATERIAL FOR USE IN APPLICATION TO COATED SURFACES TO CHANGE THE ABSORPTIVE AND REFLECTIVE CO-EFFICIENTS OF SUCH COATINGS AND THE PERVIOUSNESS AND RESISTANT QUALITIES THEREOF.
Claims use since May 17, 1935.

Reg. No. 359,660. Registered Aug. 30, 1938. MULFORD COLLOID LABORATORIES, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Sulphocol

FOR SOLUTION OF SULPHUR IN COLLOIDAL FORM, FOR EXTERNAL AND INTERNAL USE IN CASES WHERE THERE IS A DEFICIENCY OF SULPHUR IN THE SYSTEM AND IN ACCELERATING THE ACTION OF THE LIVER TO PREVENT INTESTINAL TOXEMIA, AND IN THE TREATMENT OF RHEUMATISM, NEURITIS, ARTHRITIS, DEFORMANS; SKIN AFFECTIONS, INCLUDING ROSACEA AND SEBORRHEA; GENERALIZED DERMATITIS, ACUTE PSORIASIS, PAINFUL FIBROSITIS, AND IN COOPERATION WITH MERCURY IN THE TREATMENT OF SYPHILIS.
Claims use since on or before Sept. 1, 1921.

Reg. No. 359,764. Registered Aug. 30, 1938. JOHN H. BRECK, INC., Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

Lacene

FOR PREPARATIONS FOR SHAMPOO PURPOSES.
Claims use since Mar. 4, 1938.

Reg. No. 360,546. Registered Sept. 20, 1938. SCHNEFEL BROS., CORPORATION, Newark, N. J., a corporation of New Jersey. Republished by registrant.

La Cross Stazon

The word "Stazon" is disclaimed apart from the mark as shown.
FOR BASE COAT NAIL POLISH.
Claims use since Oct. 15, 1937.

Reg. No. 365,970. Registered Mar. 21, 1939. MARTHA P. MINTER, doing business as Totus Mfg. Co., Philadelphia, Pa. Republished by Totus Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

totus

FOR ANTISEPTIC DEODORANT POWDERS, AND MEDICATED GREASELESS SKIN CREAMS.
Claims use since June 1935.

Reg. No. 371,317. Registered Sept. 19, 1939. THE MACKWIN COMPANY, Winona, Minn. Republished by McConnon and Company, Winona, Minn., a corporation of Minnesota.

Mackwin

FOR INSECTICIDE.
Claims use since May 1, 1939.

Reg. No. 376,103. Registered Mar. 12, 1940. SHERCO PRODUCTS CORPORATION, Syracuse, N. Y. Republished by The Drackett Company, Cincinnati, Ohio, a corporation of Ohio.

Garbex

FOR GARBAGE DEODORANT AND DISINFECTANT, INSECT AND ANIMAL REPELLENT, HAVING INCIDENTAL CLEANSING PROPERTIES.
Claims use since on or about Sept. 25, 1939.

Reg. No. 388,093. Registered June 10, 1941. BEACON CHEMICAL CORPORATION, Philadelphia, Pa. Republished by Hood Chemical Co., Inc., Pittsburgh, Pa., a corporation of New York.

33

FOR BLEACH, GERMICIDE, AND DISINFECTANT, ALSO HAVING INCIDENTAL CLEANSING PROPERTIES.
Claims use since on or about Nov. 21, 1938.

Reg. No. 398,516. Registered Nov. 3, 1942. SCHNEFEL BROS. CORPORATION, Newark, N. J., a corporation of New Jersey. Republished by registrant.

NAYLON

FOR NAIL POLISH AND NAIL ENAMEL.
Claims use since Nov. 15, 1941.

Reg. No. 411,594. Registered Jan. 23, 1945. THOMAS IMPELL, Cold Spring, N. Y. Republished by Tom's Scalpade, Inc., Cold Spring, N. Y., a corporation of New York.

FOR SCALP CLEANSER AND HAIRDRESSING.
Claims use since Oct. 30, 1941.

CLASS 7

CORDAGE

Reg. No. 50,586. Registered Mar. 27, 1906. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

FOR ROPE.
Claims use since Apr. 1, 1904.

Reg. No. 309,172. Registered Jan. 2, 1934. MENTE & CO., INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

DREADNAUGHT

FOR TWINE OF COTTON OR JUTE.
Claims use since 1921.

Reg. No. 356,604. Registered Mar. 3, 1938. FRANK W. WINNE & SON, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

A A A GOLDEN

The word "Golden" is disclaimed apart from the mark as shown.
FOR BINDER TWINE, SISAL BINDER TWINE, AND SISAL ROPE.
Claims use since Dec. 15, 1932.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 231,363. Registered Aug. 16, 1927. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

RPM

FOR PROTECTED METAL SHEETS FOR BUILDING CONSTRUCTIONS.
Claims use since Dec. 17, 1925.

Reg. No. 285,666. Registered Aug. 4, 1931. THE MAUL COMPANY, Detroit, Mich. Republished by Maul Macotta Corporation, Detroit, Mich., a corporation of Michigan.

MACOTTA

FOR CONCRETE UNITS FOR USE IN BUILDINGS AND IN MAKING ORNAMENTAL WALLS.
Claims use since Feb. 23, 1931.

Reg. No. 287,530. Registered Sept. 29, 1931. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Republished by Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation of Connecticut.

FOR COPPER DOWNSPOUTS; METAL DIVIDING STRIPS FOR USE IN CONCRETE FLOORS, TO SUPPORT PLASTER AT THE MOLDING OR CORNERS, AND TO HOLD LINOLEUM; BRASS RAILINGS; BRASS CHANNELS FOR USE WITH WINDOWS, DOORS, AND OTHER APERTURES, AND WITH ORNAMENTAL METAL WORK; AND BRASS MOLDINGS.
Claims use since May 14, 1928.

Reg. No. 294,077. Registered May 17, 1932. CHARLES LACHMAN CO., INC., Philadelphia, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

CELKOTE

FOR THERMAL AND SOUND INSULATING BUILDING PRODUCTS, MADE OF HAIR OR HAIRFELT WITH OR WITHOUT MIXTURE OF VEGETABLE FIBERS, QUILTED BETWEEN SATURATED ASPHALT PAPER, OR WITH REINFORCED KRAFT PAPER.
Claims use since May 14, 1930.

Reg. No. 294,079. Registered May 17, 1932. CHARLES LACHMAN CO., INC., Philadelphia, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

FELT-O-CEL

The word "Felt" is disclaimed apart from the mark as shown.
FOR THERMAL AND SOUND INSULATING BUILDING PRODUCTS MADE OF HAIR, HAIRFELT, ASBESTOS, ASBESTOS PAPER, PAPER AND CLOTH OR COMBINATIONS THEREOF AND QUILTED.
Claims use since Nov. 9, 1929.

Reg. No. 396,080. Registered June 30, 1942. MARTIN FIREPROOFING CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

CRETEPLANK

FOR TONGUE AND GROOVE AERATED CONCRETE PLANKS.
Claims use since Oct. 24, 1939.

Reg. No. 407,203. Registered May 23, 1944. GEORGE J. DONALDSON, doing business as Donaldson Floor Company, Rockford, Ill. Republished by Donaldson Floors, Inc., Rockford, Ill., a corporation of Illinois.

MAR-FLEX

FOR MAGNESITE CEMENT FLOORING.
Claims use since Jan. 1, 1942.

Reg. No. 412,640. Registered Mar. 20, 1945. MARTIN FIREPROOFING CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

CRETECHANL

FOR REINFORCED CONCRETE CHANNEL-SHAPED SLAB OR PLANK USED FOR CONSTRUCTING WALLS AND FLOORS OF BUILDINGS.

H-Q

FOR CANNED DOG FOOD.
Claims use since Dec. 27, 1945.

Reg. No. 424,525. Registered Oct. 8, 1946. COASTAL CANNING CORPORATION, Philadelphia, Pa., a corporation of New York. Republished by registrant.

SHEP

FOR CANNED DOG FOOD.
Claims use since Dec. 27, 1945.

Reg. No. 424,526. Registered Oct. 8, 1946. COASTAL CANNING CORPORATION, Philadelphia, Pa., a corporation of New York. Republished by registrant.

CHIPS

FOR CANNED DOG FOOD.
Claims use since Dec. 27, 1945.

Reg. No. 424,527. Registered Oct. 8, 1946. COASTAL CANNING CORPORATION, Philadelphia, Pa., a corporation of New York. Republished by registrant.

STAG

FOR CANNED DOG FOOD.
Claims use since Dec. 27, 1945.

Reg. No. 429,139. Registered Apr. 22, 1947. W. L. AKIN, doing business as Southern Foods Co., McAllen, Tex. Republished by Southern Foods Company, McAllen, Tex., a corporation of Texas.

TEXAS ACRES

The word "Texas" is disclaimed apart from the mark as shown.
FOR CANNED GRAPEFRUIT JUICE FOR FOOD PURPOSES AND CANNED VEGETABLES — NAMELY, STRINGBEANS.
Claims use since Oct. 30, 1945.

Reg. No. 430,152. Registered June 10, 1947. COASTAL CANNING CORPORATION, Philadelphia, Pa., a corporation of New York. Republished by registrant.

TRIX

FOR CANNED DOG FOOD.
Claims use since Dec. 27, 1945.

Reg. No. 432,253. Registered Aug. 26, 1947. WM. H. FLOYD, Los Angeles, Corning, and Del Rosa, Calif. Republished by registrant, present address Los Angeles, Calif.

WILFLOYD

FOR CANNED RIPE OLIVES.
Claims use since July 11, 1946.

Reg. No. 432,274. Registered Aug. 26, 1947. PAUL A. RUTH, doing business as Paul A. Ruth Company, Phoenix, Ariz. Republished by registrant, present address Talleson, Ariz.

BLACK PANTHER

FOR FRESH VEGETABLES AND MELONS.
Claims use since July 1925.

CLASS 47

WINES

Reg. No. 90,925. Registered Apr. 1, 1913. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

ARMADA

FOR PORT AND SHERRY WINE.
Claims use since July 1905.

Reg. No. 300,872. Registered Feb. 14, 1933. GEO. G. SANDEMAN SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

THE PARTNERS

FOR WINES.
Claims use since Jan. 6, 1913.

Reg. No. 302,144. Registered Mar. 28, 1933. GEO. G. SANDEMAN SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

"BROWN BANG" SHERRY.

The word "Sherry" is disclaimed apart from the mark as shown.
FOR SHERRY WINE.
Claims use since July 17, 1920.

Reg. No. 302,263. Registered Apr. 4, 1933. GEO. G. SANDEMAN SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

FOR WINES.
Claims use since Nov. 27, 1930.

Reg. No. 302,726. Registered Apr. 25, 1933. SANDEMAN HERMANOS Y COMPANIA, Jerez de la Frontera, Spain, a limited liability company of Spain. Republished by registrant.

PEMARTIN

FOR WINES.
Claims use since 1878.

Reg. No. 305,613. Registered Aug. 22, 1933. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

BROWN BANG

FOR SHERRY WINE.
Claims use since July 17, 1920.

Reg. No. 319,358. Registered Nov. 20, 1934. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

APITIV

FOR WINES.
Claims use since Jan. 15, 1934.

Reg. No. 331,686. Registered Jan. 14, 1936. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

"THE DON"

FOR WINES.
Claims use since Feb. 14, 1935.

Reg. No. 333,134. Registered Mar. 10, 1936. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

FOR WINES.
Claims use since May 16, 1935.

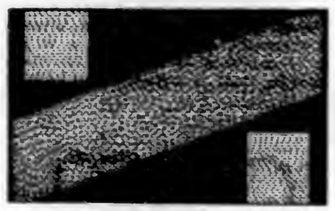
Reg. No. 362,126. Registered Nov. 15, 1938. PETRI CIGAR CO., also doing business as Petri Wine Company, San Francisco, Calif., assignor to Western States Grocery Company, Oakland, Calif., a corporation of Nevada. Republished by Beverage Distributors, Inc., San Francisco, Calif., a corporation of California.

FOR WINES.
Claims use since May 5, 1937.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 310,398. Registered Feb. 27, 1934. A. GETTELMAN BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.



FOR BREWED MALT BEVERAGES OF LEGAL ALCOHOLIC CONTENT.
Claims use since December 1890.

Reg. No. 316,491. Registered Aug. 28, 1934. JOS. SCHLITZ BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR BEER.
Claims use since Apr. 25, 1934.

Reg. No. 335,652. Registered June 9, 1936. JOS. SCHLITZ BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

The drawing is lined for black, yellow and silver.
FOR BEER.
Claims use since Jan. 23, 1936.

Reg. No. 360,357. Registered Sept. 13, 1938. A. GETTELMAN BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Rathskeller

FOR BEER.
Claims use since Apr. 12, 1938.

Reg. No. 393,690. Registered Feb. 24, 1942. JOS. SCHLITZ BREWING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR BEER.
Claims use since Apr. 18, 1941.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 101,072. Registered Nov. 10, 1914. MACKIE & COY, DISTILLERS, LTD., Glasgow, Scotland. Republished by White Horse Distillers Limited, Glasgow, Scotland, a corporation of Great Britain.

FOR SCOTCH WHISKY.
Claims use since Mar. 20, 1890.

Reg. No. 177,462. Registered Dec. 18, 1923. WILLIAM GRANT & SONS LIMITED, Dufftown, Scotland, a limited liability company of Great Britain. Republished by registrant, present locations Glasgow and Dufftown, Scotland.

Grant's
LIQUEUR
Scotch Whisky.
BOTTLED & GUARANTEED BY
William Grant & Sons Limited
TRADE MARK

All the printed words appearing on the drawing are disclaimed.
FOR SCOTCH WHISKY.
Claims use since Aug. 5, 1903.

Reg. No. 177,467. Registered Dec. 18, 1923. WILLIAM GRANT & SONS LIMITED, Dufftown, Scotland, a limited liability company of Great Britain. Republished by registrant, present locations Glasgow and Dufftown, Scotland.

Grant's
STAND FAST
BLEND
Scotch Whisky.
BOTTLED & GUARANTEED BY
William Grant & Sons Limited

All matter with the exception of the words "Stand Fast" is disclaimed apart from the mark as shown.
FOR SCOTCH WHISKY.
Claims use since June 22, 1903.

Reg. No. 303,111. Registered May 9, 1933. GEO. G. SANDEMAN SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

FOR WHISKY, GIN, RUM, AND BRANDY.
Claims use since Nov. 27, 1930.

Reg. No. 304,290. Registered June 27, 1933. SANDEMAN & SONS LIMITED, Edinburgh, Scotland. Republished by Geo. G. Sandeman, Sons & Co. Limited, London, England, a limited liability company of Great Britain.

"SANDEMAN'S V.V.O. SCOTCH WHISKY."

The letters "V. V. O." are disclaimed apart from the mark as shown.
FOR WHISKY.
Claims use since 1886.

Reg. No. 316,671. Registered Sept. 4, 1934. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

RITTENHOUSE
SQUARE

FOR WHISKEY.
Claims use since Sept. 2, 1933.

Reg. No. 319,713. Registered Dec. 4, 1934. GEO. G. SANDEMAN SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

APITIV

FOR WHISKY.
Claims use since Jan. 15, 1934.

Reg. No. 331,168. Registered Dec. 31, 1935. GEO. G. SANDEMAN SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

"THE DON"

FOR GIN, WHISKY, AND RUM.
Claims use since Feb. 14, 1935.

Reg. No. 331,388. Registered Jan. 7, 1936. SUPREME DISTRIBUTORS, INCORPORATED, Phoenix, Ariz., a corporation of Arizona. Republished by registrant.

WHITE
KING

FOR GIN AND WHISKEY.
Claims use since Sept. 6, 1935.

Reg. No. 331,807. Registered Jan. 21, 1936. JAMES BUCHANAN & COMPANY LIMITED, London, England, a corporation of Great Britain. Republished by registrant.

The words "Scotch Whisky, a Blend" are disclaimed apart from the mark as shown.
FOR WHISKY.
Claims use since 1932.

Reg. No. 332,807. Registered Feb. 25, 1936. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

The word "Dry" is disclaimed apart from the mark as shown.
FOR GIN AND WHISKY.
Claims use since May 16, 1935.

Reg. No. 336,670. Registered July 14, 1938. SUPREME DISTRIBUTORS, INCORPORATED, Phoenix, Ariz., a corporation of Arizona. Republished by registrant.

FOR WHISKEY.
Claims use since Mar. 20, 1936.

Reg. No. 388,564. Registered July 1, 1941. GEO. G. SANDEMAN, SONS & CO. LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

The words "Scotch Whisky," "Edinburgh" and the representation of a label per se are disclaimed. The words "The King of Whiskies" and the representation of ears of corn are disclaimed apart from the mark as shown.
FOR SCOTCH WHISKY.
Claims use since July 3, 1939.

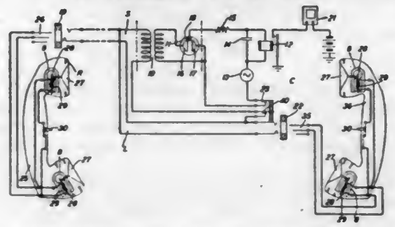
Reg. No. 411,853. Registered Feb. 6, 1945. JAMES BUCHANAN & COMPANY LIMITED, London, England, a limited-liability company of Great Britain. Republished by registrant.

The words "De Luxe" are disclaimed apart from the mark as shown.
FOR WHISKY.
Claims use since Mar. 1, 1944.

CLASS 50

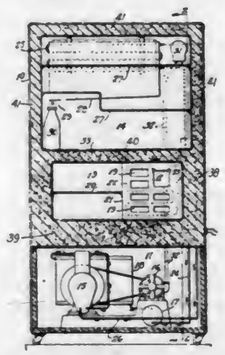
MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 304,476. Registered July 11, 1933. THE STEARNS & FOSTER COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present address Lockland, Cincinnati, Ohio.



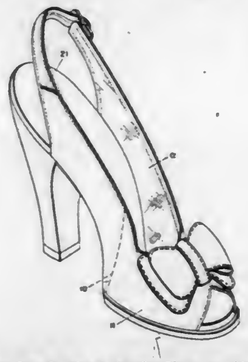
FOR QUILTING FRAMES OR HOOPS.
Claims use since Apr. 7, 1931.

REISSUES



DECEMBER 14, 1948

23,057
SIGNALING SYSTEM
George E. Atkins, Glen Ridge, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Original No. 2,332,043, dated October 19, 1943, Serial No. 428,680, January 29, 1942. Application for reissue May 14, 1946, Serial No. 669,475
31 Claims. (Cl. 179—36)



1. The combination in a signaling system of a signaling circuit, a sound transmitting device capable of translating sound signals of the level of normal speech signals and sound signals of appreciably higher levels, and a visual signaling device for indicating, in a continuous manner, the translation, by said device, of an instantaneous sound signal of a level appreciably higher than the level of normal speech signals.

23,058
REFRIGERATOR
Lewis J. Bronaugh, Portland, Oreg., and Thomas I. Potter, New York, N. Y., assignors, by direct and mesne assignments, to Refrigeration Patents Corporation, Buffalo, N. Y., a corporation of New York
Original No. 2,056,165, dated October 6, 1936, Serial No. 516,032, February 16, 1931. Application for reissue June 18, 1948, Serial No. 33,876
4 Claims. (Cl. 62—116)

1. A household refrigerator which in normal operation provides above-freezing moist cold air for preserving in a refrigerated condition foods susceptible to moisture loss by evaporation and below-freezing dry cold air and a dry cold surface for preserving foods in a frozen condition, said refrigerator comprising a cabinet having a cooling compartment and a freezing compartment, thermal insulation around said compartments thermally insulating said compartments from each other and from the outside atmosphere, air in said cooling compartment having a substantially stable temperature of about 40° F. and having a humidity whose relative value is at least 100% at 32° F., air in said freezing compartment having a temperature well below 32° F., a cooling refrigerant expander having heat-conducting surfaces within said cooling compartment and constructed and arranged to maintain its heat-conducting surfaces at a temperature above 32° F. while withdrawing heat from said compartment to maintain said air in said cooling compartment at said substantially stable temperature, a freezing refrigerant expander having heat-conducting surfaces within said freezing compartment and constructed and arranged to maintain its heat-conducting surfaces at a temperature well below 32° F. while withdrawing heat from said compartment, volatile refrigerant in said expanders, a single liquefying unit associated with said expanders and constructed and arranged to condense refrigerant expanded by heat extracted by said expanders from both said compartments, the volatile refrigerant circulating through said expanders being the sole heat-extracting medium, and a thermostat responsive to the temperature in one of said compartments controlling the operation of said liquefying unit.

23,059
OPEN-BACK SHOE WITH STIFFENING MEANS
Thomas A. Cochary, Brockton, Mass.
Original No. 2,446,169, dated August 3, 1948, Serial No. 737,817, March 28, 1947. Application for reissue September 28, 1948, Serial No. 51,562
3 Claims. (Cl. 36—8.5)

3. An open back shoe including in its structure a lined upper having a binding about its top edge, a fabric stiffening member inserted in place between the upper and lining, a row of stitching along the top and rear edges of the upper confining the stiffening member, said member extending vertically from the sole line toward the top edge and longitudinally from near the edge of the open back into the inside shank portion of the upper and toward but not in advance of the

ball line, the stiffening member conforming to the contour of the shoe and resiliently maintaining the upper in smooth condition without wrinkles in wear.

23,060
ORGANO-SILICON POLYMERS AND METHODS OF MAKING THEM

Rob Roy McGregor, Verona, and Earl Leathen Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York

No Drawing. Original No. 2,375,998, dated May 15, 1945, Serial No. 397,468, June 10, 1941. Application for reissue September 18, 1948, Serial No. 50,013

12 Claims. (Cl. 260—46.5)

1. A composition of matter which comprises a polymeric organo-silicon oxide having on the average less than two organic radicals per silicon atom, the organic substituents of said oxide being selected from the class consisting of alkyl radicals of 1 to 3 carbon atoms and phenyl radicals, and a minor proportion of boric oxide.

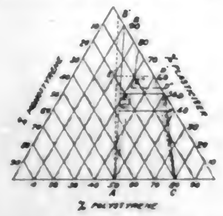
23,061
CURLING ROD

Stephan Molchan, El Monte, Calif., assignor of one-half to Hy Schwartz, Los Angeles, Calif.

Original No. 2,404,517, dated July 23, 1946, Serial No. 551,138, August 25, 1944. Application for reissue July 23, 1947, Serial No. 762,865

3 Claims. (Cl. 132—34)

1. A hair curling device comprising a rod having an integral extension of reduced diameter at one end and provided with a circumferential groove at the other end; a relatively rigid washer rotatably disposed within said groove; and a flexible strap having a hole near each end thereof, said strap detachably secured to the said washer and adapted to be stretched across the rod and looped over the integral extension of the rod on the opposite end thereof.



23,062
ELECTRIC INSULATING MATERIAL

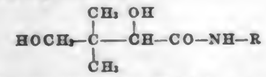
Archibald Alan New, Stanley George Foord, and Dudley Robert Beckwith, London, England, assignors to International Standard Electric Corporation, New York, N. Y.

Original No. 2,365,646, dated December 19, 1944, Serial No. 458,598, September 16, 1942. Application for reissue March 19, 1947, Serial No. 735,574. In Great Britain October 31, 1941

1 Claim. (Cl. 117—122)

Fibrous tape impregnated with a mixture of 51.6% polystyrene, 23.2% rubber, 21.4% polyisobutylene, 3.8% polyethylene and monostyrene to the extent of 20% of said mixture, said mixture having a viscosity of between about 10^3 and about 10^6 poises at about 20° C. and the viscosity of said

mixture becoming with time greater than about 10^6 poises at about 20° C.



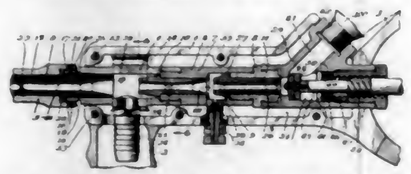
23,063
N-SUBSTITUTED PANTOYL AMIDES

William Shive, Austin, Tex., and Esmond Emerson Snell, Madison, Wis., assignors to Research Corporation, New York, N. Y., a corporation of New York

No Drawing. Original No. 2,446,615, dated August 10, 1948, Serial No. 672,338, May 25, 1946. Application for reissue October 12, 1948, Serial No. 54,202

2 Claims. (Cl. 260—561)

1. New growth inhibiting amides, represented by the following formula:



in which R represents an alkyl group containing from 3 to 7 carbon atoms.

23,064
METHOD AND APPARATUS FOR SANDBLASTING

Leslie L. Tirrell, Benton Harbor, Mich., assignor to The Hydroblast Corporation, Chicago, Ill., a corporation of Illinois

Original No. 2,200,587, dated May 14, 1940, Serial No. 127,620, February 25, 1937. Application for reissue August 12, 1948, Serial No. 43,841

27 Claims. (Cl. 51—8)

11. In a hydraulic sand blast gun, a gun body provided with three nozzles in tandem, means to project a high pressure liquid stream through said three nozzles, valve means to admit air between the rear nozzle and the middle nozzle, and means to admit abrasive particles mixed with water between the middle nozzle and the front nozzle.

PLANT PATENTS

GRANTED DECEMBER 14, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

814
PEACH TREE

Oscar F. Jones, Crozet, Va., and Wilbur C. Jones, Hagerstown, Md.

Application February 6, 1947, Serial No. 726,894

1 Claim. (Cl. 47—62)

A new and distinct variety of peach tree substantially as herein disclosed, characterized by rapid growth, early maturity for production of fruit and flexibility and tensile strength of its branches; and the fruit of such tree characterized by uniformity of size, being elongated, ovate-oval with very prominent tip, development of color when grown in shade, resistance to brown rot, almost entire absence of fuzz, and superior flavor and shipping qualities; and the hardiness of bud and blossom to frost and freezes.

815
ENGLISH OR PERSIAN WALNUT TREE

William A. Benton and Gilbert L. Smith, Wassaic, N. Y.

Application February 11, 1947, Serial No. 727,783

1 Claim. (Cl. 47—62)

The variety of walnut tree herein shown and described characterized by its resistance to cold climatic conditions, and production of relatively large early ripening nuts.

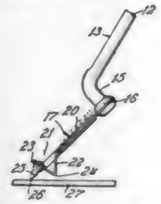
PATENTS

GRANTED DECEMBER 14, 1948

2,455,910
METHOD FOR CURING ETHYLENE POLYMERS
Witty Lysle Alderson, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 20, 1945, Serial No. 578,939
10 Claims. (Cl. 260—23)

1. A method for curing an essentially saturated ethylene polymer which comprises forming a homogeneous blend of said polymer with from 1% to 20% by weight of said polymer of an inorganic peroxy compound and from 0.2% to 30% by weight of said polymer of a monocarboxylic acid having at least four carbon atoms, and heating said blend to a temperature of from 100° C. to 250° C. until said polymer becomes insoluble in organic solvents in which it was initially soluble, said inorganic peroxide being selected from the group consisting of sodium percarbonate and the basic peroxide hydrates of zinc and cadmium.

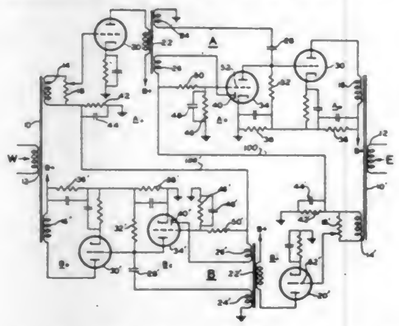
2,455,911
SELF-CURING POLYCHLOROPRENE COMPOSITIONS
Louis S. Bake, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 18, 1947, Serial No. 769,328
3 Claims. (Cl. 260—79)



1. A relatively rapid, low temperature-curing polychloroprene composition comprising a volatile organic solvent solution of the polychloroprene containing from 1% to 10%, based on the weight of the polychloroprene, of a heavy metal xanthate derived from an unsubstituted aliphatic alcohol containing from 1 to 8 carbon atoms.

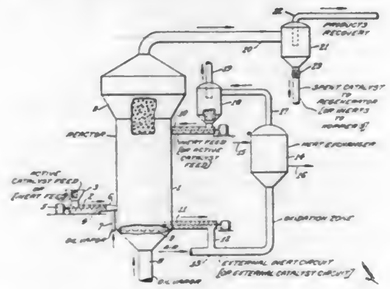
2,455,912
POLYMERIZED TETRAMETHYLETHYLENE OXIDE
Theodore L. Cairns and Robert M. Joyce, Jr., Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 11, 1947, Serial No. 768,086
1 Claim. (Cl. 260—2)

Solid polymerized tetramethylethylene oxide.



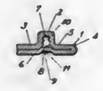
2,455,913
STYLUS CONSTRUCTION
Benjamin B. Bauer, Oak Park, Ill., assignor, by mesne assignments, to Shure Brothers Incorporated, Chicago, Ill., a corporation of Illinois
Application October 16, 1944, Serial No. 558,799
11 Claims. (Cl. 274—38)

1. In a phonograph reproducer having a vibratable member, a stylus construction including a generally flat spring normally extending from said reproducer downwardly toward a record, said spring having its upper end coupled to said vibratable member, said spring having at its lower end a generally V-shaped heel portion normally extending downwardly toward said record but clearing the same in normal playing position, a stylus tip carried by the free end of said V and having normal engagement with a sound track in said record, said V having the arms thereof relatively rigid, said spring generally determining a plane intersecting the record along a line gener-



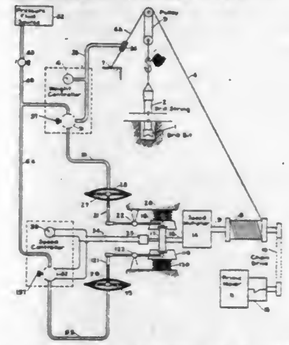
ally perpendicular to the sound track at the stylus tip, said spring being flexible along lines perpendicular to the general spring plane and being rigid along lines lying within the spring plane, said spring being adapted to yield upon excessive vertical loading to move said heel into record engagement and clear the stylus from said record.

2,455,914
VOICE OPERATED ANTISINGING REPEATER
Francis J. Biltz, Eatontown, N. J.
Application July 19, 1944, Serial No. 545,704
2 Claims. (Cl. 179—170)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A two-way signal repeater system comprising a pair of amplifying channels; each channel having first and second amplifier stages, said first stage being normally operative and said second stage being normally inoperative; means to couple the first stage of each channel and the second stage of the other channel to a common section of a two-way transmission line; and means in each channel responsive to a signal in the output of the first stage in said channel to provide a bias voltage to render inoperative the first stage of the other channel, and a time delay circuit responsive to said bias voltage to provide a delayed bias voltage to render the second stage of said channel operative to amplify and transmit said signals from one to the other section of said transmission line.

2,455,915
CATALYTIC CONVERSION OF HYDROCARBONS
Walter H. Borcherding, New York, N. Y., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
Application July 6, 1944, Serial No. 543,676
10 Claims. (Cl. 196—52)

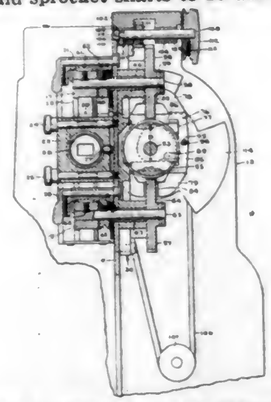


10. In a continuous process for effecting the catalytic conversion of hydrocarbons with finely divided catalyst which is repeatedly contacted with a gas or vapor, the improvement which comprises charging to the process an active silica-alumina catalyst in the form of a powder consisting of particles having relatively high settling rates and also charging to the process a powder of a solid having substantially no catalytic activity consisting essentially of particles having settling rates lower than that of the particles of said active catalyst, said substantially inactive powder being introduced in a substantial amount such that in a mixture so produced the particles having high settling rates consist essentially of said active catalyst and the particles of low settling rates consist predominantly of said substantially inactive powder, and passing the gas or vapor upwardly through a contact zone in said process containing a mixture of said active and inactive powders at a velocity within limits of about 1 to 3 feet per second effective to carry out of the contact zone in suspension substantially only inactive particles.

2,455,916
BUCCAL TUBE FOR ORTHODONTIA
Archie B. Brusse, Denver, Colo., assignor to Rocky Mountain Metal Products Co., Denver, Colo., a corporation of Colorado
Application April 16, 1945, Serial No. 588,490
3 Claims. (Cl. 32—14)

1. An orthodontic bracket formed of a single sheet of material and comprising upper and lower contiguous positions, said upper portion being bent to form an arch wire receiving tubular socket extending between two opposite edges thereof, and the lower portion having its outer surface depressed so as to provide a tie wire receiving passage when said lower portion is attached to a supporting surface with respect to which an arch wire is to be secured.

2,455,917
DRILLING CONTROL SYSTEM
Wilfred S. Crake, Houston, Tex., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application February 9, 1946, Serial No. 646,551
1 Claim. (Cl. 255—19)



An automatic control system for a rotary drilling installation comprising a drill string supported on a cable and a cable drum rotating to unwind the cable as the drill string descends, said system comprising a high-ratio speed multiplier driven by the cable drum, said speed multiplier having a high-speed shaft, brake means on said shaft, first and second fluid motor means, leverage means connected to said fluid motor means and said brake means for applying the restraining force of said brake means to said high-speed shaft, means for supplying to said fluid motor means an actuating pressure fluid, said means comprising a source of fluid pressure, a weight controller and first conduit means connecting said weight controller to said source and the first fluid motor means, a speed controller and second conduit means connecting said speed controller to said source and the second fluid motor means, adjustable means on the weight controller for pre-setting the fluid pressure transmitted thereby to the first fluid motor to a value corresponding to a predetermined weight supported by the cable, adjustable means on the speed controller for pre-setting the fluid pressure transmitted thereby to the second motor fluid to a value corresponding to a predetermined speed of said multiplier shaft, a weight indicator connected to the cable for registering the weight supported thereby, a speed indicator connected to the multiplier shaft for registering the speed thereof, means responsively connecting the weight indicator to the adjustable means on the weight controller for varying the setting of said adjustable means in proportion to the changes of the weight supported by the cable, and means responsively connecting the speed indicator to the adjustable means on the speed controller for varying the setting of said adjustable means in proportion to the changes of the speed of the multiplier shaft, whereby the fluid pressure transmitted to said fluid motors is independently varied in proportion to said weight changes and to said speed changes.

2,455,918
MOTION-PICTURE PROJECTOR
Roy A. Clapp, Minneapolis, Minn., assignor, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan
Application June 23, 1945, Serial No. 601,091
5 Claims. (Cl. 88—18.4)

1. In a motion picture projector, a main sup-

port having an upright wall extending in the direction of the projection axis, a sub-frame removably mounted on one side of said wall, a main shaft rotatably mounted on said sub-frame and extending substantially in the same direction as said axis, cam means on said main shaft, a shutter on said main shaft, two transverse sprocket shafts rotatably mounted on said sub-frame above and below said main shaft, said sprocket shafts extending through apertures in said wall, sprockets on said sprocket shafts on the other side of said wall, means on said sub-frame connecting said sprocket shafts to be driven by said

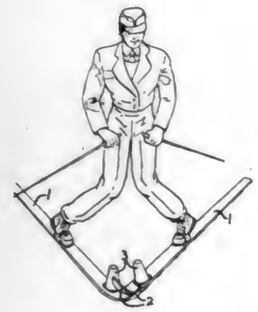
main shaft, a claw feed device mounted on said sub-frame in operative association with said cam means, a projection lens assembly mounted on said other side of said wall at a level intermediate said sprockets and means for guiding the film between said sprockets past a projection aperture rearwardly of said lens assembly, said wall being apertured rearwardly of the lens assembly to permit said shutter to extend through said wall into the projection light path and permit said claw feed device to extend through said wall into engagement with the film between said sprockets for intermittently advancing said film past the projection aperture.

2,455,919

REARVIEW MIRROR MOUNTING

Rene Daon, Norwalk, Conn., assignor to Yankee Metal Products Corp., Norwalk, Conn., a corporation of New York

Application February 7, 1946, Serial No. 646,073
5 Claims. (Cl. 248—226)



1. A rear view mirror assembly to be secured externally of an automobile door of the type having a spindle extending normally to the door, a rear view mirror and bracket means between said spindle and mirror, in combination, a device for securing the assembly to the flange of the door and for holding said spindle against turning after initial adjustment of the assembly 360° about the spindle, a pair of bracket arms the proximal ends of which are pivotally mounted at the extended end of said spindle with one arm on each side of the spindle, for turning on an axis through said pivots and normal to said spindle, and means for holding the bracket arms against turning after adjustment about said proximal axis, the distal ends of said pair of bracket arms being in abutting relation.

2,455,920

ANTISPILL ATTACHMENT FOR SKIS

Norman E. Ebbley, Jr., Leadville, Colo.

Application May 16, 1947, Serial No. 748,444
6 Claims. (Cl. 280—11.37)

1. In combination with a pair of skis, an upright post mounted upon each ski closely behind the upturned tip, of a height equalling but not greatly exceeding the height of such tip, and devoid of protuberances whereon the edge of the opposite ski may catch.

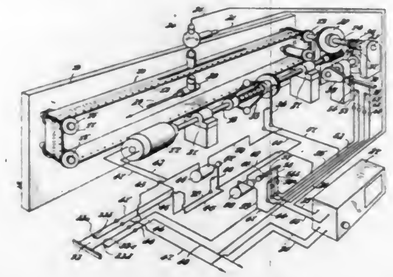
2,455,921

METHOD OF MAKING A PLASTIC CORK COMPOSITION

Josef Ehrlich, New York, N. Y., assignor to Erko Corporation, New York, N. Y., a corporation of New York

No Drawing. Application October 4, 1943, Serial No. 504,963
6 Claims. (Cl. 106—149)

1. A method of making a coherent and elastic and plasticized body from granules which consist substantially wholly of unplasticized cork, which consists in coating said granules with a substantially anhydrous solution of uncured zein whose solvent is substantially wholly an aliphatic polyhydric alcohol which is a plasticizing solvent for zein and which also is a plasticizer for said cork granules, said cork granules adsorbing said plasticizing solvent, said solution containing an excess of said aliphatic polyhydric alcohol over the amount which is required to plasticize all said zein and to dissolve all said zein at a temperature of substantially 25° C. and at a pressure of 760 mm., said excess of said aliphatic polyhydric alcohol being sufficient to plasticize said cork granules, said coating also containing a substance selected from a class which consists of the polymers and compounds of formaldehyde and the polymers of



acetaldehyde, said dissolved and uncured zein being inert to said selected substance and remaining uncured at 25° C., heating said coated granules under pressure to 100° C.–170° C. to decompose said selected substance to evolve enough formaldehyde to cure said zein, said aliphatic alcohol having a boiling point of at least 170° and being sufficiently non-volatile to be substantially wholly retained in said body when said mixture is heated to evolve said formaldehyde.

2,455,922

ANNUNCIATING DEVICE

Joseph B. Englander, Woodmere, N. Y.

Application December 27, 1945, Serial No. 637,417
4 Claims. (Cl. 179—100.3)

1. In an annunciating device, a movably mounted member having an endless sound track and a sound recording thereon, means for reproducing and audibly amplifying said recording, an electric motor for driving said movably mounted member, a governor, a cam driven by said motor in timed relation with the movement of the recording on said member, a normally open switch controlled by said governor, a pair of solenoids arranged in parallel in an electric circuit between a source of current supply and said governor controlled switch, a normally open switch controlled by the movement of the armature of one of the solenoids and a pair of normally open switches controlled by the movement of the armature of the other solenoid, a pair of switches controlled by the movement of said cam, one of said cam controlled switches being moved to open relation when engaged by the high portion of said cam and being connected in circuit with said governor controlled switch and with one switch of said pair of armature controlled switches and with the switch controlled by the other armature and the other of said cam controlled switches being closed when engaged by the high portion of said cam and connected in circuit with said source of current supply and with the solenoid having said pair of armature controlled switches, and a normally open switch connected in circuit with said motor and said source of current supply for controlling the operation of the motor and functioning when said switch is closed and said solenoids energized upon the closing of said governor controlled switch by the attainment of a predetermined rate of speed of the movable member to effect the closing of the armature controlled switches and thereby close the circuit between the reproducing and audio amplifying means for rendering the same operative to continually repeat the recording during the time that the said last named switch is closed and to complete the reproduction of the recording after opening of said last named switch.

2,455,923

BITUMINOUS LAMINATED MATERIAL

William F. Fair, Jr., Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware

Application February 4, 1944, Serial No. 521,107
3 Claims. (Cl. 154—51)

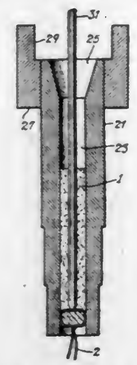
1. A compressed laminated product comprising: alternate layers of thin fibrous sheets and of coal-digesting pitch of uniform thickness that is non-flowing from vertical surfaces of said sheets and non-embrittling throughout the range of atmospheric temperatures and containing heat-digested coal and heavy hydrocarbon oil and having in combination a softening-point in the range of about 80° C. to 120° C., a penetration at 32° F., 200 grams, 60 seconds, of at least 10, and a penetration at 115° F., 50 grams, 5 seconds, of not more than approximately 65, and a layer of said coal-digestion pitch on one side of said laminated product having a softening-point in the range of about 95° C. to 110° C. and a penetration of not more than about 65 at 115° F.

2,455,924

ADDITION COMPOUNDS OF PYRIDINE DERIVATIVES AND METHOD OF PREPARING SAME

Ernst A. H. Friedheim and Saul Soloway, New York, N. Y.

No Drawing. Application March 1, 1944, Serial No. 524,624
5 Claims. (Cl. 260—270)



1. An addition product of one molecule of a ferric halide selected from the group, consisting of ferric chloride and ferric bromide, one molecule of the hydrogen halide of the halogen of said ferric halide and one molecule of nicotinic acid diethylamide.

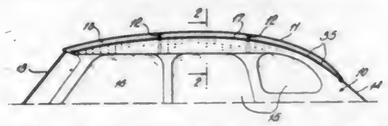
2,455,925

MANUFACTURE OF ABSORBENT TAMPONS

Henry Ganz, Ridgefield Park, N. J., assignor to The Personal Products Corporation, New Brunswick, N. J., a corporation of New Jersey

Original application July 24, 1940, Serial No. 347,087. Divided and this application August 27, 1942, Serial No. 456,369
4 Claims. (Cl. 18—55)

1. The method of making a tampon which comprises the steps of forming a web of absorbent fibrous material of predetermined contour and



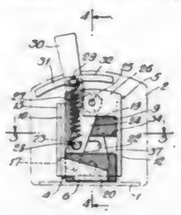
size greater than the sibe of the finished tampon, simultaneously compressing the web of fibrous material into a tightly compacted cylindrical tampon having an opening of relatively small diameter and appreciable depth in one end and maintaining said opening during compression to limit the folding of the fibrous web, as it is being compacted, to small folds and pleats substantially less than the diameter of the tampon.

2,455,926

AUTOMOBILE BODY STRUCTURE

Albert E. Gessler, Scarsdale, N. Y., William F. Grupe, Lyndhurst, N. J., and Clifford J. Rolle, Yonkers, and Francis J. Tuttle, New York, N. Y., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio

Application February 20, 1942, Serial No. 431,636
8 Claims. (Cl. 296—137)



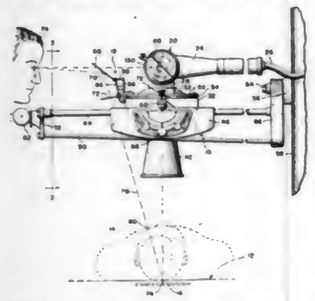
1. A lining for the roof of a body of a movable vehicle which vibrates markedly on movement thereof, comprising a resilient self-supporting non-metallic structure spaced apart from the roof of the vehicle to provide a double roof with an air space between, and supported principally on the ends of the resilient structure resting on ledges attached to the sides of the body below the roof, the structure having a coating on the bottom thereof, impervious except in the portions thereof which are punctured by holes which penetrate through the coating at least to a backing of sound absorbent material back of the coating.

2,455,927

ELECTRIC SWITCH

Stephen S. Grady, New York, N. Y.

Application July 21, 1945, Serial No. 606,369
6 Claims. (Cl. 200—67)



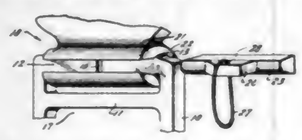
1. The combination of a bearing bracket constituting one terminal of an electric circuit, a blade and an arm pivotally connected at spaced apart portions of said bearing bracket, a spring connected at one end to said arm and at its other end to said blade, a contact bracket constituting the other terminal of an electric circuit, the spring being positioned to one side of the pivotal connection of said arm when said blade and arm are spaced from said contact bracket, said contact bracket having a flexible contact plate, and a contact flange on said blade, the spring being positioned to one side of the pivotal connection of said arm when said arm and blade are maintained in open switch position and said spring being positioned to the other side of the pivotal connection of said arm when said spring yieldably maintains the free end of said arm in contact with said contact bracket and the flange of said blade in contact with said flexible plate, said blade being movable relative to said arm so that said flange may be withdrawn out of contact with said flexible plate before the free end of said arm is withdrawn from contact with said contact bracket.

2,455,928

X-RAY TUBE SIGHTING DEVICE

Thomas Richard Hawks, Washington, D. C.

Application July 29, 1944, Serial No. 547,239
4 Claims. (Cl. 250—64)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an X-ray machine in which the X-ray tube is adjustable about transverse and longitudinal axes with respect to a cassette, means to facilitate alingment of the X-ray tube transversely and longitudinally of the cassette with respect to a given point thereon, said means comprising a mirror mounted for rotation about the transverse axis of rotation of the X-ray tube, said mirror having a reference mark parallel to the transverse axis of rotation, a mirror mounted for rotation about the longitudinal axis of rotation of the X-ray tube, said second mirror having a reference mark thereon parallel to said longitudinal axis of rotation, sights cooperating with said mirrors in such a manner that when the images of the said given point on the cassette and sights are observed to be superposed on the reference marks the X-ray tube will be aligned both transversely and longitudinally with respect to said given point and means for adjusting the angular position of one of the mirrors with respect to the X-ray tube so that at a given distance the image of said point on the cassette will be seen to be superposed with its sight both transversely and longitudinally in said one mirror.

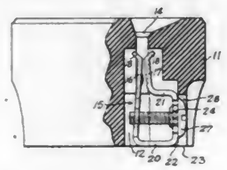
2,455,929

ROTATABLE-JOINT CLASP HAVING SAFETY LOCKING MEANS

Mark Hattan, Pasadena, Calif.

Application August 27, 1947, Serial No. 770,843
2 Claims. (Cl. 24—225)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a clasp for joining strips of flexible or jointed material, a frame of generally rectangular



shape, a rounded outer and inner free edge on one outer cross member of said frame, a connecting link cooperating with the said edges, said link comprising a frame, a sleeve, a neck connecting said frame and sleeve, said sleeve having an open side of trapezoidal section wide enough at its outer edge to receive said outer cross member of the first mentioned frame when the latter is introduced at approximately a 90° angle and a bore adapted to rotatably receive said outer cross member and to engage its rounded edges, and a slide of generally trapezoidal section adapted to be inserted therein, its base in contact with said outer cross member to fill substantially the space between a flat side of said outer member of the frame within said sleeve and the line of outer surface contour of said sleeve.

2,455,930

PLUG RECEPTACLE

Harvey Hubbell, Long Hill, Conn.

Application April 10, 1943, Serial No. 482,537
1 Claim. (Cl. 173—338)

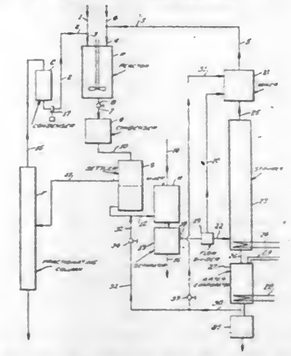
An electrical receptacle comprising an insulating body member having compartments therein opening through the rear face of the body and a contact blade slot in its front wall leading to each compartment, grooves in the opposite side walls of each compartment leading forwardly from the rear face of the body, a contact in each compartment comprising a contact finger located to the rear of the slot to engage a contact blade inserted therein, said contact also including a body portion to which the finger is connected, said finger including a connecting bar extending laterally from the rear edge of said body portion at the entrance to the compartment, an insulating strip including an intermediate portion on the outer surface of said bar and end flaps folded over the opposite edges of said bar to the inner side thereof, shoulders on the insulating body against which said flaps engage, and the opposite side edges of the body portion of the contact being seated in said grooves and at least one of said edges being provided with holding means shaped to permit ready sliding of the contact into the compartment and then to grip the material of the insulating body to retain the contact therein and said flaps against said shoulders.

2,455,931

METHOD OF MAKING N-METHYL ANILINE

Everett C. Hughes, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application October 23, 1944, Serial No. 560,042
2 Claims. (Cl. 260—577)



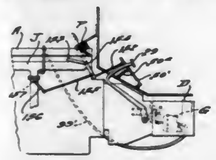
1. The method of making N-methyl aniline which comprises agitating mono-chlorobenzene with an aqueous phase containing 40 to 75% mono-methylamine and a catalyst comprising a copper chloride.

2,455,932

PROCESS OF MAKING ARYL AMINES

Everett C. Hughes, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

Application November 25, 1944, Serial No. 565,151
4 Claims. (Cl. 260—577)



1. A process of making arylamines, which comprises mixing a non-aqueous phase comprising chlorobenzene with an excess of an ammoniacal compound selected from the group consisting of ammonia and lower alkyl amines and a copper chloride catalyst in an aqueous phase substantially saturated with an alkali metal chloride at a temperature and for a time to obtain the aryl amine corresponding to said ammoniacal compound as the wanted reaction product and the corresponding ammoniacal hydrochloride as a by-product, separating the aqueous and non-aqueous phases from the reaction, separating the aryl amine from any unreacted chlorobenzene and recycling the latter, liberating at least a part of said amine from said hydrochloride by adding to the aqueous phase alkali metal caustic in an amount not in excess of one mol per mol of said hydrochloride, separating at least a part of the alkali metal chloride and of any water formed by the addition of said caustic and recycling the alkylamine and the copper chloride in solution with the alkali metal chloride.

2,455,933

POWER TRANSMISSION

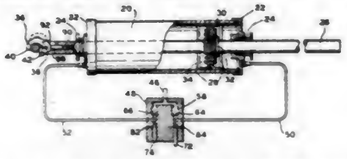
Teno Iavelli and Victor E. Matulaitis, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Original application November 28, 1940, Serial No. 367,584. Divided and this application December 4, 1941, Serial No. 421,558
24 Claims. (Cl. 74—472)

1. In a control device for a motor vehicle power transmission having an ignition system adapted to be interrupted to facilitate change in the speed ratio drive through the transmission; an operating member adapted for reciprocatory movement from a first position to a second position for controlling change in the speed ratio drive through the transmission; releasable holding means for

holding said operating member in its said first position; control means for controlling said holding means to effect release thereof; means operating to urge movement of said operating member from its said first position to its said second position when released by said holding means; power operating means for moving said operating member from its said second position to its said first position; second control means for said power operating means operating, when said operating member is in its said second position, to cause said power operating means to move said operating member from its said second position to its said first position; grounding means for said ignition system comprising a pair of switches in series with each other; switch operating means for one of said switches comprising means biasing this switch open, and means operating to close this switch in response to movement of said operating member from its said second position to its said first position, said switch operating means for closing said one switch comprising a lost-motion spring connection between said operating member and said one switch adapted for spring unloading action in response to predetermined movement of said operating member from its said first position to its said second position thereby to permit said biasing means to open said one switch; and second switch operating means for the other of said switches comprising means operating to close this switch in response to operation of the first said control means in releasing said holding means, said second switch operating means comprising means operating to open said other switch in response to operation of the second said control means as aforesaid.

2,455,934



CHUCK OPERATING MECHANISM

Francis W. Kelleher, Lynn, Mass.

Application March 28, 1945, Serial No. 585,372

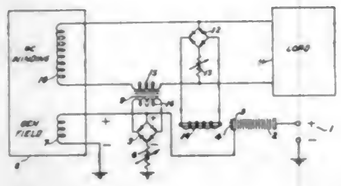
3 Claims. (Cl. 279—4)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a machine tool having a chuck actuated by an operator controlled lever mounted to swing and tilt in different directions, means for swinging said lever to open and close said chuck, said means comprising a shaft, means for reciprocating said shaft, a latch pivoted to said shaft and having a hook arranged partially to encircle said lever, said latch being adapted to be swung into an inoperative position in response to a tilting movement of said lever whereby said hook is moved out of the path of said lever when the latter is swung, and means for yieldingly holding said latch in its inoperative position.

2,455,935

VOLTAGE REGULATOR



Charles N. Keller, Dayton, Ohio

Application August 17, 1944, Serial No. 549,943

2 Claims. (Cl. 322—25)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The combination of an alternating current alternator having a field winding and an alternating current winding, the alternating current winding supplying energy to an alternating current circuit supplying current to a load characterized by varying current demands, a transformer having a primary winding in series in the alternating current circuit between the alternating current winding and the load, means energized from said alternator and regulating the output voltage therefrom, a secondary winding of said transformer associated with the alternator field

winding and a direct current source supplying direct current to said field winding of said alternator, a full wave rectifier drawing energy from the secondary winding of said transformer and feeding direct current to the field winding of said alternator, and an adjustable resistance in parallel with said rectifier and in series therewith between said alternator field winding and the direct current source feeding the field winding of the alternator.

2,455,936

GELLING OF POLYVINYL ALCOHOL COATINGS

Wesley G. Lowe, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application January 22, 1944 Serial No. 519,339

9 Claims. (Cl. 117—34)

2. A method of preparing photographic products from polyvinyl alcohol photographic emulsions which comprises mixing a small proportion of a heavy metal nitrate selected from the group consisting of zirconium nitrate, ferric nitrate and uranyl nitrate with the emulsion, coating it out in the form of a thin layer upon a support therefor and fuming the coating while wet with a volatile nitrogen base from the group consisting of ammonia, methylamine, and ethylamine whereby the emulsion is set to a rigid gel.

2,455,937

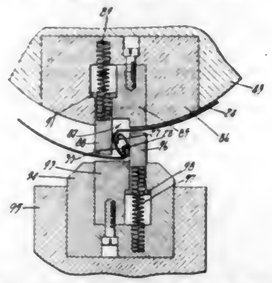
PREPARATION OF HARDENED POLYVINYL ALCOHOL COATINGS

Wesley G. Lowe, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application October 23, 1944, Serial No. 560,026

8 Claims. (Cl. 260—29.2)

1. A method of preparing hardened polyvinyl alcohol coatings which comprises incorporating in an aqueous solution of polyvinyl alcohol a water-soluble complex essentially consisting of zirconium nitrate, ethylene glycol in an amount sufficient to prevent the precipitation of zirconium oxide in the complex at a pH of at least 2.9, and an inorganic water-soluble base in an amount sufficient to raise the pH to at least 2.9 but insufficient to precipitate zirconium oxide from the mixture, coating out the solution upon a surface, and drying the same.



2,455,938

METHOD OF MAKING TUBULAR CONTAINER BODIES WITH SOLDERLESS SIX-LAYER SIDE SEAMS

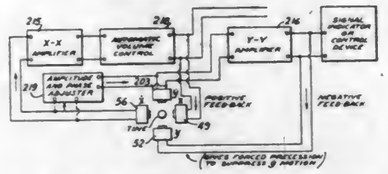
William McK. Martin, River Forest, Ill., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application January 27, 1945, Serial No. 574,840

1 Claim. (Cl. 113—120)

The method of producing a tubular container body having a solderless lined hermetic side seam, comprising feeding a flat blank between a pair of rollers and against a deflector member to form a tubular body about a mandrel, advancing the tubular body along the mandrel to successive stations and at the respective stations performing the following operations on said body: first bending the opposed marginal side seam portions of the body into cooperating interengageable inner and outer primary hooks, then further bending said tubular body adjacent said hooks into inner and outer secondary hooks respectively constituting inner continuations of said primary hooks, then applying a lining material to the inner surface of one of said primary hooks, then bringing the side seam edges of the tubular body together to interengage the hooks of one edge with those of the other edge, and finally compressing said interengaged hooks while confining the hooks against lateral displacement to set up a rotating action to first wrap the secondary hooks around the primary hooks and to thereafter flatten the wrapped hooks into an interfolded locked side seam including six layers of body material with the lining material interposed between the two innermost layers constituting said primary hooks, whereby to produce a hermetic solderless side seam for the container body.

2,455,939



DEVICE FOR DETECTING TURN OR MEASURING RATE OF TURN

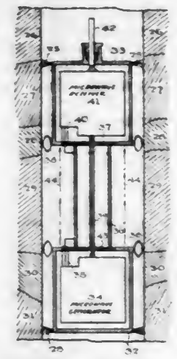
Frederick William Meredith, London, England, assignor to S. Smith & Sons (England) Limited, a British company

Application September 27, 1943, Serial No. 504,072

In Great Britain July 27, 1942

11 Claims. (Cl. 33—204)

1. A device for measuring rate of turn, the three dimensional orthogonal axes of which are designated X, Y, and Z, the turn taking place about the Z axis, the X and Y axes therefore lying in the plane of the turn to be detected; said device comprising a base, a mass, said mass being resiliently mounted on the base for movement in the direction of the X axis and in the direction of the Y axis, means for forcing an oscillation of the mass in the direction of the X axis, means controlled by oscillation of the mass in the direction of the Y axis for generating an alternating E. M. F. proportional to the velocities of the oscillations in the direction of the Y axis, and driving means controlled by said E. M. F. for applying a force to oppose and therefore damp oscillations in the direction of the Y axis, said E. M. F. being a measure of the rate of turn.



2,455,940

METHOD OF GEOPHYSICAL EXPLORATION BY MICROWAVES

Morris Muskat, Oakmont, and Norman D. Coggeshall, O'Hara Township, Allegheny County, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware

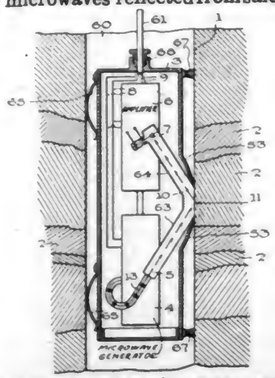
Application November 28, 1944, Serial No. 565,514

1 Claim. (Cl. 175—182)

A method of earth testing for use in logging a bore-hole comprising replacing the borehole fluid by an insulating medium, scraping the walls of the borehole substantially free of extraneous conducting material, generating microwave energy, transmitting microwave energy via the wall of a selected portion of the borehole, receiving said microwave energy and measuring a characteristic value of the received energy.

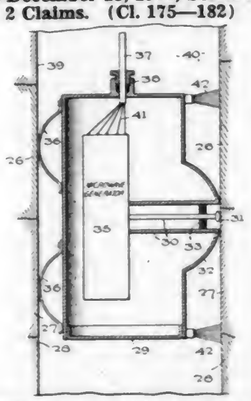
2,455,941

GEOPHYSICAL PROSPECTING IN BORE-HOLES BY MICROWAVES



Morris Muskat, Oakmont, and Norman D. Coggeshall, O'Hara Township, Allegheny County, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware

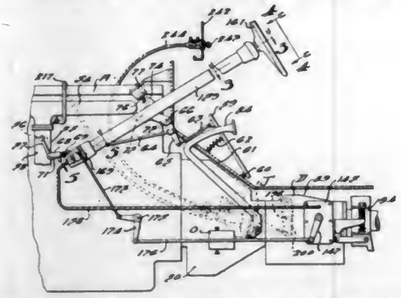
Application December 13, 1944, Serial No. 568,059



2 Claims. (Cl. 175—182)

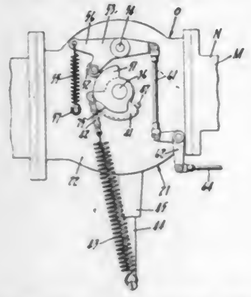
1. A method of earth testing for use in logging a borehole which comprises exciting a tubular open-ended wave guide with microwave energy, terminating said wave guide by peripheral contact with the side wall of the borehole so that the axis of the wave guide makes an acute angle with the plane tangent to the borehole wall, exciting from substantially the same microwave-terminating portion of the borehole wall

a second tubular open-ended wave guide directed to receive microwaves reflected from said termination and measuring the microwave excitation of the second wave guide.



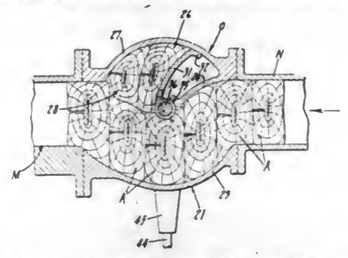
2,455,942
GEOPHYSICAL EXPLORATION OF BOREHOLES BY MICROWAVES
Norman D. Coggeshall, O'Hara Township, Allegheny County, and Morris Muskat, Oakmont, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application December 13, 1944, Serial No. 568,060
2 Claims. (Cl. 175—182)

1. Borehole logging apparatus comprising a microwave generator, a tubular open-ended microwave guide coupled thereto, means for supporting said microwave guide so that its open end is directed substantially perpendicular to the axis of the borehole, means for urging an open end of said microwave guide substantially throughout its periphery against the wall of the borehole and means for measuring the power absorbed by the microwave generator.



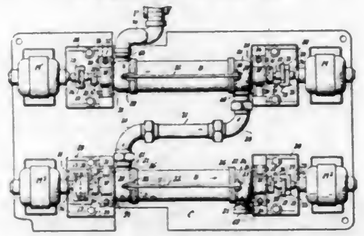
2,455,943
POWER TRANSMISSION
Carl A. Neracher, William T. Dunn, Teno Iavelli, and Augustin J. Syrovy, Detroit, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application May 15, 1940, Serial No. 335,310
21 Claims. (Cl. 74—189.5)

1. In a motor vehicle drive having a rotatable driving shaft adapted to receive drive from the engine and a rotatable driven shaft adapted to transmit drive from the driving shaft for driving the vehicle; a first set of clutch teeth carried by the driven shaft for rotation relative thereto; manually operable clutch means operable at the will of the vehicle driver for drivingly connecting or disconnecting the first set of teeth with the driven shaft, said clutch means comprising engageable clutch parts respectively drivingly connected with the first set of teeth and the driven shaft; reduction drive means, including an overrunning clutch interposed therein, operably drivingly connecting the driving shaft with the first set of teeth for driving these teeth from and at a speed slower than that of the driving shaft, said overrunning clutch automatically releasing the



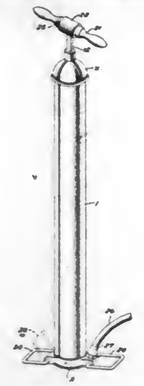
reduction drive in response to coast of the driving shaft; a second set of clutch teeth drivingly connected with the driving shaft; spring operating means for yieldingly urging shifting movement of one of said sets of teeth into positive clutching engagement with the other set when the speeds thereof are approximately synchronous; vacuum power means controlling operation of said spring operating means; blocking control means cooperable with said shiftable teeth for blocking clutching shift thereof when the speeds of said sets of teeth are asynchronous; and means operable at the will of the vehicle driver for controlling shift of said shiftable teeth independently of vacuum operation of said vacuum power means.

2,455,944
EXPANDIBLE TUNNEL FISH CANNING MACHINE
Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application May 20, 1946, Serial No. 670,939
6 Claims. (Cl. 198—37)



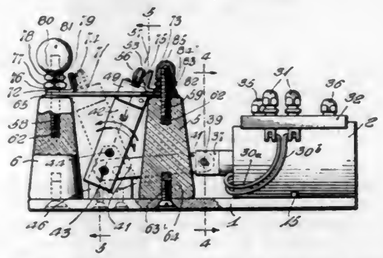
3. In a fish canning machine, the combination of a supply tunnel for confining cut pieces of fish advancing therethrough for delivery to a canning

mechanism said tunnel having flat top and bottom walls and curved side walls, feeding devices for feeding the cut pieces of fish into said tunnel, a pivotally mounted gate for forming a curved portion of one side wall of said tunnel and movable between said top and bottom walls for temporarily increasing the volume of the tunnel to compensate for an excessive accumulation of fish passing through the tunnel, and elements operable by said pivotally mounted gate when moved to increase the volume of the tunnel for controlling the operation of said feeding devices to regulate the quantity of fish fed into said tunnel.



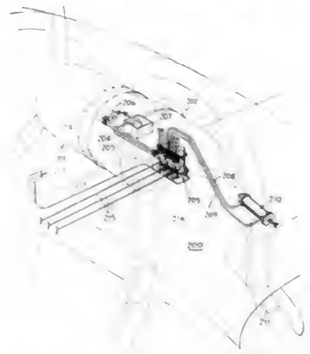
2,455,945
APPARATUS FOR BREAKING AND MAKING EMULSIONS
Charles E. North and Anna P. North, Montclair, N. J.
Application August 7, 1943, Serial No. 497,794
9 Claims. (Cl. 259—64)

1. In apparatus for breaking emulsions, an elongated closed cylindrical casing having an inlet in one end and an outlet in the opposite end, two series of contrivances in and spaced axially of the casing with the contrivances of one series alternating with the contrivances of the other series and the two series of contrivances adapted to be rotated in opposite directions on the axis of the casing, and means connected to the inlet of the casing operative for continuously feeding the emulsion into a column in the casing, the contrivances in the casing adapted by the rotation thereof to whip the column of emulsion into a plastic state and agglomerate the fat globules of the emulsion into clusters, and the feeding of the emulsion into the casing displacing the column of emulsion in the casing as it is whipped and discharging the whipped emulsion with the agglomerated clusters of fat globules from the outlet of the casing.



2,455,946
PUMP
George E. Peters and Linus E. Russell, Springfield, Ohio, assignors to Peters & Russell, Inc., Springfield, Ohio, a corporation of Ohio
Application October 20, 1944, Serial No. 559,537
2 Claims. (Cl. 230—190)

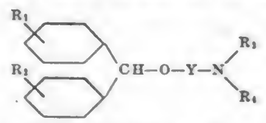
1. An air and gas hand pump, including a tubular barrel, a reciprocatory piston therein, a manually operable piston rod, an annular head on the piston rod, a projection upon the inner wall of the annular head, a cross arm insertable through the annular head and capable of limited rotary motion therein, a peripheral cam groove



of progressively varying depth in the cross arm within which the projection engages upon insertion of the cross arm into the head and wherein it is tightened upon subsequent partial rotation of the cross arm about its longitudinal axis.

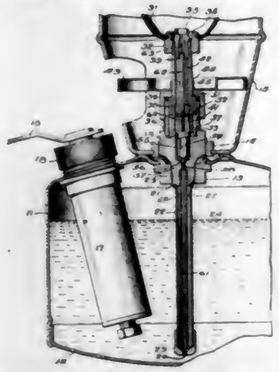
2,455,947
ELECTRICALLY CONTROLLED SWITCH
Osborne I. Price, Frederick, Md., assignor to Magnetic Devices, Inc., Frederick, Md., a corporation of Maryland
Original application September 14, 1942, Serial No. 458,263. Divided and this application February 22, 1944, Serial No. 523,461
4 Claims. (Cl. 174—140)

1. A pedestal insulator supportable from a metallic base, comprising a pedestal structure formed from insulation material, said pedestal structure having screw-threaded recesses symmetrically arranged in each end thereof, electrically conducting graphite packed in each of said recesses, metallic members screw-threaded into each of said recesses and abutting the graphite packed therein, the screw threaded member in one end of said pedestal insulator serving to secure said insulator with respect to a supporting base and the screw-threaded member in the opposite end of said pedestal insulator serving as mounting means for an electrical contact on the end of said insulator, said graphite packed in each of said recesses forming an electrically conductive column internally of said pedestal structure corresponding in transverse section to the section of said screw-threaded metallic members.



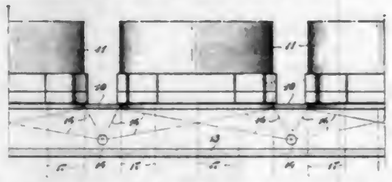
2,455,948
HYDRAULIC CONTROL SYSTEM FOR AIRPLANES
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Application October 17, 1942, Serial No. 462,363
1 Claim. (Cl. 244—75)

In an airplane having an engine for propulsion thereof mounted on a wing portion of the airplane, in combination: a movable part, a hydraulic motor for actuating said part and located adjacent thereto, a hydraulic pump driven by said engine and mounted thereon, hydraulic lines interconnecting said motor and said pump and running substantially directly therebetween, a valve controlling flow of liquid through said lines and located in said wing portion, electrical means for operating said valve, mechanical means mounted on said valve for operating the same independently of said electrical means and including means for rendering the electrical means ineffective, a manual control station located in the fuselage of the airplane, an electrical circuit for energizing said electrical means and extending to said control station, manually operable switching means at the control station for controlling said circuit, and a mechanical connection between said control station and said mechanical valve-operating means for independently operating said valve.



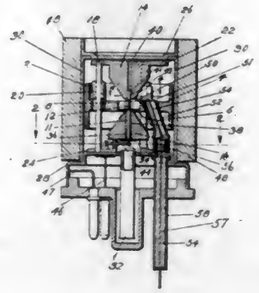
2,455,949
DIALKYLAMINOALKYL BENZHYDRYL ETHERS AND SALTS THEREOF
George Rieveschl, Jr., Grosse Pointe Woods, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application June 2, 1947, Serial No. 751,985
7 Claims. (Cl. 260—570)

1. A compound of the class consisting of a free base, its quaternary ammonium salts and its acid addition salts, said free base having the formula,



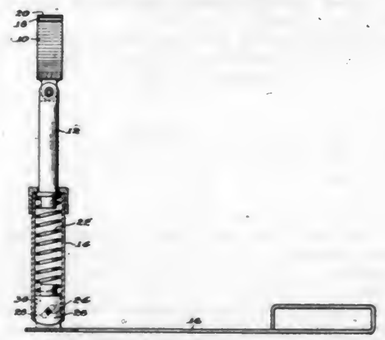
where Y is a branched chain alkylene radical containing 3 to 6 carbon atoms inclusive, R_1 and R_2 are members of the class consisting of hydrogen, halogen, lower alkyl and lower alkoxy and R_3 and R_4 are alkyl radicals containing not more than six carbon atoms.

2,455,950
PORTABLE STOVE FOR BURNING LIQUID FUEL AND BURNER CONTROL MECHANISM THEREFOR
Bestor Robinson, United States Army, Oakland, Calif.
Application July 7, 1942, Serial No. 449,987
17 Claims. (Cl. 158—32)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



7. In a hydrocarbon fuel burner, in combination, a fuel reservoir and a burner assembly including a jet having a fuel orifice, said burner assembly including a body portion, an air tube extending downwardly from said body portion and communicating with the fuel reservoir, a fuel tube extending downwardly from said body portion and communicating with the fuel reservoir; a fuel mixing valve associated with said air and fuel tubes, and a jet cleaning needle structure including a needle, said needle being positioned above said fuel mixing valve and adapted to enter the fuel orifice of the jet, the cleaning needle structure and the valve being mechanically interconnected with each other, and means to move the cleaning needle structure and valve simultaneously with each other so as to open the mixing valve and raise the cleaning needle into operating engagement with the fuel orifice of the burner tip.

2,455,951
INSTRUMENT LIGHTING
John M. Roper, Washington, D. C., and Maurice K. Laufer, Chevy Chase, Md.
Application February 23, 1944, Serial No. 523,554
4 Claims. (Cl. 240—2.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

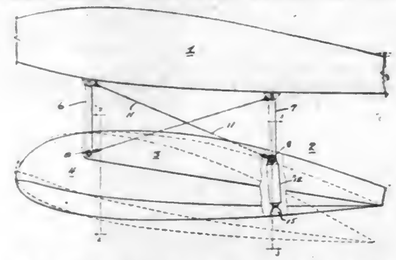


4. Instrument lighting means comprising a source of blue light, orange yellow fluorescent instrument markings so positioned as to be activated by radiations from said source of blue light, and a translucent red panel located to place the source of radiations and the activated instrument markings on the one side of the panel and the eyes of the observer on the other side of the panel to thereby screen out all radiations except those emitted by said activated instrument markings.

2,455,952
MAGNETRON
Robert C. Schmidt, Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 9, 1945, Serial No. 572,035
4 Claims. (Cl. 250—27.5)

1. An electron-discharge device comprising: a cathode; an anode structure, including a plurality of cavity resonators, spaced from and surrounding said cathode; opposed pole pieces at opposite ends of said cavity resonators; an hermetically sealed envelope enclosing said cathode, said anode structure, and said pole pieces; and means, carried by said pole pieces independently of and spaced from said envelope, supporting said anode structure.

2,455,953
WHEEL MOUNTING HOLDER
Walter Emanuel Schultz, Weirton, W. Va.
Application February 25, 1947, Serial No. 730,845
5 Claims. (Cl. 188—32)

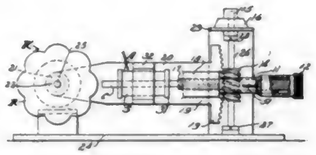


1. A wheel hub holder comprising: a hub-engaging friction shoe, a plunger for supporting the shoe, a floor-engaging member, a spring connected between the floor member and the plunger arranged to yieldably move the plunger away from the member, and a handle connected with said member to move the member and plunger into position to force the shoe into pressure engagement with the hub.

2,455,954
PROCESS FOR PRODUCING WHITE CAST IRON CASTINGS
Oliver Smalley, Larchmont, N. Y., assignor to Meehanite Metal Corporation
No Drawing. Application September 22, 1945, Serial No. 618,059
3 Claims. (Cl. 75—130)

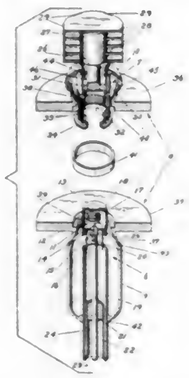
3. A process to give positive control of the physical properties in a white iron casting which comprises providing molten cast iron which produces a constitutional carbide wedge value embraced in a range having a minimum value of at least substantially $^{24}/_{32}$ for castings ½-inch thick, $^{48}/_{32}$ for castings substantially 1-inch thick and $^{80}/_{32}$ for castings substantially 2-inches thick and having a maximum value of at least substantially $^{50}/_{32}$ for castings substantially ½-inch thick, $^{90}/_{32}$ for castings substantially 1-inch thick, and $^{192}/_{32}$ for castings substantially 2-inches thick, and processing the molten material to give a processed carbide wedge value embraced within a range having a minimum value of at least substantially $^{20}/_{32}$ for castings substantially ½-inch thick, $^{40}/_{32}$ for castings substantially 1-inch thick, and $^{72}/_{32}$ for castings substantially 2-inches thick and having a maximum value of at least substantially $^{40}/_{32}$ for castings substantially ½-inch thick, $^{80}/_{32}$ for castings substantially 1-inch thick, and $^{160}/_{32}$ for castings substantially 2-inches thick.

2,455,955
WING-TIP FLOAT STRUCTURE FOR AIRCRAFT
Glenn A. Smith, United States Navy
Application May 5, 1945, Serial No. 592,157
3 Claims. (Cl. 244—105)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



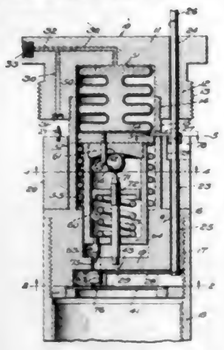
1. For use on an airfoil, at least one pair of strut structures and a single strut structure, the respective structures depending rigidly from the airfoil and spaced in the front to rear direction, a cover occupying a position between the strut structures, being affixed to the rear strut structure and extending into approximation with the pair of front strut structures, a hull member underlying the cover and partially housed thereby, fastener means rigidly securing the front of the cover to the pair of struts and simultaneously supporting the hull member for pivotal movement in respect to the cover, and telescopically contrived pressure fluid-operable means having its relatively movable components respectively pivotally attached to the hull and to the rear strut structure.

2,455,956
ADJUSTABLE GENERATOR
Craige M. Snader, Rosedale, Pa.
Application August 8, 1945, Serial No. 609,671
5 Claims. (Cl. 171—252)



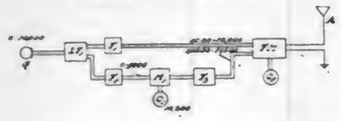
1. In a multiple wave generator a supporting structure, a driving shaft journaled with respect

to said supporting structure, a magnetic rotor driven by said shaft, a bracket mounted on said supporting structure and spaced from said driving shaft, a plate member journalled at one end about said shaft and projecting into said bracket at the other end thereof, adjustable gear means associated with the last mentioned end of said plate member, an electromagnetic solenoid system a bracket for mounting said electromagnetic solenoid system on said plate member, a magnetized core member adjustable through



said solenoid system toward or away from the periphery of said magnetic rotor, an electrical circuit connected with said solenoid system, and means associated with said gear system for variably adjusting the spatial relation of said magnetized core member with respect to the periphery of said rotor and selectively fixing the radial position of said magnetized core member with respect to the periphery of said rotor for controlling the characteristics of current generated in said solenoid system and supplied to said electric circuit.

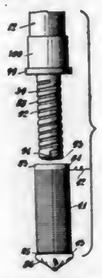
2,455,957
MULTIELEMENT ELECTRON-DISCHARGE DEVICE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 9, 1945, Serial No. 592,881
7 Claims. (Cl. 250—27.5)



1. An electron-discharge device comprising: a plurality of electrodes, one of which consists of a pair of annular members surrounding the remaining electrodes; said annular members having contacting surfaces of appreciable area lying in a plane normal to the direction of the axes thereof; and a pair of envelopes each of which is sealed to one of said annular members and to one of the remaining electrodes.

2,455,958
DELAY ARMING ANTIDISTURBANCE FUSE
John Taylor, Bronxville, N. Y.
Application February 27, 1947, Serial No. 731,200
1 Claim. (Cl. 102—81)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a fuse, the combination of arming means comprising a fluid filled compressible member, means for bleeding fluid from said member, means associated with said member operative to arm said fuse upon at least partial compression of said member, said last named means comprising a retainer retractable upon compression of said member, a readily displaceable element normally held in an operative position by said retainer but being freed for displacement upon retraction of said retainer, a spring loaded firing mechanism in engagement with said element, said mechanism being releasable from said element for movement in a firing direction upon displacement of said element.

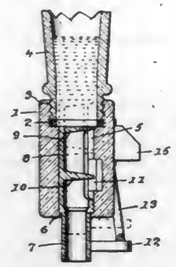


2,455,959
DEVICE FOR THE TRANSMISSION OF SIGNALS BY MEANS OF FREQUENCY-MODULATED CARRIER WAVES
Jan van der Mark and Theodorus Josephus Weyers, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application March 24, 1943, Serial No. 480,362
In the Netherlands April 3, 1941
2 Claims. (Cl. 250—6)

1. In a frequency modulation system, a source of wave energy of carrier wave frequency to be modulated, a source of modulating potentials coupled to said source of wave energy to modulate the frequency of the latter in accordance with the modulating potentials, and means in said coupling for increasing the frequencies of a band of lower frequency modulation potentials by selected equal amounts which exceed the lowest modulation frequency to reduce at a receiving point distortion at said lower frequency modulation potentials due to multipath transmission comprising, filter circuits for separating a band of modulating potentials in the lower frequency range of said modulating potentials from the remaining modulation potentials, separate paths coupling said filter circuits to said frequency

modulator for supplying the modulating potentials to said frequency modulator and heterodyning means in the path supplying said band of lower frequency modulating potentials.

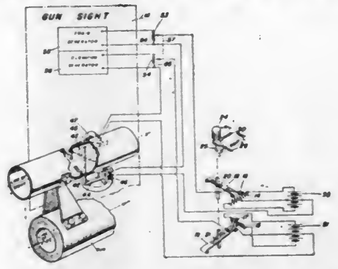
2,455,960
ELECTRICAL TRANSFORMER
Alexander C. Wall, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application November 16, 1945, Serial No. 629,174
3 Claims. (Cl. 175—359)



1. An electrical transformer comprising, in combination, a primary winding, a substantially cylindrical flat-bottomed glass cup for receiving said winding, a secondary winding wound about the exterior of said cup, a disc of metallic foil substantially greater in diameter than said cup, and a body of solder anchoring the high tension end of said secondary winding and said foil disc to the substantially flat bottom of said cup, said foil disc being preliminarily coned to serve as a contour-adaptable terminal for the high tension end of said secondary winding.

2,455,961
HYDRAULIC FLUID
Kenneth E. Walker, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 10, 1944, Serial No. 539.779
8 Claims. (Cl. 252—75)

1. A hydraulic fluid consisting essentially of a base mixture of water and from 30% to 95% by volume of ethylene glycol having dissolved therein a soluble thickener of the class consisting of ethyl bromide addition product of polyvinyl pyridine, ethyl bromide addition poduct of styrene-vinyl pyridine co-polymer, polyvinyl alcohol, alkali metal polyacrylates, alkali metal polyalkacrylates, and alkali metal salts of N-(carboxyalkoxymethyl) - polyamides, said soluble thickener having a molecular weight in excess of 1000 and being present in the proportion of from 1 to 30 grams per 100 cubic centimeters of the said base mixture.



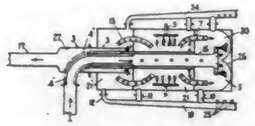
2,455,962
RECORDING LIQUID DISPENSER
Harold R. Wheeler and Joseph A. Kofalt, Harrisburg, Pa.
Application July 25, 1946, Serial No. 686,248
3 Claims. (Cl. 222—38)

3. In a measuring dispenser for bottles and the like, a cylindrical body having a centrally disposed bore extending longitudinally therethrough with an inner circumferential bead at the outer end and an internally threaded socket at the inner end, said body having a bypass recess communicating with the bore in one side thereof and intermediate of the ends, and a tube providing a spout with a centrally disposed discharge passage and also providing a cylindrical base, the outside diameter of which is greater than that of the circumferential bead, said tube being slidably mounted in the bore of the body, said cylindrical base being closed at the inner end and provided with a transverse baffle intermediate of the ends dividing the base into separated chambers with

the outer chamber communicating with the discharge passage, said base having a longitudinally extending slot in one side communicating with each of the chambers thereof and also adapted to communicate with the said bypass recess in the side of the bore of the body, and said tube having an actuating arm with a link pivotally connected thereto extending from one side thereof, said link adapted to actuate a counter positioned on the said body.

2,455,963
ELECTRICAL GUN SIGHT CONTROL
Phillip Rood Wheeler, Alexandria, Va.
Application November 8, 1945, Serial No. 627,515
1 Claim. (Cl. 177—351)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

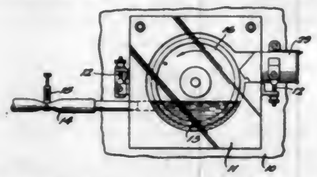
In a gun mounted for training and elevation movement and having a gun sight provided with a reference mark and means for deflecting the reference mark in one coordinate direction by an amount functionally related to a first electrical signal and means for deflecting the reference mark in a second coordinate direction by an amount functionally related to a second electrical signal, whereby said reference mark is positioned in a frame of Cartesian coordinates to provide an indication the combination of, a control arrangement for adjusting both of said deflecting means comprising a manually displaceable control member, means responsive to displacement of said control member in one coordinate direction for varying said first signal and means responsive to the displacement of said control member in



another coordinate direction for varying said second signal, whereby displacement of said control member in its frame causes displacement of said reference mark in its frame.

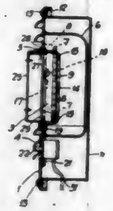
2,455,964
PEN
Arthur Winter, Weehawken, N. J.
Application September 22, 1944, Serial No. 555,243
9 Claims. (Cl. 120—50)

1. In a fountain pen a feed including an outside feed having a bore therein, a portion of said outside feed being cut away to define an open section into said bore. a slot extending into said bore and running from the open section to the rear of the outside feed, a plurality of grooves communicating with said slot, a feed plug positioned within said outside feed, said feed plug having a pair of grooves running longitudinally thereof and merging short of the forward end of the feed plug to form a slot with a pen nib positioned in said slot.



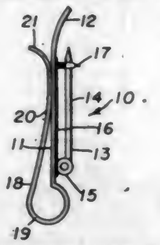
2,455,965
WET-TYPE WATER-SEPARATING STEAM-INHIBITING EXHAUST MUFFLER
George Wohlberg, Annapolis, Md.
Application March 25, 1943, Serial No. 480,554
12 Claims. (Cl. 181—52)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

9. A wet-type exhaust muffler for internal combustion engines comprising inlet and outlet means, a section provided with passages or spaces arranged in heat-transferring relation to one another so that the hot gases flowing through the inlet means can impart heat to the cooled gases leaving the muffler through the outlet means, a second section provided with water sprays for the gases coming from the inlet means to cool them and to quench sparks, a drain for the excess water in this section, a third section connected to the outlet means provided with means for imparting a whirling motion to the gases coming from the second section for centrifugally separating the water particles from the wet gases and draining means in said third section for the separated water.



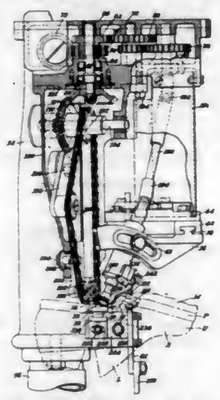
2,455,966
VAPOR INDICATING APPARATUS
Robert A. Ackley, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois
Application October 19, 1946, Serial No. 704,418
8 Claims. (Cl. 73—29)

1. Vapor indicating apparatus comprising a rotatable disc having a flat polished portion on one face, means to rotate the disc, means to circulate air containing non-aqueous vapor over the disc, means to hold a body of water in contact with the lower portion of the disc whereby circulation of air thereover will cool the disc to a temperature above the dew point of the air, and means



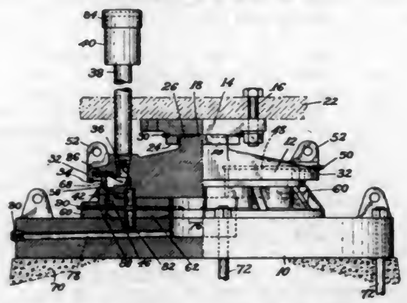
to sense the condensation of vapor on the flat polished surface of the disc.

2,455,967
ELECTRIC HEATER
Edwin C. Adams, Pittsburgh, Pa., assignor to Adams Bros. Mfg. Co., Inc., Pittsburgh, Pa., a corporation of Pennsylvania
Application April 10, 1945, Serial No. 587,642
5 Claims. (Cl. 219—34)



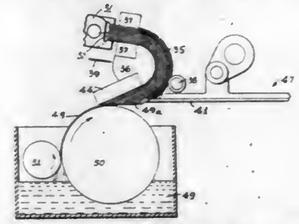
1. In an electric heater, in combination a main frame having an opening therein, a heating element container insertable from the front into said opening, a lug secured to said frame for supporting said container, a hook on said container for engaging said lug, a cover plate for a portion of said opening adjacent that portion filled by said container, a lug on said cover plate disposed to make locking engagement with said frame, a lug on said container for engaging said cover plate, and detachable element for securing said cover plate to said last-mentioned lug and locking the cover plate and the heating element container securely in said main frame.

2,455,968
KEY HOLDER
Edna J. Baker, Los Angeles, Calif.
Application March 3, 1947, Serial No. 732,083
2 Claims. (Cl. 24—3)



1. A key holder comprising a vertically disposed, substantially rectangular plate, a vertically extending pin hinged at its lower end to the rear face of said plate, a detent carried by the rear face of said plate at the upper end of the pin for engaging the free end thereof, the upper end of said plate being arcuate to extend over the free end of the pin to shield the same, and a strip-like extension at the lower end of said plate bent back upon itself to provide a keeper seat.

2,455,969
LASTING MACHINE
Corwin W. Baker, Stoneham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 16, 1945, Serial No. 593,981
8 Claims. (Cl. 12—1)



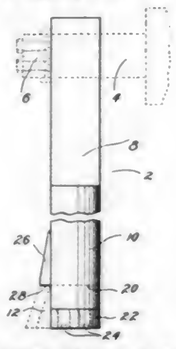
7. A lasting machine having a driven roll for applying a frictional drag on the lasted margin of stock to be lasted, a member for pressing said lasting margin against the roll, said member comprising a body portion formed with a surface for engaging the stock at a location on the roll adjacent to the edge of a shoe presented to the machine and a part having a surface for engaging the stock at a location inwardly from the edge of the shoe, said last-named part being yieldably movable relative to said body portion, away from the roll, means for yieldingly urging said member toward the roll, and means for periodically moving said member away from the roll.

2,455,970
CENTER BEARING
Harry A. Balke, Valencia, Pa., assignor to American Bridge Company, a corporation of New Jersey
Application August 23, 1944, Serial No. 550,781
3 Claims. (Cl. 308—137)

1. In a center bearing including a base, an annular flange upstanding from said base forming a centering ring, a stationary bearing disc seated within said ring, a second bearing disc within said ring resting on the stationary disc for rotary movement thereon, said second disc having a peripheral surface slidably engaging said flange as a radial bearing, and a circular load-distributing member resting on said second disc, the improvement comprising a substantially flat-topped elongated boss extending diametrically across the top of said member, said boss having a flat raised rib extending longitudinally thereof, and a saddle resting on said boss, said saddle having a flat bottom surface which engages said rib and shoulders depending therefrom adjacent the sides and ends of said boss.

2,455,971
BOOKBINDING AND METHOD OF PRODUCING THE SAME
James F. Bosch, Wappingers Falls, N. Y.
Application November 4, 1947, Serial No. 783,974
5 Claims. (Cl. 11—1)

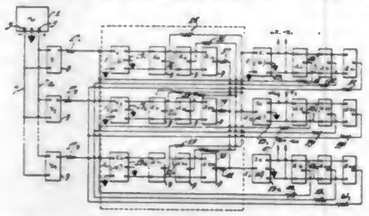
1. A method of bookbinding which comprises the steps of assembling sheets in a predetermined order to form a stack, clamping said stack adjacent one edge thereof, trimming at least the edge of said stack opposite said one edge, clamping a part of the stack adjacent the clamped edge thereof against a forming device, pressing the unclamped portion of the stack against said forming device, bending the unclamped portion of the stack by turning a portion of said forming device about an axis parallel to said one edge, whereby marginal portions of said sheets along said opposite edge will be exposed, pressing said stack in proximity to said exposed marginal portions against a pressure plate, mechanically applying a predetermined layer of adhesive to said marginal portions, and returning the stack to its original, straight condition.



2,455,972
COMBINATION MAGNIFYING LENS AND PUNCH OR THE LIKE
Hoel L. Bowditch, Sharon, Mass.
Application April 21, 1945, Serial No. 589,668
1 Claim. (Cl. 88—39)

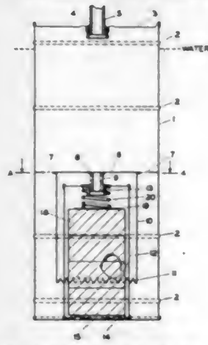
In combination, a tool having an elongated generally cylindrical stem terminating in a working end, said stem and working end having a common longitudinal center line, an optical lens the periphery of which extends appreciably outwardly from said center line and said lens having a flat surface facing the working end, a convex surface facing the tool stem and having an opening therethrough concentric with the axis of said lens for receiving said stem, and holding means

for holding said lens axially along said stem to position the end of said tool within the focal length of said lens, and to position the end of the tool with respect to the said periphery so that the angle between the said center line and a line passing through the end and periphery is in the order of 45°, whereby the working end of said tool may be viewed through the lens over a wide angle throughout 360° of rotation of the tool about its longitudinal center line.



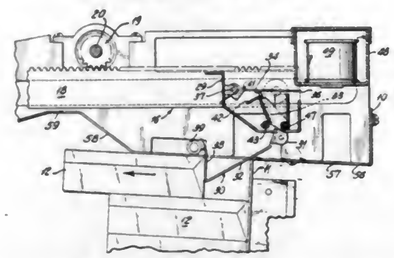
2,455,973
KEYWAY CUTTER HOLDER
William J. Boyd, Jr., Pittsburgh, Pa.
Application June 27, 1945, Serial No. 601,898
3 Claims. (Cl. 29—96)

1. In the combination of a metal cutting keyway cutter having a shank and a cutting portion, said cutting portion having a cutting edge projecting from one end thereof and a cutter holder securing said cutter, the improved holder which comprises an elongated shank portion, a cutting tool holding portion coextensive with the shank of the holder, said tool holding portion having a slot therein extending substantially perpendicular to the axis thereof and of such width and shape as to fit the opposite side surfaces of the cutter shank closely, at least one set screw substantially perpendicular to the direction of the slot, said set screw extending through and having screw threaded engagement with the wall of the slot opposite the shank of the holder, said set screw having an inner end of substantially the same diameter as the width of the slot for engagement with the cutter shank, said cutter holding portion having a back-up portion projecting outwardly therefrom on the side of the slot toward the shank of the holder so as to engage the rear of the cutting portion of the cutter secured in the holder and to back it up in the vicinity at the rear of the cutting edge.



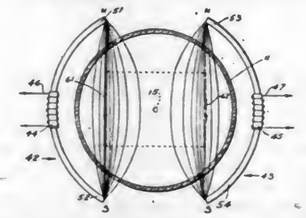
2,455,974
AUTOMATIC SOLUTION OF LINEAR SIMULTANEOUS EQUATIONS
George W. Brown, Ames, Iowa, assignor to Radio Corporation of America, a corporation of Delaware
Application November 15, 1946, Serial No. 709,920
14 Claims. (Cl. 235—61)

6. A device of the character described which includes a source of voltage, a first plurality of voltage dividers connected to said source; a first group of amplifiers connected one to each voltage divider, a second plurality of voltage dividers connected to the output of each amplifier, the output of each voltage divider of a given amplifier being coupled to one voltage divider of each other amplifier and to one of a second group of amplifiers; a third plurality of voltage dividers connected to the output of each amplifier of the second group,



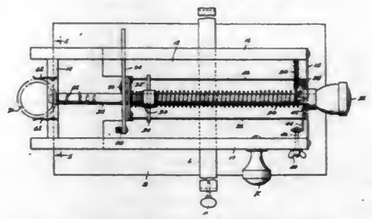
the output of each voltage divider of a given amplifier of the second group being coupled to the output of one voltage divider of each other amplifier of the second group and to the input of one of the first group of amplifiers.

2,455,975
GAS GENERATOR
Walter M. Buehl and Clark B. Shepherd, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application June 28, 1944, Serial No. 542,582
2 Claims. (Cl. 23—282)



1. A portable gas generator of the type adapted to generate gas by chemical reaction between water and a solid gas generating material when the generator is partly immersed in water, which comprises a gas collector which is essentially a hollow shell open at the bottom and having an opening to serve as a gas outlet at the top, a cylindrical baffle which is a cylindrical hollow shell closed at the top and open at the bottom mounted inside said shell in the lower portion thereof, the bottom edge of said baffle being located a short distance above the bottom edge of said shell, the bottom edge of said baffle being serrated, the portion of said shell above said baffle forming a chamber which is connected by passageways with said lower portion, and a cylindrical container for gas generating material provided with fastening means for detachably mounting it inside and concentric with said cylindrical baffle and spaced from the top and sidewall thereof, the bottom of said container being substantially flush with the bottom of said shell, an opening in the bottom of said container provided with a readily detachable closure and an opening in the top of said container likewise adapted to be provided with readily detachable closure means for use when the container is disassembled from the baffle.

2,455,976
ARTICLE EJECTOR FOR VENDING MACHINES
Mario Caruso, Maplewood, N. J., assignor to C-Eight Laboratories, Newark, N. J.
Original application December 26, 1946, Serial No. 718,529. Divided and this application December 10, 1947, Serial No. 790,842
8 Claims. (Cl. 312—68)

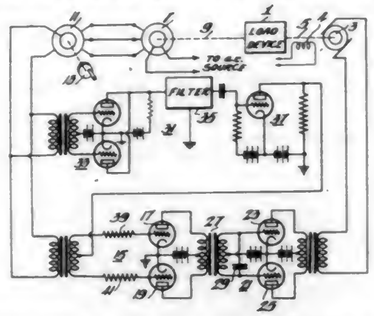


1. In an article ejector structure for vending machines employing means for feeding upwardly articles of merchandise arranged in columns, a reciprocating carriage movable above and transversely in respect to the direction of movement of the merchandise columns, a plurality of individual ejector elements, one for each column, releasably mounted in said carriage but normally held in inoperative position above and clearing the merchandise, means for releasing one of the ejector elements to its operative position for engagement with an article of merchandise in one of the columns, means for actuating said carriage to move first in one and then in the reverse direction, and means for resetting the released ejector element, the first movement of the carriage causing the released element to eject the engaged article and to reset the element to its inoperative position, the reverse movement of the carriage placing the latter and its ejector elements to a starting position ready for the next operation.

2,455,977
MAGNETIC LENS FOR CORRECTING SCANNING DEFECTS
Carlo V. Bocciarelli, Oxford, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application December 31, 1946, Serial No. 719,428
13 Claims. (Cl. 250—157)

1. In an image system, a cathode ray tube having means for generating a luminous spot, means for applying a sweep signal to said cathode ray tube for deflecting said luminous spot, said sweep signal having a substantially non-linear time variation, and an adjustable magnetic means for establishing a constant magnetic field through said cathode ray tube, the orientation and configuration of said magnetic field being arranged whereby in combination with said sweep signal said field provides substantially linear deflection of said luminous spot.

2,455,978
SPRING-ACTUATED PROJECTOR FOR GAME BOARDS
Leonardo Colaluca, Somerville, N. J.
Application June 12, 1947, Serial No. 754,186
1 Claim. (Cl. 273—129)

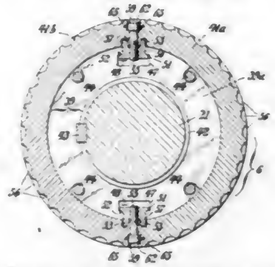


In a projector, a base, a housing supported on said base and mounted for pivotal movement about a vertical axis, a cover supported on said housing, a sight projecting from said cover for aiming said housing, a rod extending longitudinally in said housing and slidably supported by the latter, a collar mounted on said rod intermediate the ends of the latter, a frame disposed within said housing and supported on said base, means embodying a pin projecting through said rod and collar and engaging said frame for preventing rotary movement of said rod, manually-operable means embodying a knob on one end of said rod for causing retractile movement of the latter, resilient means embodying a coil spring circumposed on said rod for biasing said rod out of its retractile position, a pair of spaced prongs projecting forwardly from said housing for releasably holding a projectile therebetween, there being a plurality of spaced notches in said rod, a latch lever pivotally connected to said frame for movement into and out of engagement with one of said notches for releasably maintaining said rod in its retractile position, resilient means embodying a coil spring operatively connected to said latch lever for biasing the latter into engagement with one of said notches when said rod is in its retractile position, whereby movement of said latch lever out of engagement with said notch causes said rod to be moved forwardly to thereby strike said projectile.

2,455,979
ELECTRO-SERVO SYSTEM
James W. Conklin, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application February 24, 1943, Serial No. 476,901
7 Claims. (Cl. 318—30)

3. A control system for driving by energy from an alternating current source a load device to an angular position corresponding to that of a control member, comprising a first synchro transformer, a second synchro transformer mechanically connected to said load device and electrically connected between said alternating current source and said first synchro transformer, a mechanical connection between said first synchro transformer and said control member, an amplifier having means including a series grid limiting resistor coupling the input thereof to said first synchro transformer, means for producing a negative D.-C. bias voltage proportional in amplitude to the rate of decrease of the voltage de-

veloped by said first synchro transformer, and means for applying said bias voltage to the input



of said amplifier to reduce the output thereof as a function of said rate of decrease.

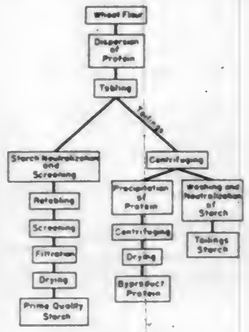
2,455,980

SPLIT ROLL FOR BRIQUETTING MACHINES OR THE LIKE

George Mifflin Dallas and Bernard M. Fine, Philadelphia, Pa., assignors to American Briquet Company, Philadelphia, Pa., a corporation of Delaware

Application September 5, 1947, Serial No. 772,436
11 Claims. (Cl. 18—21)

4. A roll for a briquetting machine or the like comprising a generally cylindrical body having shouldered cavities extending axially substantially throughout the length thereof at its perimeter, a series of wedge blocks disposed end to end through said cavities, said wedge blocks having nut portions fitting within said cavities with capacity for limited radial movement, but restrained against rotation therein, and, having outwardly projecting lugs, a cylindrical shell surrounding said body and consisting of arcuate segments interiorly recessed to receive the outwardly projecting lugs of said wedge blocks, and bolting means passing through said shell and having threads engaging the nut portions of said wedge blocks to secure said arcuate segments in firm engagement with said body.



2,455,981

ALKALI PROCESS FOR WHEAT STARCH PRODUCTION

Robert J. Dimler, Peoria, Ill., assignor to the United States of America as represented by the Secretary of Agriculture

Application August 21, 1944, Serial No. 550,477
6 Claims. (Cl. 127—67)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process comprising treating wheat flour with 6 to 12 parts of an aqueous alkaline material per part of moisture-free flour at a pH of at least 10.5 and at a temperature below the temperature at which the starch gelatinizes to cause

a homogeneous dispersion of the protein therein, and separating the starch granules from the liquid protein dispersion.

2,455,982

SEALING WASHER

George H. Dowty, Cheltenham, England

Application July 16, 1945, Serial No. 605,298
In Great Britain May 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 3, 1964
7 Claims. (Cl. 288—20)

3. A composite sealing washer comprising an annular sealing ring of resiliently deformable material, having two generally axially extending faces, and an annular confining ring of substantially non-deformable material abutting said sealing ring along one of the axially extending faces of the latter, the abutted face of the sealing ring being of an axial length not greater than the axial length of the abutting face of the confining ring, and the other face of the sealing ring, when such ring is relaxed, being substantially cylindrical, and of an axial length greater than the greatest axial length of said confining ring.

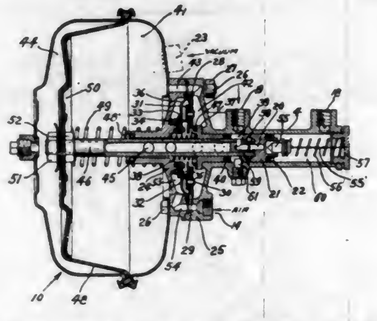
2,455,983

PRODUCTION OF POLYMERS FROM CARBYLAMINE AND CARBOXYLIC COMPOUNDS

Henry Dreyfus, London, England; Claude Bonard administrator of said Henry Dreyfus, deceased, assignor to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application October 31, 1944, Serial No. 561,327. In Great Britain March 10, 1941
4 Claims. (Cl. 260—78)

1. Process for the production of linear polymers of high molecular weight, which comprises heating a reaction mass wherein the polymer-forming molecules each contain two, and only two, reactive radicles, the total number of reactive radicles being made up of approximately equal numbers of carbylamine and carboxyl radicles, all said polymer-forming molecules



which contain pairs of dissimilar reactive radicles being such that said radicles are joined by a chain of at least 6 atoms, and all said polymer-forming molecules which contain pairs of similar reactive radicles being such that, in any two mutually reactive molecules, the sum of the number of atoms in the chain joining a pair of carbylamine radicles and of the number of atoms in the chain joining a pair of carboxyl radicles is at least 4.

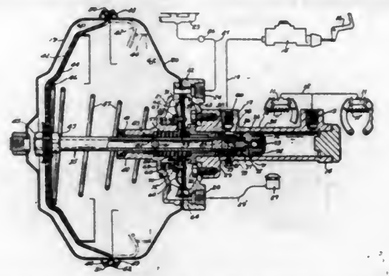
2,455,984

HYDRAULIC PRESSURE INTENSIFIER UNIT

Gordon R. Elliott, Ferndale, Mich., assignor to Irving A. Puchner and Edward U. Demmer, Milwaukee, Wis.

Application January 22, 1945, Serial No. 573,997
9 Claims. (Cl. 60—54.5)

1. The combination, a hydraulic cylinder, a valve control piston and a fluid control piston with an opening therethrough oppositely disposed therein providing a fluid chamber therebetween, there being a secondary fluid chamber in said cylinder for delivering fluid under pressure, a manually controlled pressure fluid source joining said first chamber, adapted for communication with said secondary chamber through said fluid control piston, and for operative pressure engagement with said valve control piston for effecting movement thereof, a power chamber, a movable member therein, means on said member slidably extending through said valve control piston and joined at its outer end to said fluid control piston and adapted to forceful translation upon a pressure differential on opposite sides of said movable chamber, an air and vacuum control valve intermediate said cylinder and power chamber engageable by said valve control piston for effecting said differential, valve means in said secondary fluid chamber for closing the opening in said fluid control piston on movement thereof in one direction, and flexible limiting means joined to said valve means for unseating the same relative to said piston opening on movement thereof in the opposite direction.



2,455,985

HYDRAULIC BRAKE BOOSTER

Gordon R. Elliott, Ferndale, Mich., assignor to Irving A. Puchner and Edward U. Demmer, Milwaukee, Wis.

Application May 14, 1945, Serial No. 593,723
8 Claims. (Cl. 60—54.5)

1. The combination, a hydraulic cylinder, valve control and fluid control pistons oppositely disposed therein providing a fluid chamber therebetween, there being a secondary fluid chamber in said cylinder for delivering fluid under pressure, a manually controlled pressure fluid source joining said first chamber, adapted for communication with said secondary chamber through an opening in said fluid control piston, and for operative pressure engagement with said valve control piston for effecting movement thereof, a power chamber, a movable member therein, means on said member slidably extending through said valve control piston and joined at its outer end

to said fluid control piston and adapted to forceful translation upon a pressure differential on opposite sides of said movable member, and air and vacuum control valve intermediate said cylinder and power chamber engageable by said valve control piston for effecting said differential, and valve means in said fluid control piston engaged by and responsive to initial movements of said valve control piston for closing the opening therein.

2,455,986

LIPSTICK DRESS PROTECTOR

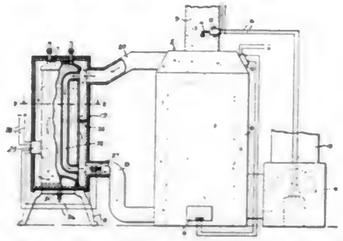
David Evenwell, San Francisco, Calif.

Application December 14, 1946, Serial No. 716,419
1 Claim. (Cl. 2—174)

A guard of the character described comprising a concave body portion having a central slot therein and capable of surrounding the ornamented lips of the user, an elongated strip secured to said body portion and positioned substantially at right angles thereto said securing means comprising a pair of adhesive tabs integrally formed with said strip, said strip having a reduced end penetrating said body through the slot thereof to provide a finger hold, and spaced ribs formed on said strip to prevent accidental displacement of the latter from the teeth of the user.

2,455,987

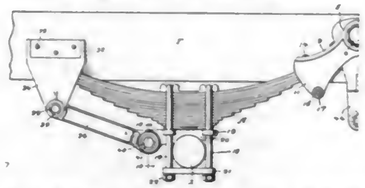
MANUFACTURE OF HYDROGEN CYANIDE



Leonard Fallows and Eric Vernon Mellers, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware

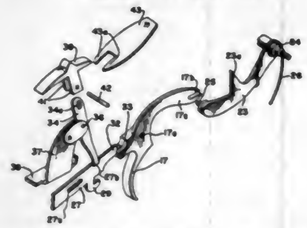
No Drawing. Application October 3, 1945, Serial No. 620,191. In Great Britain October 25, 1944
8 Claims. (Cl. 23—151)

1. Process for the manufacture of hydrogen cyanide, which comprises passing ammonia mixed with at least an equal volume of carbon monoxide and substantially free from oxidizing gases in contact with a catalyst which, at the beginning of the reaction, comprises manganese diox-



ide at a space velocity of at least 10 litres of ammonia, measured at 0° C. and 760 millimeters of pressure, per hour per litre of catalyst and at a temperature above 450° C.

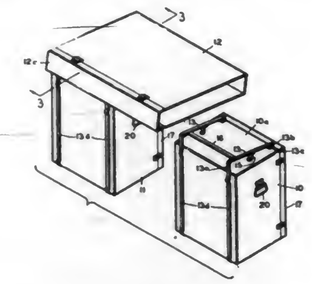
2,455,988
WATER HEATER
Truesdell C. Fife, Reading, Mass.
Application December 14, 1945, Serial No. 634,944
2 Claims. (Cl. 237—2)



1. In a hot air heating furnace including heating means and a chamber for air heated thereby, means for heating water, comprising a water tank located remotely from said furnace, a casing inclosing said tank and spaced therefrom to provide an air space therearound, a hot air inlet conduit connecting said chamber and casing and opening into said air space of said casing adjacent one end thereof, a cool air outlet conduit connecting said chamber and said casing and opening out of said air space of said casing adjacent an opposite end thereof, power means for circulating heated air through said chamber, conduits and casing, baffle means in the air space of said casing intermediate said conduits, and at least one flue through said tank, said flue opening into said air space at points adjacent to and in facing relation to said conduit openings.

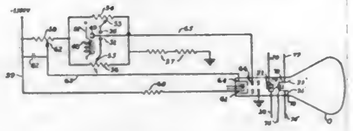
2,455,989
TANDEM AXLE SPRING SUSPENSION
Van Frazier, Springfield, Mo.
Application October 20, 1947, Serial No. 780,876
2 Claims. (Cl. 280—104.5)

1. In a tandem spring suspension for a vehicle, the combination with a longitudinally-extending frame, and a pair of spaced, parallel axles arranged transversely below said frame, of a shaft disposed above said axles and supported in said frame, an equalizer operatively connected to said shaft, said equalizer comprising a bearing head for rotatably receiving an end of said shaft, a pair of diverging channel arms dependingly carried by said bearing head, a pair of spaced, parallel flanges dependingly carried by each of said arms and coacting with the latter to define a pair of housings, an upper bearing plate supported on each of said axles, a pair of floating springs arranged in end-to-end relation with respect to each other and supported on said upper bearing plates, the adjacent ends of said springs being slidably seated in the housings of said equalizer, resilient means in each of said housings for engagement with the ends of said springs, a bracket casing arranged on each side of said equalizer and secured to said frame, a pair of spaced, parallel flanges dependingly carried by each of said bracket casings for receiving the other ends of said springs to prevent lateral displacement of the latter, resilient means in each of said bracket casings coacting with the complemental ends of said floating springs, a first coupling link having one end pivotally connected to one of said bracket casings and having its other end pivotally connected to one of said bearing plates, a bracket dependingly supported by said equalizer, a second coupling link having one end pivotally connected to said bracket and having its other end pivotally connected to the other of said bearing plates, and resilient means in the pivotal connections of said links.



2,455,990
SAFETY DEVICE FOR FIREARMS
Lloyd P. Gaugler, Elysburg, Pa.
Application January 7, 1947, Serial No. 720,511
1 Claim. (Cl. 42—70)

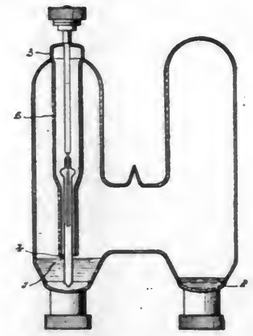
In combination in a gun, a frame having a rearwardly extending tang, a shell loading and ejecting mechanism, a firing mechanism, means for locking said mechanisms against inadvertent operation, means for actuating said locking means comprising a bracket carried by said frame, a lever pivoted to said bracket intermediate the ends of said lever and adapted to operatively engage said locking means, the upper end of said lever having a longitudinal slot, a finger piece adapted to slide upon the upper surface of said tang, said finger piece provided with laterally spaced depending ears having transversely aligned holes, a pin engaging said slot in said lever and said holes in said ears and extending outwardly beyond said ears, the diameter of said pin relative to the width of said slot being such that there is no lost motion transversely of the axis of said lever during relative movement of the finger piece longitudinally of the axis of said lever, and a spring on the underside of said tang, said spring having bifurcated ends adapted to straddle said ears and to engage said pin to resiliently urge said finger piece against the upper side of said tang.



2,455,991
DESK OF PACKING-CASE CONSTRUCTION
Edwin R. Goldfield and Ralph C. Schiring, University Heights, Ohio, assignors to Picker X-Ray Corporation Waite Manufacturing Division, Inc., Cleveland, Ohio, a corporation of Ohio
Application March 8, 1947, Serial No. 733,358
5 Claims. (Cl. 45—69)

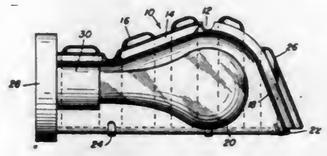
5. In combination, two packing cases, each case having a pair of parallel skid rails secured to one end thereof, said rails being inclined in the same general direction, a cross-bar connecting each said pair of rails, a third packing case having generally parallel wide flat sides, and two lips

secured in alinement to one of said sides and adapted to hook over the crossbar of said first named cases.



2,455,992
CATHODE-RAY TUBE AMUSEMENT DEVICE
Thomas T. Goldsmith, Jr., Cedar Grove, and Estle Ray Mann, Upper Montclair, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application January 25, 1947, Serial No. 724,444
6 Claims. (Cl. 315—26)

1. In a device of the character described, an electrical circuit comprising a cathode-ray tube, adjustable means including a sawtooth wave voltage generator, a pair of adjustable resistors between the output of said generator and ground to cause the beam of said tube to sweep from a fixed point along different paths along the face of said tube and means to cause said beam to become defocussed at different positions of its sweep by the output from said voltage generator.

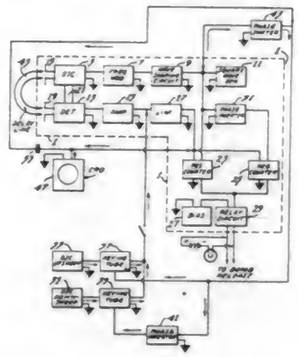


2,455,993
DISCHARGE TUBE
Theodorus Hagenberg, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application February 14, 1947, Serial No. 728,496
In the Netherlands July 8, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 8, 1964
3 Claims. (Cl. 250—27.5)

1. An electric discharge device comprising a mercury cathode having a surface level subject to variations, an ignition electrode to initiate an electric discharge through said device from said cathode and having a portion immersed therein, and an insulating member surrounding said ignition electrode without the interposition of another electrode and having a lower edge portion near the surface of said mercury cathode, said lower edge portion being in contact with the cathode at a predetermined surface level thereof to prevent initiation of a discharge by said igni-

tion electrode at cathode surface levels above said predetermined level.

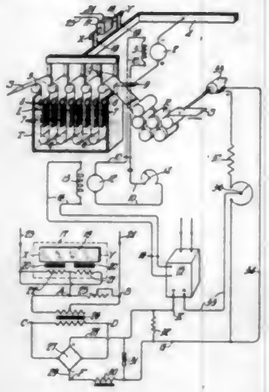
2,455,994
LAMP SHADE
Robert A. Hanlin, Logansport, Ind.
Application July 18, 1947, Serial No. 761,806
3 Claims. (Cl. 240—110)



1. A lamp shade comprising a cover of heat insulating material, said cover having externally criss-crossed hollow ribs providing air chambers within said cover, air vents provided in said chambers, an inner lining for said cover, and means for securing said inner lining to said cover.

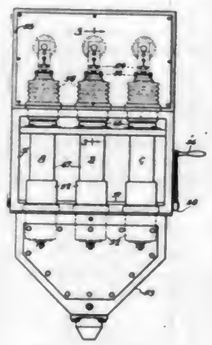
2,455,995
PRODUCTION OF NITRILES FROM CERTAIN OLEFINS AND HCN
Charles R. Harris, Lockport, and Wilbur W. De Atley, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 5, 1947, Serial No. 759,300
17 Claims. (Cl. 260—465.3)

1. Process for the production of nitriles which comprises reacting a compound from the group consisting of hydrocarbons containing not more than 10 carbon atoms and having an aliphatic chain containing one double bond, said double bond linking a tertiary carbon atom to another carbon atom and hydrocarbons containing 3 to 6 carbon atoms and having one double bond said bond linking a secondary carbon atom to another carbon atom with hydrogen cyanide in the vapor phase in the presence of a non-metallic catalyst selected from the group consisting of activated alumina, silica, titania, magnesium silicate and mixtures thereof at 250–500° C. under substantially atmospheric pressure.



2,455,996
FREQUENCY MODULATED RADIO TESTING SYSTEM
Robert L. Harvey, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 15, 1945, Serial No. 635,337
3 Claims. (Cl. 343—5)

1. Apparatus for testing the operation of a radio bomb release system of the type including a radio transmitter, a source of modulation signals, a frequency modulator connected to said transmitter and responsive, with substantial lag, to said modulation signals to vary the frequency of said transmitter, a radio receiver responsive to the output of said transmitter as transmitted and as received after reflection by a selected target to provide beat frequency signals, and two differential beat frequency responsive means alternately operable, with substantially no lag, in response to said modulation signals, said apparatus including a pair of oscillators adjustable in frequency to simulate respectively beat signals which occur during increase and decrease respectively of the frequency of said transmitter in the normal operation of said bomb release system, keying circuits for alternately connecting said oscillators to said beat frequency responsive means, and means for applying said modulation signals to said keying circuits, said last-mentioned means including a phase shifter adjustable to provide a lag in said keying substantially equal to said lag in the response of said modulator to said modulation signals.

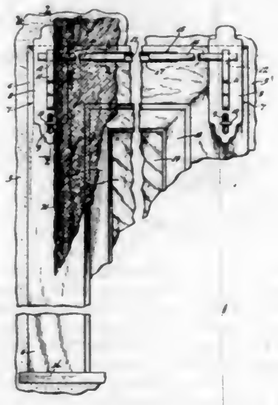


2,455,997
CURRENT REGULATING SYSTEM
Robert W. Holman, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application January 24, 1944, Serial No. 519,517
3 Claims. (Cl. 322—36)

1. A system for regulating the current output of a generator connected to a load including, in combination, a first circuit including a bus bar connected to the generator for conveying the direct current generated thereby to the load, a second electric circuit including a saturable reactor wherein the bus bar constitutes one side thereof with alternating current windings constituting the other side of the same, a source of alternating current supply for said windings, said windings being connected so that no alternating current will be generated in the direct current bus bar when alternating current is supplied to said windings whereby a voltage will be obtained in said second circuit proportional to the current in said first circuit and said bus bar, a resistor connected in series with said windings, means for multiplying the voltage drop occurring across said resistor, means for rectifying

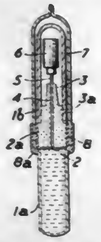
said multiplied voltage, means for obtaining a voltage in said second circuit proportional to that required by the load and in opposition to said multiplied voltage, and means responsive to the direction of current flow in said second circuit for varying the output of said generator.

2,455,998
ELECTRICAL LOAD BREAKING DEVICE
Peder B. Hoye, Maywood, Ill., assignor to Electrical Engineers Equipment Co., Melrose Park, Ill., a corporation of Illinois
Application December 20, 1943, Serial No. 514,944
25 Claims. (Cl. 200—146)



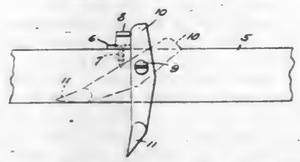
19. In switching apparatus of the class described, the combination of a pair of cooperating main contacts capable of relative movement into and out of engagement with each other, a readily removable interrupter unit adapted to be associated with said main contacts, said interrupter unit comprising a pair of relatively separable arcing contacts and an air-break type of arc extinguishing chamber through which at least one of said arcing contacts is adapted to travel for extinguishing the arc drawn between said arcing contacts in such relative separation, said chamber comprising throat means constructed and arranged to direct the gaseous products of the arc diagonally inwardly into the path of the arc, said arcing contacts being electrically connected with said main contacts, means operative during the switch opening operation for causing said arcing contacts to remain in engagement until after said main contacts have separated and for thereafter causing said arcing contacts to separate so as to draw the arc therebetween, and readily releasable holding means normally holding said interrupter unit in said switching apparatus but capable of being released by a switch stick from a relatively remote point without opening said main contacts nor disconnecting them from the line.

2,455,999
METHOD OF PREPARING ORGANOSILICONES
James Franklin Hyde, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application August 1, 1944, Serial No. 547,641
13 Claims. (Cl. 260—448.2)



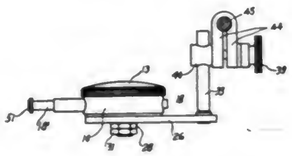
1. The method of converting high molecular weight polymers of dimethyl silicone to low molecular weight polymers thereof, which comprises heating them in the substantial absence of oxygen under conditions equivalent to a temperature of about 275° C. and above, and a pressure of one atmosphere and collecting the vaporous products.

2,456,000
CURTAIN ROD SUPPORT
Joseph Irling, Chicago, Ill.
Application September 19, 1944, Serial No. 554,775
2 Claims. (Cl. 248—261)



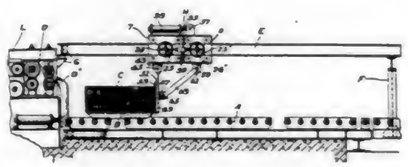
1. In a device of the character described bracket means provided with lip portions adapted to engage slidably and removably a tongue portion of the top edge of a window casing, and further provided with vertical extensions having open recesses with semi-circular bottom portions, and curtain rod support means cradled within the said open recesses, the said curtain rod support means comprising, a central tubular element, and two rod elements adjustably and frictionally secured to the said tubular element.

2,456,001
HYPODERMIC AMPOULE SYRINGE
George Emrys Jones, Weston-super-Mare, England
Application January 9, 1946, Serial No. 640,027
In Great Britain January 9, 1945
7 Claims. (Cl. 128—215)



1. A hypodermic ampoule syringe construction, comprising an elongated integral one-piece sealed envelope, said envelope being of two different diameters with an annular shoulder between them, a separate fluid outlet nozzle having an inlet side and an outlet side and a bore through which fluid is adapted to pass from said inlet side to said outlet side, said nozzle fitting within the larger diameter portion of said envelope with its inlet side resting against said shoulder, and thereby dividing said envelope into a compartment of larger diameter and a compartment of smaller diameter, the compartment of smaller diameter forming a collapsible container for the fluid to be ejected and the compartment of the larger diameter forming a hermetically sealed enclosure for the outlet side of said nozzle, and a separate clamping sleeve surrounding said envelope and clamping the same around said nozzle the envelope being adapted to be ruptured to expose the outlet side of said nozzle.

2,456,002
SKI BRAKE
Charles Jonette, Dawson City, Yukon, Canada
Application November 8, 1946, Serial No. 708,655
1 Claim. (Cl. 280—11.13)

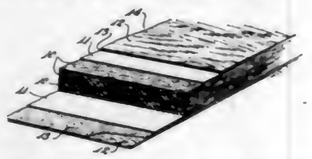


A device for preventing the backward movement of skis embodying a flat one piece base plate fixedly secured to the top of a ski and laid flatwise thereon, the ends of the base plate being laterally extended beyond the sides of the ski whereby one edge of each end will constitute a stop, flat blade members pivotally mounted on the sides of the ski and disposed flatwise of said sides, the lower ends of the blade members overbalancing the upper ends, the upper ends of the blade members extending above the top of the ski for edgewise engagement between the stops and blade members when the blade members are swung in one direction, and wide blades rigid with the lower ends of the blade members and disposed in plane perpendicular to the planes of the blade members, the blades having straight sharp lower edges for engagement with a supporting surface.

2,456,003
UNIVERSAL INDICATOR SUPPORT
Lester T. Knutson, Minneapolis, Minn.
Application May 30, 1945, Serial No. 596,769
4 Claims. (Cl. 248—124)

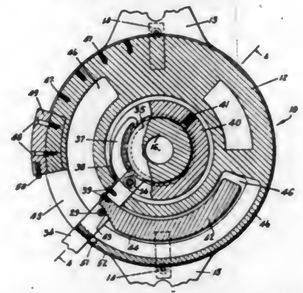
1. In combination with an indicator having a casing and a plunger with a head thereon adapted to contact a rotating surface whereby the indicator will reveal irregularities of said surface, a plate member, means rigidly connected with the plate member for supporting both said plate member and the indicator, and means for rotatably mounting the indicator on a lateral surface of said plate member.

2,456,004
APPARATUS FOR HANDLING METAL SHEETS
Charles A. Larkin, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application July 18, 1946, Serial No. 684,400
5 Claims. (Cl. 214—6)



1. A sheet stop for piling steel sheets delivered onto a piling conveyor from a sheet processing line, which comprises, in combination, a piling conveyor, a beam mounted over the conveyor in axial parallelism therewith, carriage instrumentalities on the said beam comprising independently movable sections adapted to be moved into and away from engagement with each other, means for locking the sections together responsively to movement thereof into mutually engaging position, sheet stop instrumentalities suspended from the forward section of said carriage instrumentalities comprising a backing plate, an abutment plate carried by the backing plate adapted to be impacted by sheets delivered onto the conveyor by the processing line and to pile the said sheets, pivotally connected toggle arms extending between and connecting said backing plate with the rearward section of said carriage instrumentalities, and a resilient shock absorbing cushion intermediate the abutment plate and backing plate, the said toggle arms comprising lifting instrumentalities responsive to separating movement between the independently movable sections for lifting the sheet stop instrumentalities for providing clearance for the piled sheets responsively to separating movement between the carriage sections.

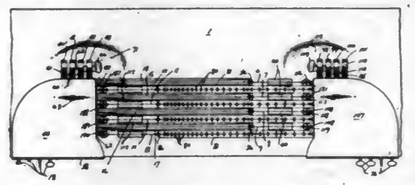
2,456,005
AIRCRAFT STRUCTURAL MATERIAL AND METHOD OF MAKING THE SAME
John C. MacKinnon, Wellesley, and Walter R. Hickler, Winthrop, Mass., assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application September 27, 1943, Serial No. 504,016
7 Claims. (Cl. 154—132)



3. A heat-molded composite product comprising a core section including at least one ply of wood veneer material and a plurality of tenuous fiber plies each comprising unwoven cotton fibers arranged in parallel relationship and in such tenuity as to constitute an unimpregnated fibrous sheet weighing not more than about one ounce per square yard, the wood veneer ply being interposed between plies of the tenuous fiber webs; a surface layer comprising a sheet of wood veneer material of the order of .01 inch thick; and a monolithic mass of heat-molded resin bonding the fibers and wood into a unitary integral structure, the resin mass permeating and enveloping completely all the several plies comprising the core section but extending only partially into the structure of the wood veneer surface layer, the outer exposed face of the wood veneer being free of the resin, the unwoven fiber webs being present in sufficient quantity to impart to the composite structure tensile strength in the aggregate at least substantially equalling that imparted by the wood veneer material in the aggregate.

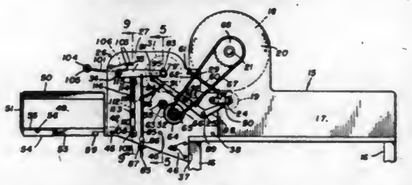
2,456,006
METHOD OF MANUFACTURING A RESIN-BONDED COMPOSITE PRODUCT
Walter R. Hickler, Winthrop, Mass., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application September 27, 1943, Serial No. 504,017
4 Claims. (Cl. 154—132)

1. A method of manufacturing a resin-bonded composite product having a surface free of resin which comprises arranging in superposed relation a core member comprising a slow-curing thermo-setting resin in a flowable unset state, an intermediate dam member comprising a fast-curing thermo-setting resin in a flowable unset state, and a surface member comprising material normally penetrable by such flowable unset resins under high pressures, the exposed face of the said surface member being free of resin, subjecting the assembly as a unit and while both said resins are still in a flowable unset state to relatively low pressure sufficient partially to compact it but not sufficient to force the resin through the normally penetrable surface member, maintaining the low pressure and heating the assembly as a unit until the fast-curing resin has substantially set, then while the slow-curing resin is still in a flowable unset state substantially increasing the pressure further to compact the assembly and heating until the slow-curing resin has substantially set, the intermediate dam of fast-cured resin serving to block flow of resin through the normally penetrable surface layer when the pressure is increased.



2,456,007
INDEX HEAD
Newman M. Marsilius, Trumbull, Conn.
Application August 24, 1945, Serial No. 612,509
1 Claim. (Cl. 90—57)

In an indexing device, a base including an inner hub-like portion and an outer annular wall-like portion extending beyond each end of said hub-like portion, a head including a central post passing through said hub-like portion of the base and a top plate having bearing on an outer end of said annular wall, an annular portion on the inner side of said plate and located at the inner side of said annular wall, said annular portion having a series of sockets therein, a locking bolt movable radially through said annular wall, a spring normally urging said locking bolt toward one of said sockets to lock the base and head together on entrance of the bolt into a socket, a ratchet wheel within said base and rigid with the inner end of said post, a lever movable about an inner portion of said post as a pivot, a pawl carried by said lever within said head and adapted to ride over the teeth of the ratchet wheel on movement of the lever from normal position and to engage a tooth of the wheel and impart turning movement to the head as the lever is moved to normal position, an elongated longitudinally curved cam within said base and rigid at one of its ends with an intermediate portion of said lever, said cam adapted to shift said locking bolt to released position and maintain it there while the lever is moved from normal position and said pawl is riding over the teeth of said ratchet wheel and during return movement of the lever while said pawl is engaged with a tooth of the ratchet wheel and said head is being turned on said base, and said cam adapted to release said locking bolt for movement into one of said sockets when the lever is returned to normal position.

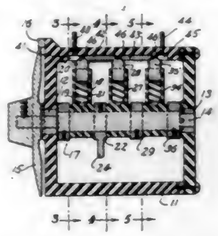


2,456,008
MUSICAL INSTRUMENT
John W. McBride, Burbank, Calif.
Original application May 29, 1942, Serial No. 444,963. Divided and this application December 3, 1945, Serial No. 632,410
26 Claims. (Cl. 84—320)

1. In a musical instrument, one or more tensioned strings, and means for vibrating said string or strings, comprising a rotary member, one or more string engaging rods operated by rotation of said member, means guiding the movement of the rods in a substantially longitudinal direction, and means for shifting said rotary

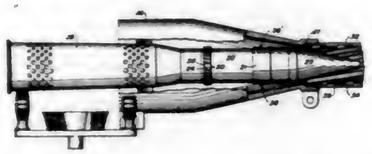
member to various positions to selectively determine the rods operated thereby during its rotation.

2,456,009
FRICTION-ROTARY BLOTTING DEVICE FOR DUPLICATING MACHINES
Jack S. McLane, Columbia, S. C.
Application April 8, 1947, Serial No. 740,080
6 Claims. (Cl. 101—416)



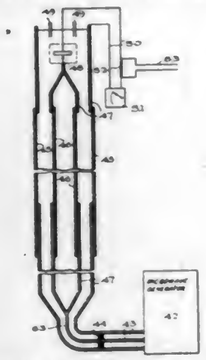
1. A blotting and drying attachment for duplicating machines having a printing drum suitably driven and an impression roller coacting therewith, means coacting between the drum and impression roller to cause raising and lowering of the impression roller to engage the drum and printing surface or to move downwardly away from the same when the sheets are fed forwardly and upwardly against the sheet for impressing the same, comprising levers swingably supporting said impression roller, a blotting and drying roller, a yoke movably supporting said blotting and drying roller to be raised and lowered, a pressure roller beneath the blotting and drying roller, means for driving said pressure roller from the drum, lever actuated means between the levers of the impression roller and the arms of the yoke to raise the blotting and drying roller when the impression roller is down and to permit lowering thereof when the impression roller is engaged with a sheet against the drum during the printing of a sheet, means normally holding the blotting and drying roller toward the pressure roller, means for guiding the sheets from between said latter rollers, a receiving tray for the sheets, and means for holding the blotting and drying roller elevated.

2,456,010
PERMUTATION IGNITION SWITCH
Gustav F. Miller, Tacoma, Wash.
Application October 25, 1946, Serial No. 705,753
5 Claims. (Cl. 200—43)



5. A switch device comprising a cylindrical housing, a shaft concentrically journaled in said housing, a first brush-carrying arm freely rotatable on said shaft, a brush carried by said arm contacting the inner surface of said housing, a first pair of angularly-spaced driving arms for said first brush-carrying arm rigidly secured to said shaft, a second brush-carrying arm freely rotatable on said shaft, a brush carried by said

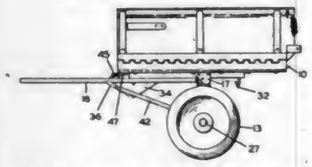
second arm contacting the inner surface of said housing, a second pair of angularly-spaced driving arms for said second brush member rigidly secured to said shaft, a third brush member freely rotatable on said shaft, a brush carried by said third brush-carrying arm contacting the inner surface of said housing, a third pair of angularly-spaced driving arms for said third brush-carrying arm rigidly secured to said shaft, the angular space between said first pair of driving arms including said first brush-carrying arm being greater than the corresponding angular space between said second pair of driving arms and the



angular space between said second pair of driving arms including said second brush-carrying arm being greater than the corresponding space between said third pair of driving arms, whereby said first, second and third brush-carrying arms are successively brought to predetermined position within said housing, axially aligned contact members carried by said housing and engageable by said brushes to complete an electrical circuit through said switch when said brushes are in a predetermined position in said housing, and a graduated dial fixed on one end of said shaft for rotating said shaft.

2,456,011
APPARATUS FOR ALIGNING PREENGRAVED PROJECTILES IN RIFLED FIREARMS
Clarence Walton Musser, Philadelphia, Pa.
Application July 17, 1945, Serial No. 605,614
10 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

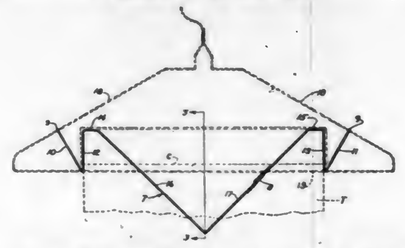
9. In combination, a rifled cylindrical member and a tube having a rifled bore adapted so as to enable the respective riflings to become registered one with the other when the cylindrical member is inserted into the tube, and resilient means separate and independent of the teeth and grooves of both the said rifled member and rifled tube adapted to cooperate therewith by yielding so as not to cause interference when said member is moved axially within and relative to said tube, but capable of functioning as an indexing device to cause meshing register between riflings of cylindrical member and the riflings of the tube when said member is axially inserted into the tube.



2,456,012
METHOD OF AND APPARATUS FOR MEASURING THE ELECTRICAL PROPERTIES AND SURFACE CHARACTERISTICS OF MATERIALS
Morris Muskat, Oakmont, and Norman D. Coggeshall, O'Hara Township, Allegheny County, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application December 21, 1944, Serial No. 569,224
2 Claims. (Cl. 175—183)

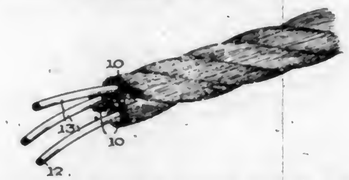
1. A method of inspecting the outside surface of a cylindrical body comprising surrounding it with a larger substantially concentric hollow cylinder, generating microwave energy and launching it in the space between the cylindrical surfaces, transmitting microwave energy via a selected portion of said cylindrical surfaces, receiving microwave energy from the space between the cylindrical surfaces, measuring a characteristic value of the received energy and varying the portion of the cylindrical surfaces selected for transmission.

2. Apparatus for inspecting the outside surface of a cylindrical body comprising a larger hollow cylinder, means for maintaining the body inside said hollow cylinder, a microwave generator, means for connecting said generator in energy-transmitting relationship to the space between said cylinders, a microwave receiver, means for connecting said receiver in energy-receiving relationship to the space between said cylinders, means for measuring a characteristic value of the received energy and means for moving the body with respect to said energy-transmitting and said energy-receiving connecting means.



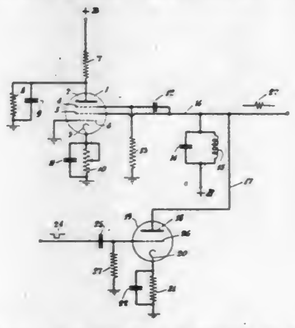
2,456,013
COLLAPSIBLE TRAILER
Adelbert M. Nelson, deceased, late of Milwaukee, Wis., by Minnie Witt, executrix, Milwaukee, Wis.
Application September 27, 1946, Serial No. 699,809
5 Claims. (Cl. 280—36)

1. A device of the character described comprising in combination, a body, said body having



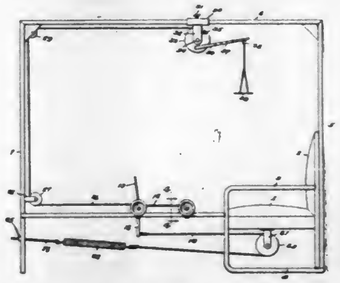
floor boards and side boards hingedly attached in a manner to permit the side boards to be folded against said floor boards, an axle extending transversely across said body, said axle provided with wheel support members hingedly attached to each of its ends, a pair of wheels, locking means attached to said axle for retaining said wheel supports in either a vertical or horizontal position, a rectangular frame, said frame slidably attached to the bottom of said body, a spring, said spring attached to said axle, a draw bar, said draw bar attached to said rectangular frame, said axle and spring hingedly attached to said body, means for adjusting said wheels from a vertical to a horizontal position, and means for adjusting said axle and spring assembly from a vertical to a horizontal position.

2,456,014
TROUSER HANGER
Ernest J. Neaves, Boston, Mass.
Application November 7, 1947, Serial No. 784,588
2 Claims. (Cl. 223—88)



1. A unitary trouser hanger formed of wire and including spaced opposed sides, each side including an intermediate generally V-shaped portion and arms carried by the ends of the V-shaped portion, the arms having shoulders at their tops, the arms being adapted for insertion within a cuff of trousers, and inverted substantially U-shaped loops connecting the lower ends of the arms of one side with the lower ends of the arms of the companion side, the U-shaped loops being adapted to be mounted upon the shoulders of a coat hanger.

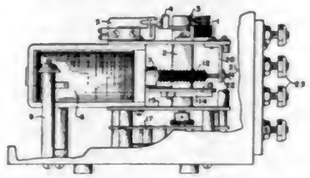
2,456,015
ELECTRICAL CONDUCTOR
Keith L. Orser, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a corporation of New York
Application August 1, 1944, Serial No. 547,590
2 Claims. (Cl. 174—69)



1. A stranded rope structure, each strand being composed of a plurality of spirally arranged load carrying elements of twisted filaments of stretchable non-metallic material, certain of said strands having an electrical conductor element embedded therein having a core constituted of twisted filaments forming one of said load carrying elements, electrical conducting wire arranged spirally around said core and an elastic non-conductive covering encasing said wire, the twisted filaments forming the core of said conductor elements having elongation and recovery characteristics substantially corresponding to the elongation and recovery characteristics of the twisted filaments forming other load carrying elements of the strands in which said conductor elements are embedded.

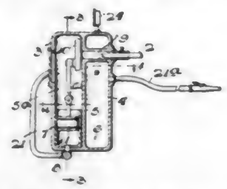
2,456,016
KEYED OSCILLATOR
Robert P. Owen, Passaic, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application September 16, 1944, Serial No. 554,382
4 Claims. (Cl. 250—36)

1. A device for producing bursts of electrical oscillations, which comprises a pentode that has its control grid grounded and its cathode connected to ground through a resistor, a condenser and inductance in parallel connected between a source of positive potential and the screen grid of said pentode, a resistor between the suppressor grid of said pentode and ground and a condenser between the screen grid and suppressor grid of said pentode to cause said pentode to oscillate when positive potential is applied to its plate, a triode adapted to be blocked when a pulse of negative potential is applied to its control grid, the plate of said triode being connected directly to said screen grid and its cathode connected to ground through a resistor.



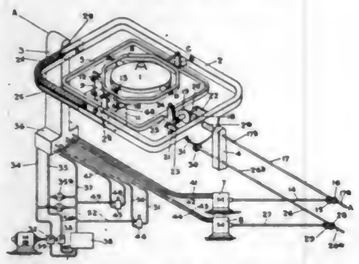
2,456,017
POLIO EXERCISING MACHINE
Marion A. Park, St. Louis, Mo.
Application September 8, 1947, Serial No. 772,753
6 Claims. (Cl. 272—79)

2. In an exercising appliance including a chair for a patient, a rigid rail frame, and an overhead frame, the combination with a wheeled foot-



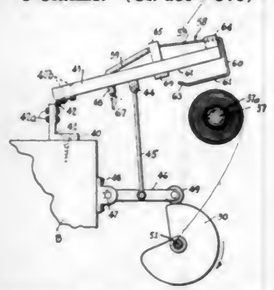
pressed truck reciprocably mounted on the rail frame, and resilient means for returning the truck toward the chair, of a vertically reciprocable hand-exerciser mounted in the overhead frame for arms and shoulders, and operative connections from the reciprocating truck for actuating the overhead exerciser.

2,456,018
TIMING DEVICE
Edward S. Peterson, Elmwood Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application June 26, 1944, Serial No. 542,178
1 Claim. (Cl. 200—97)



In a timing mechanism, the combination of a solenoid having a plunger, an adjustable stop for providing an outward plunger movement of desired length, means for energizing and deenergizing said solenoid at certain intervals, a switch for controlling an electric circuit or circuits, a gear train, a spring, rotatable means, said plunger drawn into said solenoid by the energization of said solenoid for causing one operation of said rotatable means to tension said spring, said tensioned spring responsive to the deenergization of said solenoid causing another operation of said rotatable means to move said plunger outwardly to said stop, means for coupling said gear train with said plunger only when said plunger is moved outwardly to delay said plunger reaching said stop for a definite period of time, the arresting of said outward movement of said plunger causing the operation of said switch providing that said plunger reaches said stop before said solenoid is again energized and again attracts said plunger, the re-attraction of said plunger before said plunger reaches said stop preventing the operation of said switch, causing said coupling means to be temporarily disconnected from said gear train, and causing said rotatable means to retension said spring.

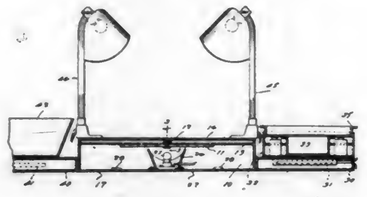
2,456,019
MOTOR ATTACHMENT FOR TRACTORS
John J. Pettipiece, Powell, Wyo.
Application February 12, 1947, Serial No. 728,116
2 Claims. (Cl. 103—218)



1. A unitary apparatus for attachment to, and use with a tractor having a power take-off shaft, which apparatus comprises a casing, a pump chamber and a compression chamber in the casing, a pump in said pump chamber, a pump shaft in said casing and for operating said pump, detachable means for drivingly connecting the pump shaft directly to the power take-off shaft, passage means connected with the pump chamber and leading from the pump chamber to the compression chamber to supply liquid under pressure to said compression chamber, and a hose connected to the compression chamber to distribute the liquid.

2,456,020
GYROSCOPE PRECESSOR AND FOLLOW-UP
Edward J. Poitras, Pasadena, Calif., and James D. Tear, Great Neck, N. Y., assignors to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Continuation of application Serial No. 35,682, August 10, 1935. This application April 11, 1939, Serial No. 267,248
15 Claims. (Cl. 74—5)

1. In a gyroscope precessing and following mechanism, a gyroscope, a pivotally mounted support therefore having a piston compartment thereon and ports in the walls thereof, a compound differential piston slidably mounted in said compartment in control of said ports and connected to said gyroscope, a source of liquid under constant pressure acting on one end of the piston, a source of liquid under variable pressure acting on the other end of the piston, and means for varying the pressure of said last mentioned source of liquid to vary the precessing force on the gyroscope.



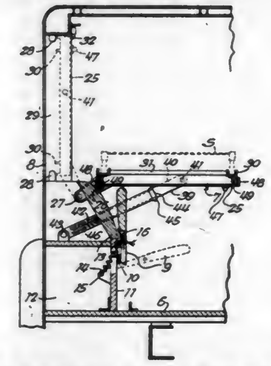
2,456,021
STOP MOTION MECHANISM FOR NARROW FABRIC LOOMS
Willis Pruitt, Attalla, Ala., assignor to Lawrence Products Co., Attalla, Ala., a firm
Application August 31, 1946, Serial No. 694,366
8 Claims. (Cl. 139—370)

1. Stop-motion for a narrow fabric loom having a magnetic starter provided with a relay including a transformer, comprising a member upon which weft thread may be wound, said member being carried by the usual shuttle and

being adapted to make an electrical contact, an electrical insulating plate, means hingedly connecting said plate to the usual loom breast beam, a pair of electrical contact members carried by said plate and adapted for engagement with said member, a cam lever, means hingedly connecting said lever to said breast beam, a rod pivotally connected to said plate and being attached to said lever, a shaft, a sprocket wheel mounted on said shaft, a sprocket wheel mounted on the usual loom crank shaft, a sprocket chain in engagement with said sprocket wheels, a cam on said first-mentioned shaft engaging said cam lever, said contact members being adapted to intermittently engage weft thread wound upon said member and to electrically contact with said member before the weft thread on said member is exhausted, electrical conductors connecting one terminal of the low voltage side of said transformer to said relay, the other terminal of said low voltage side to one contact of said pair of electrical contacts, and the other contact of said pair of electrical contacts to said relay.

2,456,022
MANICURE APPARATUS
Noreen C. Rebo, Gorin, Mo.
Application March 18, 1947, Serial No. 735,521
2 Claims. (Cl. 132—73)

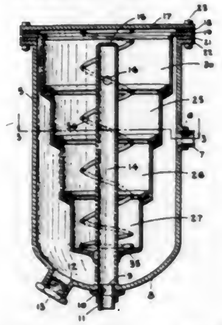
1. A finger nail manicuring stand comprising a horizontal base to rest upon a support, said base comprising an upper plate and a lower plate, said plates being vertically spaced and formed near one edge with vertically registered openings, a light source on said base beneath said lower plate arranged for directing light upwardly through said registered openings, and a rotatable masking disk mounted on and beneath said lower plate, the edge of said masking disk projecting beyond an edge of said upper plate to facilitate rotation of said masking disk from a position above said upper plate, said masking disk being formed with a plurality of circumferentially spaced openings arranged to be selectively registered with said openings in the upper and lower plates by rotating said masking disk.



2,456,023
TENNIS RACKET
Isaac Lee Rosenbalm, Inglewood, Calif.
Application February 14, 1947, Serial No. 728,647
3 Claims. (Cl. 273—73)

1. A tennis racket having its loop portion formed of tubular material with spaced openings around the inner side thereof, and means for anchoring strings thereto, said means including a series of heads with holes therethrough, each head having a neck portion inserted through one of said openings in the inner face of said tubular loop, strings threaded through said heads across said loop portion, said neck portions each having a hole therethrough, within the tubular loop, and an anchoring wire threaded through said neck

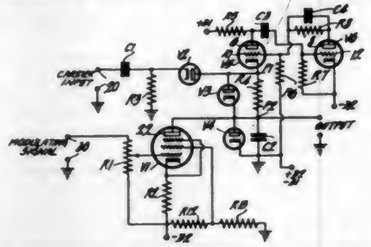
portions within said tubular loop to yieldingly anchor said anchoring means.



2,456,024
FOLDABLE STRETCHER CARRIER FOR AMBULANCES
Earl L. Schofield, Rockford, Ill., assignor to E. L. Schofield, Incorporated, Rockford, Ill., a corporation of Delaware
Application March 5, 1945, Serial No. 581,003
6 Claims. (Cl. 296—19)

1. In an ambulance, comprising a body having substantially vertical side walls and a floor, a stretcher support comprising an elongated frame extending longitudinally with respect to the body for support of a stretcher, means for pivotally supporting said frame on one longitudinal edge portion thereof on the adjacent side wall for swinging movement upwardly from a substantially horizontal operative position to a substantially vertical retracted position alongside said wall, said pivoting means being so arranged with respect to said frame and side wall that the frame swings past a dead-center position in moving upwardly toward its retracted position, whereby said frame tends to gravitate toward said side wall when in retracted position, means for releasably securing said frame in retracted position, and means for supporting said frame in horizontal operative position, said means comprising telescoping members, one of which is pivoted to the frame radially outwardly from the pivotal axis of said frame on said side wall and the other of which is pivoted on said side wall below said pivotal axis, and a coiled compression spring means arranged to be compressed in the con-

tracting movement of said telescoping members and arranged to expand throughout the extending movement of said telescoping members, whereby said spring means in at least the last portion of the lowering of the frame counterbalances the weight thereof and in at least the first portion of the raising of the frame assists such operation.



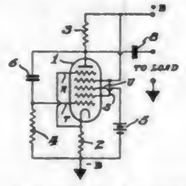
2,456,025
MECHANICAL FILTER
Emmett Seifert, San Gabriel, Calif.
Application May 10, 1946, Serial No. 668,655
6 Claims. (Cl. 210—165)

5. A mechanical filter for oil or other liquid under pressure comprising a closed vertical casing provided with an oil inlet below its upper end and a filtered oil outlet in its bottom, an axial downflow tube having its lower end connected to said outlet, said downflow tube being closed at its upper end and provided with a port located above the level of said oil inlet, a plurality of telescoped stripping sleeves concentrically surrounding said downflow tube, the innermost sleeve having a closed bottom apertured to slidably fit said downflow tube and the outermost sleeve being fixed to the upper part of said casing, at least one intermediate sleeve having an inwardly projecting annular stripping flange on the lower end thereof having a stripping surface slidably fitting the exterior of said innermost sleeve and an outwardly projecting annular stripping flange on its upper end having a stripping surface slidably fitting the interior of a next outer sleeve, with the upper stripping flange of one intermediate sleeve slidably fitting the interior of said outermost sleeve above the lower inwardly projecting stripping flange thereof, the entrance of the oil under pressure into said sleeves acting to force said innermost and intermediate sleeves upwardly so as to further telescope the sleeves, means for limiting the upward telescoping travel of the sleeves relative to each other and to said outermost sleeve, said stripping surfaces being formed with annular oil grooves for increasing the stripping action of said surfaces upon oil passing upwardly between said surfaces and the interior of the next outer sleeve.

2,456,026
MODULATOR EMPLOYING TRIGGER CIRCUIT
Eugene R. Shenk, Brooklyn, and Anthony Liguori, New York, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application June 14, 1947, Serial No. 754,758
14 Claims. (Cl. 179—171.5)

1. In a signalling apparatus, a trigger circuit comprising two tubes having electrodes and connections such that the circuit has one condition of stability to which it returns at a predetermined time interval after it is tripped therefrom, a capacitor, a discharging path for the capacitor including the impedance between the electrodes of

one of said tubes, a charging path for said capacitor including a source of continuous unidirectional current, connections to said trigger circuit for tripping the same from said one condition of stability at a recurring rate and an output circuit coupled to said capacitor.

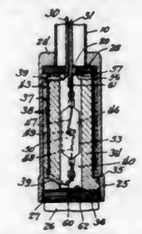


2,456,027
METHOD OF MAKING FLUOROCARBONS
Joseph H. Simons, State College, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
No Drawing. Application April 1, 1944, Serial No. 529,182
4 Claims. (Cl. 260—648)

1. A process for the production of fluorocarbons which comprises heating carbon to a temperature of from 200° C. to 600° C. in an atmosphere of fluorine and in the presence of at least one material from the group consisting of the fluorides of mercury, antimony, aluminum and iron, serving as a catalyst to cause smooth non-explosive reaction between the carbon and the fluorine within said temperature range.

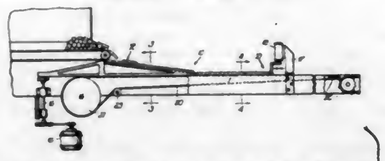
2,456,028
FLUOROCARBON COMPOUND
Joseph H. Simons, State College, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
No Drawing. Application December 3, 1947, Serial No. 789,553
1 Claim. (Cl. 260—648)

The alicyclic fluorocarbon compound C_5F_{10}, having five carbon atoms in the ring.



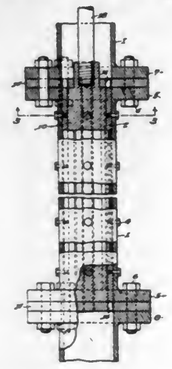
2,456,029
THERMIONIC TUBE CIRCUITS
Richard L. Snyder, Jr., Glassboro, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 30, 1942, Serial No. 452,820
14 Claims. (Cl. 250—36)

2. An oscillator including a thermionic tube having a cathode, an anode, a screen electrode,



and a plurality of control electrodes, a source of anode potential positive with respect to said cathode, means connecting said positive anode potential to said anode and said screen, a source of bias potential positive with respect to said cathode, a cathode resistor, means including said resistor connecting said cathode to a point of reference potential, means connecting the first of said control electrodes to said point of reference potential, means for applying said positive bias potential to a second one of said control electrodes, reactive feedback means, and means connecting said feedback means between at least one of said control electrodes and at least one of said electrodes connected to said positive anode potential means.

2,456,030
ELECTRIC SOLDERING IRON
Carl B. Sohns, Grafton, Wis.
Application December 5, 1945, Serial No. 632,925
2 Claims. (Cl. 219—26)

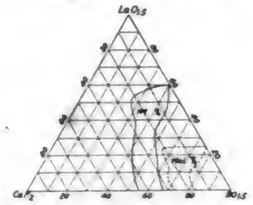


1. An electric soldering iron comprising, in combination, support means, a handle at one end thereof adapted to be gripped manually, a soldering tip at the other end, a generally cylindrical heating element carried by said support means in heat conducting relation to said tip, automatic temperature control means disposed within said cylindrical heating element in such position as to be affected directly by the heat of said tip and arranged to control the energization of said heating element so as to maintain the tip substantially at a predetermined temperature, and means for resiliently mounting said automatic temperature control means within said heating element whereby said control means is substantially unaffected by shock resulting from rough handling of the soldering iron.

2,456,031
ARTICLE ARRANGING AND ADVANCING CONVEYER MECHANISM
William P. Spain, Villa Park, Ill., assignor to E. J. Brach & Sons, Chicago, Ill., a corporation of Illinois
Application April 10, 1946, Serial No. 661,155
6 Claims. (Cl. 198—30)

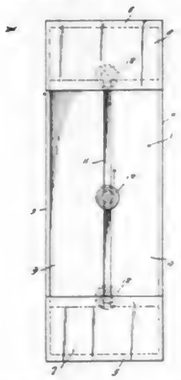
6. In a device for arranging and advancing a plurality of edible units in spaced apart rows comprising a frame having a plurality of spaced apart guide members longitudinally mounted therein, said frame having an inclined receiving end for said units between which said guide members are similarly inclined and secured, and a discharge end therefor, and means connected to said receiving end simultaneously and continuously to impart a sidewise movement and forward thrust to said units to align them in spaced apart rows between said guide members and to advance them toward said discharge end of the frame, and a conveyor disposed beneath said frame to advance said aligned units from said inclined end past the discharge end thereof, said forward thrust being applied to said units by said inclined end.

2,456,032
FUEL CONTROL DEVICE FOR SUBMERGED BURNERS
Rudolph J. Stengl and Floyd B. Bedwell, Tulsa, Okla., assignors to Ozark-Mahoning Company, a corporation of Delaware
Application July 4, 1944, Serial No. 543,470
6 Claims. (Cl. 251—84)



1. A fuel control device for a submerged burner adapted for interposition between the latter and an inlet pipe for conveying a combustible gaseous mixture thereto, and comprising an elongated hollow casing having circumferentially spaced internal ribs, a rotatable plug within the casing having external grooves respectively receiving said ribs and each of greater circumferential length than and of a radial width substantially equal to that of the rib received therein and lands between adjacent grooves extending to and in sliding engagement with the casing wall between the ribs, means adjacent an end of the casing and engaging the proximate ends of the ribs providing ports respectively registering with portions of the spaces between the ribs, the effective shape and area of each port substantially conforming to that portion of the adjacent groove unoccupied by the corresponding rib when the plug is at one limit of its rotative travel, and means operable from a point remote from the device for rotating the plug from said position to diminish the effective areas of said ports and spaces for the passage of the mixture to the burner.

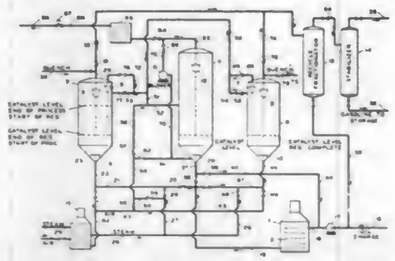
2,456,033
FLUOBORATE GLASS
Kuan-Han Sun, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 9, 1946, Serial No. 646,681
11 Claims. (Cl. 106—47)



1. A glass resulting from a batch comprising

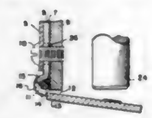
in cationic percentage boron oxide, 45 to 90 per cent; lanthanum oxide, 1 to 28 per cent; and

fluoride, 1 to 31 per cent, said glass having an n_D value greater than 2.2–0.01 ν.



2,456,034
MOVING TARGET MACHINE
Norman Suydam, Toledo, Ohio
Application August 10, 1945, Serial No. 610,017
6 Claims. (Cl. 273—105.2)

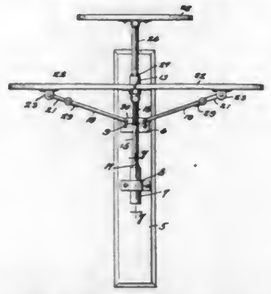
1. In a moving target machine, a vertically positioned target run, a target movable from the bottom to the top of the machine through the target run, a conveyor, a finger on said conveyor constructed to engage the target to support it vertically and to carry it upwardly through the target run, a cam at the upward end of the target run for disengaging the target from said finger whereby the target may fall under the influence of its own weight to the bottom of the machine, and means at the bottom of the run for resetting the target for engagement with said finger.



2,456,035
TREATMENT OF FLUIDS WITH COMMINUTED SOLIDS
Burle F. Wobker, Mission, Kans., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 2, 1948, Serial No. 222
11 Claims. (Cl. 196—52)

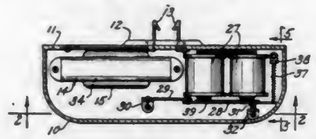
7. A process for cracking hydrocarbon oils which comprises vaporizing a hydrocarbon oil and passing same upwardly through a first turbulent mass of powdered cracking catalyst at cracking conditions of temperature, pressure and contact time, separating gaseous cracking products from said mass, continuing for a period of time until the quantity of carbonaceous material deposited on the catalyst in said mass attains a predetermined maximum, during said period introducing into said mass additional quantities of hot reactivated powdered cracking catalyst to minimize loss of catalyst activity therein, at the end of said period passing said vaporized oil in contact with a second mass of powdered cracking catalyst in the manner just described, purging hydrocarbons from the first named mass and then passing therethrough a hot oxygen-containing gas under conditions effecting reactivation of the catalyst by oxidation of carbonaceous matter therefrom, during the thus-described reactivation treatment increasing the velocity of reactivation gases to effect entrainment of a substantial proportion of the catalyst mass as a suspension of catalyst particles in hot gases, separating the thus-suspended particles from the hot

gases and accumulating same in a third mass of catalyst particles maintained in a fluidized condition by upward flow of fluidizing gases therethrough, utilizing said third mass of catalyst as the source of the aforementioned additional quantities of hot reactivated catalyst introduced into the masses of catalyst employed for cracking said oil, purging said hydrocarbons from said second mass of catalyst at the end of its cracking period, again utilizing for cracking the first said mass of catalyst which has been reactivated and reactivating the said second mass of catalyst in the manner described, and continuing the aforesaid process cyclically with each said first and second masses of catalyst being employed alternately for cracking and reactivation.



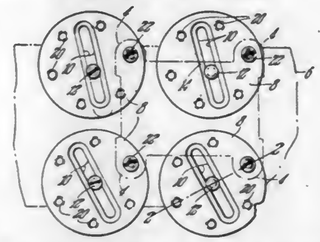
2,456,036
RELAY YOKE
Fredric E. Wood, Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application November 23, 1945, Serial No. 630,422
3 Claims. (Cl. 175—336)

1. In an electromagnetic switching device, a core, a heel piece secured to said core, an armature having a pivot pin, means for rotatably securing said armature to said heel piece, said means including a relay yoke having a pair of semi-rounded ears at one extremity of said yoke, inner semi-rounded bearing surfaces in said ears for pivotally securing said pivot pin and said armature to said heel piece, a reinforcing section extending longitudinally between said ears to stiffen said ears and keep said bearing surfaces in alignment, said reinforcing section being out of alignment from said bearing surfaces of said ears to provide clearance between said section and the armature pivot pin, and said reinforcing



section extending laterally only part way between said ears to provide an opening therebetween for visually observing the air line between said heel piece and said armature.

2,456,037
FOLDING DINETTE TABLE
Webster F. Woods, Glendale, Calif.
Application June 12, 1947, Serial No. 754,197
1 Claim. (Cl. 311—19)

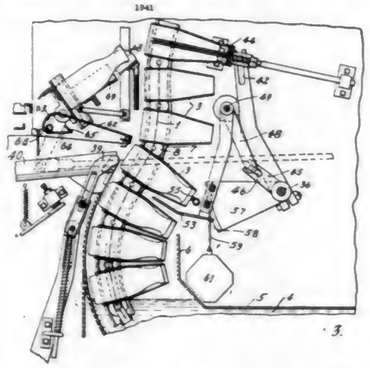


In a swinging foldable table, a supporting plate, vertical spaced upper and lower tubular bearings secured to the supporting plate, a main supporting arm, a fitting secured to one end of the main supporting arm, a bearing pin extending from the lower end of the fitting and being disposed in the upper bearing for rotary movement of the main supporting arm, a brace rod secured to the lower edge of the main supporting arm, throughout a portion of the length of the main supporting arm and having one of its ends fitted within the lower tubular bearing, table leaves hingedly connected with the opposite sides of the main supporting arm, brace arms including a metal strap secured to said supporting arm and brace rod and depending therefrom, arms pivotally connected with the strap at opposite sides thereof, and links connected with the outer ends of the latter arms, the links being connected with the table leaves, said leaves being foldable downwardly out of the way or extended to their upper positions.

2,456,038
PORTABLE FIRE ALARM DEVICE
Richard E. Young, Detroit, Mich.
Application May 29, 1947, Serial No. 751,338
1 Claim. (Cl. 177—311)

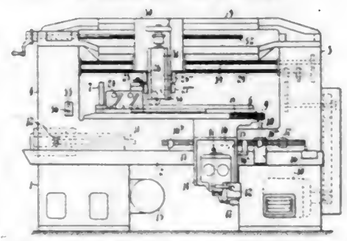
A portable, unitary alarm device for indicating a temperature above a predetermined value in the space contiguous thereto comprising a casing having a back plate and a front cover detachably secured to said back plate, a pair of fingers projecting from the back side of said plate for reception in an electrical convenience outlet to support and electrically energize said device, a transformer mounted at the front side of said plate, an electrical connection between one of said fingers and one side of the primary winding of said transformer, an adjustable thermostatic switch mounted on the front side of said plate, an electrical connection between one contact of said switch and the other side of said primary winding, an electrical connection between the other contact of said switch and the other of said fingers, an electro-magnetic vibrator mounted at the front side of said plate, and electrical connections between said vibrator and the opposite sides of the secondary winding of said transformer to operate said vibrator upon closing of said thermostatic switch.

2,456,039
SECURING DEVICE
Morris H. Abramson, Springfield, Mass.
Application September 27, 1945, Serial No. 618,936
3 Claims. (Cl. 248—23)



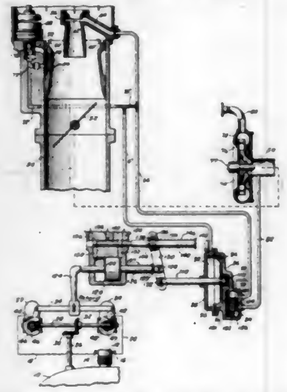
1. Means for securing a motor having separated bolt holes to a base having separated bolt holes spaced differently from those of the motor comprising, a plurality of circular plate members adapted to underlie a motor each having circumferentially spaced bolt holes adjacent marginal edges thereof for receiving bolts extending through the bolt holes of the motor, said members having elongated depressions in their upper faces terminating inwardly from opposite sides thereof and slots extending longitudinally of the depressions for receiving bolts extending upwardly from the holes of the base, the slots being of less width than the depressions forming ledges at the sides thereof for the heads of the support bolts disposed below the upper faces of said members whereby bolts in the base may underlie the motor.

2,456,040
PRERINSING APPARATUS FOR CONTAINER WASHERS
E. Roy Alling, Kenmore, and John C. Knepflar, Tonawanda, N. Y., said Knepflar assignor to Rice and Adams Corporation, Tonawanda, N. Y., a corporation of New York
Original application April 25, 1941, Serial No. 390,400. Divided and this application June 15, 1944, Serial No. 540,379
12 Claims. (Cl. 134—131)



2. A washer for containers comprising a flexible conveyor moving in a selected path and having a plurality of container receiving pockets supported thereon for movement therewith in succession along said path, each of said pockets having an open end through which the container is moved into the pocket and through which they are later discharged, said conveyor in one portion of said path being guided downwardly at an inclination to both the vertical and horizontal, with the pockets in said portion inclined upwardly toward the open end, means for delivering the containers into said pockets in succession while in said portion of the path, spray means disposed adjacent the lower ends of said pockets, while in an inclined position in said portion of the path, for

directing upwardly into said pockets in succession a stream of rinsing liquid, a tank below said inclined portion and into which the conveyor descends after leaving said portion of the path, means for advancing the conveyor step by step with intervals of rest between the movements for positioning the pockets in succession in front of said spray means, a drain pan shiftable between one position beneath the lower end of a pocket aligned with said spray means in which it receives and diverts away from said tank the drip from any container in a pocket aligned with said spray means, and another position in which it clears said pockets during their advance, and a connec-

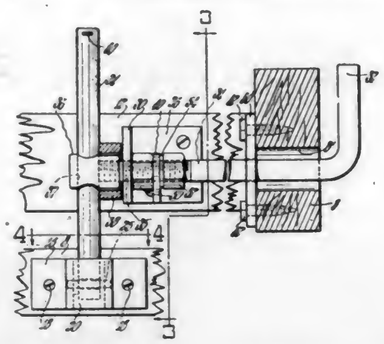


tion from said pan to said conveyor advancing means for moving said pan into said one position at the beginning of each of said rest intervals and moving it from that position to said another position at the end of that interval, and a shield disposed in alignment with the longitudinal axis of any pocket which is disposed at any time in alignment with said spray means for receiving and collecting the stream passing through a pocket with no container therein, said shield having a roof portion to intercept the stream and deflect it laterally, and another portion depending below the roof portion for collecting the deflected spray and conducting it to a drain.

2,456,041
MACHINE FOR MACHINING ARCUATE SURFACES
Edgar Barker, Toronto, Ontario, Canada
Original application November 5, 1942, Serial No. 464,615, now Patent No. 2,379,870, dated July 10, 1945. Divided and this application January 13, 1945, Serial No. 572,665
4 Claims. (Cl. 90—16)

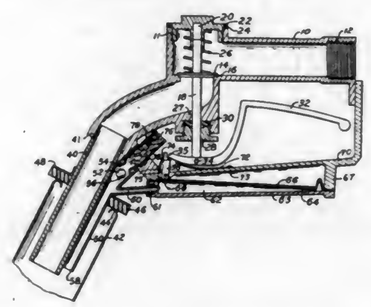
1. A machine of the class described having a frame including an overarm; a movable table suitably mounted on the frame for carrying work; a cutter head movable longitudinally on the overarm; a rotary cutter horizontally journalled on said head; a slide vertically adjustable on said head; a rotary cutter horizontally journalled on said slide below the first cutter for movement relative thereto; a suitably driven horizontal splined shaft; a vertical shaft journalled in said head having a slidable drive connection with the splined shaft; and worm gearing between each of the cutters and the vertical shaft for driving the cutters and permitting relative movement thereof.

2,456,042
IGNITION TIMING
Guy E. Beardsley, Jr., West Hartford, and Clarence W. Laubin, Windsor, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application July 20, 1945, Serial No. 606,127
12 Claims. (Cl. 123—117)



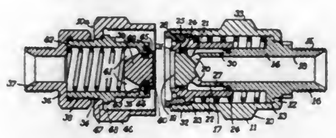
1. In ignition timing apparatus for an engine, means responsive to a pressure difference which increases with increases in engine power, and means controlled by said pressure responsive means for gradually retarding the ignition timing of said engine in accordance with increases in said pressure difference.

2,456,043
LOCKING DEVICE FOR ROCKING CHAIRS
Adelard J. Belisle, Springfield, Mass., assignor to The Berkline Corporation, Springfield, Mass., a corporation
Application May 22, 1948, Serial No. 28,558
2 Claims. (Cl. 155—72)



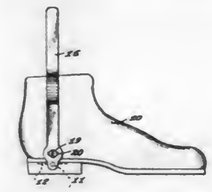
1. Apparatus for releasably locking the base and seat members of a rocking chair against relative rocking movement, comprising in combination, a bracket having a plate portion secured to one of the members and a flange portion extending outwardly from the plate portion and having inner and outer sides, a manually engageable threaded actuator oscillatable in the flange portion between locking and unlocking positions, a locking nut at the outer side of the flange portion having a threaded socket operatively receiving one end of said actuator and provided with a slide rod opening therethrough, a primary nut fixed on said actuator for engaging the inner side of the flange portion, a slide rod having an end pivotally connected to the other of the members and slidably receivable through the slide rod opening in said locking nut, and a locking collar loosely carried on said locking nut between said slide rod and the outer side of the flange portion

for engaging the same, all adapted and arranged whereby as said actuator is oscillated to locking position said primary nut is forced against the inner side of the flange portion and said locking nut



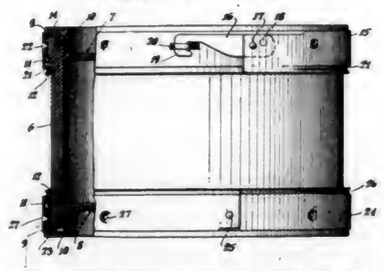
is moved axially toward the outer side of the flange portion to cause said collar to be squeezed between said rod and the flange portion so that said slide rod is held by said collar against sliding movements relative to said nut.

2,456,044
DISPENSING NOZZLE WITH AUTOMATIC CUTOFF
David Biermann, Cook County, Ill.
Application August 3, 1945, Serial No. 608,713
3 Claims. (Cl. 226—120)



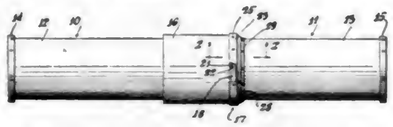
1. A device for insertion into a container to be filled with a liquid comprising in combination a valve body having a fluid passage therein, means for sealing the connection between said valve body and said container, a vent passage leading from within said container to the outside atmosphere, a check valve in said vent passage loaded to close only by the passage of a liquid from the container to the atmosphere, a self closing valve in said body, a manually actuatable lever pivotally mounted on a latch and engaging said self closing valve, said latch pivotally mounted on said valve body, a chamber closed by a diaphragm, a member attached to said latch and cooperating with said diaphragm for movement therewith, and a passage connecting said vent passage with said closed chamber to transmit pressure arising from the closing of said check valve and thereby implementing the release of said latch and the closing of said valve.

2,456,045
PIPE COUPLING
William Hudson James Brock, Leamington Spa, England
Application December 29, 1945, Serial No. 637,882
In Great Britain January 2, 1945
3 Claims. (Cl. 284—19)



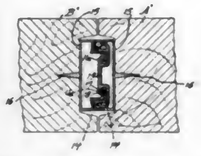
1. A pipe coupling of the kind referred to, consisting of two coupling parts of which the first comprises a tubular stem with lateral apertures closed by a sleeve sliding on the stem and forming with the latter an annular fluid space in permanent connection with the interior of said stem, and the second comprises a tubular body with an end aperture closed by an axially movable valve, the axially movable valve being displaced, inwardly by the stem, and the sleeve being displaced along the stem by the tubular body as the parts are brought together, until the apertures in the stem pass through the end aperture in the tubular body, characterized by the fact that the sleeve and axially movable valve are both grooved circumferentially and are fitted with sealing rings engaging respectively with the end of the stem remote from said fluid port means and the curved wall of the end aperture in the tubular body when the coupling parts are separated and that the stem is also grooved circumferentially and fitted with a sealing ring for engaging the end of the sleeve adjacent said fluid port means, whereby said annular space is sealed at each end thereof.

2,456,046
LEG BRACE
Glen A. Burrows, Charlotte, N. C.
Application March 24, 1947, Serial No. 736,722
4 Claims. (Cl. 128—80)



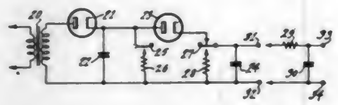
1. A leg brace comprising a stirrup barrel adapted for attachment to the heel of a shoe or the like, side arms pivotably associated with said stirrup barrel, and means for limiting the pivoting movement of said arms with respect to said stirrup barrel comprising arm members disposed to extend upwardly from said stirrup barrel adjacent the upper of said shoe and carrying stop elements at their extending ends disposed for engaging said side arms in spaced relation to the point of pivoted association with said stirrup barrel and thereby limit pivoting movement of said side arms with respect to said stirrup barrel.

2,456,047
CONTAINER
Herbert L. Carpenter, Amityville, N. Y., assignor to Carpenter Container Corporation, Brooklyn, N. Y., a corporation of Delaware
Original application February 1, 1937, Serial No. 123,414. Divided and this application June 19, 1945, Serial No. 600,318
1 Claim. (Cl. 229—5.7)



A container comprising a tubular body portion made of fibrous material and formed with a circumferential bead adjacent but spaced from the end thereof, said bead presenting a relatively sharp shoulder facing away from the end and a tapered surface facing towards said end, a closure having a portion fitted into the end of the body portion and a split clamping rim embracing the end of the tubular body portion and having an inwardly projecting flange overlapping the peripheral portion of the closure, said split rim being expandable to open position to provide for its removal and being contractable to closed position gripping the end of the body portion and pressing it into engagement with the closure and said rim having an inwardly projecting circumferential shoulder interengageable with the shoulder of said bead when the rim is in closed position to retain the rim and closure in assembled relationship.

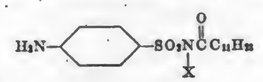
2,456,048
SECTIONAL CONTAINER AND COUPLING
Herbert L. Carpenter, Amityville, N. Y., assignor to Carpenter Container Corporation, Brooklyn, N. Y., a corporation of Delaware
Original application February 1, 1937, Serial No. 123,414. Divided and this application June 19, 1945, Serial No. 600,319
2 Claims. (Cl. 285—129)



1. A container structure comprising a plurality of separable sections each including a hollow body portion made of fibrous material and cooperable to be joined together end to end, the end of one section being of greater diameter than the end of another section to provide telescopic engagement between the ends, one of said sections being formed with a circumferentially extending relatively thin, separate metal band secured therearound having a continuous projecting rib thereon adjacent the end of said section which joins the other section and means including an expanding metal clamping rim for encircling and overlapping the joining ends of the said sections, the said rim having a portion inter-engageable with the rib on the band of one section and being inter-engageable with the other section whereby the sections are releasably retained in assembled relationship.

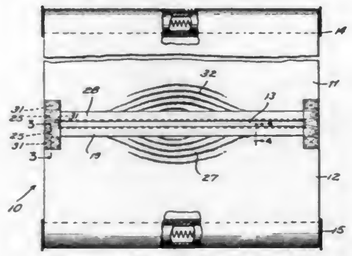
2,456,049
INTERLOCKING PARTITION STRUCTURE
Theodore Carrozza, New York, N. Y.
Application January 11, 1946, Serial No. 640,575
1 Claim. (Cl. 20—92)

The combination of a pair of coplanar structural elements each having a groove in an edge, said elements having their edges disposed in opposed relation with the grooves defining a recess, a channel member for each of said elements secured within the groove thereof and having opposed edges, said edges having an inwardly extending portion and an intermediate portion extending at an angle thereto and a terminal portion extending at an angle with the intermediate portion, the intermediate and terminal portions of one channel being parallel to and in nesting relation with the corresponding portions of the other channel, and a plate having portions substantially of C-shape extending along opposite edges, the C having an edge portion coplanar with the main body of the plate and engaging a terminal portion of a channel, the C including a wing portion extending away from the main body of the plate and outwardly in engagement with a terminal portion of a channel and extending backwardly into engagement with the intermediate portion of the edge of the last mentioned channel.



2,456,050
ELECTRICAL CIRCUITS
John R. Cooney, Waldoboro, Maine
Application April 12, 1945, Serial No. 588,011
8 Claims. (Cl. 175—363)

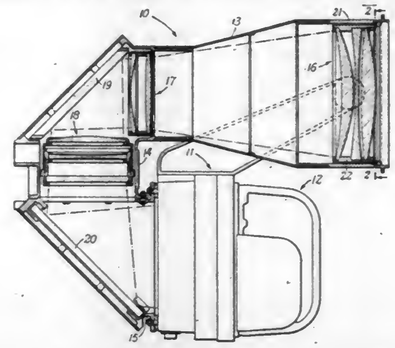
1. The combination of means for applying an alternating voltage, a first capacitor, a second capacitor having a capacitance which is small as compared to that of said first capacitor, means for rectifying said voltage and for applying said rectified voltage to said capacitors, means for discharging said first capacitor at the beginning of each positive half-cycle of said voltage, and means for discharging said second capacitor at the beginning of each negative half-cycle of said voltage whereby the unidirectional voltage output of said device is increased rapidly in response to an increase in the amplitude of said alternating voltages and decreases at a predetermined time after a decrease in the amplitude of said alternating voltage.



2,456,051
N'-DODECANOYLSULFANILAMIDES
Martin E. Hultquist and Elmore H. Northey, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 15, 1944, Serial No. 568,386
2 Claims. (Cl. 260—397.7)

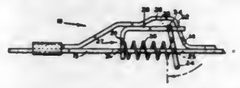
1. N^1 - dodecanoylsulfanilamide having the formula:

in which X is a cation.



2,456,052
CURTAIN FOR FOCAL PLANE SHUTTERS
Irving W. Doyle, Massapequa, and Carl V. Johnson, Kew Gardens, N. Y., assignors to Fairchild Camera and Instrument Corporation, Jamaica, N. Y., a corporation of Delaware
Application November 2, 1944, Serial No. 561,556
3 Claims. (Cl. 95—57)

1. In a focal plane shutter curtain, in combination, a relatively rigid straight slit forming strip, a flexible cloth curtain having slit and roller attaching edges, and means for attaching the slit edge of said curtain to said strip, the length of said curtain while motionless at its longitudinal center line being greater than the length of said curtain along lines spaced transversely of its center line, the greater length of said curtain along its longitudinal center line being created through the provision of a surplus of material adjacent to and extending away from the slit edge of the curtain where it is attached to said strip.

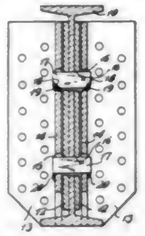


2,456,053
CAMERA LENS MOUNT
Irving W. Doyle, Massapequa, N. Y., assignor to Fairchild Camera and Instrument Corporation, Jamaica, N. Y., a corporation of Delaware
Application April 20, 1945, Serial No. 589,350
7 Claims. (Cl. 88—57)

1. In a camera lens mount, the combination of, a housing, an optical element, a barrel whose outer diameter is less than the inner diameter of the housing for supporting said optical element disposed in said housing and forming an annular space with the inner surface thereof, and means including a plurality of projections secured to said housing in a plane normal to the optical axis and extending radially therefrom into cooperating apertures in said barrel and in slidable engagement therewith for securing said barrel in said housing, whereby said barrel is free to expand radially within said housing but is restrained from axial movement relative thereto,

whereby the optical axis of said optical element is held coincident with the axis of said housing.

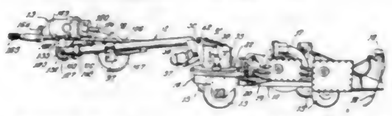
2,456,054
LOCKING DEVICE FOR THE SLIDING MEMBERS OF EXTENSIBLE FRAMES
Daniel A. Eberhardt, St. Louis, Mo.
Application December 11, 1947, Serial No. 791,084
3 Claims. (Cl. 287—58)



1. In an extendible frame having two arms with means for holding the arms in substantially parallel abutting relationship with each other and slidable one with respect to the other, a clamp for locking the said arms against relative movement in one direction comprising a key having an opening therein through which a first of said arms is passed, said opening being dimensioned proportionately to the dimensions of said first arm but larger in area than the cross-sectional area of the first arm, a bowed section formed in the second of said arms, a key mounting member supported from said bowed section and having first and second sections parallel and normal, respectively, to the first of said arms, said first section having a slot therein to receive said second arm and said second section having a slot therein to receive said first arm, means for pivotally connecting said key to said key mounting member, and a spring acting between said second section of said key mounting member and said key to bias the latter into a normal locking position.

2,456,055
END CONNECTION FOR STRUCTURAL STEEL BEAMS
John R. Farrar, Lakewood, Ohio
Application November 8, 1945, Serial No. 627,357
3 Claims. (Cl. 189—36)

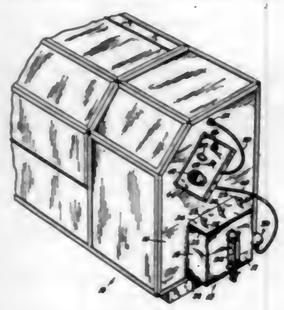
1. In a structural steel construction, a connection between an end of a horizontal structural member and a supporting structural member comprising connecting angles having arms arranged on opposite sides of the web of said horizontal member adjacent the end thereof and arms adapted to be secured to the supporting member, said web and said first mentioned arms being provided with a plurality of vertically



spaced registering openings elongated in the longitudinal direction of the horizontal member, and supporting shelf members extending through the registering openings in said web and said first mentioned arms, the upper walls of the web openings having even simultaneous bearing contact upon the top surfaces of the shelf members while the uper walls of the openings in said first mentioned arms are out of contact with the top

surfaces of the shelf members, the lower surface of one of the shelf members being out of contact with the lower walls of the openings in said web and in said first mentioned arms but with said shelf member secured to said arms, another of said shelf members having its lower surface out of contact with the lower wall of the opening in the web but having bearing contact with the lower walls of the openings in said first mentioned arms and secured to said arms,

---

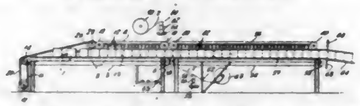


2,456,056
MINE DRILL SUPPORT AND DRIVING MECHANISM
Louis J. Fellay and Harry H. Kavanaugh, Peoria, Ill., assignors to Dooley Bros., Peoria, Ill., a corporation of Illinois
Application September 10, 1947, Serial No. 773,270
11 Claims. (Cl. 255—51)

1. A mine drill support and driving mechanism comprising, in combination, a base plate, a turret supported for rotational movement relative to the base plate, a latch mechanism for locking the turret in any one of a multiplicity of positions relative to the base plate, a drill carrying arm supported at one end by the turret for swinging movement in a plane transverse to the plane of said rotational movement, a motor driven screw mechanism for determining the position of the arm relative to the turret, a drill driving and feeding mechanism mounted for practically universal swinging movement at the other end of the drill carrying arm, and a manually operable control element for actuating said latch mechanism and a switch for controlling said motor driven screw mechanism both mounted on the drill carrying arm near said drill driving and feeding mechanism.

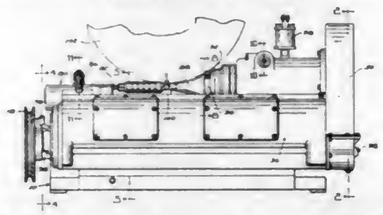
2,456,057
VAPORIZER AND CONTROL PANEL
Frederick W. Glossbrenner, Indianapolis, Ind.
Application October 13, 1947, Serial No. 779,569
3 Claims. (Cl. 219—38)

1. A vaporizer assembly comprising a tank formed to provide bottom, side, and end walls, means spanning a pair of said walls at spaced points, each of said means being provided with a tapped opening therein, a cover for said tank, said cover being formed with spaced openings registering, when said cover is in closing association with said tank, with said tapped openings, a screw enterable through each of said cover openings and taking into one of said tapped openings, each of said screws being provided with an operating knob at one end, said cover further being provided with a tapped opening therein, a further screw taking into said tapped opening in said cover and having a knob at one end, a sight glass, means mounting said sight glass on said tank outside the same, the upper and lower ends of



said sight glass being in communication with the interior of said tank at vertically spaced points, one upstanding wall of said tank being provided with an opening therethrough adjacent said bottom wall, an electrical heater including a body and a resistance heating unit, said unit being entered through said last-named opening and positioned within said tank, means clamping said body to said upstanding wall, another upstanding wall of said tank being provided with an opening therethrough at a point remote from said bottom wall, and a short pipe section rigidly fixed to said last-named upstanding wall and registering with said last-named opening for communication with the interior of said tank.

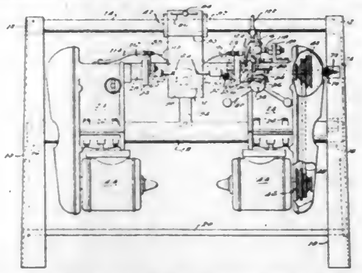
2,456,058
OUTLET GRILLE
George R. Goldthwaite, North Easton, Mass., assignor, by mesne assignments, to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application November 26, 1946, Serial No. 712,356
2 Claims. (Cl. 98—110)



1. A grille comprising a frame having an outlet opening therein and having side members on opposite sides of the opening, said side members having substantially triangular openings therein, the openings having apices and bases opposite the apices, said bases having a plurality of notches therein, and vanes extending across said outlet opening, said vanes having springs attached to the ends thereof and which have portions fitted into said apices and notches.

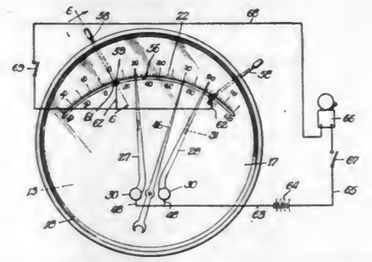
2,456,059
MACHINE FOR AND METHOD OF BANDING BOXES
William F. Grupe, Lyndhurst, N. J., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a corporation of New York
Application March 6, 1946, Serial No. 652,339
6 Claims. (Cl. 216—20)

2. In a machine for banding boxes together, the combination of means for feeding boxes one behind the other in a row, devices for guiding bands having adhesive on one side thereof and applying the adhesive sides of the bands to opposite sides of the boxes as the boxes pass a predetermined station in their travel, means for applying pressure to the bands when they are applied and maintaining the pressure thereon until the adhesive has become substantially set so as to firmly secure the bands to the boxes, and means for thereafter severing the bands so as to successively separate the boxes in groups from the row.



2,456,060
ROTOR GRINDER
Joseph H. Hoern, Birmingham, and Curtis G. Pardee, Detroit, Mich., assignors to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application December 29, 1945, Serial No. 638,184
5 Claims. (Cl. 51—50)

4. A machine for generating external peripheral teeth on inner rotors of internal gear pumps comprising a spindle adapted to carry the rotors to be machined, means for rotating the spindle about its axis, means for moving the spindle in an eccentric path, means for counterbalancing the movement of the spindle, and rotatable means adapted to engage the rotors carried by the spindle effective to provide for the generation of the teeth on the rotors, said spindle, the means for eccentrically rotating the spindle and the means for counterbalancing the spindle movement all being arranged parallelly and symmetrically to one another.

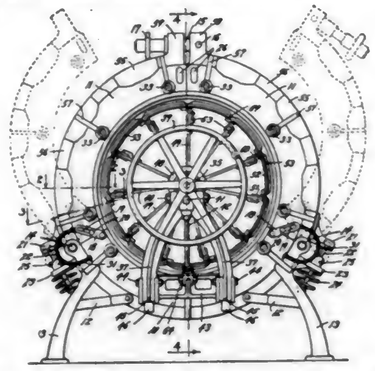


2,456,061
DOUBLE END CENTER LAPPING MACHINE
George Hohwart, Detroit, Mich., assignor to N. A. Woodworth Company, Ferndale, Mich., a corporation of Michigan
Application August 6, 1945, Serial No. 609,145
4 Claims. (Cl. 51—71)

3. In a lapping machine, a pair of opposed and spaced tool heads each including a spindle and means for driving said spindle, means for supporting said heads with the spindles in axial alignment with each other, means for effecting relative axial movement between said spindles, lapping elements carried by said spindles and having working ends, an air nozzle directed approximately at the working end of each lapping

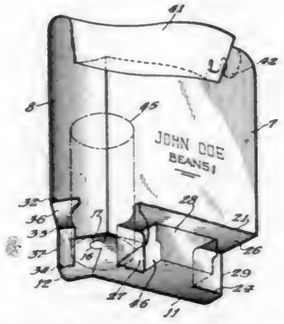
element, valve means for controlling the flow of air through said nozzles, and means rendered operable by relative movement of the spindles to open said valve means.

2,456,062
THERMOMETER AND THERMOSTATICALLY OPERABLE ELECTRIC SIGNALING DEVICE
Emil F. Iwanski, Chicago, Ill.
Application October 8, 1945, Serial No. 620,906
3 Claims. (Cl. 177—311)



1. A thermostatically operable thermometer comprising a dial having a thermometric scale depicted thereon and a temperature indicator disposed above said dial, said dial being provided with a slot coextensive with said thermometric scale, a marker shiftable within said slot for selectively marking temperature degrees upon said thermometric scale, a hand in pivotal engagement with said dial and movable over said thermometric scale, said hand being positioned intermediate said temperature indicator and said marker, an electric signal, a series electric circuit including said signal, said marker and said hand, whereby temperature changes moving said temperature indicator toward said hand will engage said hand and shift said hand therewith towards said marker, said hand upon contacting said marker completing said electric circuit to energize said signal and to set the same in operation, said temperature indicator being movable away from said hand without deenergizing said signal.

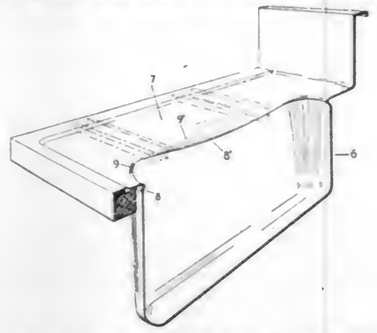
2,456,063
TIRE RETREADING DEVICE
Harold V. James, Denver, Colo.
Application July 24, 1944, Serial No. 546,266
3 Claims. (Cl. 18—18)



3. A pneumatic tire retreading device comprising: an annular hollow housing open at its axial face; an annular heating bar within said housing; means for preventing lateral movement of said

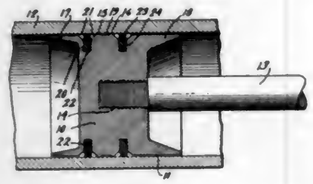
bar yet allowing radial movement thereof; an annular matrix ring supported within said housing and within said heating bar; spring means urging

said heating bar radially against said matrix ring; and means for guiding the spring-urged movement of said heating bar in a radial direction.



2,456,064
DISPLAY STAND
Arnold E. Johnson, Chicago, Ill., assignor to Arvey Corporation, Chicago, Ill., a corporation of Illinois
Application January 10, 1948, Serial No. 1519
1 Claim. (Cl. 248—198)

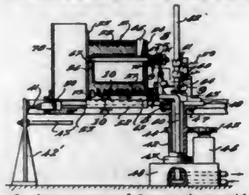
In a display stand, a sheet of flexible material such as cardboard cut and scored to provide a display section, a wing section hingedly connected to one side of said display section, said wing section being angularly disposed with respect to said display section, a primary base section hinged to the lower end of said display section, a wing base section hinged to the lower end of said wing section, said primary and wing base sections being disposed in a common plane and having their adjacent side edges in abutting relation, and locking means formed on the abutting edges of said base sections.



2,456,065
SINK
Matyas J. Just, Chicago, Ill., assignor to Just Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 30, 1945, Serial No. 613,493
11 Claims. (Cl. 4—187)

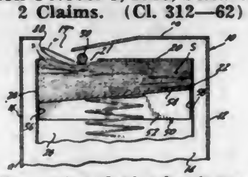
1. A sink comprising a bowl and drain board in welded connection, the upper margin of the sink bowl overhanging the bowl and the contiguous marginal portion of the drain board having a convex downward curvature to an edge co-

extensive with said bowl margin and provided with a weld affording continuous connection between the bowl and drain board substantially along the line of maximum overhang.



2,456,066
MEMBER SEALING MEANS
Leslie A. Kempton, Chicago, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application April 6, 1945, Serial No. 586,998
8 Claims. (Cl. 309—4)

4. In combination relatively slidable members one of which has a land surface in frictional engagement with the other and a sealing element interposed between and in stressed sealing engagement with said members adjacent said land, said element having a flexible free portion tightly pressed against one of said members adjacent said land and one of said members being recessed around said free portion providing clearance for the bending of said free portion laterally with respect to said land during a limited extent of relative sliding movement of said members without dislodging said free portion from its position of sealing engagement, said free portion upon continued relative movement of said members being movable against the recessed member so as to bottom thereon and thereafter have sliding sealing contact with one of said members.



2,456,067
CENTRIFUGAL CASTING MACHINE
Theodore C. Kuhlman, Detroit, Mich.
Application August 23, 1943, Serial No. 499,619
2 Claims. (Cl. 22—65)

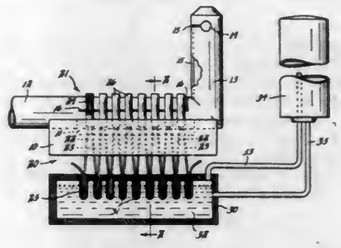
1. In a casting machine having a revolvable furnace, an outlet in said furnace for discharging molten metal in a mold by centrifugal pressure; a refractory rod for normally closing said outlet, means for retaining said rod in closing position, and means for moving said rod to opening position including means for inflicting a hammer blow on said rod to break it loose from said outlet, said

last means being operable automatically in response to revolution of said furnace.

2,456,068
DISPENSER FOR STACKED ARTICLES
Jay Liben, New York, N. Y.
Application October 3, 1946, Serial No. 700,987
2 Claims. (Cl. 312—62)

1. In a dispensing device having a follower for feeding a stack of folded flexible sheets, each having a transverse line of fold forming its forward end, towards a delivery plate having an opening in its forward end in line with the fold lines of the stacked sheets, the dispensing device having a transverse operating rod adjacent the plate opening, the follower being closer to the plate at the end remote from the opening than at the open end thereof, thereby partially separating the uppermost sheet from the stack thereunder, the operating rod being movable against the stack to move the folded end of the uppermost sheet clear of the stack to permit manual engagement thereof for removal from the dispenser.

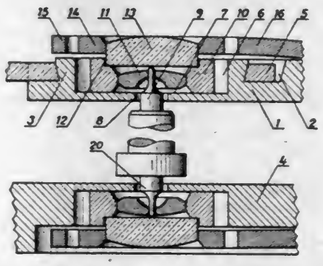
2,456,069
ADJUSTING THE pH OF SYNTHETIC ELASTOMER LATICES
Herbert K. Livingston, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 29, 1945, Serial No. 613,447
5 Claims. (Cl. 260—29.7)



1. In the process for producing and maintaining a pH of from 11.7 to 12.7 in synthetic elastomer latices of the class consisting of polychloroprene latices and 1,3-butadiene elastomer latices in which the principal dispersing and stabilizing agent is of the anionic type, the step which comprises incorporating in the latex a tetraalkanolammonium hydroxide of the formula:

$(HOC_xH_{2x})_4NOH$

in which x is one of the integers 2 and 3 and in each case is the same.



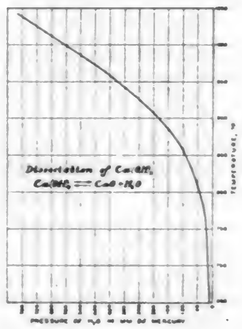
2,456,070
THERMOELECTRIC GENERATOR WITH FLUID COOLING
Sidney K. Malek and Marvin R. Laing, Minneapolis, Minn., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application February 14, 1944, Serial No. 522,369
7 Claims. (Cl. 136—4)

3. In a thermoelectric generator, a thermocouple composed of dissimilar metal members joined at one of their ends and supported to form a hot junction, an electrical conductor secured to the other end of each of said members, a mass of substance which is thermally conductive and electrically nonconductive surrounding each of the other ends of said members, a liquid container associated with said mass, said container being partially filled with a liquid in heat transfer relationship with said mass to absorb heat conducted through the thermocouple members from

the hot junction, said liquid being characterized by having a boiling point which is substantially less than the operating temperature of said cold junction, a condenser associated with said liquid container and positioned above the liquid level therein for receiving and condensing the evaporated portion of said liquid, and conduit means connected between said container and said condenser for returning the condensed liquid to said container.

2,456,071
SHOCK-ABSORBING DEVICE FOR PIVOTS OF WATCH BALANCE STAFFS
Adamir Marchand, La Chaux de Fonds, Switzerland, assignor to Benrus Watch Company, Inc., New York, N. Y., a corporation of New York
Application October 23, 1945, Serial No. 623,957
In Switzerland March 29, 1945
5 Claims. (Cl. 58—140)

1. In a watch movement, a balance staff pivot, a balance bridge having a recess, said bridge having an opening in the bottom of said recess for the passage of said pivot, a bearing body spaced from the side walls of said recess, rested freely on the bottom thereon and movable thereon transversely to the axis of the pivot, a pierced jewel set in said bearing body and receiving the end of said pivot, the inner wall of said bearing body having a groove spaced apart from the outer face of said pierced jewel, a cap jewel freely rested in said groove and supporting said pivot, a spiral spring having its outer end fastened to said balance bridge and having a central hole at its inner end, said cap jewel being set in said central hole, said spring being so conformed as to allow radial



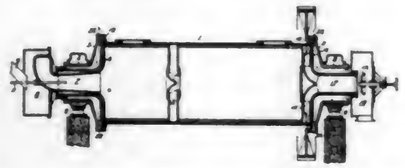
as well as axial yielding displacement of said cap jewel, and lubricant within the space between the adjacent faces of said pierced and cap jewels, whereby upon axial shock on said pivot, said pierced jewel follows said cap jewel in its yielding displacement under the capillary action of said lubricant and upon radial shock said bearing body is moved transversely within said recess and takes up said cap jewel against the radial centering action of said spring.

2,456,072

CONVERSION OF HYDROCARBONS IN THE PRESENCE OF A CATALYST AND CALCIUM OXIDE TOGETHER WITH STEAM AND/OR CARBON DIOXIDE

Milton M. Marisic, Northfield, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio

Application February 12, 1945, Serial No. 577,442
11 Claims. (Cl. 196—52)



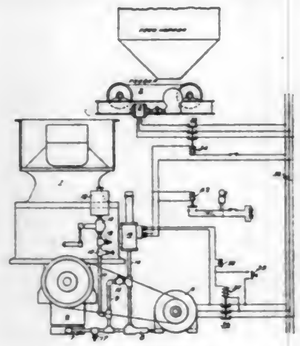
1. The method of catalytically cracking hydrocarbon oil in the presence of a solid catalyst regeneratable by heating in presence of oxygen comprising incorporating quicklime in the catalyst and contacting the quicklime with carbon dioxide during the cracking reaction.

2,456,073

TUBE OR BALL MILL WITH COOLED TRUNNION

Ray C. Newhouse, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application September 15, 1943, Serial No. 502,427
1 Claim. (Cl. 241—67)



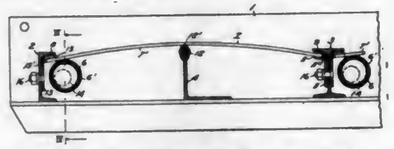
In a mill for treating hot materials, a fluid-tight drum shell having an imperforate annular end wall with an outwardly extending tubular extension of smaller diameter than said shell, said shell and end wall forming an impervious material treating container and said tubular extension forming a material conduit opening into said container, means to support said container for rotation comprising a hollow trunnion of a diameter intermediate the diameter of said tubular extension and said drum shell in coaxially spaced relation to said tubular extension, said trunnion being physically connected in supporting relation to said container solely by a structural end head axially spaced from said end wall except adjacent to the outer periphery of said end wall and passages opening radially outwardly from the space between said end wall and said structural end head to provide for free circulation of cooling fluid through the space between said end wall and said structural end head and hollow trunnion.

2,456,074

OVERLOAD RESPONSIVE SYSTEM FOR CONTROLLING FEED AND OPERATION OF CRUSHING APPARATUS

Ray C. Newhouse, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application May 29, 1944, Serial No. 537,919
7 Claims. (Cl. 241—34)



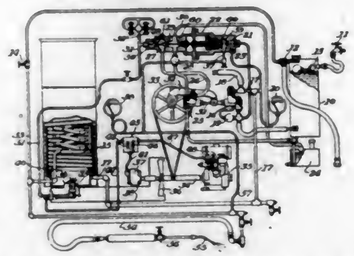
5. A crusher system comprising a continuously acting power driven crusher having relatively moving crushing members, a feed control means to supply material to be crushed to said crushing members, yieldable means normally supporting said crushing members in predetermined operative relation and responsive to a predetermined excessive crushing pressure between said members to permit said members to yield relatively in opening direction, resilient energy accumulator means connected with said supporting means in a manner to accumulate energy as a result of yielding movement of said crushing members in amount sufficient to return said crushing members to normal operative relation from relatively displaced positions under no load conditions, said resilient energy accumulator means being constructed and arranged to accumulate such energy at an energy level only just high enough to return said members under substantially no load conditions, energy transfer check means connecting said supporting means and said accumulator means and constructed and arranged to normally prevent the transfer of energy from said supporting means to said accumulator means and to permit a flow of energy in the reverse direction under no load conditions, and means responsive to relative displacement of said members from their normal operative relation and operatively connected to said feed control means to cut off supply of material to said crushing members during such displacement.

2,456,075

ROD DECK SCREEN WITH RUBBER-COVERED CYLINDRICAL CLAMPING MEANS

Ray C. Newhouse, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application November 3, 1944, Serial No. 561,698
5 Claims. (Cl. 209—395)



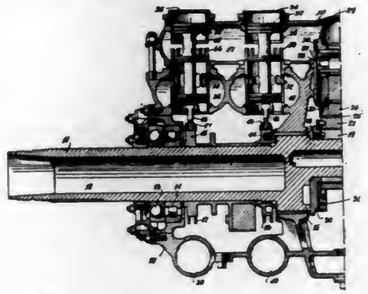
5. A parallel rod material separating screen comprising a rigid rectangular frame, laterally spaced pairs of alined individual rod end receiving sockets in opposed faces of a pair of parallel frame members, said sockets having rod end engaging seat portions generally in the plane of said frame and facing the same side of said plane, a camber bar in said frame parallel to and spaced intermediate said socketed frame members and having a rod supporting surface facing in a direction opposite that in which said seat portions of said sockets face, a plurality of separate generally rectilinear flexible resilient rods each having its opposite ends individually seated in an alined pair of said sockets and its intermediate portion sprung over said rod supporting surface of said camber bar, the location of said rod supporting surface of said camber bar relative to the plane of said seat portions of said sockets being so chosen with relation to the normal unstressed form and thickness of said rods that said rods are somewhat bowed when in position under an elastic stress which tends to retain them in position in parallel laterally spaced relation in said frame, and a clamping bar operably mounted on said frame adjacent and parallel to one of said socketed frame members for movement into engagement with the surfaces of said rods adjacent their ends to clamp said rod ends firmly against said rod end engaging seats of said one of said socketed frame members.

2,456,076

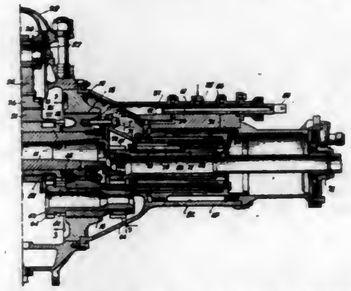
MULTIPLE SPARK CIRCUIT

Frank W. Ofeldt, Coraopolis, Pa., assignor to Homestead Valve Manufacturing Company, Coraopolis, Pa., a corporation of Pennsylvania

Application November 23, 1943, Serial No. 511,421
13 Claims. (Cl. 158—28)



10. In a burner control circuit the combination of a burner, means for supplying fuel to the burner, spaced electrodes to provide a spark for igniting the fuel in the burner, a spark controlled motor for operating said fuel supply means, a second pair of spaced electrodes to provide a spark arranged to control the operation of said motor, a high voltage electric source controlled by the operation of the motor, a coupling having primary and secondary windings, electrical connections placing the high voltage electric source and the primary winding and the fuel igniting electrode in a closed series circuit, and electrical connections placing the ends of the secondary winding across the second pair of electrodes to control the operation of the motor.



2,456,077

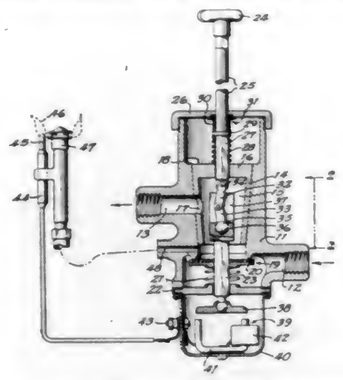
HYDRAULIC TRANSMISSION

Elias Orshansky, Jr., New York, N. Y., assignor to The Acrotorque Company, Stamford, Conn., a corporation of Connecticut

Application June 26, 1946, Serial No. 679,428
9 Claims. (Cl. 103—38)

1. A mechanism for varying the stroke of a reciprocating piston comprising, in combination, a rotatable shaft, an eccentric freely rotatable upon said shaft, a second eccentric freely rotatable upon said first eccentric, said second eccentric being connected to said piston, a gear rigidly coupled to said first eccentric, an elliptical gear rigidly coupled to said second eccentric, a second elliptical gear in mesh engagement with said first elliptical gear, a second gear including an idler gear coupled to said first gear for imparting reverse rotation to said first gear, a common shaft for rigidly carrying said second gears, the rotation of said gears producing concurrent and opposite rotation of said eccentrics, and means for rotating said common shaft in either direction.

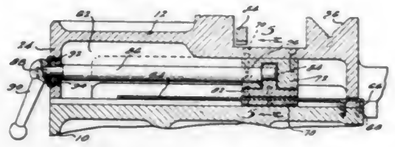
2,456,078



MANUAL RESET VALVE

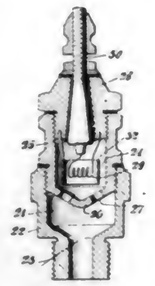
Eugene Paille, Los Angeles, Calif., assignor to General Controls Co., Glendale, Calif., a corporation of California

Application May 10, 1947, Serial No. 747,309
8 Claims. (Cl. 277—8)



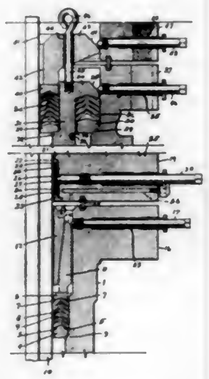
1. In combination: a valve casing; a first valve comprising an apertured plug seated in said cas-

ing and rotatable to control flow therethrough; an additional valve also controlling flow through said casing; means for operating said additional valve comprising a pair of spaced members in axial alignment and movable along said axis; means disposed generally along said axis and forming a connection between said members, said connection normally being collapsible away from



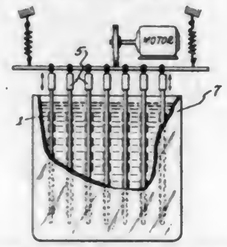
said axis when compressive force is applied between its ends so that it is ineffective to transmit said force from one of the members to drive the other; and means, operated by rotation of said plug, for so limiting the collapse of said connection when the plug is in a predetermined flow-controlling position that the connection is then effective to transmit compressive force between the members for operating said additional valve.

2,456,079
SURFACE GRINDER
John W. Parker, Grosse Pointe, Mich.
Application November 19, 1945, Serial No. 629,550
1 Claim. (Cl. 51—231)



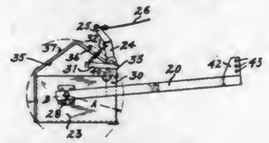
A surface grinder comprising, in combination, a base; a saddle mounted for sliding movement on said base; a table slidably mounted on the saddle for movement in a direction of right angles to the direction of travel of said saddle; actuator means for said saddle and said table; and means for holding the saddle in a selected adjusted position, said holding means comprising an inherently flexible metallic strip mounted on the base and extending in spaced relation therewith beneath the saddle and parallel to its direction of travel, a support attached to the saddle positioned to travel along said strip, an adjustable clamping member carried by the support and movable against said strip to press the latter into binding, frictional engagement with the support, and a manually rotatable shaft journaled in the saddle and having an eccentric connection with said clamping member whereby rotation of the shaft moves the clamping member into and out of engagement with the strip.

2,456,080
IGNITION PLUG
Wu Pe, Nanking, China
Application December 27, 1946, Serial No. 718,860
In China November 20, 1944
6 Claims. (Cl. 123—143)



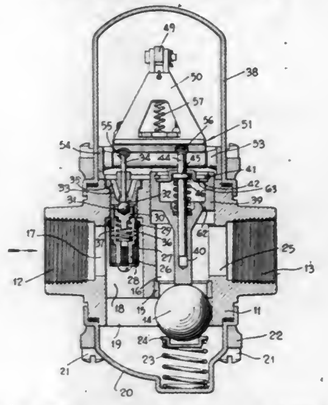
1. An ignition plug for use in an internal combustion engine having a piston and cylinder, comprising a member adapted to be secured in the wall of said cylinder forming an ignition chamber adapted to communicate with the interior of said cylinder, means associated with said member to form an inner firing chamber and a timing grid separating said chambers and having openings therethrough of such cross sectional area that the velocity of flow of fuel mixture through said grid into said firing chamber under the compression impulse of said piston exceeds the velocity of flame propagation in said firing chamber until the piston travel has reached a determinate point, and a removable closure for said firing chamber having an electrical resistance element supported thereon and extending into said firing chamber for igniting the fuel mixture therein.

2,456,081
WELL-HEAD SEAL
Arthur J. Penick, Houston, Tex., assignor to Oil Center Tool Company, Houston, Tex., a corporation of Texas
Application November 2, 1945, Serial No. 626,333
1 Claim. (Cl. 285—22)



In a well head assembly having concentric parts spaced apart, the outer part having an inside, annular, upwardly facing seat and the inner part having an external annular flange spaced above said seat, a wear ring on the seat, an assembly of superimposed, nested seal rings between the wear ring and flange, said inner part having an inside, annular, upwardly facing shoulder, a lower wear ring on said shoulder, an upper wear ring spaced above the lower wear ring, an assembly of seal rings between said lower and upper wear rings, an annular gland concentric with the inner part and bearing against the upper wear ring and means for forcing the inner part and the gland, respectively, against the corresponding seal ring assemblies.

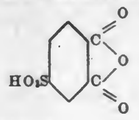
2,456,082
ART OF METALIZING NONMETALLIC BODIES
Leopold Pessel, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application September 30, 1943, Serial No. 504,495
4 Claims. (Cl. 117—35)



4. A method of metallizing a non-metallic object which comprises immersing said object in a bath consisting of a mixture of two solutions A and B, of which solution A consists of ammoniacal silver nitrate and solution B consists of silver tartrate, said mixture being made up such that it contains a ratio of silver present as tartrate to silver present as ammonia compound of the order of 0.3 to 0.5.

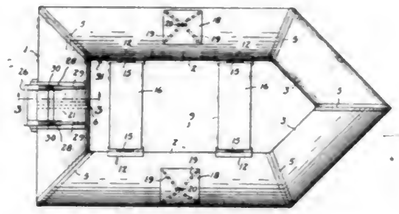
2,456,083
IRRIGATION RIDGE BLOCKER
Kenneth D. Priestley, Campbell, Calif.
Application February 9, 1945, Serial No. 577,064
2 Claims. (Cl. 37—140)

1. In an irrigation ridge blocker of the character described, the combination of a drawbar frame, a latching means carried by said drawbar frame for holding a tumbling bucket in an earth gathering position, an earth gathering bucket turnably connected to said drawbar frame and adapted when unlatched to tumble completely over and return to its original latched position, said bucket being turnable about an axis extending transverse to the direction of movement of said drawbar frame, an upstanding bucket supporting runner at each side of said bucket having two flat angularly disposed surfaces which meet to form an apex in said runners substantially centrally above the top of said bucket, and said bucket being journaled upon said drawbar frame at a point rearwardly of the apex of said runner, whereby during the dumping portion of its tumbling movement said bucket will turn at a different rate than during its return to a normal earth gathering position.



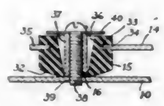
2,456,084
FLUID CONTROL VALVE
William A. Ray, Los Angeles, Calif., assignor to General Controls Co., a corporation
Application December 18, 1944, Serial No. 568,676
9 Claims. (Cl. 137—139)

5. In a fluid control valve: a casing having a main passage therethrough provided with a valve seat, a closure movable with respect to said seat to control fluid flow through the valve, a motor operable by the pressure of the fluid controlled by the valve and comprising means forming a pressure chamber defined in part by a movable partition for actuating said closure, a pilot valve for controlling supply of said fluid to said chamber and mounted in a wall of the chamber separate from said movable partition, a spring cooperable with said partition and effective when stressed to exert a force on the partition supplementing the force produced by said fluid pressure, means in said chamber for operating said pilot valve and for substantially simultaneously stressing said spring, and an additional motor for operating said last-named means.



2,456,085
CATION-EXCHANGE RESINS PREPARED BY CONDENSING SULFOPHTHALIC ANHYDRIDE AND XYLENE
Stanley P. Rowland, Philadelphia, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application March 21, 1946, Serial No. 656,156
4 Claims. (Cl. 260—78.4)

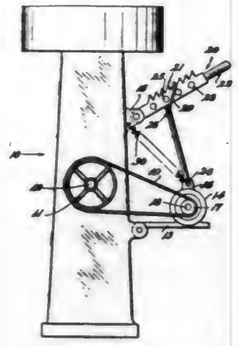
1. An insoluble, infusible, porous, resinous composition having cation-exchange properties, which comprises a condensate of one mol of sulfophthalic anhydride, having the formula



and two mols of xylene.

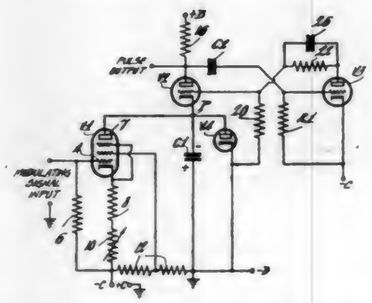
2,456,086
COLLAPSIBLE BOAT AND METHOD OF MAKING THE SAME
Chester F. Schwall, Jr., Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application May 17, 1945, Serial No. 594,233
16 Claims. (Cl. 9—2)

1. The herein described method of making an inflatable boat body which comprises providing a strip of impregnated fabric adapted to retain air under pressure and of a length corresponding to the external periphery of the boat body to be formed, shortening the strip along its longitudinal central portion by forming spaced tucks in the fabric, all disposed upon the same side thereof, and converting the strip into an endless tube with the tucks upon the interior thereof by attaching together the longitudinal and end edges of the strip.



2,456,087
RUBBER GROMMET
Emmor V. Schneider, Alliance, Ohio, assignor to The Alliance Manufacturing Company, Alliance, Ohio, a corporation of Ohio
Application November 15, 1944, Serial No. 563,575
15 Claims. (Cl. 248—358)

1. A rubber grommet for mounting a vibrating element upon a support and isolating vibration of the vibrating element from the support, said rubber grommet being arranged for connection to the vibrating element and the lower end of the grommet being arranged to rest upon the support, there being an axial opening through the grommet and a spacer located through said axial opening for attachment to the support, the spacer and axial opening being so shaped that the only point of contact between the spacer and the grommet is at the lower end of said axial opening and the lower end of the grommet being convex so that the only point of contact between the grommet and the support is at the center of the lower end of the grommet surrounding said axial opening.

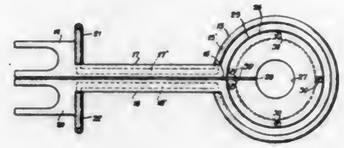


2,456,088
HINGED MOTOR HANGER FOR CREAM SEPARATORS OR LIKE MACHINES
William M. Scircle, Scircleville, Ind.
Application June 19, 1947, Serial No. 755,809
4 Claims. (Cl. 74—242.15)

1. In a device of the class described comprising a frame, a platform pivoted along one edge to said frame, a driven pulley rotatably mounted on said frame, a motor mounted on said platform and having a driving pulley, a belt connecting said pulleys, said motor having an eyelet thereon, means for adjustably tightening and loosening said belt comprising a lever pivoted at one end to said frame above said platform, a rod pivotally

connected at one end to said eyelet and at the other end to said lever, resilient means normally urging said motor and platform in an upward direction, means partly on said rod and partly on said lever for limiting the pivotal movement of said rod with respect to said lever.

2,456,089
WIDE BAND FREQUENCY MODULATOR
Eugene R. Shenk, Brooklyn, and Anthony Liguori, New York, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application June 26, 1946, Serial No. 679,339
9 Claims. (Cl. 179—171.5)

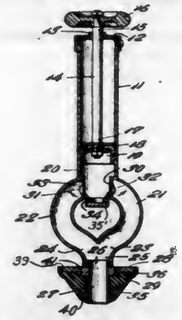


1. A timing modulation system including in combination, a trigger circuit including two electrode structures with their electrodes cross-coupled by resistors and capacitors in such a manner that current normally flows in one electrode structure and is cut-off in the other electrode structure, a capacitor connected to an electrode of one electrode structure to include the same in a path for said capacitor wherein current or potential is developed to control the charge in said capacitor to thereby control the potential on said electrode, a modulator tube having output electrodes in a second charge controlling circuit for said capacitor, and means for controlling the current through said modulator tube in accordance with signals.

2,456,090
PREPARATION OF NOVEL DICYANDIAMIDE DERIVATIVES
John Kenson Simons, Toledo, Ohio, assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company, a corporation of Ohio
No Drawing. Application March 27, 1942, Serial No. 436,485
3 Claims. (Cl. 260—308)

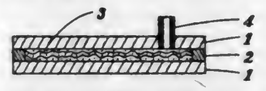
1. A method of preparing dicyandiamide derivatives that comprises carrying out condensation, with elimination of a molecule of ammonia, of a molecule of dicyandiamide and a molecule of a hydrazide having not more than two hydrazide radicals, any atoms other than carbon, hydrogen and nitrogen in the molecule of such hydrazide consisting of oxygen atoms.

3. 1-guanyl guanazole.



2,456,091
INDUCTOR FOR HIGH-FREQUENCY INDUCTION HEATING
Nelson B. Stevens, Woodhaven, and Pasquale R. Capolongo, New York, N. Y., assignors to Induction Heating Corp., New York, N. Y., a corporation of New York
Application March 12, 1945, Serial No. 582,264
4 Claims. (Cl. 219—47)

1. An inductor for high frequency induction heating, comprising a pair of adjacent supporting and terminal connection members, a ring-like frame portion fixed thereon for completing a circuit connection therewith, said members and frame portion being formed with cavities for circulation of cooling fluid therethrough, and readily removable and replaceable plate-like adaptor means mounted to extend over the space within said frame portion, and formed with a central aperture of size and shape preselected to receive the object to be heated with close inductive coupling therewith, the periphery of said adaptor means and the interior of said ring member being formed with complementary interengaging flanges, and said adaptor means and frame portion being correspondingly slotted adjacent said terminal connections to avoid short-circuiting same, the said interengaging flanges providing effective electrical and heat conducting contact therebetween substantially continuously around the frame portion except at the slot.

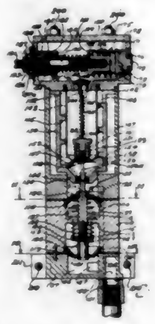


2,456,092
PUMP FOR CLEARING WATER TRAPS
Rasmus Storevik, Brooklyn, N. Y.
Application February 21, 1946, Serial No. 649,142
3 Claims. (Cl. 4—255)

1. A pump comprising a cylinder terminating in an inlet pipe, a piston workable in said cylinder, a flap valve for the inlet, a pair of arcuate outlet pipes projecting outwardly from said inlet, said outlet pipes having a common terminal coaxial with said inlet, a nipple carried by the terminal, valves for said outlet pipes adjacent said inlet, a retaining flange carried by said nipple

and a flexible cone detachably carried by said flange.

2,456,093
METHOD OF POLYMERIZATION
David A. Swedlow, Los Angeles, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware
Application March 24, 1943, Serial No. 480,322
8 Claims. (Cl. 154—140)

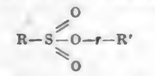


5. A method which comprises placing a plurality of superposed fibrous layers impregnated with a liquid polymerizable material in an amount in excess of that desired in the final product in a closed cell comprising a pair of sidewalls movable with respect to each other and provided with a compressible separator to permit motion of the sidewalls toward each other, establishing a differential pressure between the interior and exterior of the cell to compact the layers through movement of the sidewalls toward each other and thereby remove the desired excess of polymerizable material from the layers and distribute the residual polymerizable material uniformly throughout the layers, and polymerizing the impregnated layers without further loss of polymerizable material therefrom.

2,456,094
METHOD AND APPARATUS FOR REGULATING WATER TEMPERATURE
John A. Victoreen, Cleveland, Ohio
Application January 23, 1943, Serial No. 473,313
4 Claims. (Cl. 236—12)

1. A thermostatic water regulator of the class described including a housing formed with a cold water inlet chamber and a hot water inlet chamber, a pair of valves for controlling the flow of fluid out of said chambers, rod means extending through said chambers and rigidly connecting said valves to each other and resilient means connected to said rod and said housing for sealing said chambers from each other, a mixing chamber, said housing formed with a duct for conducting the cold water discharging from the cold water chamber to said mixing chamber said duct opening in the side of said chamber, said hot water chamber being disposed to discharge water controlled by said valve directly to said mixing

chamber, baffle means in said mixing chamber for cooperation with the fluid flow into said chamber to mix the fluids in said chamber and comprising a downwardly extending member for diverting the hot water stream, said baffle formed with an outlet port for the discharge of fluid from said chamber, and thermo responsive means disposed in the path of fluid from said mixing chamber and comprising a tank having a fluid therein, a bellows disposed in one end of said tank and a member having one end connected to and carried by said bellows and the other end connected to said rod and extending through the mixing chamber for controlling said valves, said bellows being disposed in the path of flow or fluid from said mixing chamber, and baffle means carried by said bellows and rod connecting member, disposed in the path of said fluid and adapted to be moved by the fluid proportional to the flow thereof to compensate for the loss of pressure in the bellows during such fluid flow.

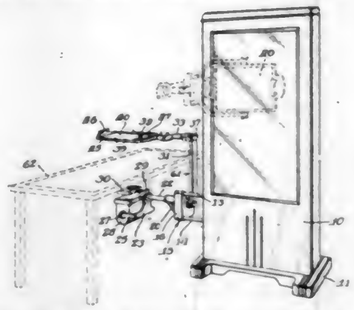


2,456,095
UREA-FORMALDEHYDE COMPOSITION

Henry A. Walter, Longmeadow, Mass., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio

No Drawing. Application November 6, 1947, Serial No. 784,524
4 Claims. (Cl. 260—17.3)

1. A thermosetting composition comprising a urea-formaldehyde reaction product and a latent curing catalyst having the general formula

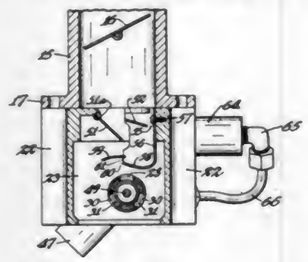


in which r is a divalent unsubstituted aliphatic radical having from two to five carbon atoms and having at least one hydrogen atom attached to the same carbon atom as the oxygen linkage, in which the free valences are connected to different carbon atoms, and R and R' are monovalent radicals selected from the class consisting of phenyl, alkyl phenyl, and alkyl alkyl phenyl, said alkyl groups having from one to five carbon atoms.

2,456,096
X-RAY EQUIPMENT

Bruno F. Wehmer, Melrose Park, Ill., assignor to The Wm. Meyer Company, Chicago, Ill., a corporation of Illinois

Application September 26, 1946, Serial No. 699,533
4 Claims. (Cl. 250—58)

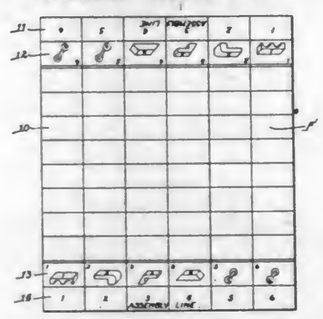


1. X-ray equipment comprising an upright pedestal, a carriage, means forming a part of said pedestal for supporting said carriage, said means enabling up and down bodily movements of said carriage under control of the operator, said carriage being also bodily movable horizontally relative to said pedestal under control of the operator, a bearing supported by said carriage exteriorly of said pedestal and pivoted for rotation in a horizontal plane, said bearing having a horizontal bore, a yoke including a shaft journaled in said bore and a radius rod connected at one end to said shaft and extending perpendicularly thereto, an arm connected to the other end of said radius rod for swinging movement in a plane passing through the radius rod, an X-ray tube carried by said shaft and rotatable therewith, and a fluoroscopic screen carried by said arm, said yoke being effective to hold said screen and tube in cooperative alignment, the rotatability of said yoke permitting said screen and tube to be positioned in alignment at opposite sides of said pedestal and, alternatively, to be positioned in alignment at one side of said pedestal.

2,456,097
FUEL VAPORIZER

Isaac W. Wepplo, Minneapolis, Minn.

Application December 1, 1945, Serial No. 632,157
2 Claims. (Cl. 48—180)



1. A fuel vaporizer for internal combustion engines adapted for use in the intake passage of the engine between the carburetor and intake manifold thereof comprising, a casing providing a chamber to be located between said carburetor and manifold and having an inlet and an outlet adapted for communication with said carburetor and manifold respectively, a butterfly valve in said chamber subject to the pressure flow of fuel intake gases through said chamber, said butterfly valve being of less extent when in a closed position than the cross sectional flow area of said chamber, thereby leaving a constantly open flow passage in said chamber, and a baffle in said chamber between said butterfly valve and the outlet side of said chamber, said baffle being directed beneath said butterfly valve from the opposite side of said chamber and extending only partially across said chamber.

2,456,098
GAME BOARD AND PLAYING PIECES THEREFOR

Albert H. Wheeler, Worcester, Mass.

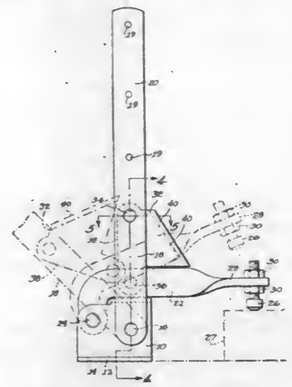
Application November 30, 1946, Serial No. 713,356
2 Claims. (Cl. 273—131)

1. A game comprising a game-board having a playing field subdivided in longitudinal and transverse rows of playing spaces and having an additional row of auxiliary spaces equal in number to the longitudinal rows and extending transversely across each end of said playing field, in combination with two playing sets each comprising a plurality of differentiated playing pieces equal in number to the number of longitudinal rows and to the number of spaces in each additional row and constituting a single production unit when assembled, the auxiliary spaces in each additional row bearing consecutive numbers from one end of the row to the other, and the separate pieces in the associated set of playing pieces bearing the same consecutive numbers and indicating the order in which the pieces should be assembled to form a production unit.

2,456,099
ELECTRODE FOR VACUUM DISCHARGE APPARATUS

Lester L. Winter, Lakewood, Ohio, assignor to National Carbon Company, Inc., a corporation of New York

No Drawing. Application April 12, 1946, Serial No. 661,862
2 Claims. (Cl. 250—27.5)

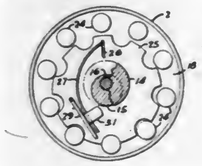


1. In a vacuum discharge apparatus an electrode composed of graphite containing, as an impurity, calcium in a maximum proportion of 0.001%.

2,456,100
TOGGLE CLAMP

Justice W. Wood, Detroit, Mich.

Application June 4, 1945, Serial No. 597,499
1 Claim. (Cl. 144—290)



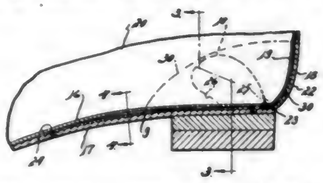
A toggle clamp comprising a base formed of sheet metal and having spaced parallel flanges connected by an integral loop, a clamping arm formed of sheet metal and having one end pivotally connected to said base between said flanges below said loop and extending substantially horizontally over said loop, a clamping head adjustably mounted at the other end of said arm, a handle formed of sheet metal and having one end bifurcated and embracing said flanges, a pivot connecting said end of the handle to said base forwardly of the connection between the base and the clamping arm, a link formed of sheet metal and comprising spaced parallel flanges straddling the clamping arm and connected by an integral loop, a pivot connecting one end of the link to the handle, and a pivot connecting the other end of the link to the clamping arm intermediate its end, said last mentioned loop being recessed from the ends of the link so as to permit free pivoting of the clamping arm and the handle.

2,456,101
HIGH-SPEED COUNTER

Maynard C. Yeasting, Elmore, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a corporation of New Jersey

Application December 10, 1946, Serial No. 715,232
4 Claims. (Cl. 235—136)

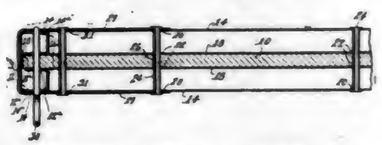
1. In a device of the class described, in combination, a lower order indicia bearing drum, an eccentric hub rotating with the drum, a gear carried on the eccentric hub, a higher order indicia bearing drum, internal teeth on the high order indicia bearing drum that mesh with the gear, a cam on the lower order drum, and operatively connected springs one engaging the cam and the other the gear for oscillating the gear as the cam rotates.



2,456,102
HEEL COUNTER REINFORCEMENT

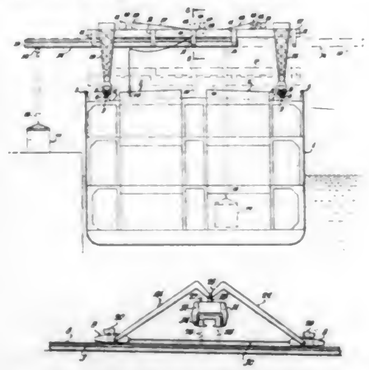
Joseph Agostinelli, Detroit, Mich.

Application March 29, 1946, Serial No. 658,337
2 Claims. (Cl. 36—68)



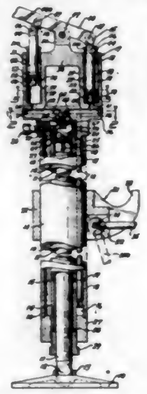
1. A shoe heel counter reenforcement member comprising an elongated rigid body adapted for mounting between the soles of a shoe and extending longitudinally thereof for a portion of the length proceeding forwardly from the heel counter; a reenforcing flap projecting outwardly

from opposite sides of said body at the rear end and lying between the inner and outer layers of



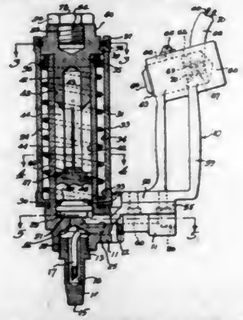
the heel's counter, one of said flaps being of greater height and length than the other.

2,456,103
COLLAPSIBLE BLACKBOARD
Walter Amstutz, Chicago, Ill., assignor to Butler Brothers, Chicago, Ill., a corporation of Illinois
Application October 17, 1946, Serial No. 703,802
3 Claims. (Cl. 35—65)



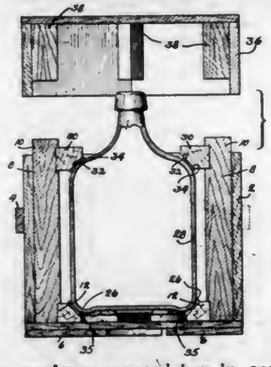
1. A collapsible blackboard comprising a blackboard proper, a frame surrounding said board, the side elements of said frame being tubular in cross section and having inturned flanges between which said board is mounted, supporting legs telescopically mounted in said tubular side elements, said legs each being formed of two parts between which said flanges are positioned, and means for locking said legs at different positions of extension in relation to said side frame elements.

2,456,104
CARGO HOIST
Nils Peter Erik Andersen, Elm Grove, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application October 9, 1944, Serial No. 557,873
2 Claims. (Cl. 214—15)



1. In a self-elevating and lowering support for an athwartship cargo hoist trolley way for ships the combination comprising a pair of parallel fore and aft runways mounted on the deck of a ship straddling a hatch, a stationary positive traction means associated with and extending lengthwise in juxtaposition to each of said runways, two self-propelled shear leg supports constituting a pair mounted for fore and aft movement on each of said runways, each of said shear leg supports having positive driving means in positive driving engagement with that stationary positive traction means which is associated with the runway upon which said shear leg support is mounted, a pair of shear legs for each runway, each of said pairs of shear legs being pivotally mounted at the foot ends thereof on respective pairs of shear leg supports, a hoisting trolley supporting girder extending between said shear legs and attached at its opposite ends to said shear legs, and means adapted to cause said shear leg supports to be driven toward and away from one another in pairs to cause elevation and lowering of said girder and adapted to cause said shear leg supports to be driven in a set in unison to impart fore and aft movement to said girder.

2,456,105
HYDRAULIC JACK
Louis Berg, Birmingham, Mich.
Application September 21, 1946, Serial No. 698,522
2 Claims. (Cl. 254—93)

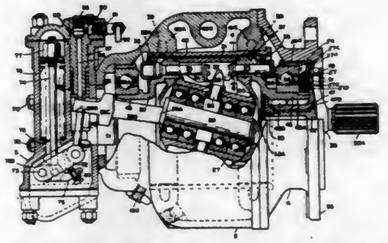


1. A hydraulic jack comprising a base, a piston connected to said base extending upwardly therefrom, a piston head on said piston, a cylinder substantially coextensive of said piston reciprocatingly mounted over said piston, a housing over said cylinder, a pump head on said housing and said cylinder forming a reservoir around said cylinder including an eduction tube extending into the said reservoir to a point substantially at the bottom thereof, a multi-piston pump in said pump head including intake and outlet valves for each pump cylinder between the said reservoir and the said jack cylinder respectively employed to withdraw fluid from said reservoir and force the same into said cylinder above said piston head whereby to raise the said cylinder and housing on said piston with respect to the said base, an independent spring urging each intake valve closed, a rocker washer bridged between the said outlet valves and a common spring acting through said rocker washer urging said outlet valves closed and permitting either one or the other to open, means slidably adjustable along said housing adapted to be removably fixed to the desired position therealong for engaging objects of various heights, and a manually operated lowering valve normally closed which when open permits fluid to flow from said cylinder to said reservoir responsive to weight lifted by said jack.

2,456,106
WELDING GUN
Harry V. Beronius, Detroit, Mich., assignor to Welding Machines Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application February 28, 1947, Serial No. 731,539
3 Claims. (Cl. 219—4)

1. A welding gun comprising a pair of relatively reciprocable structures connected in series with the welding current circuit, a holder for a welding electrode connected to one of said structures, a fluid pressure motor including relatively reciprocable tubular plunger and cylinder elements operatively connected respectively to said structures for reciprocating said structures relatively to one another to engage the electrode in said electrode holder with the work to be welded, an expansible tubular stem connected to said plunger element and projecting telescopingly into said tubular plunger element, said stem and said plunger being of electrically-conducting material and an auxiliary piston reciprocably mounted in said tubular plunger element in expanding relationship with said stem, one of said structures having a fluid passageway therein communicating with the interior of said tubular plunger and responsive to the supplying of pressure fluid thereto for moving said auxiliary piston into engagement with said stem and expanding said stem into enhanced electrical contact with said plunger.

2,456,107
CARBOY PACKAGE
Oscar Z. Brewer, Spokane, Wash., assignor of one-half to H. H. McNeill Lumber Co., Inc., New York, N. Y., a corporation of New York
Application May 8, 1945, Serial No. 592,575
1 Claim. (Cl. 217—53)

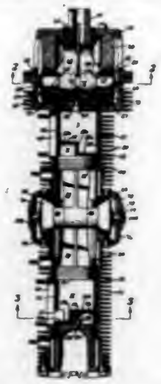


A carboy package comprising in combination a box and a carboy therein, cornerposts for the box rectangular in cross section, cushions abreast of each cornerpost adjacent the bottom and adjacent the top of the box between the cornerpost and carboy, a carrying block for each cushion, each block being provided in its rear face with a vertically extending right-angled slot for the reception of the correspondingly shaped edge of the cornerpost, said slot permitting of placement of the upper blocks after assembly of the box and insertion of the carboy therein, said slot also providing for vertical independent movement of each block and preventing lateral movement of the block, each block having a bevelled face at the side adjacent the carboy to which one of said cushions is secured, the bevel of the blocks at the upper part of the box inclining downwardly and outwardly of the box, and the bevel of the blocks at the lower portion of the box inclining upwardly and outwardly, the bevel for each block terminating short of one extremity of the block.

2,456,108
EMBALMING
Thomas C. Brogan, Jr., Philadelphia, Pa.
No Drawing. Application May 4, 1946, Serial No. 667,469
5 Claims. (Cl. 27—22)

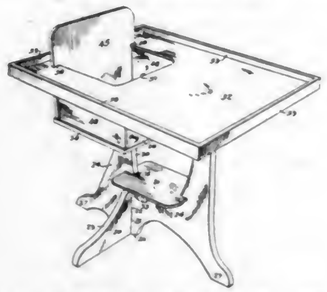
1. In embalming an incised and eviscerated body, the steps which include subjecting the viscera to embalming, pliantly confining the viscera in a fluid tight condition, and positioning the confined viscera within a body cavity, as a form for aiding in returning the body to natural shape.

2,456,109
FLUID PUMP
Cecil C. Buckner, Grosse Pointe Park, Mich.
Application February 28, 1944, Serial No. 524,176
6 Claims. (Cl. 103—162)



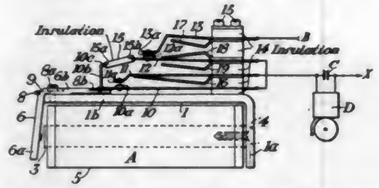
1. A multicylinder fluid pump having a rotor consisting chiefly of a plurality of pairs of axially arranged opposed aligned cylinders having pistons therein, a non-rotatable shaft within said rotor, piston actuating means rotatable upon said shaft in a plane normal to the axis of said shaft, delivery pressure actuated means for tilting said shaft whereby to vary the piston stroke, resilient means resisting said tilting, and a pump housing, said housing comprising a portion enclosing said rotor and a separable portion enclosing said tilting means and said resisting means.

2,456,110
INTERNAL-COMBUSTION ENGINE
Joseph M. Caldwell, Roscoe, Calif.
Application August 17, 1946, Serial No. 691,330
14 Claims. (Cl. 123—50)



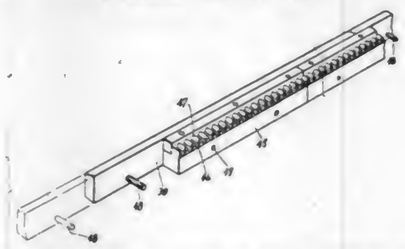
10. An internal combustion engine comprising: a housing having a cylindrical bore, intake, ignition and exhaust ports in the wall of said housing, a sleeve mounted for reciprocal and rotational

movement within the base of said housing, and said sleeve mounted for reciprocal and rotational movement within the bore of said housing, and said sleeve being formed with two diaphragms and having an opening on each side of said diaphragms adapted upon rotation of the sleeve to periodically register with the intake, ignition and exhaust ports, a compression head in each end of said sleeve and supported against reciprocal movement and means for non-reciprocally supporting two compression heads in the central



region of said sleeve and cooperating with the diaphragms and sleeve to form combustion chambers whereby successive explosions in the combustion chambers cause reciprocal movement of the sleeve, means for translating such reciprocal movement of said sleeve into simultaneous rotary motion thereof, and a coupling with said means for taking off the torque, said means comprising a stationary cam race formed by complementary cams, and a cam follower operating in said cam race and coupled with said sleeve.

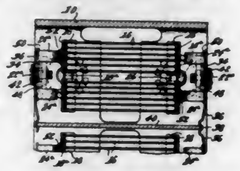
2,456,111
CHILD'S KNOCKDOWN CHAIR AND TABLE
Ballard Creech, Chehalis, Wash.
Application April 1, 1947, Serial No. 738,582
1 Claim. (Cl. 155—124)



In a knockdown combined chair and table, the combination of a single central vertical plate-like stand, having forward and rearward upwardly extending portions; a vertical brace at right angles to said stand, and means between the upper edge of the brace and lower edge of the stand to maintain said stand in a vertical position; a seat interlocked with said stand, comprising a horizontal seat plate having a transverse downwardly extending plate brace, interlocking means between the lower edge of said plate brace and the upper edge of the rearward portion of said central stand; arms and a back removably doweled together and to the sides and rear of the seat; a table top having a downwardly extending lug near its forward end, interlocking means between the lower edge of said lug and the upper edge of the forward portion of said stand, said table having an opening therein through which the back extends, said table being supported on the upper edges of said arms, notches in the side edges of the opening at the rear thereof receiving the side edges of the back.

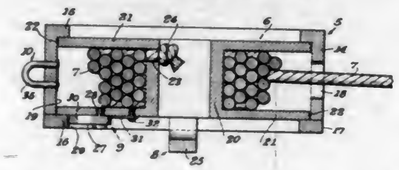
2,456,112
ELECTRICAL RELAY
Arthur E. Dodd, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application November 27, 1945, Serial No. 631,160
4 Claims. (Cl. 200—5)

1. A contact mechanism comprising four superposed contact fingers disposed in parallel spaced relation, two of said fingers being relatively movable and the remaining two fingers being relatively fixed, each said movable finger cooperating with a different one of said fixed fingers to form a switch means, and a toggle link connecting the free ends of said movable fingers, the parts being so proportioned and so adjusted that the inherent resiliency of the one movable finger will cause the switch means including such finger to be normally open and the other switch means to be normally closed and that upon movement of said one movable finger in one direction said normally closed switch means will open with a snap action due to said toggle link but not until after said normally open switch means has closed.



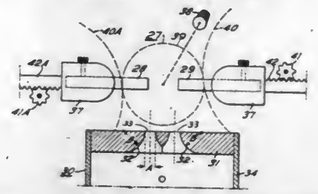
2,456,113
STEP-BY-STEP MOLDING OF EXTENSIVE ARTICLES
John A. Dorner, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application August 30, 1946, Serial No. 693,943
5 Claims. (Cl. 18—34)

4. Apparatus for forming an extensive conveyor belt article having determinately spaced interlocking teeth along a margin thereof, said apparatus comprising separable mold plates defining a through cavity of uniform cross-section



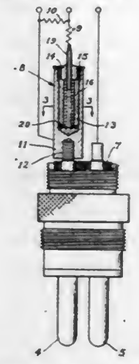
therebetween, said cavity including a bar-receiving groove in one of said plates for interchangeably seating bars for supporting tooth-molding members, a plurality of bars interchangeably fitting said groove and slideable therealong, and projection molding members adapted to be seated on said bars in end-to-end relation for collectively forming a tooth-molding surface, said tooth-forming members being removeably secured to said bars and being adapted to span abutting ends of the bars within the confines of said molding members to connect said bars to each other in series and each tooth-forming member being interchangeably positionable along said series of bars, the means for securing said tooth-forming members to said bars comprising dowels arranged along said bars at uniform intervals with intervals of half said uniform intervals between the dowels nearest the ends of the bars and the corresponding ends of the bars.

2,456,114
CONDENSER STRUCTURE
Karl A. Duerk, Defiance, Ohio, assignor to The American Steel Package Company, Defiance, Ohio, a corporation of Ohio
Application July 20, 1945, Serial No. 606,189
2 Claims. (Cl. 175—41.5)



2. Means for mounting the stator assembly of a variable condenser including a split stator, in a frame, comprising a pair of brackets secured to and insulated with relation to said frame, said split stator unit having supporting plates for each stator section connected with the stator plates, and insulation plates extending from the supporting plates of one split stator section to the supporting plates of the other split stator section to support one section in relation to the other, a supporting plate of one split stator section being soldered to one of said brackets, and a supporting plate of the other stator section being soldered to the other bracket, one of said brackets constituting a stationary plate of a trimmer condenser for one of said split stator sections and the other of said brackets constituting a stationary plate of a trimmer condenser for the other of said split stator sections.

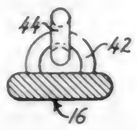
2,456,115
CLOTHESLINE REEL
Sidney J. Duhaime and Cornelius V. Butler, Los Angeles, Calif.
Application October 10, 1946, Serial No. 702,558
6 Claims. (Cl. 242—101)



1. A clothesline reel comprising a tubular housing formed with end retaining flanges and having an opening, a spool in said housing having end disc flanges engaged with said end retaining flanges, said end disc flanges having rotational engagement with the inner surface of said tubular housing, and a clothesline wound on said spool and passing through the mentioned opening.

2,456,116
STABILIZED CONTROL GAP FOR SPARK SPECTROSCOPES
John H. Enns, Ann Arbor, Mich., assignor to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 13, 1947, Serial No. 747,659
7 Claims. (Cl. 315—111)

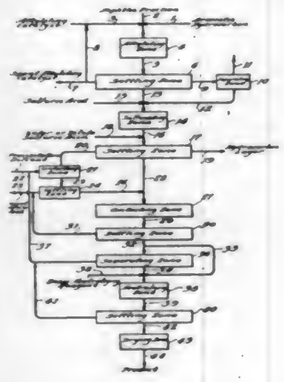
1. A control spark gap for spectrographic analysis comprising spaced sparking electrodes, and structure having a passage contoured to minimize turbulence in a stream of gas directed across the spark path between the tips of the electrodes to remove ionized particles from said path in the interval between successive sparks.



2,456,117
SALINITY METERING SYSTEM
Anton M. Feller, Elizabeth, N. J., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Original application May 25, 1945, Serial No. 595,709. Divided and this application September 7, 1946, Serial No. 695,538
4 Claims. (Cl. 175—183)

1. The combination with a conductivity cell comprising an insulating body having heat and current conducting electrodes projecting therefrom for immersion into an electrolyte and at least one electrode having its opposite end also projecting from said insulating body; of a temperature compensating resistor comprising a liquid filled and sealed heat and current conductive body having a central electrode and having means for mounting said body on the last named projecting end of said cell electrode in thermal and electrical contact therewith, and means for

coupling said conductivity cell and said temperature compensating resistor to a metering circuit, said means being connected to said body and said central electrode.



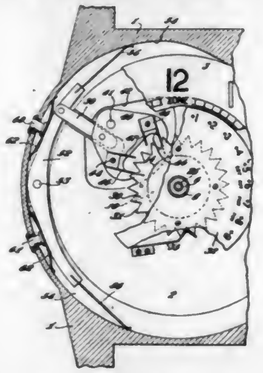
2,456,118
TERMINAL MEMBER
Cyril J. Foster, Chicago, Ill., assignor, by mesne assignments, to Thomas Hawkinson and Harrison Burnett, both of Chicago, Ill., copartners, trading as Crimp Seal Products Co.
Application May 14, 1943, Serial No. 486,933
1 Claim. (Cl. 174—153)

A terminal member and seal for an apertured container housing an electric element comprising a tubular member having an intermediate flange with stem portions extending from either side thereof and having an interior passageway therein, a conductor connected to said electrical element disposed in said passageway one of said stem portions being inserted through said housing aperture, an annular mass of deformable, fluid impervious, electrically insulating material surrounding said one stem portion and disposed intermediate said flange and one side of the housing, an additional annular mass of deformable, fluid impervious, electrically insulating material surrounding said one stem portion and abutting the other side of the housing, the outer end of said one stem portion being deformed outwardly and compressed axially to compress said masses of insulating material into fluid sealing engagement with the aperture defining walls of the housing, the other of said stem portions having an intermediate portion thereof whose opposite wall portions are completely collapsed to form a bond with each other and with said conductor therein sufficiently for hermetically sealing off the interior of said container and also electrically connecting said conductor to said terminal member, the remaining tubular end portion of said last stem having the end of said conductor lying therein, an exterior connecting conductor having an end disposed within said end portion of said last stem alongside of and against said first conductor, the opposite wall portions of said end portion being collapsed to form a bond with each other and with both of said conductors therein.

2,456,119
PRODUCTION OF SURFACE ACTIVE AGENTS
Bernard S. Friedman, Chicago, and George L. Hervert, Berwyn, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 25, 1945, Serial No. 624,562
15 Claims. (Cl. 260—505)

10. A process for the production of surface active agents which comprises treating a naphtha fraction containing olefinic hydrocarbons boiling within the range of from about 160° C. to about 240° C. to remove therefrom condensed-ring aromatic hydrocarbons and nitrogen- and sulfur-containing organic compounds; alkylating a mononuclear aromatic hydrocarbon containing at least two replaceable nuclear hydrogen atoms with the thus treated naphtha fraction; sulfonating at least a portion of the resultant alkylate with sulfuric acid of from about 80 to about 115% concentration to form an aromatic sulfonic acid; separating the resultant sulfonation products into an uppermost hydrocarbon layer, a middle layer comprising said sulfonic acid and dissolved sulfuric acid, and a lowermost layer comprising used sulfuric acid and dissolved sulfonic acid; extracting said lowermost layer with a selective solvent for the sulfonic acid present therein; separating the resultant extract and contacting the same with said middle layer to effect the separation therefrom of a separate layer of said dissolved sulfuric acid which is substantially insoluble in said extract; and separating the resultant solution of sulfonic acid and neutralizing the aromatic sulfonic acid content thereof with a basic reagent to form the corresponding aromatic sulfonic acid salt.

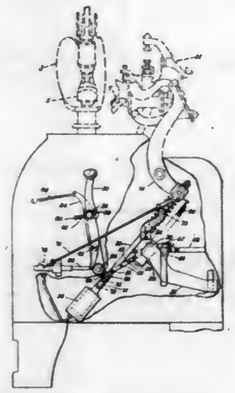
2,456,120
THREAD ADVANCING REEL
William H. Furness, Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application February 19, 1945, Serial No. 578,599
32 Claims. (Cl. 28—71.6)



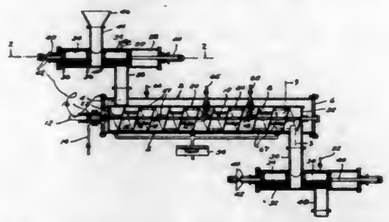
1. A reel for the treatment of yarns and the like comprising a rotatable body portion, means for supporting the same, two concentric sets of longitudinally extending yarn carrying bars carried on said body portion for rocking movement with respect thereto, the bars of one set alternating with bars of the other set, to provide pairs of adjacent bars, one of a pair belonging to one set and the other of the pair to the other set of bars, and means for rocking said pairs of bars about an axis extending longitudinally thereof whereby in one extreme position of rocking movement the yarn is carried by one set of bars and in the opposite extreme position of rocking movement the yarn is carried by the other set of bars while in the middle position the yarn is carried by both sets of bars, and means for longitudinally reciprocating the bars.

2,456,121
FLUX COATING FOR WELDING RODS
Walter Goerg, North Bergen, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application April 17, 1946, Serial No. 662,923
1 Claim. (Cl. 219—8)

A welding rod consisting of a metal and a coating adhering to the surface thereof, consisting of boric acid 67.40 to 76.40%, borax 9.00 to 15.70%, sodium silicate 11.20 to 15.70%, alkali metal bichromate 1.10 to 3.40% and sodium alginate 0.90 to 1.10%.



2,456,122
TIME ZONE WATCH
Ira Guilden, Miami Beach, Fla., assignor, by mesne assignments, to The First National Bank of Boston, Boston, Mass., a corporation of the United States of America, as trustee
Application June 5, 1945, Serial No. 597,605
8 Claims. (Cl. 58—43)

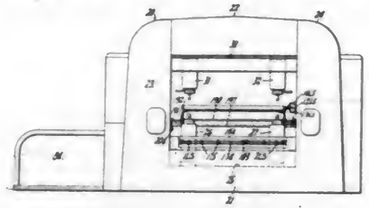


1. In a timepiece of the type having an hour wheel driven by a motor mechanism, an index disk rotatable about an axis concentric with said hour wheel, a slip-clutch connection between said index disk and hour wheel, said slip-clutch being operative normally to drive said index disk synchronously with said hour wheel and to permit said index disk to be advanced relative to said hour wheel, an hour hand carried by said index disk, a rotatable dial having portions containing indicia designating different time zones, and setting means having parts engageable with said index disk and dial for advancing said index disk and dial through predetermined angles, thereby to change the setting of said hour hand by a predetermined time interval and simultaneously set the dial to correspond with the setting of said hour hand.

2,456,123
EDGE FINISHING MACHINE
Thomas William Hart, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 22, 1947, Serial No. 723,588
In Great Britain February 25, 1946
3 Claims. (Cl. 12—17)

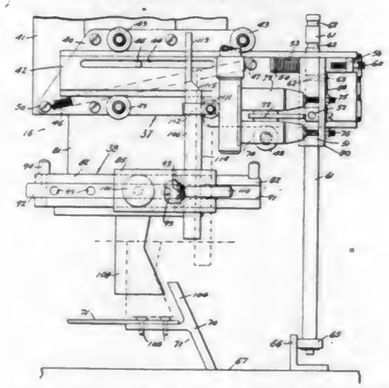
3. An edge setting machine comprising an edge setting tool, a shoe support, power-driven means for effecting relative traverse between said tool and the edge of the sole of a shoe on the support, a starting handle for initiating the operation of the power-driven means, means actuated by the starting handle and including a fluid pressure operated piston for moving the tool into engagement with the shoe, a lost-motion connection between the starting handle and said piston, means for vibrating the tool, and a cam mechanism operated by said piston for initiating the operation of said vibrating means, said cam mechanism being constructed and arranged to retain the vibrating means in operation during the movement of parts permitted by the lost-motion connection.

2,456,124
APPARATUS FOR AND METHOD OF TREATING FOOD PRODUCTS
John J. Hoffman, Point Pleasant, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a corporation of New York
Application August 10, 1943, Serial No. 498,045
3 Claims. (Cl. 62—114)



3. The method of freezing pieces of material which comprises passing the material through a chamber, agitating the pieces of material as they pass through the chamber, applying moisture to the pieces of material while they are thus passing through the chamber, and maintaining a sufficiently high vacuum in the chamber to effect freezing as the pieces pass through the chamber.

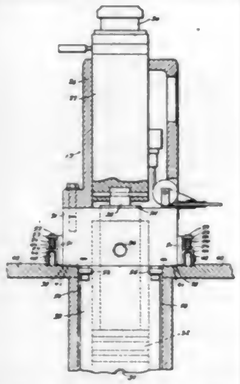
2,456,125
AUTOMATIC MULTIPLE RIVETER
Wilbur Johndrew, Buffalo, N. Y.
Application July 28, 1942, Serial No. 452,606
20 Claims. (Cl. 78—48)



4. A riveting machine, comprising a frame having a work feeding opening therein, means for feeding a workpiece through the opening, upper and lower cooperating units for performing a riveting operation upon the workpiece when the

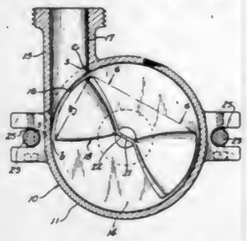
workpiece is arrested, and station-locating means carried by the workpiece and cooperating with

the feed means for so arresting the latter for such riveting operation.



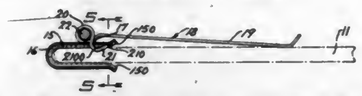
2,456,126
AUXILIARY FEEDING ATTACHMENT
Wilbur Johndrew, Buffalo, N. Y.
Application February 29, 1944, Serial No. 524,423
9 Claims. (Cl. 78—48)

1. In a riveting machine, the combination with the cylinder, the reciprocating ram, the lateral feeding means and the worktable thereof, of an auxiliary feeding attachment comprising a compensating device carried by said cylinder for controlling said feeding means, said device having a stationary mounting plate, a laterally reciprocating bracket carried by said plate, an oscillating arm carried by said plate, a laterally fixed guide member carried by said worktable, said arm having its lower end in engagement with said laterally fixed member, switch means carried by said bracket and actuated by movement of said oscillating arm, said switch means being associated with said feeding means to cause said cylinder and said ram to be moved laterally of said worktable, and means carried by said ram and actuated during the working stroke thereof for causing said feeding means to be operated.



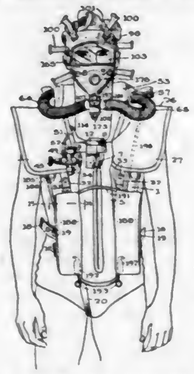
2,456,127
RIVETING MACHINE
Wilbur Johndrew, Buffalo, N. Y.
Original application July 28, 1942, Serial No. 452,606. Divided and this application May 11, 1944, Serial No. 535,026
5 Claims. (Cl. 78—46)

3. A riveting machine, comprising guideways, a riveting unit having a riveting anvil and a support therefor, a mounting unit carried at each side of said riveting unit for substantially counter-balancing the weight of said riveting unit as the same is moved from one to another of a series of riveting stations, each of said units comprising a bracket carried by said riveting unit and formed with a vertical leg and a horizontal leg, anti-friction rollers carried by each vertical leg, spring means for pressing each of said rollers into contact with a horizontally arranged surface of the associated guideway, said spring means being yieldable during riveting operation to provide direct supporting engagement of the riveting unit upon said guideways, guide rollers carried by the



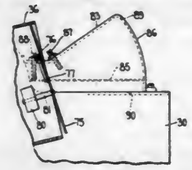
horizontal leg of one of said brackets and engageable with the vertically arranged surface of one of said guideways, a roller plate slidably mounted upon the horizontal leg of the other of said brackets, guide rollers carried by said plate for engagement with the vertical bearing surface of the other guideway, resilient means for urging said plate inwardly to bring the rollers carried thereby in yieldable contact with said bearing surface of the guideway, and means for moving the anvil on the support for riveting operation.

2,456,128
PUMP AND IMPELLER THEREFOR
Joseph S. Kessler, Kenosha, Wis., assignor to Tri-Clover Machine Co., Kenosha, Wis., a corporation of Wisconsin
Application November 15, 1946, Serial No. 709,905
5 Claims. (Cl. 103—103)



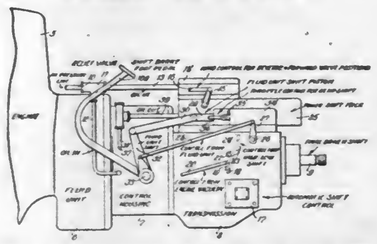
1. A pump comprising a casing having a cylindrical impeller chamber provided with a peripheral outlet opening, an impeller rotatable in said chamber and formed from a relatively flat plate having a central neck portion and having blade portions with diverging side edges reversely twisted about the transverse center line of said neck portion, said center line forming the axis of rotation for the impeller, said blade portions being twisted to such an angle that the width of said impeller measured in a direction parallel to the axis of rotation is substantially equal to the width of said outlet opening of the casing, and so that the projected breadth of the blades near their outer ends and taken at right angles to said impeller width is substantially equal to that dimension of the outlet opening which is at right angles to said outlet opening width.

2,456,129
VISOR DOCUMENT CLIP
Ralph E. Krogh, Detroit, Mich.
Application January 30, 1948, Serial No. 5,441
4 Claims. (Cl. 24—81)



4. A document clip for automobile visors and the like comprising a U-shaped heel plate outwardly flared at its open end having a pair of laterally spaced ribs therein forming interior grooves and having a paid of laterally spaced apertures therein at the base of the said grooves near the flared open end thereof, a spring wire document engaging arm including a pair of laterally coiled spring elements at the inner end thereof, a pin disposed through the said coiled spring elements maintaining the said coiled spring elements in transverse alignment, each coiled spring element including an arcuate anchorage loop at the end thereof disposed substantially parallel to the document engaging arm positioned through the said apertures in the said U-shaped heel plate with the ends of the said loops disposed in the said grooves in contact with the inside of the said U-shaped heel plate whereupon the said document engaging arm assumes a position diagonally across the open end of the said U-shaped heel plate, the said anchorage loops contacting and engaging the automobile visor and anchoring the said document clip thereto when the said heel plate is telescoped over the edge of the said visor and the document engaging arm is sprung against the face of the said visor.

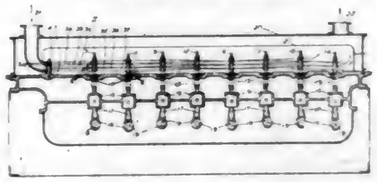
2,456,130
BREATHING APPARATUS
Christian J. Lambertsen, Scotch Plains, N. J.
Application January 31, 1945, Serial No. 575,386
17 Claims. (Cl. 128—142)



17. Breathing apparatus comprising a breathing bag, a breathing mask, a housing connected to said breathing mask, said housing having a main chamber in communication with the breathing mask and an auxiliary chamber from which oxygen is inhaled and into which exhaled gases pass and from which they are exhausted, a passageway for gas between said main and auxiliary chambers, means for conducting oxygen to be inhaled from said breathing bag to said auxiliary chamber, means for removing carbon dioxide from exhaled gases, means for conducting exhaled gases to said carbon dioxide-removing means, means for conducting exhaled gases from which carbon dioxide has been removed from said carbon dioxide-removing means to said breathing bag, and a manually-operable valve for controlling the flow of gas through said passageway, said valve, when closed, and when the mask is not on the face of a person, preventing the escape of oxygen from said auxiliary chamber.

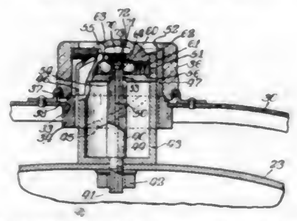
2,456,131
DRAFT CONTROL MEANS FOR FUEL BURNERS
Walter S. Landon, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application April 28, 1944, Serial No. 533,119
14 Claims. (Cl. 236—45)

14. A damper comprising a crank arm having two pin or shaft portions with their axes in laterally offset parallel lines, one pin or shaft portion being adapted to be journalled in an air duct with the other portion positioned within the duct to swing around said one portion, a damper swingably connected to and on the other pin or shaft portion so that said damper is movable concentrically and eccentrically about said one portion, and means for rotating said crank arm.



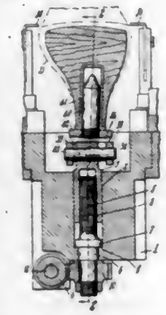
2,456,132
TRANSMISSION
Robert Lapsley, Berrien Springs, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application July 10, 1943, Serial No. 494,439
21 Claims. (Cl. 74—189.5)

1. In a transmission, a fluid unit including, a stator and a rotor, a shaft driven by said rotor, change speed gearing, an output shaft driven by said shaft through said gearing, synchronizer means for coupling said shafts for direct drive therebetween, a brake mechanism, a clutch op-



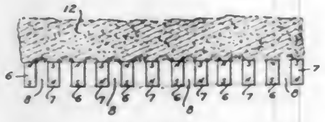
erative to clutch said stator to said first-named shaft to change said unit into a fluid coupling, and actuating means operable in one direction from a neutral position to engage said clutch and operable in the other direction to actuate said brake mechanism for holding said first-named shaft against rotation caused by idling torque of said fluid unit.

2,456,133
PUMP FOR GASEOUS WORKING FLUIDS
Robert Lipscomb, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application February 11, 1944, Serial No. 521,956
In Great Britain February 15, 1943
11 Claims. (Cl. 230—1)



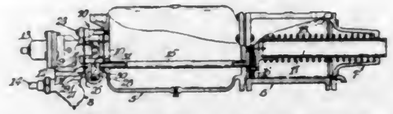
1. A pump comprising a casing, at least one flexible plate therein, rods projecting into the working space of the casing through gas-tight seals, and attached to the plate at intervals throughout its length, means for reciprocating the said rods to cause wave-like deformations to travel unidirectionally along the plate from the one end to the other with points of maximum displacement in the plate in contact with at least one wall of the casing so as to form a pumping space between said plate and said wall, and an inlet to and an outlet from said casing.

2,456,134
PRESSURE COOKER COVER STRUCTURE
Walter C. Lueneburg, Evanston, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application October 1, 1947, Serial No. 777,327
10 Claims. (Cl. 220—25)



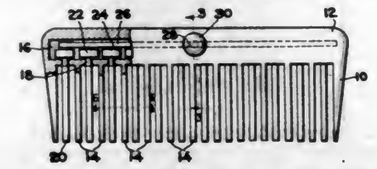
3. In a pressure cooker comprising a receptacle having an elliptical top opening, a cover engageable with the underside of the margin of said opening and movable therethrough when tilted and rotated 90° out of alignment with the opening, a bridge adapted to rest at its ends on the receptacle, a knob mounted over said bridge and rotatably supported thereby and controlling the raising and lowering of the cover into and out of engagement with said margin, and a cover-supporting stem secured at its lower end to the cover and cooperating with said knob to rotate the cover, said stem having a vertical passage communicating at its lower end with the interior of the receptacle and having a lateral opening at its upper end, the combination therewith of a valve-carrying member mounted within said knob, and a spring-pressed ball mounted in said member and seated in said lateral opening to close said passage, said ball being adapted to open said passage to permit escape of steam from the receptacle when a predetermined pressure is reached.

2,456,135
SHOE SUPPORT
Kenneth W. Macdonald, Winchester, Mass., assignor to Compo Shoe Machinery Corporation, Boston, Mass., a corporation of Delaware
Application April 29, 1943, Serial No. 485,007
7 Claims. (Cl. 12—126)



1. A device of the class described, comprising a supporting member, a block pivoted to said member on a substantially horizontal pivot and with freedom of motion between limits axially of said pivot, means for adjusting said block angularly about its pivot, a yoke pivotally supported on said block about an axis transverse to the direction of said block pivot for limited pivotal motion, and a jack pin secured to and projecting upwardly from said yoke.

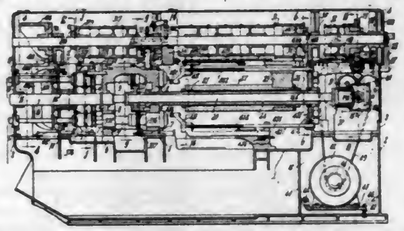
2,456,136
ART OF SINTERING ORES
Robert L. Manegold, Shorewood, and Ira H. Wynne, Milwaukee, Wis., assignors to Dings Magnetic Separator Co., Milwaukee, Wis., a corporation of Wisconsin
Application April 20, 1945, Serial No. 589,412
3 Claims. (Cl. 75—5)



1. The method of sintering a static bed of mixed magnetic ore and fuel particles resting upon a grate having supporting bars spaced apart sufficiently to normally permit particles of the mixture to gravitate freely through the spaces, which comprises, magnetizing and maintaining the bars constantly magnetized with sufficient intensity to cause the magnetic particles to loosely bridge each space with bridges sufficiently dense to prevent particles of the mixture from falling through the spaces, and igniting the fuel particles to sinter the mixture and continuing the sintering operation by passing combustion air and gases through the bed and spaces.

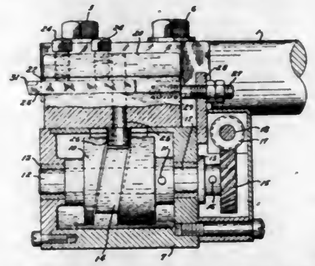
2,456,137
AIR BRAKE APPARATUS
John W. Marsh, Arlington, Va., assignor to Apex Railway Products Co., Chicago, Ill., a corporation of Delaware
Application October 30, 1946, Serial No. 706,656
5 Claims. (Cl. 303—84)

1. Air brake apparatus embodying therein a triple valve having an air port, a brake cylinder spaced therefrom, an auxiliary air reservoir between said valve and said cylinder and operatively connected at one end to said cylinder, means providing a conduit through said reservoir and opening at one end into said cylinder, a member disposed between the other end of said reservoir and said valve and formed for the passage of air therebetween, said member being further formed at its ends with ports for the passage of air between the air port of said valve and said conduit through said reservoir, said member also being formed to provide passageways affording communication between said ports therein and a manually operable valve for closing off the passage of air through one of the passageways in said member without affecting the passage of air through the remainder of said passageways in said member.



2,456,138
COMB
Costanzo Marini, Leominster, Mass.
Application November 29, 1945, Serial No. 631,656
1 Claim. (Cl. 132—21)

A comb having a back, a chamber therein, a series of fixed teeth extending from the back, a rotatable blade-like tooth between each pair of fixed teeth, an eccentric for each rotatable tooth, said eccentrics being located in the chamber, a bar secured to each eccentric, and means for moving the bar for rotating the eccentrics and therefore the rotatable teeth.

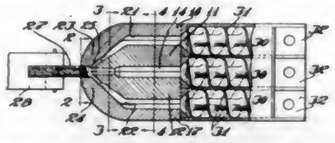


2,456,139
MULTIPLE SPINDLE LATHE
Carroll E. Miller and John M. Ingalls, Windsor, Vt., assignors to Cone Automatic Machine Company Inc., Windsor, Vt., a corporation of Vermont
Application December 19, 1942, Serial No. 469,516
4 Claims. (Cl. 29—37)

1. In a machine of the class described, work supporting means, tool supporting means, means for relatively moving said supporting means to cause tools on said tool supporting means to perform an operative cycle with respect to work held by said work supporting means, means for driving said moving means selectively at a relatively fast speed in either of two directions and at a relatively slow speed in one direction, a controller for each of said fast speeds and a controller for said slow speed, each of said controllers including a rod movable axially when the corresponding controller is actuated, said rods being arranged in parallel relation, and interlocking connections

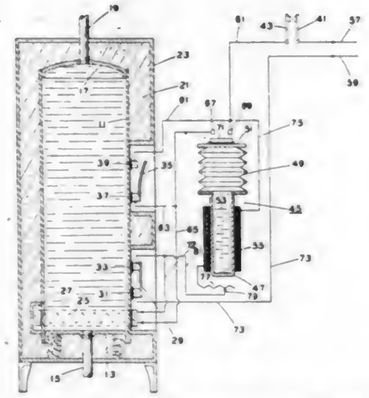
between said rods causing actuation of a controller to condition said moving means to move in one direction to insure the inoperative condition of a controller to condition said moving means to move in the reverse direction.

2,456,140
ADJUSTABLE CHAMFERING DEVICE
Siegfried E. Mueller, East Cleveland, Gordon Victor Anderson, Shaker Heights, and Arthur Dacas, Cleveland, Ohio, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application January 17, 1944, Serial No. 518,564
2 Claims. (Cl. 29—57)



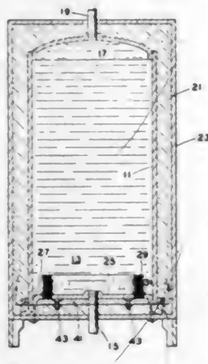
1. An attachment comprising a tool holder having a shank for mounting in an indexible tool turret, a cam carried by said tool holder, a tool slide and tool support slidably carried by said cam housing, manual means for slidably advancing and returning said tool slide and tool in said cam housing toward and away from said work, said means comprising a barrel cam including a barrel with a spiral cam slot therein and rotatably mounted in said cam housing, a roller carried by said tool slide and engaging said cam slot to operatively connect said cam to said tool slide, a hand wheel and an irreversible worm gear drive between the same and said cam for manually rotating said cam in either direction and adjustment stop limiting members carried by said adjusting plate for limiting relative sliding movement of said tool slide in said cam housing.

2,456,141
APPARATUS FOR EXTRUSION MOLDING OF PLASTIC ARTICLES
Simon Myerson, Brookline, Mass.
Application May 6, 1946, Serial No. 667,668
6 Claims. (Cl. 18—12)



1. Apparatus for moulding a relatively inelastic plastic article from a plurality of substantially

inelastic plastic materials having different characteristics which comprises an extrusion passage terminating in an extrusion orifice, said extrusion passage being formed throughout its length between the adjacent surfaces of a plurality of abutting die members which, upon separation, divide the wall of said passage into fully exposed segments thereby to expose said wall for cleaning throughout its length, a plurality of compression chambers, a plurality of feeder passages, each feeder passage extending from the emission end of a compression chamber to said extrusion pas-

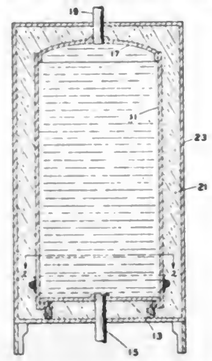


sage, each of said feeder passages being formed throughout its length between the adjacent surfaces of a plurality of abutting die members, which, upon separation, divide the wall of said passage into fully exposed segments, thereby to expose said wall for cleaning throughout its length, means in said compression chambers operative to force the plastic materials from said chambers through said feeder passages, the extrusion passage and the extrusion orifice, and holding means adapted releasably to hold said die member in said assembled relationship.

2,456,142
THERMAL RETARDER
Clark M. Osterheld, Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application August 24, 1946, Serial No. 692,900
14 Claims. (Cl. 219—39)

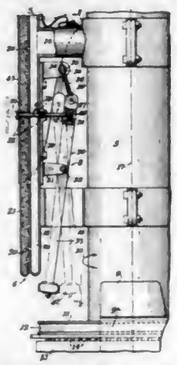
1. A water heater control system for a hot water tank comprising an electric heater, said system comprising a first thermally-actuable heater circuit control switch adapted to be in heat-receiving engagement with water in the tank near the lower end thereof and to be in open position when subject to hot water and to be in closed position when subject to cold water, a second thermally-actuable heater circuit control switch adapted to be subject to the temperature of water intermediate the ends of a tank and to be in closed position when subject to cold water and to be in open position when subject to hot water, a thermal retarder heater circuit control switch unit comprising an elongated tubular member, an expansible and contractible bellows secured to one end of said tubular member, fluid in said tubular member, an electric heating coil on said tubular member, a heater circuit control switch adapted to be closed when said bellows has expanded a predetermined amount and an off-peak time-controlled heater circuit switch adapted to be closed during off-peak hours of a twenty-four-hour day, said electric heater being energized immediately upon closure of said time-controlled switch through said first and said second thermally-actuable switches and said time-controlled switch when said tank is full of cold water.

2,456,143
WATER HEATER
Clark M. Osterheld, Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application November 19, 1946, Serial No. 710,776
2 Claims. (Cl. 219—39)



1. In combination, a water tank having in the bottom wall thereof an annular recess of uniform width and depth, a heating element in said recess comprising a sheet-metal resistor and a layer of electric-insulating material wound together into a tight spiral with successive turns in firm contact, and thin metal sheets having electric-insulating layers thereon lining said recess, said wound resistor and metal sheets filling said recess and fitting snugly therein.

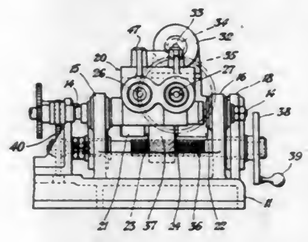
2,456,144
WATER HEATER
Clark M. Osterheld, Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application November 30, 1946, Serial No. 713,336
3 Claims. (Cl. 219—39)



1. An electric heater for a hot water tank comprising a corrugated strip adapted to be mounted against the outside surface of a tank, a relatively thin liner, of substantially semi-circular shape, in contact with the tank, a helically wound metallic resistor member in said corrugation engaging said liner and said corrugation and means for tightly clamping said corrugated strip against the tank and for clamping said metallic resistor member tightly between said corrugated strip and said liner and the outside surface of the

tank, the entire outer surface of said metallic resistor member having thereon an inorganic,

high-temperature-resisting, heat-conducting and electric-insulating coating.

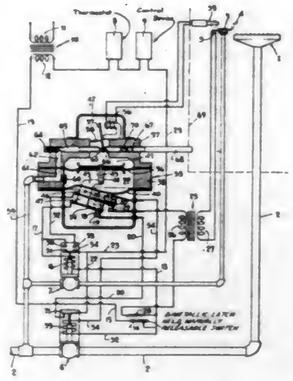


2,456,145
PRESSING MACHINE TAIL CLAMP
Otto H. Pearson, Salt Lake City, Utah, assignor to Louis N. Strike, Salt Lake City, Utah
Original application April 2, 1945, Serial No. 586,053. Divided and this application December 12, 1946, Serial No. 715,687
7 Claims. (Cl. 38—12)

2. Mechanism of the character described comprising a movable buck for receiving a garment to be pressed, a clamp element extending through the buck movable therewith and including a clamping member manually movable to clamp portions of said garment, mechanical means connected to and movable with the clamp element, and stationary means engageable with the mechanical means for effecting release of the clamp member, said mechanical means comprising an over center spring toggle for holding the clamp element in moved position, and said stationary means comprising a cam for operating the toggle to move the clamp member to release position.

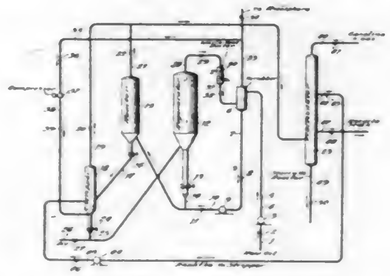
2,456,146
CAM PROFILING MACHINE
Charles Perry, Bexley, England, assignor to Vickers-Armstrongs Limited, London, England, a company of Great Britain
Application July 11, 1944, Serial No. 544,414
In Great Britain November 23, 1943
9 Claims. (Cl. 90—13.4)

1. A cam profiling machine of the type described and comprising a cutter-frame provided with a plurality of operative members arranged with their axes parallel to one another, at least one of which members is a rotary cutter and at least one other of which members is a tracing guide member formed as at least a portion of a solid of revolution of the same general shape as the said rotary cutter and being of substantially the same radius as the cutter, the said cutter-frame being associated with a base provided with means for supporting upon a common axis a master cam and a cam blank in such a manner as to render them rotatable simultaneously at the same angular speed, the arrangement being such that the said operative members when in any operative position bridge the said master cam and cam blank respectively so as to be adapted to rest transversely upon them, the parallel axes of the operative members always being in a different plane than said common axis of the master cam and cam blank, the cutter-frame being provided with feeding means adapted to move it axially of the said master cam and the said cam blank, and the cutter frame being also associated with guiding means enabling it



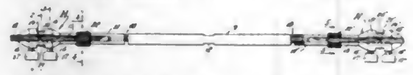
to float to such an extent as to make the said tracing guide member and cutter freely movable in the direction to and from the master cam and cam blank but substantially immovable in all other directions except as moved by the said feeding means, the cutter-frame and the cutter and the tracing guide member being so arranged in relation to the said base and to each other that, when the master cam and cam blank are in situ supported upon the base, by floating motion of the cutter-frame the cutter can be caused to approach the cam blank so as to operate upon it, and the tracing guide member be simultaneously and correspondingly caused to approach the master cam in such a manner that by co-operation between the tracing guide member and the master cam during the operation of the machine the cutter is limited and guided in its approach to the cam blank so that the cam blank is cut to a profile that corresponds to the profile of the master cam.

2,456,147
BURNER CONTROL SYSTEM
William A. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application December 5, 1944, Serial No. 566,662
15 Claims. (Cl. 158—117.1)



7. In a system of the character described, a fuel burner, fuel supply means for said burner, an electrically operated igniter for the burner, a circuit controller for the igniter, and means for operating said circuit controller, comprising means forming a pressure chamber with a movable wall adapted to be subjected to the fluid pressure of the fuel on both sides, and means responsive to the existence of a flame at the burner

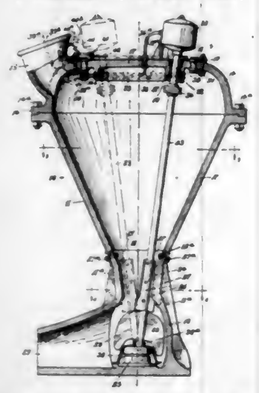
to release the fluid pressure from one side of said wall for causing the fluid pressure of the fuel on



the opposite side to move the wall and thereby de-energize the igniter.

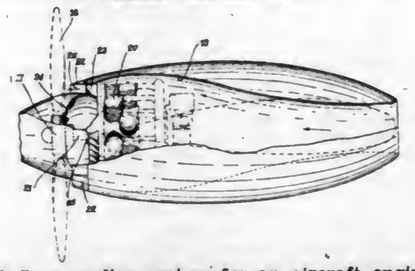
2,456,148
STRIPPING OF SPENT CATALYST IN HYDROCARBON CONVERSION PROCESSES
Davis Read, Jr., Downers Grove, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application May 25, 1945, Serial No. 595,715
7 Claims. (Cl. 196—52)

2. A hydrocarbon conversion process which comprises subjecting a hydrocarbon charge to conversion conditions in the presence of a solid catalyst in a reaction zone; introducing the resultant conversion products into a fractionation zone and therein separating a naphtha fraction; withdrawing contaminated catalyst from the reaction zone and introducing the same into a separate stripping zone; contacting said naphtha fraction with said contaminated catalyst in said stripping zone to displace high boiling hydrocarbons from the contaminated catalyst; separately withdrawing from said stripping zone the stripped catalyst and the naphtha fraction containing displaced high boiling hydrocarbons; introducing the latter into said fractionation zone without passage thereof through said reaction zone; introducing said stripped catalyst into a regeneration zone and therein removing combustible contaminants from the catalyst; and returning resultant regenerated catalyst to said reaction zone.



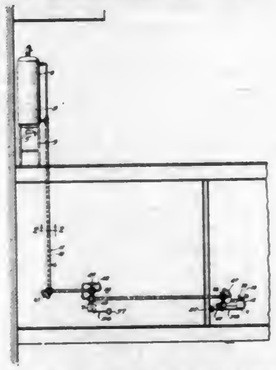
2,456,149
DEVICE FOR SPLICING CABLE
Oscar C. Roesen, Scarsdale, N. Y., assignor to Wood Newspaper Machinery Corporation, Plainfield, N. J., a corporation of Virginia
Application June 28, 1944, Serial No. 542,548
8 Claims. (Cl. 287—75)

1. A device for attachment to a cable comprising an elongated head member having a longitudinally extending laterally open slot therein extending to one end thereof, at least one set screw movable into said slot transversely thereof to clamp a cable therein, and resilient means movable transversely of the slot for retaining a length of cable in said slot in a position to be gripped by said set screw.



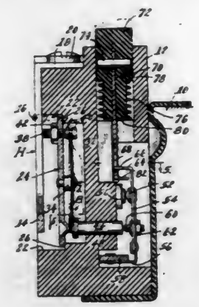
6. A device for splicing a cable comprising a pair of aligned elongated clamping heads having longitudinally extending laterally open slots therein extending to the outer ends thereof, screw means for clamping cables in said slots, resiliently movable means extending transversely into said slots for retaining cables therein while said screw means are tightened, and means of variably adjustable length connecting said heads.

2,456,150
GRINDING APPARATUS WITH UPPER GYRATORY DRIVE
Garold N. Rowley, Fort Pierce, Fla.
Application January 1, 1945, Serial No. 570,903
9 Claims. (Cl. 241—212)



1. An apparatus of the character described comprising a conical hopper, for receiving the material to be acted upon, a convex cover having a central circular opening secured to the open top of said conical hopper, said hopper having a constricted passage adjacent its base, a circular cover plate rotatably mounted in said circular opening, said cover plate having an eccentrically disposed opening, a shaft rotatably mounted in said eccentrically disposed opening and extending into said constricted passage, means for rotating said circular cover, cutting means carried by said shaft and working in said constricted passage, and means carried by said circular cover for axially revolving said shaft, whereby said shaft is revolved and actuated in a conical path adjacent the walls of said hopper, and said cutting means co-acts with the wall of said passage to reduce the material therebetween.

2,456,151
AIRCRAFT ENGINE COOLING SYSTEM
James G. Sawyer, Williamsville, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application March 29, 1943, Serial No. 481,059
3 Claims. (Cl. 123—171)

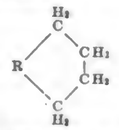


1. In a cooling system for an aircraft engine having heat dissipating means with surface portions to be air cooled; a casing structure for said engine providing an air passageway in which said heat dissipating means is disposed, said passageway having a forwardly directed air inlet section and an annular rearwardly directed air outlet section; a fan disposed rearwardly of said engine and drivably connected thereto, said fan having a streamlined hub portion forming the inner wall of said annular air outlet section and having blades extending from said hub portion across the annular outlet section of said passageway, said fan hub portion extending rearwardly beyond said casing structure to form a substantially streamlined continuation of the outer surface of said casing; and cowl flaps adjustably secured to said casing structure for varying the extent to which the outlet of said passageway is opened.

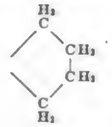
2,456,152
STERILE DISTRIBUTION AND DRAWOFF SYSTEM
Robert H. Schneider, Madison, Wis., assignor, by mesne assignments, to Air Reduction Company, Incorporated, a corporation of New York
Application July 14, 1944, Serial No. 544,993
6 Claims. (Cl. 21—103)

1. The combination with a building having a plurality of separate compartments formed in the interior thereof, of an apparatus for supplying water in a sterile condition to said compartments, said apparatus including a source of sterile water, at least one draw-off faucet in each of said compartments, a conduit system connecting said faucets to said source of sterile water, and means for maintaining the water in sterile condition while in the conduit system and faucets, said conduit system comprising a plurality of pipe sections, cross fittings connecting the sections one to another, the faucets being connected to certain of the cross fittings, each of said cross fittings having two pairs of aligned openings, the axes through said pairs of aligned openings being arranged at an angle to each other, at least two of the adjacent openings in each cross fitting receiving each an end of a pipe section for connecting such sections, said maintaining means comprising a source of steam associated with said container, and piping extending from the source of steam and through the conduit system to the faucets, the piping being directed from one conduit section into a cross fitting secured thereto and out through the opening in said cross fitting aligned with said one conduit section and then being directed through the second pair of openings in the cross fitting into the other conduit section connected to said cross fitting.

2,456,153
THERMAL CUTOUT
Paul Schell, Elkhart, Ind., assignor to Penn Electric Switch Co., Goshen, Ind., a corporation of Iowa
Application September 18, 1946, Serial No. 697,766
7 Claims. (Cl. 200—122)



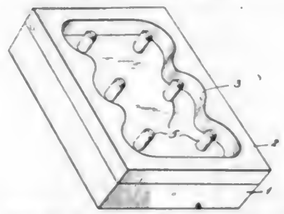
3. In a thermal cutout, a body member having a recess, a mounting plate on a shoulder in said recess, a snap-disc bimetal element mounted in said recess on one side of said mounting plate, thermal cutout contacts opened by said disc element when it is heated to a predetermined degree, an electrical heater for said disc element comprising a semi-circular flat portion extending circumferentially in relation to said disc element and located on the opposite side of said mounting plate, said mounting plate being perforated to permit the radiation of heat from said electrical heater to said disc element, and means to latch said contacts open.



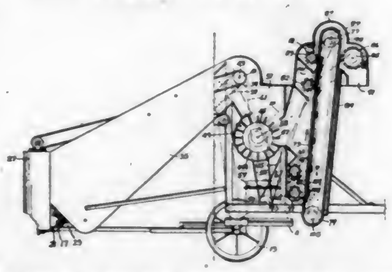
2,456,154
TREATMENT OF RUBBER
Winfield Scott, deceased, late of Akron, Ohio, by Ruth P. Scott, executrix, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application July 2, 1945, Serial No. 602,935
8 Claims. (Cl. 260—810)

1. A method of treating rubber which comprises vulcanizing it in the presence of a dihydro poly-

cyclic p-hydroquinone of condensed ring structure having the formula



in which R is an aryl radical having the hydroquinone hydroxyl groups attached to the ring adjacent the

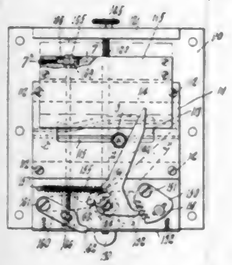


ring.

2,456,155
DEVICE FOR TEACHING THE BLIND
Emily C. Seaman, New York, N. Y.
Application November 15, 1944, Serial No. 563,469
2 Claims. (Cl. 35—38)

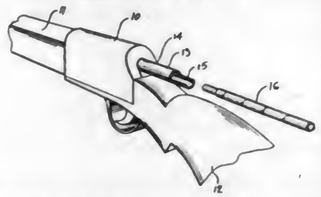
1. In a device of the character described, a base member, holes in said base member arranged in a pattern corresponding to the embossings forming the Braille alphabet, and movable pegs fitting the said holes whereby by different arrangements and numbers of said pegs the Braille alphabet may be reproduced, the pegs and the spacing of the perforations being much larger than the embossings and spacings, respectively, of a Braille character when printed in the customary manner.

2,456,156
COTTON CLEANER
William F. Speck, West Memphis, Ark.
Original application October 20, 1944, Serial No. 559,515. Divided and this application May 31, 1946, Serial No. 673,397
3 Claims. (Cl. 19—36)



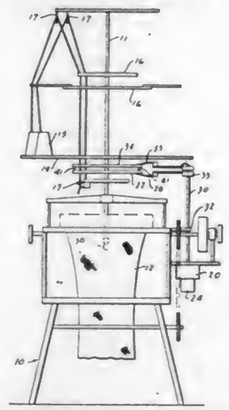
3. Cotton cleaning means including rotary breaker means, an open top housing for said breaker means, said housing having a perforate bottom section for escape of trash and having a portion extending rearwardly from said perforate section to provide a discharge chute, shredder means disposed rearwardly of and lower than said breaker means to receive discharge from said chute, said shredder means projecting rearwardly beyond the discharge end of said chute and including means for effecting shift of material longitudinally, and housing means rearwardly open enclosing the front and lower portions of said shredder means, and open for discharge at one end, an endless carding belt, carried by upper and lower pulleys, positioned and spaced apart to establish substantially upright flights, said belt being disposed rearward of said shredder means with its forward flight in adjacency to said shredder means and spaced from the discharge end of said chute to provide an unobstructed vertical pathway from said chute to said shredder means for material discharged from said chute, rotary combing means disposed in adjacency to the upper end of said forward flight, a rotary brush disposed in contacting adjacency to the rear flight of said belt, and means for driving said breaker, combing and stripper means, said carding belt pulleys and said brush; said driving means being coordinated to drive said shredder means to traverse materials engaged thereby toward the discharge opening of said housing and the forward flight of said carding belt upward.

2,456,157
PROTECTOR FOR THE DOORS OF VEHICLES
Roy W. Tadd, San Gabriel, Calif.
Application September 6, 1947, Serial No. 772,527
8 Claims. (Cl. 293—62)



3. A protector for the door of a vehicle, comprising similar sections having hooking engagement with opposite lateral edges of said door, an inner extension on one end of each section adapted to engage the opposite lateral edge faces of said door, fastening screws for said sections passing through said extensions and into the door edge faces, means for connecting the sections, and a bumper unit carried by each section.

2,456,158
TRACER AND AUTOMATIC PATTERN FEED
William L. Tancred, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application April 19, 1945, Serial No. 589,229
8 Claims. (Cl. 90—62)

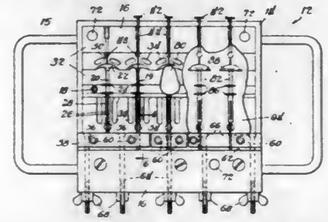


1. In combination, a tracer mechanism comprising a support, a pair of elements one within the other, and each pivoted to said support, a feeler carried by one of said elements, said feeler-carrying element being pivoted to said support closer to said feeler than the pivot of the other of said elements, a pattern having an edge with which a side of said feeler may contact, means for moving said support and pattern relatively under control of said feeler as it is moved relative to said support and to said other element by contact of said pattern against said feeler, a cam associated with said pattern, a follower member carried by said support and extending through said feeler transverse to said feeler side and engaging and moving along said cam as said support and pattern are moved relatively, and means actuated by motion of said follower produced by said cam as said support and pattern are moved relatively for controlling the speed of said moving means.

2,456,159
SHOT CARTRIDGE
Walter A. Tratsch, Chicago, Ill., assignor to Clarence E. Threedy, Chicago, Ill., as trustee
Application October 1, 1945, Serial No. 619,569
1 Claim. (Cl. 124—45)

A cartridge for a pneumatic rifle comprising a tubular member formed of flexible material having a shoulder at one end portion and a tip extending beyond the shoulder, the wall of the tip being relatively thin with respect to the wall of the tube member whereby when shots are projected through the tube said tip will expand to reduce restraining friction between the shots and the wall of the tip.

2,456,160
LIGHT SYSTEM FOR KNITTING MACHINES
Marco Violandi, Brooklyn, N. Y., assignor to Stop-Motion Devices Corp., Brooklyn, N. Y., a corporation of New York
Application April 7, 1948, Serial No. 19,552
3 Claims. (Cl. 66—1)

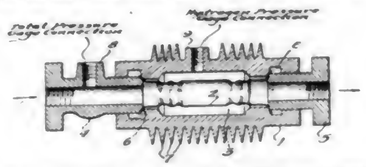


3. The combination with a circular knitting machine having a rotary vertical shaft extending down into the circular material being knitted by said machine, of a pair of conductor rings coaxially mounted on said vertical shaft, a contact arm for each of said conductor rings, a lamp mounted on the bottom portion of said vertical shaft for lighting up the interior of said circular knitted material and electrically connected in series with said conductor rings, and an electric feed circuit for lighting said lamp and connecting said contact arms, said conductor rings, and said lamp in series.

2,456,161
PARAFORMALDEHYDE COMPOSITIONS
Joseph Frederic Walker, Staten Island, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 29, 1945, Serial No. 613,453
6 Claims. (Cl. 260—611.5)

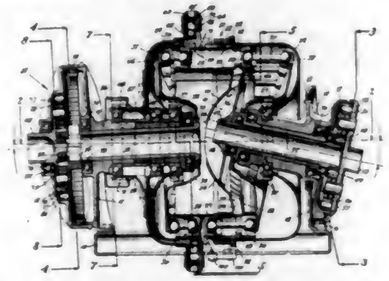
1. Paraformaldehyde containing, as an agent for controlling and stabilizing polymer reactivity, 0.1% to 10% pentaerythritol.

2,456,162
MOLD
Carl C. Waterbury, Chicago, Ill., assignor to Diaphragm & Chemical Company, Chicago, Ill., a corporation of Illinois
Application March 13, 1946, Serial No. 654,165
5 Claims. (Cl. 18—42)



1. A mold comprising, a mold base and a mold cover adapted to be fitted and secured together, the base and cover each having a cavity formed therein and arranged to have their open sides meet when the base and cover are fitted together, the mold being adapted for the reception of a wire having a main body with separated leg portions formed at one end thereof, supporting means for positioning the main body of said wire substantially centrally of the cavities, supporting means for positioning the separated leg portions in spaced substantially parallel relation in and on opposite sides of the central longitudinal axis of said cavities, there being a projection extending from the bottom of each cavity and extending toward the open side thereof and positioned to define separate cavities for the leg portions of the wire when the wire is in position in said cavities, and means for securing the base and cover together.

2,456,163
HYDROGEN METER
Charles C. Watson, Evanston, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application June 20, 1945, Serial No. 600,553
8 Claims. (Cl. 73—23)

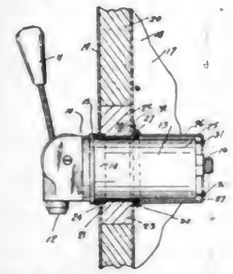


1. An apparatus for measuring hydrogen concentration in a gaseous mixture which comprises a tubular housing having an inlet at one end and an outlet at the opposite end thereof for said

gaseous mixture, cooling means around the exterior of the said housing, a cylindrical and expansible hydrogen permeable sleeve placed concentrically within said housing, said cylindrical sleeve having its ends sealed to the inner wall of

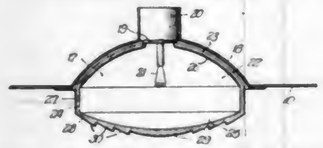
said housing and forming an annular hydrogen receiving space with the wall of said housing, and a nozzle connecting to said hydrogen receiving space suitable for attaching a pressure indicating means.

2,456,164
COMBINED INTERNAL-COMBUSTION AND TURBINE ENGINE
Joseph Youhouse, Fairfield, Conn.
Application April 5, 1944, Serial No. 529,642
19 Claims. (Cl. 60—13)



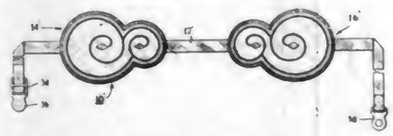
3. A combined internal combustion and turbine engine having a first and a second cooperating turbine blade structure rotatable in opposite directions, each including a plurality of sets of turbine blades; power take-off means for translating said rotatable movements into a unidirectional drive; and means rotatable with said first structure for producing a propelling fluid and directing same against the turbine blades of the second structure, and thereafter against the turbine blades of the first structure and again against the blades of said second structure.

12. A combined internal combustion and turbine engine having two sets of interdigitated cooperating turbine blade structures rotatable in opposite directions, each set comprising a plurality of concentrically disposed annular turbine elements; power take-off means for translating said rotatable movements into a unidirectional drive; internal combustion units rotatable with one of said structures; and means for directing the combustion gases from said units in an annular progression against succeeding portions of each blade structure to drive the same.



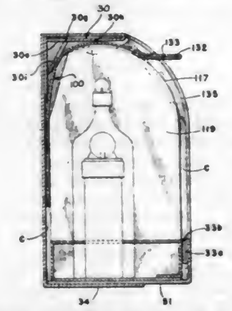
2,456,165
VALVE MOUNTING
Rudolph Yuza, Chicago, Ill., assignor to A. Dalkin Company, Chicago, Ill., a corporation of Illinois
Application March 19, 1945, Serial No. 583,574
2 Claims. (Cl. 137—69)

1. A mounting for a valve structure having an elongated body, comprising a wall having an opening formed therein, a resilient insert in said opening and adapted to embrace the medial portion of said body, a sealing cap having a ring-like recess formed in one end thereof and embracing an end portion of the body, said sealing



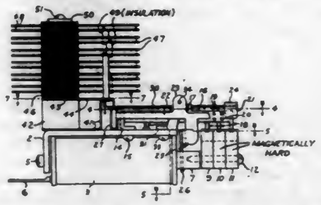
cap including a resilient sealing ring encircling the body adjacent said medial portion and seated in said recess and adapted to bear against said wall adjacent the opening, and means for connecting said cap to said body for bearing said sealing ring against said wall.

2,456,166
ELECTRIC LIGHTING
Albert L. Arenberg, Highland Park, Ill., assignor to Patent License Corporation, Chicago, Ill., a corporation of Illinois
Application November 8, 1946, Serial No. 708,557
7 Claims. (Cl. 176—34)



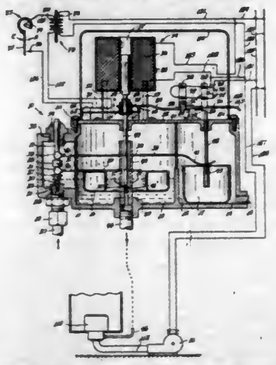
1. An electric light bulb having a base and a housing extending from said base comprising a dome-shaped reflector portion, a lens portion, and an annular diffusing band portion spacing said lens portion from said reflector portion.

2,456,167
HEAD ORNAMENT
Catherine Arkus, New York, N. Y., assignor to Feder Industries, Inc., New York, N. Y., a corporation of New York
Application June 26, 1947, Serial No. 757,155
2 Claims. (Cl. 2—209)



1. A head ornament comprising an elongated limp tape and a pair of earmuffs, each of said earmuffs including a flat outer layer and a flat inner layer, said outer layer being imperforate, said layers being substantially coextensive and superimposed, said layers being secured together adjacent the peripheries thereof so as to leave unattached the central portions thereof, the unattached portions of said layers providing an elongated passageway running through the center of the earmuff and terminating at its opposite ends in openings in the inner layer adjacent the periphery of the earmuff on diametrically opposite sides of the center, said tape extending through said passageway and being slidable axially therethrough over substantially its entire length, whereby the portions of the tape lying within the peripheries of the earmuffs are wholly concealed, and the earmuffs can be slid from positions overlying the ears to positions overlying the hair of a wearer, the centrally disposed edge-to-edge tape portions holding the earmuffs flat against the ears and flat against the head of the wearer in its two positions so that in their second-named position the earmuffs can function as ornaments.

2,456,168
DISPLAY CARTON WITH SLIDING CLOSURE
Albert Behrens, New York, N. Y.
Application October 11, 1946, Serial No. 702,783
8 Claims. (Cl. 206—44)

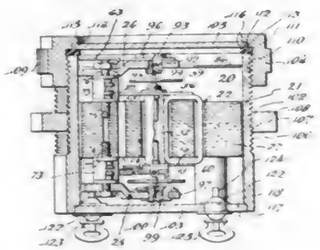


1. A folding box comprising a housing having a front panel, a rear panel, a pair of end panels, all panels being defined by vertical score lines, bottom closure flaps extending from the lower ends of said panels to form a bottom closure, a main top closure flap extending from the top of the front panel and having a horizontal score line at its base as well as a horizontal intermediate score line defining a horizontal body portion and a vertically tucked-in end portion, a pair of auxiliary top closure flaps each one of which extends from a respective end panel and is spaced a distance from said main closure flap, the end panel upper portions between each auxiliary flap and the main closure flap being foldable in an inward pleat defined by diverging score lines having their center at an intermediate point of the respective vertical score lines of the front panel, whereby the upper portion of the front portion is allowed to recede from the plane of the lower portion of the front panel, the front panel having a substantially rectangular display opening defined by a lower tongue portion extending from the bottom side of said opening, said tongue portion being foldable inwardly due to a horizontal base score line and an intermediate horizontal score line, said opening being further defined by an upper complementary tongue portion extending from the top side of said opening and folded inwardly and having a body portion extending horizontally and a terminal portion inclining downwardly and towards the rear panel, said upper tongue portion having struck therefrom a secondary tongue portion extending horizontally rearwardly and in line with said horizontal body portion of the upper tongue portion, a guide structure having a horizontal base portion and a pair of upstanding shank portions and being insertable in said housing whereby the folded lower tongue portion intervenes between the front panel and the base portion of said guide structure, and up and down slideable roll top member for said opening confined in its sliding path inwardly by said guide structure and outwardly by said front panel by said upper tongue portion, and by said rear panel.

2,456,169
ELECTROMAGNETIC COUNTING DEVICE
John I. Bellamy, Brookfield, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a corporation of Illinois
Application January 12, 1946, Serial No. 640,797
10 Claims. (Cl. 177—353)

1. In combination, an electromagnet having a winding for receiving series of impulses, a series of armatures for said electromagnet corresponding respectively to the impulses of a received series, means for causing the electromagnet to operate its armatures as it receives the impulses of a series, each such armature responding to its corresponding impulse of the series, a series of members mounted in association respectively with said armatures and corresponding respectively to the impulses of a received series, an actuating bar operatively associated with each said member subject to the corresponding associated armature being operated, and means initially effective following the termination of a received series of impulses for moving said bar, said movement selectively operating said members according to the number of received impulses as indicated by the armatures which have been operated.

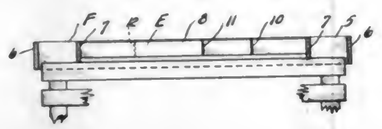
2,456,170
LIQUID FUEL BURNER CONTROL
Ashley C. Bennett, St. Louis Park, Minn.
Application October 22, 1942, Serial No. 462,947
18 Claims. (Cl. 158—42.3)



1. In a liquid fuel control for a burner, a casing having a first float chamber, and an overflow float chamber into which liquid flows only when the liquid fuel in said first float chamber rises to an abnormal level, floats in said first float cham-

ber and said overflow float chamber, a first valve means positioned by the float in said first float chamber, a second valve means in series with said first valve means, thermostatically affected means for adjusting the position of said second valve means in accordance with the demand for liquid and continually vibrating the same when said valve means is in an intermediate position, and operative connections between the float in said overflow float chamber and both said first valve means and said second valve means such that upon the liquid fuel rising in said overflow float chamber, both valve means are closed.

15. In combination with a fluid fuel burner having an electrically operated draft controlling means, a valve mechanism for controlling the flow of fuel to said burner and comprising a liquid chamber, means for normally maintaining fluid fuel in said chamber at a constant level, valve means for controlling the flow of fuel from said chamber to said burner, means for adjusting said valve means in accordance with the demand for fuel, and means operative upon the fuel rising in said chamber to an abnormal level to cause said valve means to close completely and cause deenergization of said draft controlling means.



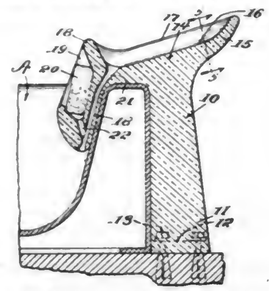
18. In a valve mechanism, valve means biased to closed position, electric motor means tending to cause opening of said valve means, thermal motor means opposing when cold the opening movement of said valve means, means including a device responsive to a first condition for controlling the heating of said thermal motor means to control the position to which said valve means may be opened, and means responsive to a second independent condition for causing the deenergization of said electric motor means upon said second condition assuming a predetermined value.

2,456,171
ELECTRICAL MEASURING INSTRUMENT
Herbert A. Bernreuter, Chicago, Ill., assignor to Simpson Electric Company, Chicago, Ill., a corporation of Illinois
Application March 24, 1945, Serial No. 584,571
13 Claims. (Cl. 171—95)

1. In an electrical instrument, the combination of a magnetic circuit structure including an annular outer magnetic circuit, a partially annular inner core and a radially inwardly extending portion supporting said inner core, said inner core having an opening, said outer circuit including a pair of magnets disposed with polarity opposed on both sides of said inwardly extending portion, a pair of bridge posts of molded plastic insulating material and having threaded metal inserts for securement to said field structure on the upper side of said field structure, and similar bridge posts on the lower side of said field structure, an upper bridge and a lower bridge, both of said bridges comprising a central portion and a pair of radially extending supporting arms carried by said bridge posts, and a moving coil unit having its pintles pivotally supported by said bridges, said moving coil unit including a coil surrounding said inner core portion of the magnetic circuit.

2,456,172
SEED POTATO CUTTER
Walter Burns, Munger, Mich.
Application March 4, 1946, Serial No. 651,685
1 Claim. (Cl. 146—170)

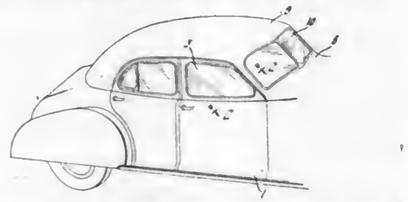
A potato cutter comprising a rectangular frame, additional bars spanning the frame at a point spaced inwardly from the end bars thereof, said additional bars being of less depth than the main frame so that said frame fits over a standard potato crate, a plurality of cutting elements mounted in said frame and arranged in a predetermined pattern between the additional end bars and the side bars, a longitudinally disposed cutting element forming a part of said pattern, transversely disposed cutting elements bridging the side bars of said frame and connected thereto, and to the longitudinal element respectively, to cut the product into six or four segments, and an additional cutting element bridging the space between one side wall of the frame and the longitudinal cutting element for cutting the product into three segments.



2,456,173
PHOTOCHLORINATION OF ACETYLENE
Oliver W. Cass, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 30, 1945, Serial No. 596,809
6 Claims. (Cl. 204—163)

1. The process which comprises reacting acetylene and chlorine in the liquid phase in a liquid mixture having substantially the composition of about 11 to 60% of tetrachlorethane, about 18 to 60% of pentachlorethane and about 12 to 25% of beta-trichlorethane, under the influence of light from ultraviolet through the visible range at a temperature of about 0 to 80° C., while maintaining the reaction mixture substantially free from oxygen and catalytic substances.

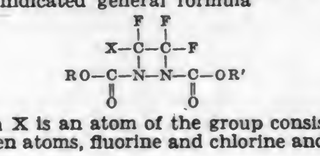
2,456,174
FOOTREST AND DRAINAGE FOR BATHTUBS
Ned Clark, Atlanta, Ga.
Application January 28, 1946, Serial No. 643,885
3 Claims. (Cl. 4—185)



1. A fitting for a bath tub, comprising a post for anchorage next to the tub and rising vertically thereto, a head at the uppermost end of the post and bridging the walling of the said tub, a foot step formed with the head and having drainage into the tub, a soap holder built with the head and

exposed within the said tub, a base for the post and fasteners engaging the base, the step being

inclined in a determined direction and having a cavity conforming to a person's foot.



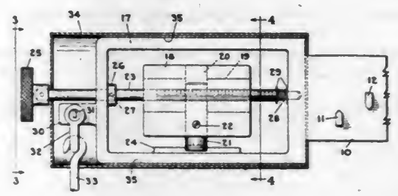
2,456,175
FRONT POST AND WINDSHIELD CONSTRUCTION
Kenneth E. Coppock, Pleasant Ridge, and Glen A. Smith, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 24, 1945, Serial No. 574,344
7 Claims. (Cl. 189—76)

1. In combination, a window frame having a sash supporting ledge of L-section with one leg thereof lying substantially parallel to the plane of the window glass and the other leg extending laterally outwardly, a sash load carrying strip of elastic deformable material covering said lateral leg, a metal sash bounding the edge of the window glass for peripherally seating on said strip and a series of spring clips detachably connected with said sash and extended therefrom with a lateral bridging portion overlying the inner edge of the first mentioned leg of the supporting ledge and terminating in an outwardly projecting spring blade which bears on the rear face of said first mentioned leg.

2,456,176
MONOMERIC ADDITION PRODUCTS OF AZOBISFORMATES AND POLYFLUOROETHYLENES
Richard D. Cramer, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 30, 1944, Serial No. 570,759
12 Claims. (Cl. 260—239)

11. A monomeric addition product of the following indicated general formula

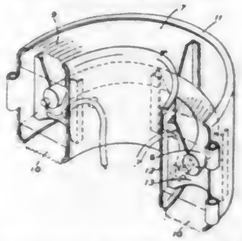
wherein X is an atom of the group consisting of hydrogen atoms, fluorine and chlorine and R and R' are the non-hydroxyl portions of saturated aliphatic monohydric primary alcohols containing not more than eight carbon atoms, said addition product being obtained by heating in the substantial absence of a polymerization catalyst at a temperature within the range of from 50° C. to 300° C. an azobisformic acid ester having the general formula ROOC—N=N—COOR' wherein R and R' are defined as aforesaid and a polyfluoroethylene having the general formula



wherein X is defined as aforesaid.

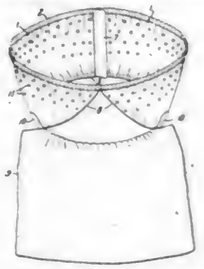
2,456,177
N-ALKYL POLYMERIC AMIC ACIDS AND COATING COMPOSITIONS CONTAINING THEM
Martin E. Cupery, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 24, 1946, Serial No. 664,703
5 Claims. (Cl. 260—78)

1. An N-monoalkyl substituted amic acid of the interpolymer of an ethylene-alpha, beta-dicarboxylic acid anhydride and a polymerizable organic compound containing an ethylenic double bond as the sole aliphatic carbon-to-carbon unsaturation, in which from 10 to 90% of the amide nitrogen atoms are attached to a monovalent alkyl substituent having 12 to 18 carbon atoms in the chain, the residual amide nitrogen atoms being attached to a member of the group consisting of a monovalent short chain alkyl substituent of less than seven carbon atoms and hydrogen.



2,456,178
BALANCE WEIGHT ASSEMBLY FOR WEIGHING SCALES
William A. Dimick, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application May 22, 1946, Serial No. 671,611
2 Claims. (Cl. 265—56.5)

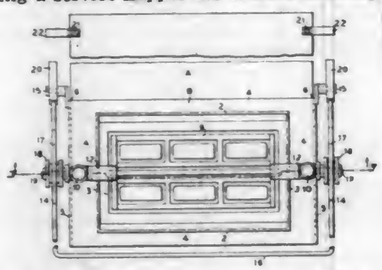
2. A weight beam having an opening formed therein near its butt end, a balance weight having horizontal and vertical intersecting passages, said weight being mounted on said beam within said opening, a casing enclosing the butt end of the beam and said balance weight, a threaded shaft for adjusting the position of said weight, said shaft extending through the end of said casing, the end of the beam, and through the horizontal passage in the balance weight, a member removably disposed in said vertical weight passage and projecting outwardly therefrom, said member having a threaded bore to receive said shaft, means on said beam coacting with the projecting end of said member to prevent said member and the weight from turning with the shaft, and means constraining said shaft against movement



endwise of the beam, comprising a collar fixed to the shaft, and a spring acting on said shaft to maintain said collar against an abutment surface on the beam.

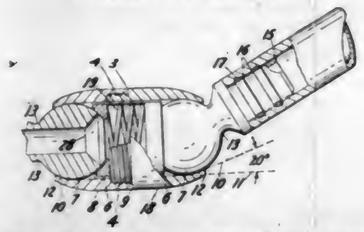
2,456,179
STREET LIGHTING STANDARD
Henry James Finer, Sutton Coldfield, England, assignor to Masts Limited, Birmingham, England, a British company
Application June 10, 1944, Serial No. 539,765
In Great Britain June 12, 1943
3 Claims. (Cl. 240—25)

1. An illuminating device for the exterior surface of a pole, comprising a unit adapted to surround an intermediate portion of a pole, said unit comprising a substantially annular inner sleeve of internal diameter to fit over the outer surface of the pole to which the unit is applied; a substantially annular outer sleeve concentrically disposed with respect to said inner sleeve and spaced outwardly therefrom; radially extending brackets having their ends secured to the said sleeves and maintaining them in concentric, spaced relation, each of said brackets having a notch along its upper edge; and a substantially annular illuminating tube positioned between the sleeves and supported within the said notches in the radially-extending brackets for casting beams of light upwardly and downwardly along the exterior surface of a pole on which said unit is mounted.



2,456,180
PROTECTION DEVICE FOR HAIR DRIERS
Jane E. Garing, Atlanta, Ga.
Application January 21, 1946, Serial No. 642,497
4 Claims. (Cl. 34—90)

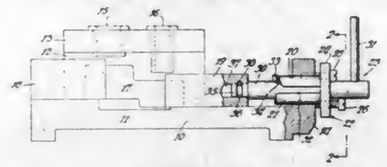
1. A protection device for hair driers, comprising a substantially annular, tubular strip-like body having end portions meeting at the back of the subject's head and provided at its upper and lower edges with means for securing it in embracing relation respectively with a drier and the head of said subject, the end portions of said body which embrace the back of the subject's head below the drier being formed with their edges relatively divergent from one of said securing means to provide an opening normally exposing the back of the subject's head through which opening the condition of dryness of the hair may be examined.



2,456,181
TAMPING DEVICE FOR BLOCK MOLDING MACHINES
Frank C. George, Orlando, Fla., assignor, by mesne assignments, to F. C. George Machine Company, Orlando, Fla., a corporation of Florida
Application February 14, 1947, Serial No. 728,405
5 Claims. (Cl. 25—41)

1. A tamping device of the type described comprising a service hopper for a block molding ma-

chine having a bed, and spaced upstanding guides based upon said hopper, and arranged parallel with each other, and shiftable with the hopper on said bed and a tamping foot having runners formed therewith and slidably mounted on said guides to lead the foot to and from working relation to a mold.

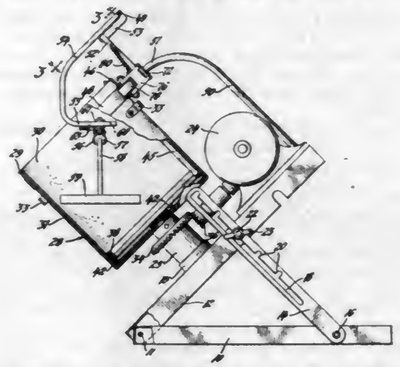


2,456,182
FLEXIBLE JOINT ASSEMBLY
Lawrence E. Goble, Fostoria, Ohio, assignor to The Fostoria Pressed Steel Corporation, Fostoria, Ohio, a corporation of Ohio
Application February 1, 1946, Serial No. 644,922
1 Claim. (Cl. 285—92)

A ball and socket type of flexible joint comprising a stem and therefrom a throat having a spheric enlargement forming a friction face, a cylindrical socket snugly coacting with the enlargement friction face, said socket having at approximately 20° an inwardly tapering seat toward an opening of sufficient diameter to provide clearance at the throat for the stem to flex as much as 45° in a complete orbit, a ring in the socket spaced from the seat by the enlargement, said ring having annular clearance from the socket with a spheric seat complementary to the enlargement face and frictionally coacting therewith, the opposite side of the ring being a flat face, and thrust-effecting means coacting in the socket, including a compression helical spring of diameter approximating the diameter of the ring and co-

acting with the ring flat face to maintain gripping coaction between the ring seat and the enlargement in holding the enlargement at tangential complete peripheral engagement in the tapering seat.

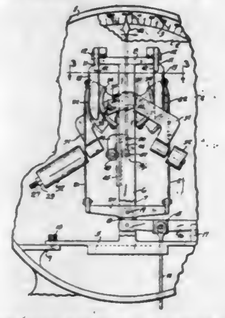
2,456,183
DEVICE FOR CLAMPING AND LOCKING WORK IN JIGS OR FIXTURES
Charles P. Green, Chicago, Ill.
Application June 18, 1945, Serial No. 600,059
2 Claims. (Cl. 81—26)



1. In a device of the class described having a stationary abutment against which pieces of work are adapted to be disposed, the combination of a sleeve member and a bolt slidable axially in said sleeve member to clamp a piece of work between said abutment and said bolt, said sleeve member having an inner cylindrical surface, said bolt having an outer cylindrical surface of uniform diameter for sliding movement in bearing relation with said inner cylindrical surface of said sleeve member, said sleeve member having a slot extending axially thereof and an inclined cam face at the end thereof adapted to face said abutment, said bolt having a pin projecting from the side thereof and adapted to be moved through said slot in the axial movement of said bolt in said sleeve member, and said pin being adapted to be engaged with said inclined end cam face upon rotation of said bolt about its axis to provide for disposing of the bolt in different axially advanced positions compensating for variations in the sizes of the pieces of work in the clamping of the latter between said abutment and said bolt.

2,456,184
PURIFICATION OF TETRACHLORETHYLENE
William C. Greenwald, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 17, 1946, Serial No. 662,915
5 Claims. (Cl. 260—654)

1. A method of removing impurities of the class consisting of 1,1,2-trichlorethane and asymmetrical tetrachlorethane from tetrachlorethylene comprising subjecting the impure tetrachlorethylene to an extraction treatment with a liquid which is immiscible with said tetrachlorethylene, said liquid comprising 50 to 95% of methanol and 5 to 50% water by volume.



2,456,185
ELECTROPLATING APPARATUS
William L. Grube, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 23, 1944, Serial No. 564,751
4 Claims. (Cl. 204—214)

1. In barrel electroplating apparatus, a base, a frame hinged to the base, means for adjustably holding the frame in any one of a plurality of inclined positions, a tubular boss fixed to said frame, a bearing at the upper portion of said boss, a spindle mounted for rotation in said tubular boss, a plating barrel having plastic inner and outer liners and fixed to the upper end of said spindle for rotation thereby, a gear fixed to said spindle and resting on said bearing, said barrel, spindle and gear being removable as a unit by moving said spindle upwardly out of said tubular boss, a second gear engaging the first gear, an electric motor carried by the hinged frame for driving said second gear, a continuous ring-shaped current conductor carried on the outside cylindrical surface of the barrel, a support carried by said frame, an arm having one end pivoted

to said support, a roller of current conducting material carried by the other end of said arm, a spring connected to said arm at a point between the pivoted end and said roller for biasing said roller into contact with said ring-shaped current conductor, a screen of current conducting material in said barrel adjacent the bottom thereof, a current conductor joining the ring-shaped current conductor and the screen, a hinged-bracket carried by said support having its lower end portion adjacent the top of the barrel, a spring-clip electrically insulated from and carried by the hinged-bracket, an anode, and an anode support having a universal joint connection with the spring-clip.

2,456,186
DIAL SCALE MECHANISM
Guldbrand Guldbrandsen, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application January 11, 1947, Serial No. 721,510
5 Claims. (Cl. 265—61)

5. In a weighing scale, a frame structure having parallel vertical guides, a pair of pendulums, each having a fulcrum sector and a load sector, said fulcrum sectors being arranged in coaxial

relation between said guides, pendulum supporting tapes engaging said fulcrum sectors and adapting them to roll along the inner confronting surfaces of said guides, load tapes connected to said load pendulums, an equalizer bar interconnecting said load tapes, means for transmitting load forces to said equalizer bar, a shaft journalled in said sectors connecting the pendulums together for conjoint translatory movement, and indicator means operatively connected to said shaft and movable responsively to translatory displacement thereof.

2,456,187

PROCESS FOR CATALYTICALLY HYDROGENATING ORGANIC SUBSTANCES

Henri Martin Guinot, Versailles, France, assignor to Les Usines De Melle (Societe Anonyme), Saint-Léger-lès-Melle, France, a company of France

Application June 15, 1945, Serial No. 599,607
In France September 5, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 5, 1961
2 Claims. (Cl. 260—690)

1. In a process for catalytically hydrogenating an organic substance which comprises passing hydrogen through an elongated reaction zone containing a charge of copper oxide and disposed in indirect heat exchange relationship with a heat exchange liquid, for the purpose of reducing copper oxide to copper, and thereafter passing vapours of a hydrogenatable organic substance in admixture with hydrogen through the freshly reduced copper in said elongated zone: the steps of first establishing a flow of an inert gas through said zone, heating said heat exchange liquid to copper oxide reduction temperature while simultaneously maintaining it under such a pressure as to cause said liquid to boil at said temperature, then cutting off heating while maintaining said pressure, and gradually and slowly substituting hydrogen for said inert gas to start and maintain the copper oxide reduction rapidly but evenly and without local overheating until the reduction to copper is completed, then employing the freshly reduced copper in the catalytic hydrogenation of an organic substance by admixing vapours of said hydrogenatable organic substance with said hydrogen at a point upstream with respect to said elongated reaction zone, and continuing the flow of the mixture of gases while simultaneously bringing said heat exchange liquid under such a pressure as to cause said liquid to boil at hydrogenation temperature for said organic substance.

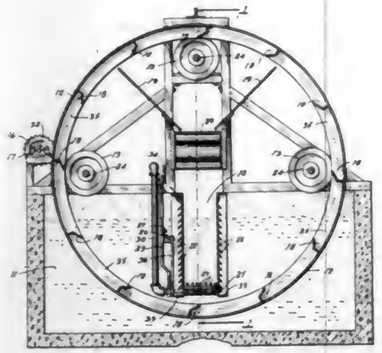
2,456,188

CYANHYDRIN ESTERS

Virgil L. Hansley and John E. Bristol, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 23, 1945, Serial No. 601,320
12 Claims. (Cl. 260—345)

1. The process for the production of a cyanhydrin acetate which comprises reacting a cyanhydrin with acetic anhydride in the presence of triethylamine.



2,456,189

CONTINUOUS SEDIMENT SEPARATOR

Benjamin F. Harbison, Rocky Ford, Colo.

Application July 7, 1945, Serial No. 603,713
2 Claims. (Cl. 209—424)

1. A sugar beet sediment collector comprising: a water containing basin; an imperforate cylindrical drum mounted to rotate partially submerged in said basin; a beet intake flume entering said basin; a beet discharge flume discharging from said basin, said flumes being in alignment with each other at opposite ends of and in axial alignment with said drum; side walls extending through said drum from the sides of the intake flume to the sides of the discharge flume; spaced apart, laterally extending grid

bars extending between said side walls above the bottom side of said drum to allow foreign materials to settle between said grid bars to said drum; an elongated hopper within said drum below the upper side thereof to receive the foreign materials from the ascending side of said drum; a water jet pipe extending horizontally across the basin end of the intake flume with its jets directed upwardly into the incoming flow.

2,456,190

SELF-ADJUSTING GARMENT

Harry S. Heilbronner, Perry, N. Y.

Application February 24, 1947, Serial No. 730,587
1 Claim. (Cl. 2—90)

A self-adjusting garment, comprising a tubular body composed of a main section shaped to extend over the shoulders of the wearer and having sleeves and including substantially V-shaped pendant portions terminating at their lower vertex ends medially of the front and back of the wearer adjacent the waist, and substantially triangular-shaped side sections of elastic-like material disposed between said pendant portions in complementary relation thereto, the vertex ends of said side sections protruding into the underside of and forming part of the arm-width of the companion sleeves adjacent the arm pits and the bases thereof intersecting the lower vertex ends of said pendant portions.

2,456,191

AQUEOUS UREA FORMALDEHYDE RESIN FOR STABILIZING TEXTILES

Philip Stanley Hewett, Royal Oak, Mich., assignor to Reichhold Chemicals, Inc., Detroit, Mich.

No Drawing. Application June 17, 1944, Serial No. 540,883
3 Claims. (Cl. 260—29.4)

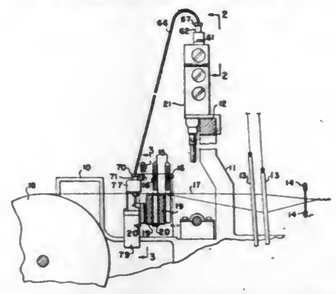
1. A process for producing a stable aqueous urea formaldehyde resinous dispersion which comprises combining urea and aqueous formaldehyde as the sole reacting ingredients in the ratio of 1.9–2.1 mols of formaldehyde per mol of urea, by forming an initially alkaline aqueous solution including in addition to the reacting ingredients a buffer and a volatile alkaline catalyst, then gradually heating the mixture and thereby progressively driving off the volatile alkaline catalyst until a pH of slightly above 5 is obtained, thereby controlling the rate of reaction to secure a stable resinous dispersion of uniform molecular weight distribution, and thereupon discontinuing the application of heat and stabilizing the final resinous dispersion.

2,456,192

CONTINUOUS PROCESS FOR THE MANUFACTURE OF SYNTHETIC RESINS

Harold G. Houlton, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware

Application September 13, 1943, Serial No. 502,102
6 Claims. (Cl. 260—57)



1. The continuous process of making a synthetic resin which includes the steps of continuously and rapidly passing a stream of a mixture of resin forming ingredients comprising formaldehyde and a phenolic body through one zone in the form of a thin confined layer and while in said zone vigorously mechanically agitating the mixture and rapidly heating it uniformly throughout the cross-section thereof to a predetermined temperature of incipient rapid reaction, passing the mixture with agitation through a second zone maintained at a substantially constant temperature and at such a rate that at the terminal of the second zone the reaction has proceeded to a point just short of gelling, maintaining the mixture in both said zones under pressure sufficient to keep all of the constituents of said mixture in liquid form, and then stopping the reaction by discharging the resin to a lower pressure whereby volatilization of volatile ingredients reduces the temperature.

2,456,193

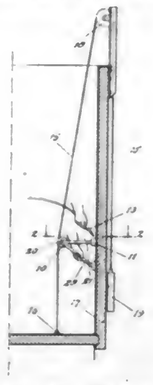
PICK CONTROLLED STOP MOTION FOR LOOMS

Clifton W. Howell and Gilbert L. Elderbaum, Erwin, N. C.

Application February 19, 1947, Serial No. 729,482
4 Claims. (Cl. 139—340)

1. In a loom having a warp stop motion comprising a plurality of drop wires through which the warp strands pass and having means operable by the dropping of a drop wire for stopping the loom, said loom having a pick counter comprising a plurality of counter wheels there being a counter wheel for each different shift of operation and also having a cumulative counter associated with the other counters and being driven continuously regardless of which of the other shift counters are in operation, one of the said counter wheels being rotatably mounted on a counter shaft and being movable by a suitable shaft driven by the pick motion of the loom, said counter shaft having mounted thereon a cam member and means for adjustably securing the cam member to one of the counter wheels to move therewith, said cam having a depression therein defined on one side by a radially disposed surface, a plunger adapted to follow the periphery of said cam and to drop into the depression when the cam passes the lower end of the plunger, said plunger having secured thereto a wire member, said wire member leading to a point adjacent the drop wires, a plunger associated with the drop wires and being connected to the other end of said wire member, a drop member adapted to fall downwardly to engage the stop motion mechanism of the loom, a spring associated with the second plunger and normally tending to move the second plunger to elevated position, both of said plungers and said wire member being movable by said spring to cause the first plunger to move into the recess of said cam and to remove the second plunger from the holding means to allow the drop member to drop downwardly by gravity to stop the loom when a predetermined number of picks have been executed.

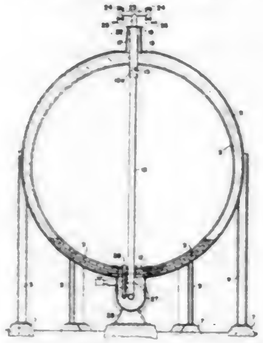
2,456,194



LEAD BURNING

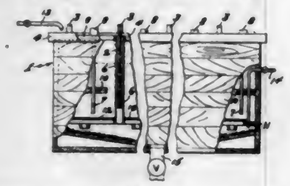
Albert E. Hughes, East Providence, R. I.

Application November 28, 1947, Serial No. 788,590
6 Claims. (Cl. 113—111)



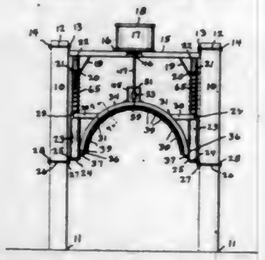
6. In an apparatus for forming a molded joint of lead, or the like, along a vertical wall, the combination of a cable anchored at one end at the bottom of said wall but laterally spaced therefrom, a pulley wheel mounted above the wall, the cable extending from its anchored end upward in spaced relation to the wall and over the pulley wheel, a weight on the free end of the cable for imposing a tension thereon, a mold for forming said joint and movable along the wall,

an arm connected at one end to the mold, a bracing member extending from the arm and engageable with the wall in spaced relation to the mold, and a wheel on the opposite end of the arm and



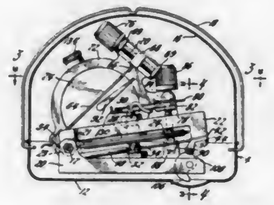
engageable with the cable, said arm and bracing member being of such length that they displace the cable laterally and are held against the wall by the counter force of the tensioned cable.

2,456,195
SPHERICAL TYPE INSULATED CONTAINER FOR LIQUEFIED GASES
James O. Jackson, Crafton, Pa., assignor to Pittsburgh-Des Moines Company, a corporation of Pennsylvania
Application June 4, 1947, Serial No. 752,517
12 Claims. (Cl. 62—1)



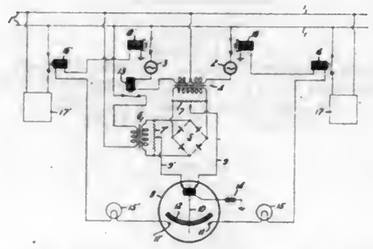
12. In an insulated container of the type utilized for storing liquid at a different temperature from that of the surrounding atmosphere and having inner and outer spaced apart metal shells with a boot-like extension attached to the bottom portion of the outer shell; means supporting the outer shell above the ground, means located between the inner and outer shells for supporting the inner shell from the outer shell, a vertical vapor outlet conduit having an extension thereof projecting above the top of the outer shell; said conduit extending through an opening in the top of the inner shell, through the bottom of the inner shell to which it is secured and through and out of contact with the outer shell and into said boot, a flexible annular diaphragm secured to the top of the outer shell adjacent its center and surrounding and out of contact with said vapor conduit extension, and a hood carried by said diaphragm and surrounding said extension and to the upper end portion of which it is secured.

2,456,196
ELECTROLYTIC CELL FOR RECOVERING MANGANESE
James H. Jacobs, Boulder City, Nev., and Warren H. Yarroll, Provo, Utah, assignors, by mesne assignments, to Crimora Research and Development Corporation, Crimora, Va., a corporation of Virginia
Application November 16, 1944, Serial No. 563,692
3 Claims. (Cl. 204—263)



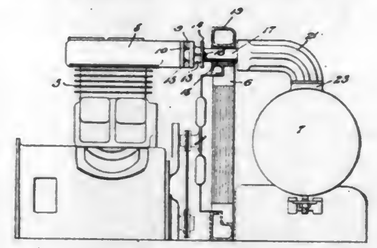
1. An electrolytic cell for recovering manganese, comprising, in combination, a box; a plurality of anode and cathode plates suspended therein with their opposite side edges spaced from the opposite side walls of the box, frames for the anodes carrying solution permeable diaphragms spaced from opposite sides of and completely surrounding each anode, except at its upper and lower ends and providing individual anolyte compartments having open lower ends, all of the cathode plates being located in a common catholyte compartment; a false bottom in the box having openings into which the lower ends of said anode frames project and providing a sludge chamber into which the anodic sludge discharges freely by gravity flow; means to supply feed solution to the catholyte compartment; and a discharge conduit connected to the sludge chamber through which spent anolyte is drained as the feed solution is supplied.

2,456,197
CURRYING MACHINE
Deane L. Jensen, Blair, Nebr., assignor to Farnam Company, Omaha, Nebr., a corporation of Nebraska
Application April 29, 1946, Serial No. 665,706
4 Claims. (Cl. 119—157)



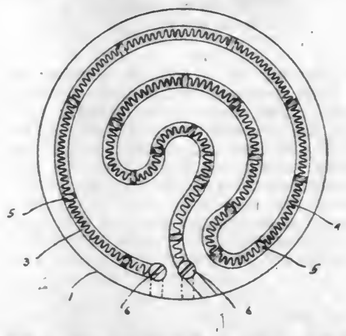
3. A currying machine comprising a vertically positioned frame work including side supports, an arcuate brush holding member including a plurality of brushes attached thereto for contacting an animal's back, springs at either side of said arcuate member bearing against said frame work for resiliently maintaining said arcuate member in normal lower position, said arcuate member having vertical female tubes attached thereto, male tubes received in said female tubes, said springs receiving said male tubes and bearing against said female tubes, an oil containing reservoir resting on the top of the frame work including a pipe extending downwardly and communicating to said brushes, said frame work having an opening for freely receiving said pipe, whereby abutment of an animal against said arcuate member will cause said pipe and reservoir to rise.

2,456,198
CONTROL
Charles F. Kettering and Albert W. Fischer, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 7, 1944, Serial No. 529,990
4 Claims. (Cl. 200—83)



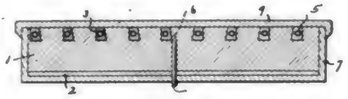
1. In control means, a pivotally movable switch arm, pressure-responsive means for moving said arm about its pivot, a pivotally movable abutment in the path of movement of the arm, timing means for progressively moving the abutment, and a second adjustable abutment in the path of the pivoted arm to limit its extent of movement.

2,456,199
GENERATOR CONTROL SYSTEM
Anthony H. Lamb, Hillside, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application January 20, 1945, Serial No. 573,667
7 Claims. (Cl. 171—119)



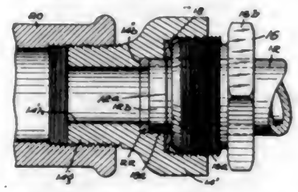
1. In an alternating current system of the type including a pair of generators connected in parallel to a load line, a modulator bridge rectifier having an input circuit energized from said load line, a conjugate input circuit for impressing upon said bridge rectifier a current that varies in sense and magnitude with the departure of the current outputs of said generators from equality, and a direct current measuring circuit connected across said bridge rectifier, said measuring circuit including a zero center current responsive device.

2,456,200
PIPE UNION FOR AIR COMPRESSORS
Ralph E. Lamberton, Worthington, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application May 5, 1944, Serial No. 534,209
2 Claims. (Cl. 230—132)



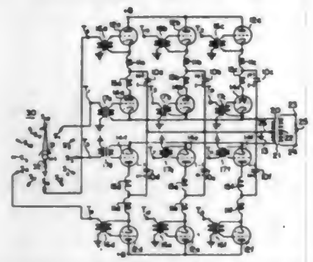
1. In air-compressing apparatus, an engine driven air compressor having low and high pressure stages of air compression, a heat-dissipating radiator through which air discharged from the low pressure stage of said compressor is passed before entering said high pressure stage, said radiator being formed with an outer shell having a transversely extending opening formed therein which is removed from and independent of the paths of air traveling through said radiator from the low to the high pressure stages of said compressor, a compressed air receiver arranged on the opposite side of said radiator as regards said air compressor, and conduit means for transmitting compressed air from the outlet of the high pressure stage of said compressor to said receiver, said conduit means being positioned in the transverse opening of said radiator.

2,456,201
HEATING ELEMENT
Hoard Lee, Houston, Tex.
Application November 3, 1944, Serial No. 561,740
1 Claim. (Cl. 219—37)



A heating element comprising a metallic body having a sinuous dovetailed groove in one face thereof, dovetailed anchors formed of insulating material spaced apart along said groove, a resistor extending approximately from end to end of the groove and anchored in place by said anchors, a jacket into which the body is fitted said jacket including a plate in contact with the grooved face, and an asbestos coating or covering, securely fastened to the side of unit opposite the grooved side.

2,456,202
HEATING UNIT
Hoard Lee, Houston, Tex.
Application November 26, 1945, Serial No. 630,784
1 Claim. (Cl. 219—37)



A heating unit comprising, a body formed of metal of poor thermal conductivity and having a sinuous groove in the upper face thereof which extends approximately throughout the area of said face, anchors formed of insulating material spaced apart along said groove, a resistor extending approximately from end to end of the groove and maintained in place by said anchors in spaced relation to the walls of the groove, a jacket into which the body is fitted, said jacket including a continuous flanged plate lying adjacent the resistor, a continuous insulating coating, or covering, on the side of the unit opposite the grooved side, a casing of heat resisting metal enclosing the margins of the body and enclosing the side of the body, opposite the groove, throughout its entire area and in contact with said insulating coating or covering throughout the area thereof, the free margin of the casing being in telescopic relation with the flange of the plate.

2,456,203
COUPLING FOR TUBULAR MEMBERS
Albert J. Loepsinger, Providence, R. I., assignor to Grinnell Corporation, Providence, R. I., a corporation of Delaware
Application August 21, 1943, Serial No. 499,745
2 Claims. (Cl. 285—166)

1. A coupling for a tubular member comprising a body having an opening to receive the member, having means for limiting the movement of the member along the axis of the body and having an internal shoulder within said body extending radially outward from the surface of said tubular member; a continuous dished washer housed within said body, encircling the tubular member, and having its concave side toward the said shoulder with the inner circular edge of said concave side closely adjacent the external surface of the tubular member and with the inner edge of its convex side outstanding from said member; and a hollow nut encircling said member having threaded engagement with said body and having a flat faced end for engaging the said edge of the convex side of the washer; the said washer, upon the nut being screwed into the body, being partially undished and moved outward along the face of said internal shoulder while the said inner edge of the concave side is moved along the tubular member with a shearing action on the surface thereof whereby a dam is formed against the concave surface of the washer, and the tubular member is forced against said limiting means.

2,456,204
INVERTER SYSTEM
Arthur V. Loughren, Great Neck, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application May 11, 1946, Serial No. 669,193
14 Claims. (Cl. 175—363)

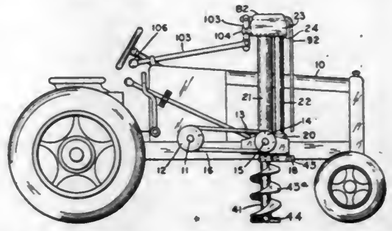
1. An electrical system for inverting a unidirectional potential to an alternating potential comprising, a plurality of energy-storage devices; charging circuits connecting each of said devices independently of the others to a unidirectional potential source, a plurality of gaseous electric-discharge devices, impedance means for coupling said system to a load, a first and a second group of circuits for discharging each of said storage devices independently of the others to supply pulses of opposite polarity to said impedance means, said circuits of each group individually including one of said storage devices and one of said discharge devices connected in series relation with at least a portion of said impedance means constituting inherent coupling between said groups of circuit, and means for triggering said discharge devices in a predetermined progression, selecting one discharge device from each of said groups in a sequence, each circuit of both of said groups comprising inductance means for providing an oscillatory discharge of the storage device thereof thereby to develop on said storage device a charge which is effective to suppress, during the deionization period of the discharge device included in the particular circuit, the tendency of said coupling between said circuits of said groups to impede deionization of said discharge device of said particular circuit.

2,456,205
SKI POLE
Jesse Magder, Toronto, Ontario, Canada
Application January 8, 1947, Serial No. 720,831
In Canada September 26, 1946
2 Claims. (Cl. 280—11.37)

1. A ski pole comprising, inner and outer tubular members in telescopic relationship, the inner

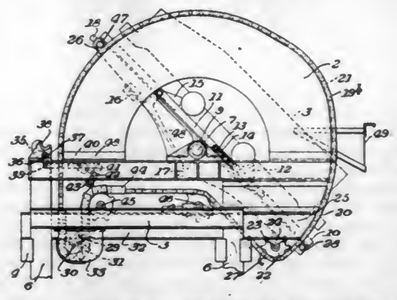
member constituting the snow-engaging portion of the pole and being provided at its "lower" end with a snow ring, the outer member constituting the handle portion of the pole and being provided on its "upper" end with a hand grip, the "upper" end of the inner member being provided with an axially projecting wedging member, said wedging member having a screw threaded shank portion and an adjoining camming portion facing the "upper" end of the pole, a pin projecting axially from the head and a camming portion on the pin, a pair of complementary jam nuts each having a threaded bore and an inwardly extending shoulder extending into said bore at one end of the nut, the bore of the nuts being engaged by the threaded shank portion at all times, the threaded shank portion on relative rotation in one direction between the outer and inner member being adapted to screw into the bore of the nuts thereby to force the camming portion in an axial direction into engagement with the shoulders of the jam nuts thereby causing said jam nuts to be forced outwardly against the outer member thereby locking the poles against telescopic axial movement, the head being adapted to limit the axial movement of the jam nuts with respect to the wedging member.

2,456,206
SPLASH GUARD
Guy Martinelli and Harry M. McMann, Indianapolis, Ind.; said McMann assignor to said Martinelli
Application April 13, 1946, Serial No. 662,065
3 Claims. (Cl. 36—70)



1. An anti-splash device for footwear adapted to be secured to the heel of a shoe and consisting of a tubular sleeve formed of rubber and having a wall curved to conform to the back and sides of a shoe heel and a substantially flat transversely extending front wall joining the front edges of the rear and side walls, the flat front wall conforming to the flat front face of the shoe heel and being transversely resilient to permit fitting of the sleeve on the shoe heel, and an integrally molded splash shield, comprising an annular flange on said sleeve extending around the rear and side walls of the sleeve with the forward ends of said flange extending partially across the front wall of said sleeve to leave a portion of the front wall free of said flange to permit unrestricted lateral stretching of said front wall and provide a splash guard for the front wall of said sleeve.

2,456,207
LIGHTWEIGHT AGGREGATE AND METHOD OF PRODUCING SAME
Walter J. McCoy, Catasauqua, Pa., assignor to Lehigh Portland Cement Company, Allentown, Pa., a corporation of Pennsylvania
Application August 2, 1946, Serial No. 687,903
11 Claims. (Cl. 252—378)



1. A lightweight aggregate suitable for making concrete which comprises discrete particles of expanded vesiculated burned unpulverized slate particles substantially all of which are less than one inch in longest dimension, said discrete particles being substantially free from sharp angular corners and exposed pitted surfaces, said aggregate weighing not substantially more than thirty-five pounds per cubic foot.

2,456,208
POSTHOLE DIGGER
Walter James McGarr, Cordele, Ga.
Application February 14, 1945, Serial No. 577,915
3 Claims. (Cl. 255—22)

1. A hole digger comprising a pair of cylinders, a piston in each cylinder, a shaft connected to one piston and having an end projecting below its cylinder, a boring tool connected to the projecting end of the shaft, a cable for each piston having one end connected to its piston, a horizontal shaft extending over said cylinders, a pulley mounted above each piston and fixed to the horizontal shaft, the other end of each cable being trained in opposite directions on the adjacently disposed pulley and connected thereto, a housing enclosing the pulleys and provided with a fluid chamber for each cylinder and in communication therewith, means for supplying each chamber with fluid under pressure, a valve for controlling the flow of fluid to and from the chambers in alternation in such a manner that when one chamber is exhausting the other chamber is being supplied with fluid.

2,456,209
CAR-DUMPING APPARATUS
Glenn W. Merritt, Bowerston, Ohio, assignor to The Mining Safety Device Company, Bowerston, Ohio, a corporation of Ohio
Application September 30, 1944, Serial No. 556,628
17 Claims. (Cl. 214—47)

10. Car dumping apparatus comprising a frame, a tiltable support thereon, fixed tracks carried thereby for receiving a car to be dumped, hoist chain supporting members alongside said support formed with chain receiving guideways, an endless hoist chain in each of said guideways, trunnions attached to said platform fore and aft, hooks attached to said chains engageable

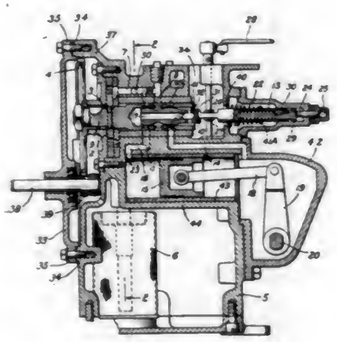
with said trunnions to tilt the support about a center axis and an end axis respectively to empty the contents of a car and discharge the car from the support respectively, a detent for holding the platform in car receiving position and means attached to one of said chains for actuating said detent.

2,456,210

UNSATURATED ESTERS OF BENZENEDIACETIC ACIDS AND THEIR POLYMERS

Henry C. Miller, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 1, 1946, Serial No. 687,715
19 Claims. (Cl. 260—78.4)



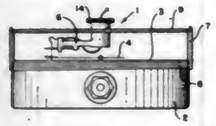
1. A bis ester of a benzenediacetic acid with a monohydric alcohol, containing not more than nine carbon atoms and having an ethylenic double band in alpha, beta position with respect to the carbinol carbon, said alcohol being selected from the group consisting of primary and secondary monohydric alcohols.

2,456,211

FLUID PRESSURE SERVOMOTOR

Romeo M. Nardone, Teaneck, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware

Original application October 22, 1940, Serial No. 362,271. Divided and this application August 10, 1943, Serial No. 498,123
2 Claims. (Cl. 121—38)



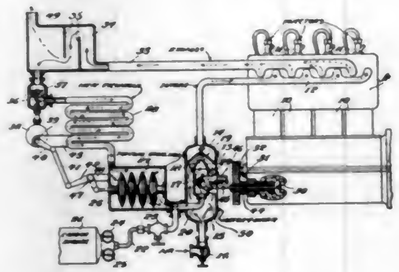
1. The combination, with a servo-motor, of valve mechanism for controlling fluid flow therein, said mechanism including a pair of relatively movable nested valve elements, the inner of which elements is reciprocable and the outer of which elements is rotatable and provided with a plurality of ports communicable with each other in a predetermined paired relation, means carried by said inner element for establishing said paired relation, said inner element having an outward extension, resilient means mounted on said extension, for yieldably holding the inner element in a position with respect to said ports, to render said first-mentioned means ineffective, means for adjusting said resilient means to insure holding said inner element in said position, and means for shifting said inner element in either direction from said position to render said first-mentioned means effective.

2,456,212

REGULATOR

Lawrence M. Patrick, Detroit, Mich., assignor of one-third to Arthur A. Locke and one-third to Raymond F. Ternes, both of Detroit, Mich.

Application May 13, 1946, Serial No. 669,229
9 Claims. (Cl. 200—56)



1. In combination with a dial gauge having a pivoted hand, a transparent plate positioned axially of the gauge and in spaced relation with the face of the gauge, an arm pivotally positioned in axial alignment with the pivot of the hand, means joining the arm and extending through the plate, means on the opposite side of the plate for manually moving the arm, a contact member, and a pin mounted on the arm and extending radially of the arm to form a pivot for the contact member, said contact member being movable by the hand for selectively completing an electrical circuit.

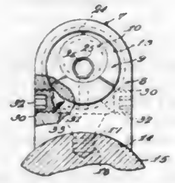
2,456,213

DIESEL ENGINE AIR METER

Stanley Pelc, Sharon, Pa.

Application December 28, 1944, Serial No. 570,182
5 Claims. (Cl. 123—119)

1. A metering mechanism of the kind described, comprising a drum forming a metering chamber, means connecting the drum to the intake manifold of a fluid power unit, means for admitting air to the chamber, a flow nozzle within the chamber and having a governor controlled valve therein, a carbon-dioxide container communicating with the nozzle, a pressure regulating enclosure communicating with the nozzle, a pressure regulator within the enclosure, a heat exchanger communicating with the enclosure, and having communication with an exhaust manifold of the power unit, and means controlled by the regulator for the last named communication.



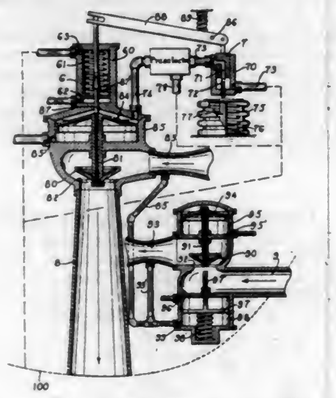
2,456,214

PEEP SIGHT FOR FIREARMS

Bryce Poe, Kansas City, Mo.

Application March 28, 1947, Serial No. 737,863
5 Claims. (Cl. 33—56)

1. In a peep sight of the character described, an outer housing section provided with a longitudinal bore extending therethrough, an outer cylinder rotatably disposed in said bore and detachably contained therein, said outer cylinder having an eccentrically disposed bore extending longitudinally therethrough, an inner cylinder detachably mounted in said outer cylinder bore and rotatably retained therein, said inner cylinder being provided with an eccentrically disposed peep sight bore extending longitudinally therethrough, and said cylinders being rotatable as a



unit or independently of one another for vertically or laterally displacing said peep sight bore relatively to the outer, housing section, said outer cylinder having a slotted end, and means for detachably clamping the outer cylinder to the housing and for contracting its slotted end for clamping the inner cylinder in the bore of said outer cylinder.

2,456,215

PRESSURE-REGULATING CONTROL MECHANISM

Nathan C. Price, Hollywood, Calif., assignor to Boeing Airplane Company, a corporation of Delaware

Original application June 27, 1938, Serial No. 216,028. Divided and this application October 6, 1943, Serial No. 505,201
23 Claims. (Cl. 98—1.5)

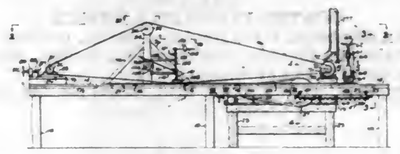
1. Mechanism to regulate aircraft cabin pressure, comprising a valve openable for outflow of air from the cabin, spring means biasing said valve to close, servo means operatively connected to open the valve in opposition to said spring means, and control means sensitive to a differential pressure varying in response to variations in the difference of cabin pressure over ambient atmospheric pressure, operatively associated with said servo means and operable to remove the biasing action of said spring means on said valve and to effect actuation of said servo means to exert a valve opening force on said valve automatically in response to an increase in the differential of cabin pressure over ambient atmospheric pressure exceeding a selected value.

2,456,216

CHLORINE-CONTAINING VINYL RESINS STABILIZED WITH A TRI-(2-ALKENYL)-PHOSPHITE AND A 1,2-EPOXY COMPOUND

Henry J. Richter, Glen Ellyn, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application February 4, 1948, Serial No. 6,342
11 Claims. (Cl. 260—78.5)



1. A composition of matter comprising a chlorine-containing vinyl resin of 14 to 75% by weight chlorine in which the chlorine is attached directly to the carbon atoms in the polymer chain, from 1 to 6% by weight, based on said resin, of a tri-2-alkenyl) phosphite having 3 to 14 carbons in each alkenyl group, and from 0.1 to 5.0% by weight based on said resin, of a 1,2-epoxy compound having a boiling point above 200° C.

2,456,217

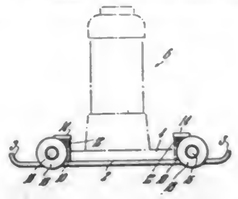
SANDING MACHINE

Linville L. Rothrock, Thomasville, N. C.

Application April 11, 1947, Serial No. 740,924
5 Claims. (Cl. 51—138)

5. In a sanding machine having means for feeding workpieces through the machine and an abrasive belt for engaging the upper surfaces of the workpieces as they pass through the machine, pressure applying means for engaging the lower reach of said abrasive belt for pressing it into contact with the workpieces, comprising a frame pivoted at one end and having a downwardly projecting member pivoted at its upper end in an upper portion of the free end of said pivoted frame, spring means for allowing lateral swinging movement of the pivoted member transversely of the path traveled by the workpieces, a pressure member having its lower surface grooved to conform to the grooves in the workpieces being engaged by the abrasive belt, said pressure member being pivoted to the lower end of the downwardly projecting member and being adapted to engage the upper surface of the lower reach of the abrasive to engage the upper surface of the lower reach of the abrasive belt for forcing the abrasive belt into contact with the workpieces as they travel through the machine, means for applying pressure to the free end of the pivoted frame for in turn applying pressure to the workpiece to force it into contact with the abrasive belt and to force the abrasive belt into contact with the workpieces passing through the machine, and means for latching the pivoted framework in raised position to hold the workpiece out of contact with the abrasive belt.

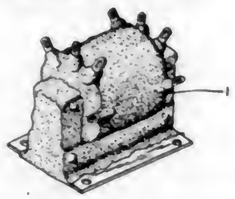
2,456,218



JACK SUPPORT

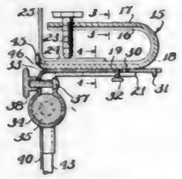
Kurt F. Semisch, Holyoke, Mass.

Application October 4, 1946, Serial No. 701,149
1 Claim. (Cl. 254—1)



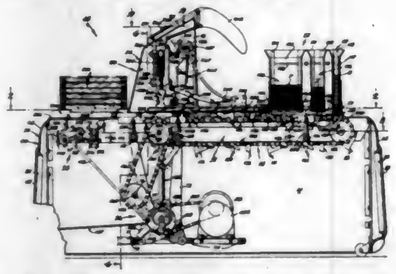
A supporting structure for a lifting jack comprising in combination, a substantially flat rectangular plate for supporting a jack, cylindrical

guides having lower ends secured to said plate at longitudinal marginal sides and adjacent opposite ends thereof and extending upwardly from the plate in parallelism, separate blocks above said plate slidable up and down on said guides, heads provided on upper ends of said guides, com-



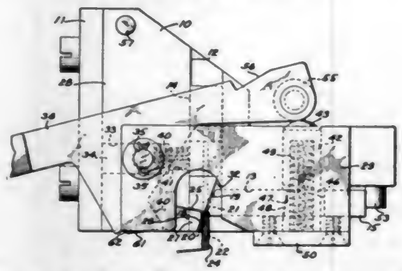
pression springs on said guides above said blocks and below said heads, separate axles secured to each of aid blocks and extending outwardly therefrom with their longitudinal axes disposed horizontally, and supporting wheels journalled on said axles disposed outside the longitudinal marginal edges of said plate.

2,456,219
COATED INDUCTIVE DEVICE
John Shaheen, West Roxbury, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application August 14, 1945, Serial No. 610,851
1 Claim. (Cl. 175—21)



An inductive device comprising a magnetizable core, a coil wound thereon, and a coating of tetraethylene glycol dimethacrylate containing insulating particles impregnating the core and coil to seal it from moisture.

2,456,220
AUTOMOBILE SERVICE TABLE
George I. Shelton and Henry L. Dowell, Athens Tex.
Application January 7, 1947, Serial No. 720,640
3 Claims. (Cl. 311—21)

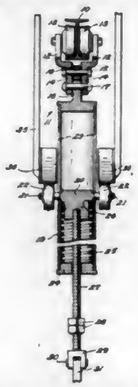


3. A service table comprising a tray having a ball member fixed to one edge thereof, a U-shaped clamp providing upper and lower arms, the upper arm including means for securing the tray to a support, the lower arm of said clamp having inturned parallel guide flanges, a slide member positioned between said guide flanges, a socket on one end of said slide member and adjustably receiving the ball member of the tray, spaced lugs at one end of the flanges and in engagement with one face of the slide member, a depending lip on one end of the slide member, and engageable with the lugs on the guide member for limiting outward movement of the slide member and means for retaining the slide member in an adjusted position in the guide flanges.

2,456,221
NAILING MACHINE
Glenn E. Stilwell, Riverside, and Gerald C. Paxton, Huntington Beach, Calif., assignors to Food Machinery and Chemical Corporation, a corporation of Delaware
Original application December 15, 1941, Serial No. 423,052, now Patent No. 2,378,948, dated June 26, 1945. Divided and this application June 18, 1945, Serial No. 600,138
9 Claims. (Cl. 1—8.1)

1. In a nailing machine, the combination of: two members disposed horizontally and held in adjustable spaced relation; magazine means; work feed means; nailing means; stacking means; each of said magazine means, nailing means and stacking means being partly mounted on one of said members and partly mounted on the other of said members so that the adjustment in the spaced relation of said members adapts all of said means for operation on work of a given dimension; and means for varying the spaced relation of said members.

2,456,222
ARTICLE FORMING APPARATUS
John S. Stull, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 30, 1944, Serial No. 565,915
9 Claims. (Cl. 140—103)



1. An article bending apparatus comprising means for supporting a portion of an article to be bent, a bending member engageable with a free portion of the article to be bent, a pivotal and slidable support for said member effective to guide its movement during the initial bending, and means for bodily moving said pivotal and slidable support and member along a rectilinear path to cause said member to complete the final bending action.

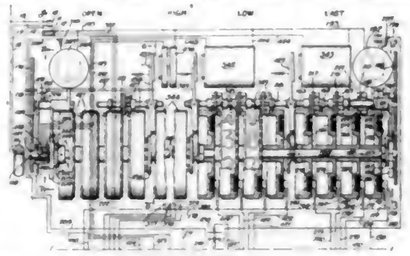
2,456,223
APPARATUS FOR FORMING TERMINAL ENDS OF COILS
John S. Stull, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 22, 1944, Serial No. 569,371
9 Claims. (Cl. 140—103)

7. A bending apparatus for a coil comprising an arbor for receiving a coil having a tangential end, one end of said arbor being cut away to form a substantially semi-cylindrical section, means for bending said end substantially diametrically across said sectional end of said arbor, means movable longitudinally of said coil for preliminarily bending a portion of said diametrically extending end to a position substantially longitudinal of the coil, and means movable substantially perpendicular to the axis of said coil for imparting a final bend to said portion.

2,456,224
OVERHEAD CONVEYER MECHANISM
Norman M. Sullivan, Kent, Ohio
Application September 20, 1945, Serial No. 617,498
6 Claims. (Cl. 198—177)

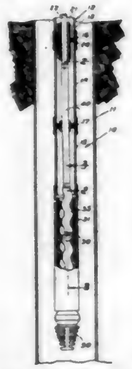
2. Overhead conveyor mechanism comprising a stationary trackway, a plurality of spaced load-carrying devices movable longitudinally of and suspended from said trackway, each of said devices embodying a rollered trolley supported on and guided by said trackway, flexible power-transmitting means connected with said devices to move the same in unison along said trackway, a cylinder pivotally connected at its upper end with the lower end of each trolley, a cross head slidably supported for vertical movement in said cylinder, said cross head having aligned stud shafts projecting exteriorly of said cylinder through slots provided in the side walls thereof, rollers mounted on said stud shafts, spring means positioned in said cylinder for maintaining said cross head in a normal position therein, a load carrying rod depending from said cross head, means carried by said rod for limiting the movement of said cross head in one direction in response to the action of said spring means, a load holding appliance carried by the lower end of said rod, and cam rails engageable with the rollers on said stud shafts at a predetermined position along said trackway to move automatically said cross head and the rod suspended therefrom vertically of said cylinder and against the resistance of said spring means.

2,456,225
MEANS FOR SECURING A CANVAS TO A FRAME
Carroll E. Thomas, Oakland, Calif.
Application July 24, 1945, Serial No. 606,758
4 Claims. (Cl. 45—130)



1. In means for securing a sheet to a frame, pairs of opposed elongated angle members substantially L-shaped in cross section arranged for engagement with the sheet where it is extended over the side edges of the frame and also with the rear side of the frame, the said angle members being independently adjustable, and spring clamp means connected to and positioned between the elongated members of each pair, whereby the said members of each pair are urged toward one another to firmly engage with the sheet and clamp it against the edges of the frame.

2,456,226
INFORMATION POSTING BOARD
Warren Thorpe, New York, N. Y.
Application April 18, 1947, Serial No. 742,341
11 Claims. (Cl. 177—353)

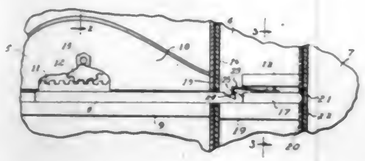


3. In an information posting board, the combination of a group of information display wheels, a control board having a plurality of keys, means including different electrical resistances for each key establishing circuits of distinct electromotive forces depending upon the keys actuated, means including electrical resistances mounted in each wheel, brushes for stepping off different resistances for each wheel depending upon the information displayed by such wheel to establish circuits of distinct electromotive forces, means for initially establishing current in the resistances of said display wheels, and means for thereupon

actuating the display wheels until their electromotive forces coincide with the electromotive

forces of the circuit established by the keys of said control board and after the circuit has been so established by the keys of said control board.

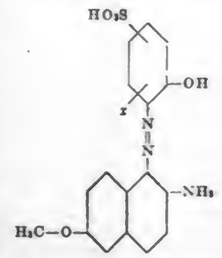
2,456,227
COUPLING STABILIZER FOR MOINEAU PUMPS
John B. Wade, Arcadia, Calif., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware
Application September 25, 1945, Serial No. 618,459
7 Claims. (Cl. 103—117)



1. In combination: a housing; a stator connected to said housing and having a helical opening; a rotor rotatably disposed in said stator opening and so shaped relative thereto as to gyrate in the opposite direction to that in which it is turned in said stator opening; a shaft journalled in said housing for rotation in alignment with the axis of said stator; a flexible drive coupling, one end of which is connected to said shaft and the other end of which is connected to said rotor; and stabilizing means mounted in said housing and positioned to be engaged by said coupling as the latter rotates in transmitting power between said shaft and said rotor, to confine said coupling against the latter yielding to the action of unbalanced centrifugal forces operating thereon.

2,456,228
METHOD OF DISPERSING A SOLID POLYMERIZATION CATALYST IN A POLYMERIZABLE THERMOSETTING RESIN SIRUP
Welcome I. Weaver, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application December 8, 1943, Serial No. 513,493
4 Claims. (Cl. 260—40)

1. A method of adequately dispersing a solid polymerization catalyst selected from the class consisting of organic peroxides and organic ozonides in a viscous polymerizable thermosetting resin syrup of an unsaturated polyhydric alcohol-polycarboxylic acid polyester having the characteristic of exothermic polymerization that comprises impregnating a filler with not more than enough of a volatile solution of the catalyst to be entirely soaked up by the filler, drying the filler to remove the volatiles and mixing the catalyst-impregnated filler with the viscous syrup.

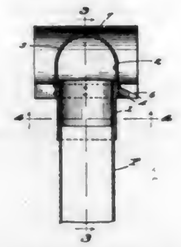


2,456,229
DOOR LOCK
Loren R. Weeks, Coeur d'Alene, Idaho
Application January 14, 1946, Serial No. 641,030
3 Claims. (Cl. 292—33)

1. In a latching arrangement for securing two adjacent vehicle doors separated by a narrow wall portion containing a keeper and the first door containing a bolt for said keeper, and an aligned bolt projectable into an associated keeper in the second door, the improvement which comprises a spring finger on one bo't extending beyond it toward the other bolt, the other bolt having a seat for the spring finger whereby the spring finger when depressed into said seat connects the bolts together for movement as a unit, and a guide member adjacent to the bolt carrying the spring finger, positioned to keep the spring finger depressed except when the bolt carrying the spring finger is withdrawn from its keeper.

2,456,230
CHROMED MONOAZO COMPOUND
Willy Widmer, Bottmingen, Switzerland, assignor to Ciba Limited, a Swiss firm
No Drawing. Application March 9, 1945, Serial No. 581,966. In Switzerland December 2, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 2, 1963
4 Claims. (Cl. 260—151)

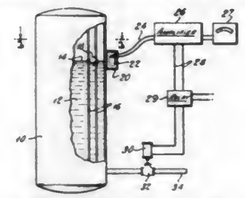
1. A complex chromium compound of a monoazo dyestuff of the general formula



wherein x stands for a member selected from the group consisting of $—SO_3H$ and $—NO_2$.

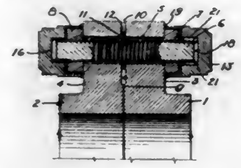
2,456,231
CHLORINE-CONTAINING VINYL RESINS STABILIZED WITH A TRI-(2-ALKENYL)-PHOSPHITE
Richard H. Wiley, Chapel Hill, N. C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 4, 1948, Serial No. 6,341
11 Claims. (Cl. 260—78.5)

1. A composition of matter comprising a chlorine-containing vinyl resin of 14 to 75% by weight chlorine in which the chlorine is attached directly to the carbon atoms in the polymer chain and from 1 to 6% by weight, based on said resin, of a tri-(2-alkenyl) phosphite having 3 to 14 carbons in each alkenyl group.



2,456,232
CHIMNEY COWL
Julius E. B. With, Port Townsend, Wash.
Application January 30, 1945, Serial No. 575,270
1 Claim. (Cl. 98—76)

A chimney cowl including a cylindrical sleeve, and upper and lower crossed plates bridging one end of the sleeve and having their top portions bowed upwardly and outwardly from the sleeve, the bowed top portions being disposed at right angles to each other, and having flat depending ends attached at their centers to the sleeve and abutting against each other to define right angles, said abutting portions of the ends cooperating with the sleeve to define substantially triangular flues extending upwardly between said ends and the sleeve, said flues being open at both ends and both plates overlying said flues, said upper plate having oppositely bulged side portions projecting beyond the flue at the opposed edges of the lower plate, the top portions of the plates being spaced apart, the width of the lower plate being substantially equal to the diameter of the sleeve and the width of the upper plate being greater than the diameter of the sleeve.

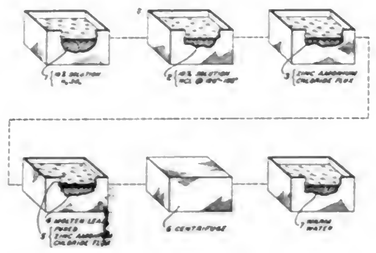


2,456,233
LIQUID LEVEL MEASUREMENT AND CONTROL
Alexander Wolf, Houston, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application August 26, 1944, Serial No. 551,369
19 Claims. (Cl. 250—83)

1. A device for determining the level of a liquid in a container having a vertical wall comprising a member adapted to float upon said liquid, means for guiding movement of said float member to a substantially vertical path, a source of penetrative radiation within said float, a radiation detector adapted to be moved substantially vertically along the outer surface of said wall, and means responsive to the output of said detecting

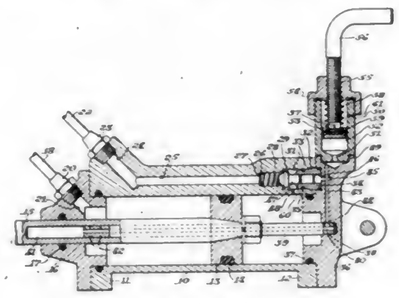
means for indicating when said float member is substantially opposite said detecting means.

2,456,234
BOLT PROTECTOR
Farrile S. Young, Kansas City, Mo., assignor to Panhandle Eastern Pipe Line Company, Kansas City, Mo., a corporation of Delaware
Application June 20, 1945, Serial No. 600,529
1 Claim. (Cl. 285—130)



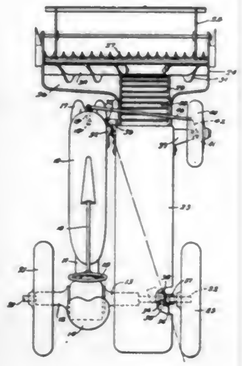
A device of the character described comprising, pipe sections having spaced flanges provided with openings, threaded bolts adapted to engage in said openings, said bolts being smaller than said openings, a compressible sealing material adapted to encircle said bolts between said flanges to form a seal of the openings around said bolts and said flanges, a ring surrounding said compressible material for retaining said compressible sealing material in place, nuts to hold the flanges together and compress the sealing material between the flanges, caps having a lubricant therein for enclosing the nuts on the ends of the bolts, rings having sealing engagement with the outer surfaces of the flanges and said caps and forming closed chambers around the ends of the threaded bolts outwardly of said compressible sealing material between said flanges, and grooves in the threaded bolts to permit movement of lubricant from the caps through the nuts and around said threaded bolts in the respective chambers, said compressible sealing material entering the grooves in said bolts between the flanges upon tightening of said nuts.

2,456,235
METHOD OF LEAD COATING FERROUS ARTICLES
William Yonkman, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 5, 1942, Serial No. 467,961
2 Claims. (Cl. 117—51)



2. The process of applying a protective coating to ferrous metal articles which comprises cleaning the articles in a hydrochloric acid solution, dipping the articles in a zinc ammonium chloride fluxing bath, dipping the articles without drying them into a lead bath containing from one to six percent of antimony, maintaining on the surface of said lead bath a flux comprising a layer of zinc ammonium chloride at least one-eighth inch

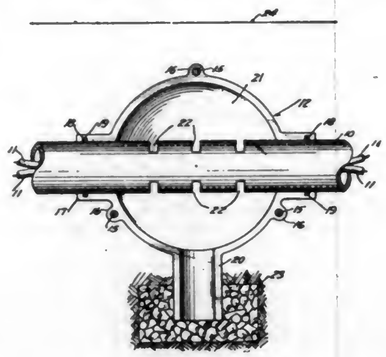
thick, maintaining said lead bath at a temperature of between 670° and 690° F., aging said lead bath for approximately forty-eight hours before



using it, and maintaining the articles wet with the zinc ammonium chloride during their transference to the lead bath.

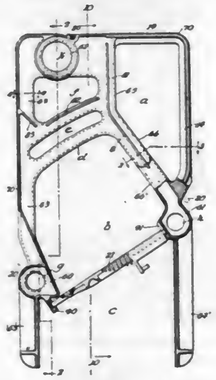
2,456,236
HYDRAULIC CYLINDER AND PISTON DEVICE
Russel D. Acton, Chicago, Ill.
Application June 20, 1947, Serial No. 755,993
9 Claims. (Cl. 121—38)

1. A stop mechanism for an expansible fluid-pressure operated device comprising in combination with a cylinder and a piston mounted for reciprocation therein, a piston rod connected to the piston and extending through one end of the cylinder, a conduit for supplying fluid under pressure to said end of the cylinder, a fluid conduit communicating with the other end of the cylinder, valve means positioned to control fluid flow through said conduit, resilient means for urging said valve means to open position, a plunger chamber, a plunger mounted in said chamber engageable with the valve means and operable under fluid pressure against the plunger to overcome the resilient means and to seat the valve thereby blocking the conduit against the flow of liquid, a bore formed in the piston rod, a displacer piston secured to the cylinder and extending into said bore, conduit means formed in the piston, an auxiliary displacement cylinder, an auxiliary piston mounted therein, communicating fluid conduits connecting said cylinder to the plunger chamber and the conduit means in the displacer piston, stop means against which said auxiliary piston abuts at a predetermined point in its stroke as fluid is delivered from the piston rod bore to the auxiliary cylinder whereby pressure is built up to operate on the valve operating plunger and to close the valve means, and means to manually adjust the position of said abutment.



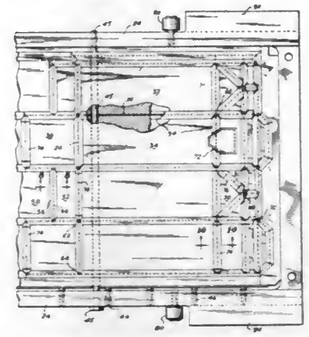
2,456,237
TRACTOR MOUNTED IMPLEMENT
Russel D. Acton, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application February 19, 1945, Serial No. 578,613
10 Claims. (Cl. 56—23)

1. An implement attaching structure for tractors having a narrow longitudinally extending body, a narrow steerable support at the front of said body, an extended rear axle structure at one side of the tractor and a wheel on said structure spaced from the body to provide a space of substantial width for the positioning of implements and in combination therewith, an implement structure arranged alongside the tractor in said space, means for pivotally supporting said structure at opposite sides thereof at two longitudinally spaced points, one on the narrow body of the tractor at the front thereof and the other on the extended axle structure adjacent the wheel thereon, the axes of said pivotal supports being coaxially arranged on an axis extending rearwardly and outwardly from the front of the tractor to the rear, whereby the portion of the weight of the implement carried by the tractor is supported at the front substantially on the narrow steerable front support and at the rear adjacent the widely spaced wheel which carries a minimum portion of the tractor weight, and a supporting wheel mounted on said implement structure at the side opposite the tractor body.



2,456,238
MEANS FOR ENTRAPPING CONDENSATION
Arthur O. Ackerman, Fullerton, Calif.
Application September 15, 1944, Serial No. 554,301
3 Claims. (Cl. 138—25)

2. A combined conduit and condensing unit, comprising a spherical shell, openings in the opposite sides of said shell lying along the equatorial center thereof, a conduit extending through the shell and through said openings, fluid sealing means between the walls of said openings and the conduit, drain vents through the walls of the conduit along the area within the shell, and a drain spout carrying accumulated condensate away from

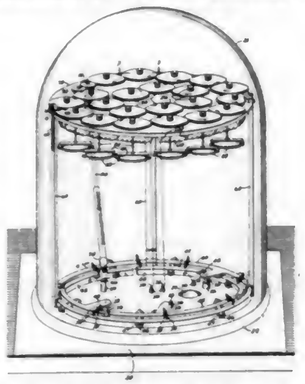


the interior of the spherical shell for drawing off surface condensation from within the shell.

2,456,239
SECTIONAL TYPE BOILER
William S. Anderson, Jr., Williamsport, Pa., assignor to Avco Manufacturing Corporation, a corporation of Delaware
Application April 2, 1945, Serial No. 586,086
10 Claims. (Cl. 122—225)

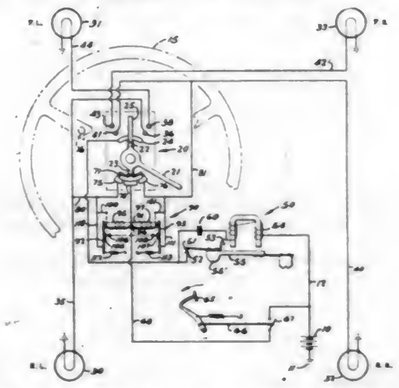
1. In a boiler of sectional magazine feed type with a firebox having an inclined grate extending transversely across the box, a boiler-section comprising walls forming sections of water conduits at the sides, respectively, one of said conduit sections being disposed substantially higher than the other and at one side of the upper end of the grate; side-legs of web-formation between the conduit sections and the base of the boiler section; a water leg extending upwardly from the lower conduit section; a fuel magazine section having an outer side of web-formation, an inclined lower portion at its inner side with a throat for fuel between said inclined portion, and a water leg extending directly between said inclined portion and the higher water conduit section; and a longitudinal flue section at the opposite side of the magazine having an upwardly and inwardly inclined bottom, the inner side of the fuel magazine and the flue sections having water chambers therein.

2,456,240
CHASE DIE ASSEMBLY
Frederick Auer, Teaneck, N. J., assignor to Champlain Company, Inc., Bloomfield, N. J., a corporation of New York
Application June 22, 1946, Serial No. 678,613
24 Claims. (Cl. 164—29)



24. In combination, a press bolster or platen, a chase die having make-ready means accessible from the back of the die, and guide means to facilitate moving the chase die into or out of the bolster for make-ready adjustment, said die comprising a chase frame, rules, furniture supporting said rules within said frame, said furniture having peripheral lands at the top, a hold-down plate, back-up strips between the backs of the rules and the hold-down plate, said back-up strips having a thickness less than the depth of the lands receiving the same, and being so shaped at intersections of the rules that each rule may be supported throughout its length by a back-up strip, and make-ready shims disposed between one or more of the back-up strips and the hold-down plate in order to determine the relative height of the rules, said guide means including rollers at the sides of the die, rails secured to the bolster on which rails said rollers may be run, ears on the chase frame, gibs releasably secured to the bolster, and adjustable stops for locating the position of the die relative to the bolster when the die is returned after having been rolled out of the bolster for make-ready adjustment.

2,456,241
METHOD OF MAKING OPTICAL TRANSMISSION FILTERS BY THERMAL EVAPORATION
Meyer H. Axler, Corona, and Kenneth F. Tripp, Tuckahoe, N. Y., assignors to Farrand Optical Co., Inc., a corporation of New York
Application November 22, 1946, Serial No. 711,562
8 Claims. (Cl. 117—71)

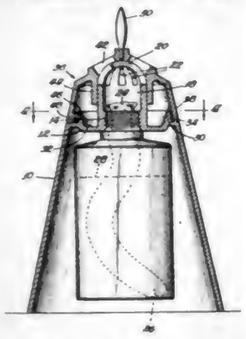


6. In the manufacture of optical filters having predetermined transmission characteristics and comprising a smooth surfaced support bearing two discrete semi-transparent metallic layers separated by a continuous layer of a metallic fluoride having a uniform optical thickness substantially equal to a small odd number of quarter wave lengths for light of a wave length to be transmitted by the filter, the method comprising the steps of depositing by evaporation in a vacuum chamber a first semi-transparent metallic layer on said support while said support is at substantially room temperature, heating said support and said first metallic layer in the said vacuum chamber to a temperature substantially within the range of 110° to 140° C., depositing by evapo-

ration in said vacuum chamber upon said first metallic layer while so heated a continuous layer of a metallic fluoride having an optical thickness substantially equal to a small odd number of quarter wave lengths for light of a wave length to be transmitted by the filter, allowing said sup-

port and the layers thereon to return to room temperature in said vacuum chamber, and depositing by evaporation in said vacuum chamber on said layer of metallic fluoride an outer semi-transparent metallic layer while said support and the layers thereon are at substantially room temperature.

2,456,242
DIRECTIONAL SIGNAL AND CIRCUITS THEREFOR
Benjamin F. Bailey, Ann Arbor, Mich., assignor to United Lens Corporation, Detroit, Mich., a corporation of Delaware
Application September 25, 1944, Serial No. 555,717
9 Claims. (Cl. 177—337)

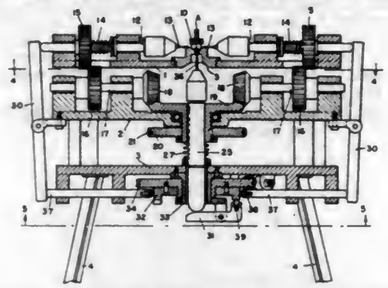


7. In a vehicle, spaced directional signals; stop signals; a circuit connections from each of said signals adapted to connect the same to a source of power; a manually settable, automatically releasable directional circuit switch in said circuit connections; a stop signal switch in said circuit connections associated with said manually settable switch; a normally open shunt circuit around said manually settable switch; an electrically controlled automatic relay to close said shunt circuit upon an abnormal voltage drop in said manually settable stop signal switching connections.

2,456,243
EMULSION POLYMERIZATION OF 2-CHLORO - 1,3 - BUTADIENE IN THE PRESENCE OF TETRAALKYL - DIAMINO - DIPHENYL - METHANES
Robert S. Barrows, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 2, 1946, Serial No. 659,155
10 Claims. (Cl. 260—92.7)

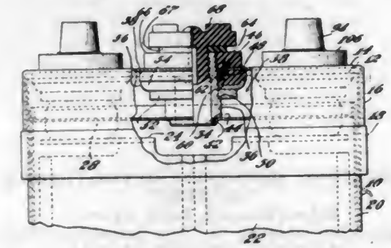
1. In the process for effecting emulsion polymerization compounds of the class consisting of 2-chloro-1,3-butadiene and mixtures of 2-chloro-1,3-butadiene with up to 60% of a 1,3-butadiene hydrocarbon in which the polymerization is carried out under alkaline conditions, the step which comprises effecting the polymerization in the presence of from 0.1% to 2%, based on the weight of the polymerizable material, of a tetraalkyl-p,p'-diamino-diphenyl methane in which each of the alkyl groups contains from 1 to 4 carbon atoms.

2,456,244
CENSER
John M. Bash, Chicago, Ill.
Application September 7, 1946, Serial No. 695,505
7 Claims. (Cl. 21—116)



1. A censer comprising a support, a wick chamber on said support, an opening into said wick chamber for receiving a container neck, a vent from said wick chamber, and a removable closure member for said vent.

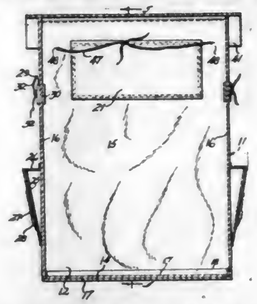
2,456,245
MACHINE FOR DRILLING CAPSTAN HEAD SCREWS
Wilbur B. Burke, East Cleveland, Ohio
Application January 6, 1943, Serial No. 471,506
4 Claims. (Cl. 77—26)



1. In a machine of the character described having means adapted to receive and hold in fixed position an article such as a capstan head screw blank with sides and end accessible for operation and a drill-carrying spindle aligned with the axis of the article thus held and movable towards and from such end of the latter and a plurality of similar spindles radially disposed in a plane transverse of such axis and movable toward and from such sides of the article having means adapted to advance and retract said aligned spindle and means adapted to advance and retract said plural spindles, said advancing and retracting means being timed to clear the center of said article of said plural spindles prior to completion of the advance movement of said aligned spindle, driving means for said spindles comprising a hollow

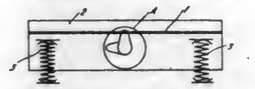
bevel gear rotatable about said axially aligned spindle, radially disposed spindles corresponding with said plural spindles and having bevel pinions

meshing with said bevel gear, and spur pinions interconnecting each pair of corresponding spindles.



2,456,246
BATTERY GLAND FOR TERMINALS OR VENTS
Carl Berg, Northampton, and Marcus Berg, Easthampton, Mass., assignors to Nickel Cadmium Battery Corporation, Easthampton, Mass., a corporation of Delaware
Application May 15, 1947, Serial No. 748,276
6 Claims. (Cl. 136—168)

1. In combination with a battery a gland for the liquid tight passage of a lead-in member through an aperture in the top wall thereof comprising a flange bordering said aperture, a compressible washer surrounding the lead-in member at the flanged side of the aperture, said washer having an annular recess in one side for the reception of said flange, and a protuberance on its opposite side, a rigid washer surrounding said lead-in member and engaging the opposite side of said compressible washer, said rigid washer having a peripheral flange embracing said annular protuberance to restrain lateral expansion of the washer, and means threaded on said lead-in member at the opposite side of the wall for squeezing the wall against the compressible washer interposed between it and the rigid washer.

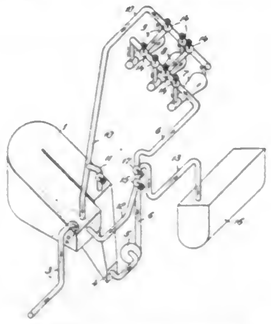


2,456,247
PACKSACK
Arthur C. Bernau, Sioux Falls, S. Dak.
Application June 28, 1946, Serial No. 680,123
3 Claims. (Cl. 224—8)

1. A knapsack comprising a container having flexible front, rear, side and bottom walls, a pair of adjustable shoulder straps secured to the rear wall, a flexible cover flap secured to the upper portion of the rear wall and formed to overlie the top of the container, means for securing said cover flap in its overlying position, auxiliary closure means in the upper end of the container, and a rope element secured at its ends to said

rear wall immediately below said auxiliary closure means and extending transversely across the top portion of the inner-side of said rear wall for substantially the full width thereof.

2,456,248
GYRATORY SCREEN
Francois Jacques Berry, Lille, France
Application September 8, 1945, Serial No. 615,183
In France May 14, 1943
2 Claims. (Cl. 209—326)

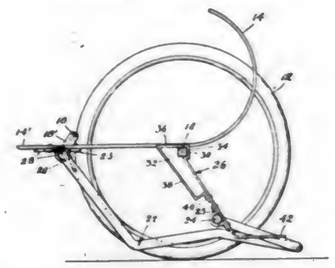


1. In a sieve for sorting solid materials comprising a movable frame spring mounted at its ends, a driving shaft for said frame, two eccentrics fixed on said driving shaft near the center of gravity of said frame, the centers of said eccentrics being located in the same diametral plane of said shaft, a connecting rod fixed to each of said eccentrics, a housing for said connecting rods rotatably mounted on said frame for rotary movement around the axis of the shaft, and said connecting rods at their ends being pivoted to said housing, at an angle of 90° to each other, and means connected between the housing and the frame for adjusting the housing about the axis of the shaft, whereby angular displacement of said housing will vary the major axis of the elliptical path of said sieve.

2,456,249
APPARATUS FOR PRODUCING VARIEGATED FIBER LENGTHS IN THE MANUFACTURE OF PAPER
George L. Bidwell, Riegelsville, Pa., assignor to Riegel Paper Corporation, New York, N. Y., a corporation of New Jersey
Application April 21, 1944, Serial No. 532,075
2 Claims. (Cl. 92—20)

2. Apparatus for the preparation of fibers for the manufacture of paper, including a circulating tub having an inlet and outlet, refining elements outside the circulating tub, said refining elements being arranged with feed piping and discharge piping of about double the diameter of the inlets and outlets of the refining elements, the discharge piping from the refining elements being higher than the discharge outlets of the refining elements, a circulating pump for circulating the stock from the circulating tub through the refining elements and back to the inlet of the

tube, in combination with a by-pass on the discharge side of the circulating pump for returning a regulated portion of the stock to the inlet of the tube and a by-pass on the discharge side of the refining elements for returning a regulated



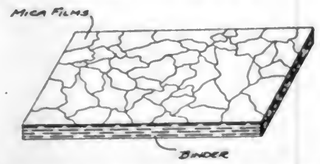
portion of the stock to the inlet of the circulating pump, said by-passes enabling a controlled amount of long fibers and short fibers to be produced in the batch of fiber being circulated, and a discharge pipe between said first by-pass and said refining elements.

2,456,250

COMBINED BRAKE AND SAFETY LEG FOR PERAMBULATORS

Alban M. Boudreau, Gardner, Mass., assignor to Hedstrom-Union Company, Gardner, Mass., a corporation of Massachusetts

Application November 13, 1946, Serial No. 709,484
8 Claims. (Cl. 188—20)



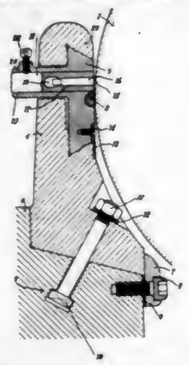
1. In a vehicle having an axle and a pair of wheels thereon, a brake member pivotally mounted adjacent to the periphery of a said wheel and swingable about its pivot into and out of engagement with the periphery of said wheel, and means rigid with said brake member and extending thence across the vertical plane of the axle to a location substantially beyond the axle, for constituting a safety leg against tipping of the vehicle when said brake member is engaged with a said wheel, means biasing said brake member in direction away from wheel engagement and biasing said safety leg to an elevated position, said safety leg being depressible in opposition to said bias to forcibly apply said brake member to a said wheel and to position said leg for preventing tipping of the vehicle, and means operative in response to a depressing of said safety leg for releasably securing the safety leg in its depressed position.

2,456,251

COMPOSITE BONDED SHEET INSULATING MATERIALS

Willis A. Boughton, Fort Lauderdale, Fla., and Chester L. Dawes and William R. Mansfield, Cambridge, Mass., assignors to Willis A. Boughton, Chester L. Dawes, William R. Mansfield, Frank C. Hughes, and Donald M. Hill, trustees of the Mica Patents Trust

Application March 15, 1944, Serial No. 526,614
5 Claims. (Cl. 154—2.6)



1. A composite mica insulation capable of resisting high temperatures comprising a plurality of inorganic insulating layers including at least one layer comprising mica flakes, said layers being bonded together under heat at temperatures from 175° F. to 325° F. and pressure between 50 and 500 pounds per square inch into a unitary structure by a mica binder, said mica binder comprising the thermal reaction product of ethyl silicate and a resinous material containing at least one resin selected from the group consisting of polyvinyl acetate, partially hydrolyzed polyvinyl acetate, an acrylic resin of the polyacrylic type and a polystyrene resin, said ethyl silicate being present from about 3.17% to about 31.75% of the weight of the resinous material, whereby the bond consists of the thermal reaction product of ethyl silicate and the selected resinous material.

2,456,252

GRINDING MACHINE AND FOOTSTOCK THEREOF

Ettore Bugatti, Paris, France

Application October 29, 1945, Serial No. 625,337
In Belgium January 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 14, 1964
5 Claims. (Cl. 51—237)

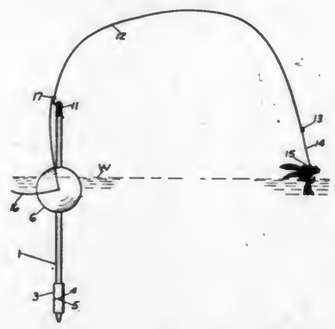
1. In a grinding-machine footstock, the combination of a carriage having a substantially planar outer face and a recess extending from said faces substantially at right angles thereto; a diamond holder slidably held in said recess for adjustment purposes; means on the carriage for clamping said diamond holder in said recess; and a footstock centre having a pointed end, set in said carriage in close proximity to said recess, with the pointed end axis considerably nearer to said outer face than to the inner face of said carriage.

2,456,253

PACK CARRIER

George Edward Bushey, St. Albans, Vt.

Application July 18, 1946, Serial No. 684,484
1 Claim. (Cl. 224—25.1)



A pack carrier comprising a pair of spaced parallel side bars, spaced parallel end bars fixed at their ends to the side bars adjacent opposite ends thereof, spaced parallel slats fixed at opposite ends to the end bars and forming with the side bars a pack supporting platform, a longitudinal row of longitudinally spaced eyes carried by each side bar, said eyes projecting perpendicularly from the plane of the platform, spacers fixed to each end bar inwardly from the side bars, said spacers projecting in a direction opposite the eyes, side rails fixed to the spacers and extending longitudinally in spaced parallel relation to the side bars, spaced parallel cross straps fixed at opposite ends to the sides of the rails opposite the spacers in spaced relation to the ends of the rails and a shoulder strap receiving loop fixed to an end bar midway between the ends thereof.

2,456,254

FISHING RIG

Rocco Paul Caruso, Newark, N. J., assignor of forty-five per cent to Russell W. Smith, Arlington, N. J., and ten per cent to A. D. T. Libby

Application March 8, 1946, Serial No. 652,987
6 Claims. (Cl. 43—4)

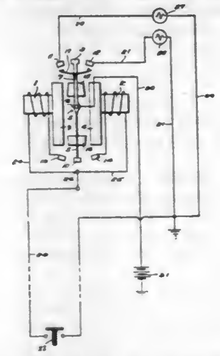
1. In combination with a fish line, a rig including a pin, a weight on one end of the pin, a spring wire attached to the other end of the pin, a float carried by the pin intermediate its ends, and a snell carrying a lure attached to the free end of said wire, the fish line being preferably attached to the wire at the end of the pin.

2,456,255

POLYMERS OF TRIFLUOROETHYLENE AND PROCESS FOR OBTAINING THEM

Donald D. Coffman and Thomas A. Ford, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 19, 1944, Serial No. 554,861
2 Claims. (Cl. 260—80)



2. A solid, film-forming, moldable polymer consisting of polymeric trifluoroethylene.

2,456,256

REMOTE CONTROL SWITCHING DEVICE

Daniel G. Crowley, Remus, Mich.

Application March 8, 1945, Serial No. 581,628
2 Claims. (Cl. 171—97)

2. A switching device for insertion between a plurality of consumer circuits operated selectively by remote control and a remote control circuit containing a remote control switch, comprising a pair of magnets provided with elongated pole pieces, an operative energizing circuit for each magnet of the pair, an oscillating armature, consisting of a rigid and a resilient section, arranged between said pole pieces and provided with a fulcrum located between said sections and between said pole pieces, an armature core on each side of said fulcrum, an operative circuit containing a source of current connected with said armature, a movable contact on each section of the armature, a pair of fixed contacts cooperating with each of said movable armature contacts, one contact pair being connected with the consumer circuits to be controlled, the other pair being connected with the energizing circuits of the pair of magnets, and a connection between said circuits and with the remote control circuit containing the remote control switch.

2,456,257

FLUSHING DEVICE FOR DOUCHE SYRINGES

William R. Curry, Ogden, Utah

Application December 4, 1946, Serial No. 713,959
1 Claim. (Cl. 128—244)

In a vaginal douche having a bulb, a tube extending from said bulb and a nozzle attached to the tube, in combination with a split collar slidably mounted on the tube, ears formed on and

extending from said split collar, nut and screw means through said ears for securing said split collar to the tube, bifurcated bearing lugs extending from diametrically opposed portions of said split collar, a plurality of manually operable levers, means pivoting said levers to said respective bearing lugs, a plurality of solid members on said levers and having opposed substantially semi-cylindrical recesses for receiving the tube, whereby said members abut each other

while embracing said tube, said members being tapered in the direction of insertion of the nozzle, whereby when the free ends of said levers are moved toward each other, said members are moved oppositely to each other away from the tube for expanding the vaginal orifice to form drainage passages about the nozzle and tube, and a lock ring embracing said tube and levers for holding the levers toward each other.

2,456,258

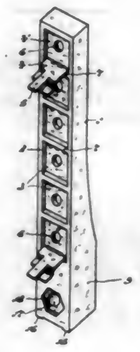
P-AMINO PHENYL-P'-AMINO PYRIDYL SULFONE AND A PROCESS OF MAKING THE SAME

Max Dohrn, Berlin-Charlottenburg, and Otto Laubereau, Berlin-Neukolln, Germany; vested in the Attorney General of the United States

No Drawing. Application December 23, 1940, Serial No. 371,412. In Germany December 19, 1939

19 Claims. (Cl. 260—239.6)

2. A method for making a phenyl pyridyl sulfone compound, comprising reacting a salt of benzene sulfinic acid having in p-position to the sulfinic acid group a radical having nuclearly bound nitrogen and selected from the class consisting of the amino group, acyl-amino groups and the nitro group, with a halogenated pyridine compound having in p-position to halogen a member of the class consisting of an amino group, a group hydrolizable to an amino group and a group reducible to an amino group.



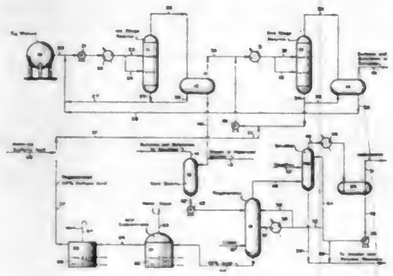
2,456,259

INSULATING SUPPORT FOR ELECTRIC WIRING

Hendrik Dorjée, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application February 5, 1947, Serial No. 726,639
In The Netherlands February 21, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 21, 1964
2 Claims. (Cl. 174—145)

1. An insulating support for electrical conductors comprising a unitary elongated body of insulating material having a U-shaped cross-section, a plurality of cavities in the outer surface of the bottom reach of said U-shaped member for accommodating contact members which may be inserted in said cavities, said elongated body having a mounting foot at one end thereof and integral therewith, said mounting foot being formed of the bottom and sides of the U-shaped cross-section, said sides being longer at said foot end of said elongated body than at the other portions thereof, said sides being thicker at the portion of said foot end more remote from the middle of said elongated body than at the other portions of said foot end and defining a



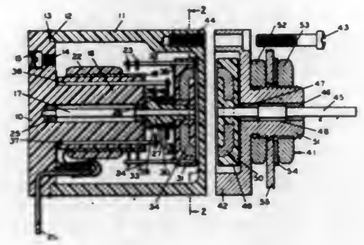
narrowed passageway therebetween, and an aperture in said outer surface of said bottom reach of said U-shaped member, said aperture extending into said narrowed passageway.

2,456,260

PROCESS FOR RECOVERING OLEFINS FROM A HYDROCARBON STREAM

Arthur A. Draeger, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

Application December 20, 1946, Serial No. 717,355
9 Claims. (Cl. 260—677)



1. In a system for recovering tertiary olefin from a predominantly C_4 hydrocarbon feed stock comprising olefins involving contacting the feed stock with sulfuric acid in a reaction zone under conditions to form an extract, the removal of the extract from the reaction zone to a regeneration zone where the extract is heated under a pressure substantially less than that of the reaction zone to cause vaporization of a major portion of the hydrocarbons from said extract and recovery of the extract and the recycling of the recovered sulfuric acid to the reaction zone, the step of heating said extract after it has been removed from the reaction zone and before it is sent to the regeneration zone to a temperature above the temperature at which the extract is formed and below the temperature to which it is heated in the regeneration zone whereby a product of improved purity is obtained.

2,456,261

LOW TORQUE TOROIDAL RESISTOR

Gabriel M. Giannini, Pasadena, Calif., assignor to G. M. Giannini & Co. Inc., Pasadena, Calif., a corporation of New York

Application August 13, 1946, Serial No. 690,314
7 Claims. (Cl. 201—56)

1. A low torque resistor-transmitter for remote indicating systems comprising a base; a cover hermetically sealed to said base; means contained in said base for introducing an inert gas under pressure; a toroidal resistor affixed to said base; a shaft structure rotatably journaled in anti-friction bearings carried by said base; wire brushes carried by said shaft structure contacting said toroidal resistor; electrical connection means between said toroidal resistor, said wire brushes and an external circuit; and magnetic driving means for rotating said shaft structure.

2,456,262

FABRICATION OF POLYTETRAFLUOROETHYLENE ARTICLES

Reuben T. Fields, Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application March 29, 1946, Serial No. 658,186
4 Claims. (Cl. 18—55)

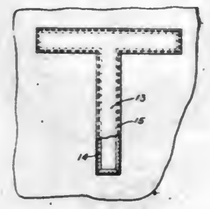
1. A process of fabricating polytetrafluoroethylene articles which comprises subjecting finely divided polytetrafluoroethylene to a pressure in a die to form a shaped body of polytetrafluoroethylene; releasing the said pressure and removing the shaped body from the die; heating the said shaped body at a temperature above 327° C. until sintered; and cooling the shaped body from the said temperature to a temperature below 250° C. under pressure in a die having the shape of the desired finished article.

2,456,263

RAZORSTROP COMPOSITION

William O. Flatt, Fort Worth, Tex.

No Drawing. Application March 10, 1945, Serial No. 582,181
2 Claims. (Cl. 51—304)



1. An abrasive-free composition for building up fabric base razor strops comprising soap, beeswax, creosote and a water soluble saponified coal tar product comprising active ingredients in the form of cresylic acid, an aryl-phenol and soap together with inert ingredients in the form of approximately 3.5% glycerin and not more than 35% water.

2,456,264

METHOD OF PREPARING APPLIQUÉS FOR ATTACHMENT

Maurice A. Friedlen, Chicago, Ill.

Application September 13, 1946, Serial No. 696,904
5 Claims. (Cl. 2—278)

4. The method of forming and attaching an appliqué to a surface which comprises cutting a blank of the material to be applied, placing the said blank over a die recessed to conform to a desired configuration, with the marginal edges of the said blank extending over the edges of said recess, cutting a form from sheet material to a configuration corresponding to that of said recess but being relatively smaller dimensionally so as to be received in said recess, placing said form over said blank and urging said form and said blank into said recess so as to cause the marginal edges of said blank to be turned upwardly out of the plane thereof, applying heat and pressure to the upwardly turned marginal edges to cause the same to be folded inwardly, removing said form from said formed appliqué, and stitching said appliqué to said surface.

2,456,265

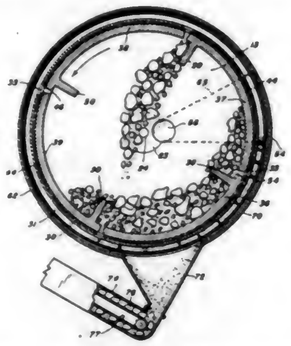
MODIFYING AGENTS FOR USE IN LOW-TEMPERATURE POLYMERIZATION REACTIONS

Per K. Frolich, Westfield, N. J., assignor, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana

No Drawing. Application January 30, 1942, Serial No. 428,834
11 Claims. (Cl. 260—93)

1. A polymerization process comprising the steps in combination of mixing together liquefied isobutylene, liquefied ethylene and zinc stearate and polymerizing the mixture by the application thereto of a Friedel-Crafts active halide catalyst, to yield a fine grained non-coalescing slurry of solid polymer having a molecular weight within the range of 15,000 to 150,000.

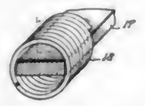
2,456,266



DRUM GRINDING MILL WITH DISCHARGE OPENINGS IN THE LINER

D. Wearing Gates, Seattle, Wash., assignor to G. B. & S. Mill, Inc., Yakima, Wash.

Application March 17, 1945, Serial No. 583,183
5 Claims. (Cl. 241—83)

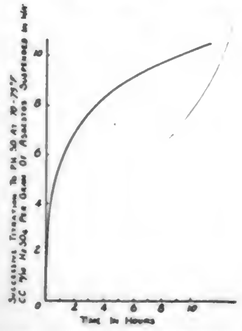


1. A grinding mill, comprising: a drum mounted to rotate about its horizontal axis, the drum consisting of a shell ring and spaced wear-resisting liner segments, the spaces between said segments serving as outlet openings for comminuted material, mountings for said segments, said mountings having loose engagement with the shell ring whereby on rotation of the drum a limited movement is imparted to said segments thereby

preventing clogging of the material therebetween, and a resilient mounting between each segment

and the shell ring to effect a rebound of particles striking the liner.

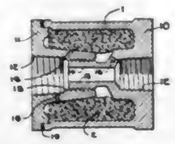
2,456,267
HANDLE BAR
Antoine Gazda, Providence, R. I.
Application October 1, 1945, Serial No. 619,624
5 Claims. (Cl. 74—543)



1. A resilient handle for pneumatic breakers, hammers, drills and the like, comprising a flat spring and a spiral spring in tubular shape substantially encompassing the same, the inner surface of said spiral spring being juxtaposed to said flat spring and extending to each free end thereof.

2,456,268
CATALYST PREPARATION
Frank C. Gibbs, Jr., Borger, Tex., Bruce M. Baird, Oklahoma City, Okla., and Robert J. Brosamer, United States Navy, assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application November 20, 1943, Serial No. 511,207
2 Claims. (Cl. 252—250)

1. A process for the preparation of a silica-alumina catalyst which comprises forming a hydrous silica gel by adding a solution of sodium silicate to an aqueous acid solution, washing and partially drying said hydrous gel, washing the partially dried gel until the acidity of the final wash water is reduced to pH value of at least about three, thereafter subjecting the resulting washed gel to the action of an aqueous acid activating solution consisting essentially of aluminum sulfate and an effective amount of a compound selected from the group consisting of alkali-metal bases and salts of alkali-metal bases and weak acids to maintain the acidity of said acid activating solution at a pH above about two during the entire activation treatment and so that the acidity of the spent acid activating solution at the end of said activation remains at a pH above about two, and subsequently washing and drying said activated gel.



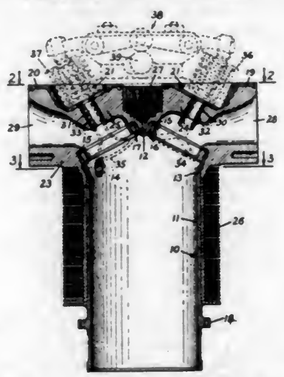
2,456,269
PLASTIC JOINT COMPOSITION
Joseph W. Gill, Elmhurst, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application December 1, 1944, Serial No. 566,230
5 Claims. (Cl. 106—113)

1. A surfacing and crevice filling composition of matter comprising the following ingredients:

	Percent
Animal glue	3.0
Corn paste	1.4
Basic chrome sulfate (25% Cr_2O_3)	0.6
Asbestos floats	4.0
Finely ground pyrophyllite	20.0
Finely ground silica	15.0
Stucco-plastic, low consistency	56.0
	100.0

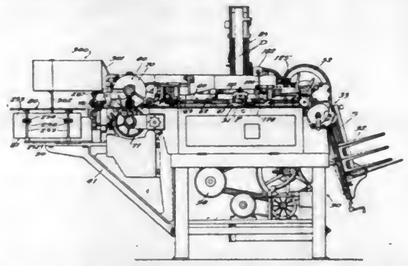
2,456,270
LUBRICATING DEVICE
Harry L. Giwosky and Peter Ketelsen, Wichita, Kans., assignors to Boeing Airplane Company, Wichita Division, Wichita, Kans., a corporation of Delaware
Application November 5, 1943, Serial No. 509,026
5 Claims. (Cl. 184—55)

2. A lubricator comprising a barrel, an end wall formed integrally therewith, a tubular thimble integral with said end wall and projecting concentrically within said barrel, a cap defining a second end wall for said barrel and having a tubular thimble integral therewith, projecting toward said first thimble, and detachably connected with said first thimble to hold said end walls in assembled relationship and to form a hollow core extending through said barrel, constituting a main air passage, and defining with said barrel an annular chamber, means for attaching air lines to said thimbles, and an oil-impregnated absorbent filler received in such annular chamber, each thimble having a small aperture through its wall to afford communication between its interior passage and the annular chamber receiving said filler, to by-pass through the filler a portion of the air flowing through the lubricator to pick up oil from the filler and to deliver it to the air stream flowing through the hollow core.



2,456,271
REACTION PRODUCT OF N-SUBSTITUTED POLYAMIDES WITH HYDROXYLATED MATERIALS AND PROCESS FOR OBTAINING SAME
Boynton Graham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 6, 1944, Serial No. 529,815
6 Claims. (Cl. 260—72)

1. A process which comprises reacting ingredients comprising an N-substituted polyamide and a substance containing a plurality of alcoholic hydroxyl groups by contacting said ingredients at a temperature of at least 20° C. and below the temperature at which decomposition of said ingredients and reaction product takes place, said N-substituted polyamide and substance being present in the proportion of from 1 to 200 parts by weight of said N-substituted polyamide and from 200 to 1 parts by weight of said substance, said N-substituted polyamide being the reaction product of a monohydric alcohol in which the alcoholic hydroxyl is the sole reactive group, formaldehyde and a catalyst consisting of oxygen-containing acid with a synthetic linear polycarbonamide which has hydrogen-bearing amide groups as an integral part of the polymer chain, the average number of carbons in the segments of the chain separating the amide groups being at least 2, and which has a molecular weight of at least 3000, and which consists of the reaction product of bifunctional polyamide-forming material containing complementary amide-forming groups in equimolecular proportions, said N-substituted polyamide containing the groups



wherein R is the radical of said alcohol, in amount of at least 5% of the carbonamide groups present in said N-substituted polyamide.

2,456,272
ENGINE CYLINDER CONSTRUCTION
Alfred T. Gregory, Manhasset, N. Y., assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y., a corporation of Maryland
Application August 2, 1946, Serial No. 687,884
5 Claims. (Cl. 123—193)

1. A cylinder for the overhead valve type of internal combustion engine and the like, comprising a barrel and head liner of ferrous metal having high structural strength, a casing for said barrel and head liner of light weight metal integrally secured thereto and having a structural strength less than the ferrous metal of said liner, lateral extensions on that portion of said casing overlying the head of said liner and forming a platform substantially normal to the axis of said cylinder and having an area substantially greater than the cross-sectional area of said casing around the barrel of said liner, and a platform integrally united with the casing metal of said extensions for mounting the operating mechanism for said overhead valves on said casing, whereby the operating load of said valve mechanism is transmitted from said platform solely through said casing to said liner.

2,456,273
PRINTING MACHINE
John H. Gruver, East Cleveland, and Homer A. Seeley, Cleveland, Ohio, assignors to Addressograph-Multigraph Corporation, Wilmington, Del., a corporation of Delaware
Application December 26, 1944, Serial No. 569,878
9 Claims. (Cl. 101—2)

1. In a printing machine for preparing business instruments having different characteristics from and under control of printing and control devices each embodying printing means and each adapted to bear identifying means at one or more identifying positions thereon, means affording a printing device guideway through which such printing and control devices are adapted to be passed one by one to sensing and printing positions disposed along said guideway, and sheet feeding means affording a sheet guideway along which sheets may be advanced into and then out of printing position; impression means at said printing station including at least two impression portions adapted when operated to print impressions on to a sheet in said sheet guideway from a printing and control device disposed at printing position, control means for rendering one of said impression portions selectively active or inactive, rotary printing mechanism to which sheets are fed one by one from said sheet guideway, said rotary printing mechanism having a plurality of printing elements one of which is adapted to be rendered selectively active or inactive, sheet sorting mechanism to which sheets are discharged from said rotary printing mechanism, and having sorting means selectively operable to sort sheets into different groups, control means for said sorting means, sensing means at said sensing position, governing means controlled by said sensing means to govern the respective control means of said impression portion and said printing means to render said one impression portion and said one printing element of said rotary printing mechanism effective or ineffective in accordance with identifying means sensed by said sensing to thereby impart different characteristics to the respective instruments in accordance with the sensed identifying means,

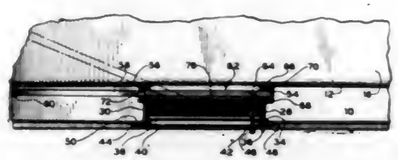
and said governing means also being operable under control of said sensing means to govern said control means of said sorting mechanism to sort said instruments in accordance with the different characteristics thus imparted to said instruments.

2,456,274

ARYL THIO-ETHERS OF METAL-CONTAINING PHTHALOCYANINES AND PROCESS FOR PRODUCING SAME

Ernst Gutzwiller, Basel, Switzerland, assignor to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm

No Drawing. Application March 15, 1945, Serial No. 583,008. In Switzerland February 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 14, 1964
12 Claims. (Cl. 260—314.5)



1. A process for the manufacture of pigments of the phthalocyanine series comprising the step of heating at 150–210° C. a phthalocyanine halogenated in the benzene nuclei with an aromatic mercaptan in presence of an acid binding agent and of an alcohol possessing a boiling point of above 150° C.

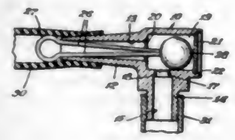
2,456,275

BATHTUB

Louise E. Harris, Macon, Ga.

Application February 6, 1946, Serial No. 645,900
12 Claims. (Cl. 4—173)

1. A bathtub comprising a bottom wall and spaced inner and outer upright walls having their upper ends joined by a transverse connecting wall, a door opening forming a passageway through said inner and outer upright walls, a door for said passageway slidable to a concealed position between said upright walls, a transverse wall connecting said inner and outer upright walls about said passageway, a door receiving recess in said transverse wall, opposed gaskets in said door receiving recess for engaging opposite sides of the door when the door is in closed position, the upright portion of the transverse wall about the door opening having a slot through which said door may be slid into the space between said inner and outer upright walls, said bottom transverse wall having a drainage opening therein, and a closure member adapted to fit in the door opening along the said outer wall, said closure member having a lateral extension at its top conforming to the transverse connection between the inner and outer upright walls to give the top of the tub a continuous appearance.



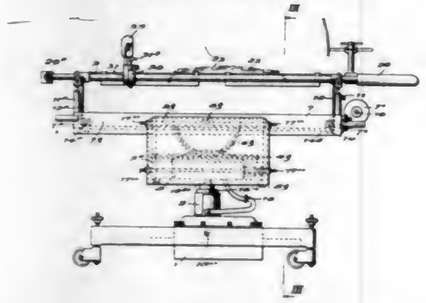
2,456,276

STALL COCK FOR MILKING MACHINES

William H. Harstick, Oak Park, Ill., assignor to International Harvester Company, a corporation of New Jersey

Application June 20, 1947, Serial No. 755,992
9 Claims. (Cl. 284—4)

7. A stall cock for a milking machine system comprising a body having a chamber, connecting members having conduits in communication with the chamber, a valve member within the chamber movable to seal any one of said conduits, a valve stem connected to said valve member, said valve stem extending outwardly through one of said



conduits, and an engaging means connected to said valve stem, said engaging means being operable to engage portions of a fluid line coupled to one of said connecting members whereby said valve member is moved and retained from sealing relation with any of said conduits.

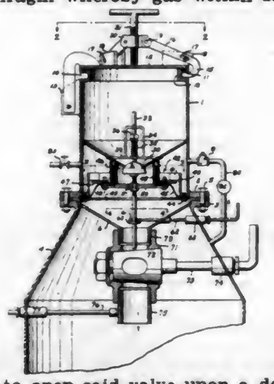
2,456,277

SURGICAL TABLE

Maurice Georges Heitz-Boyer, Vichy, France; vested in the Attorney General of the United States

Application September 5, 1942, Serial No. 457,509
In France June 5, 1941
3 Claims. (Cl. 250—55)

1. A table for surgical and like purposes for use with an X-ray tube device, which comprises, in combination, a single supporting column, a substantially flat track carried by the top of said column, a body support, means movably carried by said body support on the under side thereof for supporting an X-ray tube device, and means for movably mounting said body support on said column for cycloidal movement on said track, said last mentioned means being so positioned and dimensioned as to prevent contact of said X-ray tube device with said column.



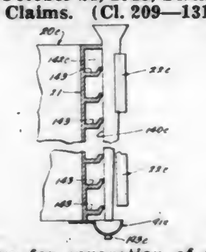
2,456,278

ACETYLENE GENERATOR

George L. Hill, Houston, Tex.

Application January 5, 1945, Serial No. 571,456
8 Claims. (Cl. 48—53)

6. A gas generator comprising a hopper having an opening in the bottom thereof, a downwardly opening valve in said opening, spring means tending to hold said valve in normally closed position, a generating chamber below said valve, closure means therefor forming an enclosure between the hopper and chamber, a diaphragm forming a partition in said enclosure, means interconnecting said diaphragm and said valve, and means for admitting gas under pressure from the generating chamber to the space above said diaphragm whereby gas within said space



functions to open said valve upon a decrease in pressure within the generating chamber.

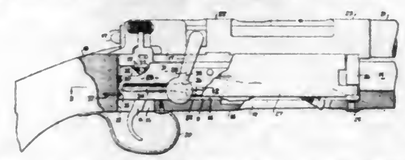
2,456,279

APPARATUS FOR ELECTROSTATIC SEPARATION OF MATERIAL PARTICLES

Basil Horsfield, Florence, Ala., assignor to Orefraction Incorporated, Pittsburgh, Pa., a corporation of Pennsylvania

Application October 24, 1945, Serial No. 624,164
8 Claims. (Cl. 209—131)

1. Apparatus for separation of material particles, comprising: means, comprising gutter means for supporting the particles, constructed and arranged to cause the particles to progress in one direction in said gutter means; functionally plate-type electrode means positioned to define a substantially vertical plane spaced horizontally from said gutter means; particle receiving means; said gutter means and said electrode means and said particle receiving means being relatively so positioned that the space left between said electrode means and said gutter means extends freely downwardly into said particle receiving means; and said electrode means and said gutter means being so constructed and arranged that when they are subjected to a sufficient difference of electric potential, particles of higher susceptibility will be lifted, by electrostatic action, out of said gutter means into said vertical space and fall downwardly therein into said particle receiving means.



2,456,280

BUFFER DEVICE FOR FIREARMS

Frederick L. Humeston, Hamden, Conn., assignor to The High Standard Manufacturing Corporation, New Haven, Conn., a corporation of Connecticut

Application June 25, 1946, Serial No. 679,246
5 Claims. (Cl. 42—75)

1. A firearm structure including in combination: a stock having an interior vertical longitudinal recess therein provided with a rear end-wall; a receiver-member arranged to seat in said recess; and recoil-transmitting means comprising a U-shaped sheet-metal member mounted in said recess, said member abutting at its base against the rear end-wall of said recess and

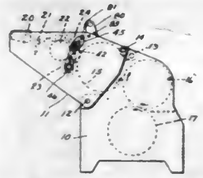
having forwardly-extending arms each provided with an inwardly-projecting rib extending longitudinally thereof, the forward end of each rib being arranged to abut the rear end of said receiver-member to transmit the rearward recoil shock of said receiver-member to the rear end-wall of said recess.

2,456,281

REMOVING INCRUSTATIONS FROM LEAD ANODES USED FOR CHROMIUM PLATING

Jacob Hyner, Waterbury, Conn., assignor to United Chromium, Incorporated, New York, N. Y., a corporation of Delaware

No Drawing. Application April 16, 1946, Serial No. 662,617
1 Claim. (Cl. 204—141)



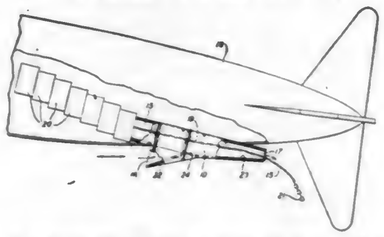
A method of removing incrustations from lead anodes used for chromium plating such incrustations being mixtures of lead oxides and lead chromate, comprising suspending the lead article in an aqueous solution consisting essentially of an alkali-metal pyrophosphate, and passing current to the aforesaid lead article, connected in circuit in said solution as a cathode, and cathodically reducing the incrusted mixture of lead oxides and lead chromate to lead.

2,456,282

INKING SYSTEM FOR PRINTING MACHINES

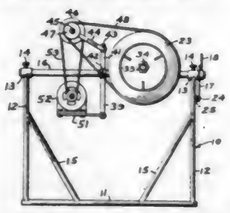
Edward J. Janke, Cleveland, Ohio, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware

Application June 27, 1945, Serial No. 601,820
29 Claims. (Cl. 101—352)



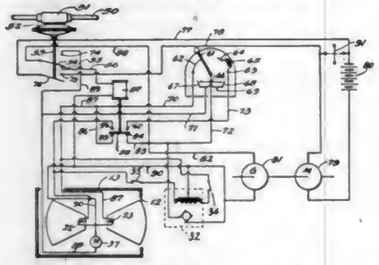
29. A printing machine having a rotary drum adapted to carry a printing plate, a normal inking system therefor including a friction-driven form roll adapted to coact with the plate and with means for supplying ink to said roll, mechanism for removably supporting said friction-driven form roll, means for rendering the normal ink supply mechanism inactive, and means for carrying a gear-driven form roll in the same supporting mechanism in place of the friction-driven form roll but in a position different therefrom and where it may contact with the printing plate while out of contact with the normal inking system and where it may be supplied with ink independently of the normal inking system.

2,456,283
TEXTILE WAX COMPOSITIONS
George D. Jefferson, Kennett Square, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 30, 1945, Serial No. 591,237
3 Claims. (Cl. 106—268)



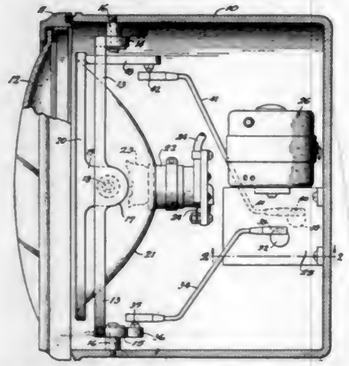
1. A solid composition consisting essentially of 40 to 70% hydrocarbon wax, 6 to 30% of a polyethylene glycol monostearate produced by the reaction of ethylene oxide and stearic acid in the proportion of at least 18 mols of ethylene oxide per mol of stearic acid, and 10 to 40% stearic acid, to make a total of 100% of said mixture.

2,456,284
FLUME FOR AIR LAID WIRE
Homer G. Jordan, Fanwood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 8, 1945, Serial No. 633,827
8 Claims. (Cl. 244—137)



1. A discharge device for guiding air laid wires from airplanes and the like which comprises in combination, an airplane, an elongated flume member mounted in the fuselage of said airplane and having a wide wire receiving inlet port at one end and a relatively narrow wire discharge outlet port at the other and an air inlet port facing forward and opening into said flume adjacent said wire receiving port for scooping up air and forcing it through said flume to accelerate the passage of wires therethrough.

2,456,285
CONCRETE FEED AND FERTILIZER MIXER
John S. Kamper, Demopolis, Ala.
Application July 10, 1947, Serial No. 759,955
1 Claim. (Cl. 259—177)

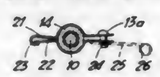


A mixing device comprising a frame, a shaft journalled on the frame, a mixing element, means for connecting the mixing element to the shaft to be adjusted therewith, means for adjusting the shaft to move the mixing element between discharge and raised positions, electric motor drive means including belts and belt pulleys connected to the shaft to be tilted therewith, said motor means including a member having a portion extending upwardly from the shaft and a portion extending downwardly therefrom, said member being fixed to the shaft, an arm pivoted upon the upwardly extending portion and normally retained in an upwardly inclined position, a shaft with two pulley wheels thereon, a pulley belt extended between one of the pulley wheels on the arm and the mixing element to rotate the same, a mounting base for the electric motor pivoted to the lower arm of the member, a pulley belt extended between the electric motor and the other pulley of the shaft of the arm, said electric motor utilizing its weight to tighten the belt between the motor and the pulley on the pivoted arm and whereby to pull the arm downwardly so as to tighten the belt between its pulley wheel on the arm and the mixing element.

2,456,286
LOW BRAKE PRESSURE SIGNAL DEVICE
Jeremiah D. Kennelly, Oak Park, Ill.
Application October 20, 1945, Serial No. 623,587
6 Claims. (Cl. 177—311)

1. In combination with a brake line maintained under high fluid pressure on railway cars and the like, a signal device provided with a warning light and a favorable light, means for rotatably mounting said lights to move one into view while obscuring the other, and means responsive to a drop in pressure in said brake line below a predetermined point for actuating said last-mentioned means to bring said warning light into view.

2,456,287
WARNING LIGHT FOR VEHICLES
Jeremiah D. Kennelly, Oak Park, Ill.
Application February 1, 1947, Serial No. 725,825
3 Claims. (Cl. 177—329)

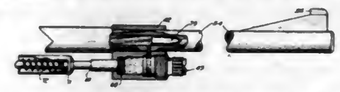


2. In warning light apparatus, a casing open at one end, a lens in said casing, a light source equipped with a reflector mounted in said casing,

a bracket member, pivot pins supporting said reflector in said bracket member for oscillation in a vertical plane, pivot pins supporting said bracket member for oscillation in a horizontal plane, a pair of motor-driven eccentric discs mounted in said casing, and arms connecting said discs to said reflector and said bracket, said discs being rotated at different speeds to produce a number of vertical oscillations of said reflector for a single oscillation of said bracket support.

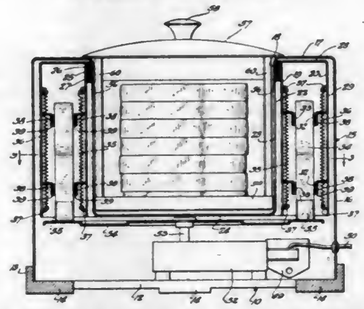
2,456,288
PROCESS OF DYEING NYLON-ACETATE MIXED FABRIC WITH 3-NITRO-4-AMINO-2'-CHLOROBIPHENYL
Jean G. Kern, Orchard Park, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application May 4, 1945, Serial No. 592,073
4 Claims. (Cl. 8—24)

1. A process for the coloration of a mixed fabric containing synthetic linear polyamide fiber and organic cellulose derivative fiber, which comprises applying to said fabric an aqueous dispersion of 3-nitro-4-amino-2'-chlorobiphenyl, whereby said fabric is colored a uniform, fast greenish-yellow shade.



2,456,289
SAFETY DEVICE FOR AIR BOMBS
Emrik Ivar Lindman, Ronninge, Sweden
Application November 3, 1941, Serial No. 417,728
In Sweden October 7, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires October 7, 1960
2 Claims. (Cl. 102—7.6)

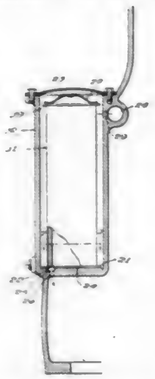
1. In an air bomb in combination, a firing pin turnably fitting in the nose of the bomb, a striking plate on said firing pin and projecting in front of the nose of said bomb, a primer, a spring normally holding said firing pin at a predetermined distance from said primer and yielding at a predetermined minimum pressure higher than the maximum pressure effected by the air when the bomb falls through it, a safety clip comprising two flat resilient plates between said striking plate and the bomb proper, said clip having an opening formed therein extending transversely of the major planes of the flat plates, a safety pin extending through the opening in said clip, and fitting loosely therein, said clip being resilient and being under stress when assembled and tending to spring apart automatically but normally being held in safety position by said safety pin, said safety pin having a transversely extending hole therein, and a locking wire extending through said hole in said safety pin, to be extracted in its longitudinal direction out of said hole when the bomb is dropped, said firing pin and safety pin being rotatable respectively in different planes so that the hole in the safety pin may always be in the longitudinal direction of said wire when the bomb is ready to be dropped.



2,456,290
GAS-OPERATED AUTOMATIC RIFLE
Albert V. Ljutic, Verona, Calif.
Application March 3, 1945, Serial No. 580,865
1 Claim. (Cl. 89—193)

In a firearm, a barrel having a cartridge firing chamber, a receiver, mechanism in said receiver for feeding a cartridge into said firing chamber and for extracting the case therefrom after firing; means for operating said mechanism comprising a sleeve mounted on said barrel and having in a depending portion thereof a cylinder and a piston movable in said cylinder, to actuate said mechanism upon admission of gases from said barrel to said cylinder, a first gas port for admitting gases to said cylinder from said barrel at

a point intermediate the ends thereof, a hollow circular plug in said cylinder having a gas passage about the outer periphery thereof for receiving gases from said first gas port, said first gas port opening from said barrel and flaring outwardly through said sleeve to deliver gases from said barrel to said gas passage and a second gas port opening from said gas passage to the interior of said hollow plug.



2,456,291
TOASTER
Homer F. Malone, Chicago, Ill., assignor of one-half to Frank D. Ross, Chicago, Ill.
Application July 5, 1945, Serial No. 603,316
4 Claims. (Cl. 99—339)

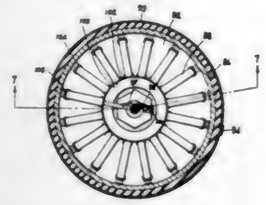
1. A toaster for bread or the like comprising, in combination, a base of insulating material, a rotary drive mechanism mounted on the base and having a centrally disposed drive shaft extending upwardly therefrom, a substantially circular table secured to the drive shaft to be supported and driven thereby, said table having a toast carrying platform with spaced and upstanding toast pushing lugs near the periphery thereof, a housing secured to the base and having a cylindrical outer wall extending upwardly from the base and spaced diametrically from said table, said housing also including an inwardly extending top portion and a centrally disposed well defined by a cylindrical wall spaced inwardly from said outer wall and a bottom wall spaced from said table, said cylindrical walls defining a circular toasting channel, a door opening in the outer wall fitted with a door and providing access to the toasting channel, support members adjacent and extending along each wall of the toasting channel in spaced relationship thereto and carried by the housing, said support members having means on the adjacent surfaces thereof carrying heating elements facing one another from opposite sides of the channel, said support members also carrying toast guide strips in spaced and substantially concentric relationship with the space therebetween substantially aligned with said platform and toast pushing

lugs, said toast guide strips and the outer one of said support members each having an end adjacent opposite sides of said door opening and a cover for said well.

2,456,292
LIQUID FILTERING APPARATUS
Howard S. Manwaring, La Grange, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application July 30, 1945, Serial No. 607,692
5 Claims. (Cl. 210—169)

1. In a filter for fluids, a thin hollow wall structure having opposed contiguous walls of thin filtering sheets through which the fluid is filterable into said structure from a fluid body ambient thereto, said structure comprising a series of hollow sections of which adjacent thereof are connected together in diverging relation by respective folds of a series of successively oppositely turned folds in such structure and arranged alternately with such hollow sections, the opposite sides of said hollow sections being pressable inwardly in a manner reacting each against the other by the pressure of such fluid body, a sealing plate for the hollow wall structure at an edge thereof to which ends of the hollow sections and of said folds extend, and drainage means comprising a plurality of ports in said sealing plate directly communicative with various of said hollow sections.

5. In a liquid filtering unit, a thin hollow wall structure having opposed contiguous sheet-like filtering walls through which liquid is filterable into the structure from a liquid body while said structure is immersed therein, said structure comprising a series of adjacent hollow sections each extending between opposite edges of said structure, and arranged in zigzag fashion wherefore there are junctions between the sections from which adjacent sections diverge; a sealing plate attached to one of said structure edges to serve as closing means for such edge, and drainage means for said structure comprising holes extending through said plate in communication with said hollow wall structure at points in registry with respective of said junctions.

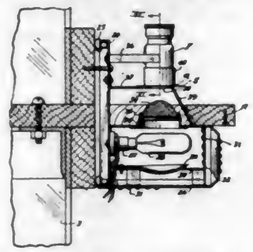


2,456,293
SEMIRIMLESS OPHTHALMIC MOUNTING
Stanley Markell, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application January 23, 1947, Serial No. 723,677
1 Claim. (Cl. 88—41)

In an ophthalmic mounting, the combination of a lens, a frame member positioned against the rear surface of the lens and extending along the nasal, top, and temporal portions thereof, said lens having depressions on its front surface adjacent its nasal and temporal edges, a mounting part secured to and extending laterally from each of the nasal and temporal portions of the frame member, and means for detachably holding the lens on the member comprising resilient clips mounted, respectively, on the nasal and

temporal portions of the member, each clip overlying the front surface of the lens and having a protuberance positioned in the adjacent depression, the protuberances being held in the depressions by the resilience of the clips, each clip having a pair of spaced integral fingers positioned, respectively, above and below the adjacent mounting part, said fingers extending partially around the frame member for holding the clip thereto.

2,456,294
UNDERWATER SOUND TRANSMITTER OR RECEIVER
Frank Massa, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio
Application May 15, 1946, Serial No. 669,761
2 Claims. (Cl. 177—386)

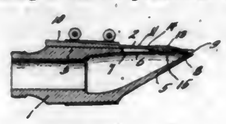


1. In a piezoelectric transducer device adapted to operate underwater, a water-tight enclosure having a vibration transmitting portion, a liquid medium within said housing having a mechanical impedance comparable to the mechanical impedance of the water in which said piezoelectric device is adapted to operate, a compressible body having a slot therein mounted within said water-tight enclosure and in contact with said liquid medium, said body having lower mechanical impedance than said liquid medium, and piezoelectric expander crystal means having at least two faces which vibrate with piezoelectric action mounted in the slot with one but not all of said faces directly against said compressible means to decouple said face from the surrounding liquid medium, said other face which vibrates being substantially coupled to said liquid medium to effect a differential alternating pressure of the liquid medium on the said two faces when the crystal unit operates piezoelectrically.

2,456,295
COATING COMPOSITIONS
William C. Mast, Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application June 22, 1944, Serial No. 541,559
6 Claims. (Cl. 260—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

6. A coating composition comprising an aqueous emulsion of polymerized monomeric methyl acrylate, the viscosity of the composition being adjusted by incorporation of peptized casein and a water-soluble alginate therein prior to polymerization, in the proportions of 3.5 to 28.2 parts of the casein and 0.25 to 3.75 parts of the alginate per 250 parts of the monomeric methyl acrylate.

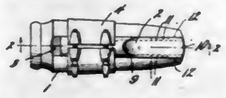
2,456,296
VISUAL INSPECTION PROJECTION APPARATUS
Rex D. McDill, Cleveland Heights, Ohio
Application January 31, 1946, Serial No. 644,491
3 Claims. (Cl. 88—24)



1. Inspection apparatus comprising a support having a smooth bearing surface and provided with an opening permitting the passage of light therethrough, light directing means directing light through the opening, a lens holder carrying a lens in alignment with said opening, a sleeve carried by said lens holder and movable toward said support, the sleeve having a smooth end adjacent the support, and a spring pressing the sleeve toward the support, the support having a smooth inclined portion diverging from a portion thereof in alignment with the end of said sleeve.

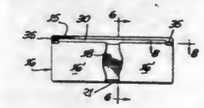
2,456,297
PROTEIN HYDROLYSIS
Daniel Melnick, Kew Gardens Hills, N. Y., assignor, by mesne assignments, to Food Research Laboratories, Inc., a corporation of New York
No Drawing. Application October 28, 1943, Serial No. 508,056
4 Claims. (Cl. 99—21)

1. Process of hydrolyzing blood proteins which consists in: heat coagulation of the proteins; and the digestion thereof with a small single charge of a pancreatic enzyme preparation whereby approximately 85% of the proteins are converted to amino acids, and not more than 10% of the free amino acids in the final hydrolysate are derived from the pancreatic enzyme preparation.



2,456,298
REVERSIBLE REED FOR WIND INSTRUMENTS
Jules Miller, Atlantic City, N. J.
Application December 24, 1947, Serial No. 793,577
6 Claims. (Cl. 84—383)

1. A reversible reed for clarinet, saxophone and the like, tapering from its proximal to its distal

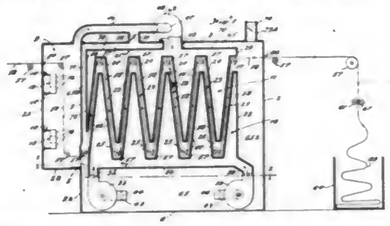


end and the surface contour of the two faces being identical.

2,456,299
PERFORATED REED FOR WIND INSTRUMENTS
Jules Miller, Atlantic City, N. J.
Application December 24, 1947, Serial No. 793,578
5 Claims. (Cl. 84—383)

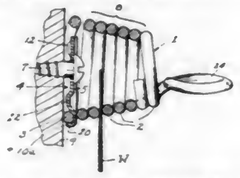
1. A reed for musical instruments, such as the clarinet, saxophone and the like, including the body portion and the vibrant portion, the vibrant portion provided near its proximal end with a series of apertures spaced slightly from the marginal side edges of said reed.

2,456,300
BILLFOLD
Joseph C. Miller, Compton, Calif., assignor to Coast Envelope & Leather Products Company, a corporation of California
Application January 24, 1944, Serial No. 519,487
2 Claims. (Cl. 150—38)



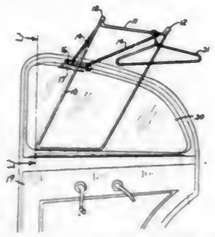
1. A billfold comprising: outer and inner walls of flexible material, said outer wall being rectangular in shape and having an area inclusive of the area of a bill to be carried, said inner wall being formed of two spaced inner wall members each forming an extension of the outer wall member; a bridging member of rectangular shape; a two part connecting wall member attached along one edge to the inner wall and along the opposite edge to the bridging member, all of said members forming one continuous flexible blank and said bridging member, said connecting wall and said inner wall being successively folded upon each other and upon the outer wall; means for permanently securing the end edges of the outer wall to the end edges of the inner wall; and a divider member between the outer wall and the connecting wall attached at its ends to the bridging member.

2,456,301
PROCESS AND APPARATUS FOR DRYING TEXTILES
Paul L. Miller and Fred T. Miller, Clearwater, S. C., assignors to United Merchants & Manufacturers, Inc., Wilmington, Del., a corporation of Delaware
Application September 14, 1943, Serial No. 502,260
3 Claims. (Cl. 34—18)



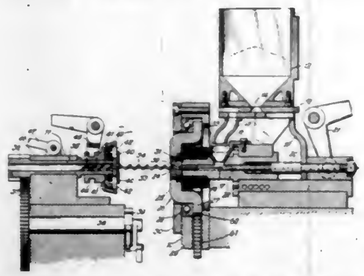
1. The process of drying wet fabric which comprises continuously passing said fabric through a flame chamber in closely juxtaposed and spaced

relation to an incandescent refractory body; directly exposing the fabric to said body for a time sufficient to volatilize a substantial proportion of water from said fabric and convert it into steam; mixing said steam with hot combustion gases, passing the fabric through a convection heat



chamber, introducing said mixture of steam and combustion gases to said convection heat chamber from opposite sides thereof and in direct heat exchange relation with said fabric in order to complete the drying of the fabric, and recirculating said mixture through said convection heat chamber only in contact with said fabric.

2,456,302
SUPPORTING DEVICE
Ladimer M. Mocnik, Cleveland, Ohio
Application August 16, 1944, Serial No. 549,723
8 Claims. (Cl. 248—303)

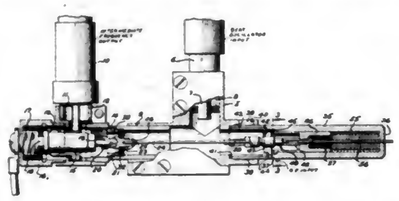


1. A device of the class described comprising a base in the form of a disc adapted to be secured to a generally flat surface and having a marginal flange, said flange being interrupted at one side of the disc, and a member in the nature of a helical spring having a terminal coil supported for more than half its circumferential extent by inner surface portions of the flange and adjacent marginal portions of the disc, said terminal coil being insertable into supported relationship to the base at the region of interruption of the flange.

2,456,303
CLOTHES RACK FOR AUTOMOBILES
James E. Mogan, Denver, Colo.
Application October 20, 1947, Serial No. 780,883
5 Claims. (Cl. 224—29)

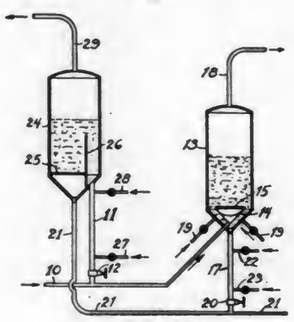
5. A garment-supporting device for automobiles having an elevatable glass pane mounted in a surrounding window frame, comprising: an open rigid frame adapted to rest at its lower extremity on said window frame against said pane; a hanger bar extending horizontally across the upper extremity of said frame; flexible members extending from the upper extremity of said rigid frame; an attachment bar connecting the free extremities of said flexible members; a flexible pad formed over and surrounding said attachment bar and extending sidewardly therefrom; dowel members in the edge of said pad opposite to said bar for thickening said edge, said pad being adapted to be placed over the upper edge of said pane to be forced upwardly by elevating the latter, said flexible members being sufficiently long to support said rigid frame in an inclined position so as to place said hanger bar a substantial distance from the inside of said pane; and raised extremities on said hanger bar acting to retain conventional garment hangers thereon.

2,456,304
METHOD OF FORMING COAXIAL CABLES
Louis H. Morin, Bronx, N. Y.
Application April 25, 1944, Serial No. 532,660
3 Claims. (Cl. 18—59)



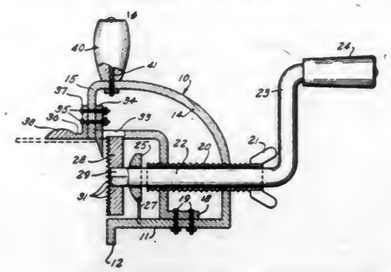
1. The method of die casting a helically shaped insulator upon a conductor which comprises casting upon a length of said conductor a section of insulating material by injecting said material in the plastic state into one end of a helically shaped cavity of a die through which said conductor extends, simultaneously gripping the conductor between a pair of jaws at a point beyond the other end of said cavity during said casting step, releasing the grip on the conductor after the casting step by opening said jaws, moving the jaws closer to the die while coincidently rotating said jaws about the conductor, regripping the conductor between said jaws, moving the jaws and the conductor away from the die while rotating the latter to pull said cast section out of the die and bring another length of conductor therein, and casting another section of insulating material on the conductor by injecting said material in the plastic state into said die cavity simultaneously with the movement of the conductor therethrough.

2,456,305
CLOSURE DEVICE FOR CRYSTAL CONVERTERS
Wilbur L. Nelson, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 22, 1944, Serial No. 555,367
7 Claims. (Cl. 250—31)



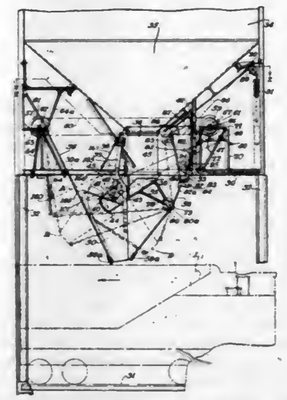
1. In a crystal converter having a series connected crystal in a coaxial line, a valve controlling an ultra high frequency input passage to the coaxial line, and means for closing said

passage comprising a cylindrical member having a seat formed thereon and positioned in the coaxial line, a cap member biased to engage said



seat and close said passage, and means to hold the cap member out of engagement with the seat when the converter is in use.

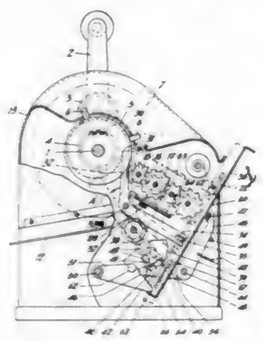
2,456,306
CONVERSION OF HYDROCARBON OILS WITH FINELY DIVIDED CATALYST
Edward W. S. Nicholson, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application September 10, 1943, Serial No. 501,741
6 Claims. (Cl. 196—52)



1. A process for the catalytic cracking of hydrocarbon oils which comprises passing the oil through a layer of cracking catalyst in powder form and contained within a cracking chamber, said powder comprising a mixture of relatively coarse synthetic cracking catalyst and relatively fine clay, continuously charging to said cracking chamber a major portion of a synthetic cracking catalyst in the form of particles of relatively large size and a minor portion of from 5 to 30 weight per cent based upon said synthetic cracking catalyst of a fine clay ranging from 1 to 25 microns in diameter, separately withdrawing a stream of said powder from the bottom portion of said cracking chamber independently of said oil vapors at a rate sufficient to maintain the level of said powder a substantial distance below the top of said cracking chamber, regulating the velocity of the oil vapors rising through said chamber to maintain said layer of powder in a turbulent state, keeping the oil vapors in contact with the layer of catalyst powder at cracking temperature for a period sufficient to obtain the desired conversion thereof, withdrawing vaporous cracked products from the upper portion of said cracking chamber and fractionating the cracked products to segregate a desired fraction therefrom.

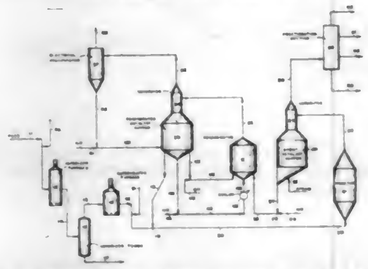
2,456,307
CAN OPENER
Wayland J. Noblett, Long Beach, Calif.
Application May 20, 1947, Serial No. 749,200
8 Claims. (Cl. 30—8)

1. A can opener comprising a continuous metal frame having a base portion arranged to contact a can wall at one end and extend substantially at right angles to said can wall, a pair of substantially parallel leg portions extending upwardly from said base portion, a guide portion overlying the upper end of the can, and a standard portion extending upwardly from said guide portion; a blade secured to said standard portion and extending downwardly through said guide portion; an externally screw threaded sleeve extending through internally threaded apertures in said leg portions; a shaft journalled in said sleeve and having a hand crank on the outer end thereof; a disk having a radially serrated inner face fixed on the inner end of said shaft in position to engage a can upper rim and rotate the can against said blade; and a thrust washer interposed between the inner end of said sleeve and said disk whereby rotation of said sleeve in said leg portions will force said disk into operative engagement with said can rim.



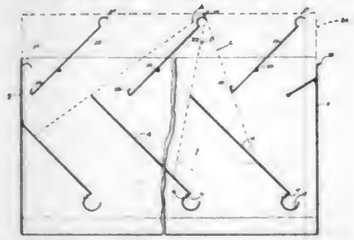
2,456,308
LOCOMOTIVE COALING APPARATUS
James E. O'Brien, Cleveland, Ohio
Application May 26, 1944, Serial No. 537,469
4 Claims. (Cl. 214—41)

1. In an apparatus of the character described, the combination of a railroad coating hopper having a coal discharge throat structure sloping downwardly over a railroad track, a closed type



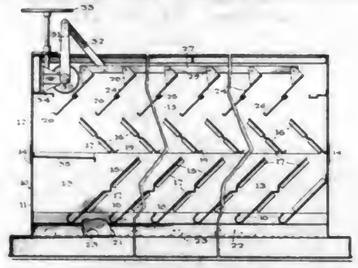
coaling chute, said chute having one open end adapted to overlie the discharge end of said throat, means for pivotally supporting said chute on an axis extending in a direction transversely of the railroad track and through said throat whereby said chute may be raised to a substantially horizontal position and extending in the general direction of the slope of said throat and having one edge of said end extending adjacent the lower edge of the discharge opening of said throat and the opposite edge of said end opening extended to lie adjacent the upper side of said throat, and whereby said chute may be swung from said substantially horizontal position about said axis downwardly and to a position in which it slopes in the opposite direction from the slope of said throat, the said one edge of the chute being adapted to lie transversely of the bottom side of said throat and said opposite edge being adapted to lie substantially in a horizontal plane through the upper edge of the discharge opening of said throat and spaced from said upper edge for forming a coal passage therebetween, and means for swinging said chute about its axis.

2,456,309
POSTAL FRANKING MACHINE
Knut Odén, Stockholm, Sweden, assignor to Aktiebolaget Hadar Schmidt, Stockholm, Sweden, a corporation of Sweden
Application April 13, 1944, Serial No. 530,905
In Sweden March 23, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 23, 1963
8 Claims. (Cl. 101—68)



1. In a machine for printing franking values directly on letters inserted into the same, comprising, in combination, operating means for the franking mechanism, a holder for a pre-paid strip, an accumulating register for the total postage value of the franking operations, type elements mounted on one side of said holder and connected with said accumulating register to be set by the same, a second holder for a daily delivery report form, additional type elements mounted on one side of the second holder and connected with said total accumulating register to be set by the same, pressing means mounted on the opposite side of the first holder to cooperate with the first-mentioned type elements to print the total value of the franking operations on said pre-paid strip, additional pressing means mounted on the opposite side of the second holder to cooperate with the additional type elements to print the total value of the franking operations on said daily delivery report form, and operating means for said additional pressing means.

2,456,310
OPERATION OF A FLUID CATALYTIC CONVERSION UNIT
Franklin M. Orr, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application April 9, 1947, Serial No. 740,301
10 Claims. (Cl. 196—52)



1. In a shutting down procedure for a catalytic conversion unit in which a fluidized powdered catalyst is continuously circulated during the conversion process through a reaction zone, a spent catalyst retention zone, and a regeneration zone and in which hydrocarbon is fed to the reaction zone, the steps of discontinuing the supply of hydrocarbon to the reaction zone while maintaining the flow of catalyst to said reaction zone, admitting a quantity of steam to said reaction zone at a temperature below the conversion temperature in said zone sufficient to maintain the catalyst in a fluidized state, discontinuing the flow of catalyst to the reaction zone and increasing the flow of steam to the reaction zone to transfer the catalyst contained therein to said spent catalyst retention zone, transferring said spent catalyst from said retention zone to the regeneration zone while maintaining an average fluid velocity in the regenerator vessel within the range of 2.7 to 3.1 feet per second and the amount of catalyst in the regenerator vessel below 800 pounds per square foot of cross sectional area of the vessel.

2,456,311
VENTILATOR
Bertie K. Paget, Detroit, Mich.
Application February 7, 1944, Serial No. 521,303
4 Claims. (Cl. 98—42)

1. A ventilator comprising a casing having side and end walls, a series of spaced, inclined baffles arranged transversely of said casing, drainage devices carried by the lower edges of said baffles comprising a trough having a width sufficient to catch moisture moving down the upper end and lower sides of said baffles, means to support said trough by said baffle having openings therein to permit moisture condensed on the lower side of the baffle to flow to said trough.

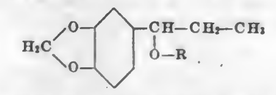
2,456,312
VENTILATOR
Bertie K. Paget, Detroit, Mich.
Application May 24, 1945, Serial No. 595,547
6 Claims. (Cl. 98—42)

1. A ventilator comprising a rectangular substantially horizontally disposed casing, a series of inclined baffles mounted near the bottom of the casing dividing the upwardly moving ventilating air into a series of parallel air streams, a second series of inclined baffles mounted in the casing above the first named series and offset horizontally with respect thereto and inclined in a direction opposite to the inclination of said first mentioned series of baffles so as to divide the ventilating air at the outlet of the said first series, and a third series of inclined baffles above the second series similarly offset to divide the ventilating air at the outlet of the second series and conduct such air to the atmosphere, means associated with at least one series of baffles for collecting any water flowing over said baffles and means for disposing of the water collected by said first-mentioned means.

2,456,313
PIGMENT COMPOSITIONS
Burt Carlton Pratt, Brandywine Hundred, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 16, 1944, Serial No. 522,667
3 Claims. (Cl. 106—290)

1. A pigment composition the pigment content of which consists essentially of a mixture of discrete particles of non-magnetic flake metal pigment with discrete particles of ferromagnetic metal pigment and in which substantially all the metal flakes contained in said composition are susceptible to magnetic orientation when contained in an undried paint film, said pigment composition containing in preponderant amount thin aluminum flake pigment and from 10% to 25% by weight of the pigment mixture of ferromagnetic metal pigment.

2,456,314
SATURATED LINEAR POLYESTERS OF MERCAPTODICARBOXYLIC ACIDS WITH DIHYDRIC ALCOHOLS
Burt Carlton Pratt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 11, 1945, Serial No. 610,402
6 Claims. (Cl. 260—75)



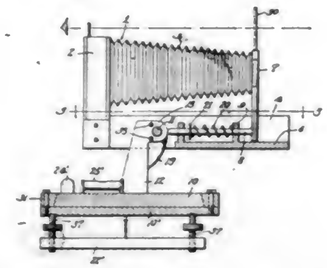
1. A saturated linear polyester, having thiol groups as substituents on the linear chain, of substantially equimolecular amounts of a saturated aliphatic mercaptodicarboxylic acid containing only carbon, hydrogen, mercaptan sulfur and carboxyl oxygen with a saturated aliphatic dihydric alcohol containing only carbon, hydrogen and hydroxyl oxygen.

2,456,315
PROCESS FOR MAKING AMINES
William W. Prichard, Claymont, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 27, 1946, Serial No. 650,737
5 Claims. (Cl. 260—563)

1. A process for making amines which comprises heating at a temperature of from 50° C. to 200° C. in contact with hydrogen under a pressure of at least 100 pounds per square inch and a hydrogenation catalyst a carboxylic acid diester of a 1,1-glycol and at least one mole per mole of diester of a substance selected from the group consisting of ammonia, primary amines, and secondary amines, the amino group in said amines being the sole functional group contained therein.

2,456,316
METHOD FOR PRODUCING α-ETHYL-PIPERONYL ETHERS
Edward A. Prill, Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc., a corporation of New York
No Drawing. Application June 10, 1947, Serial No. 753,799
5 Claims. (Cl. 260—338)

3. The process of producing an organic compound represented by the formula:



wherein R and in the compound HOR is an aliphatic hydrocarbon radical containing between 4 and 13 carbon atoms and which is interrupted by at least one ethereal oxygen atom, the method step comprising the condensation of equimolar quantities of an isosafrole hydrohalide of the group consisting of isosafrole hydrochloride and isosafrole hydrobromide and a compound of the formula HOR with the elimination of an equimolar quantity of hydrogen halide in the presence of a hydrogen halide acceptor selected from the group consisting of alkali and alkaline earth metal carbonate and hydroxides activated with a small catalytic quantity of an organic nitrogen base.

2,456,317
AUTOMATIC FOCUSING OF CAMERAS
Jacob Rabinow, Washington, D. C.
Application February 13, 1946, Serial No. 647,327
4 Claims. (Cl. 95—45)

1. A camera adapted to remain automatically focussed on an object plane substantially removed from a fixed position of said camera, comprising: supporting means for said camera, first pivot means on said supporting means constructed and arranged to permit rotation of said camera about an axis perpendicular to the object plane; a support for a sensitive image receiving surface in said camera and a lens board movable to and from said sensitive surface to focus the camera; second pivot means between said supporting means and said camera constructed and arranged to permit rotation of said

camera about an axis parallel to the said object plane and perpendicular to the lens axis; motion-controlling means operably connected between said supporting means and said lens board to move said lens board relative to said sensitive surface; means for initially adjusting said

motion controlling means to adjust the camera focus for the distance between the camera and the said object plane; said motion controlling means being arranged and proportioned to maintain the camera focussed on said object plane as said camera is rotated on said second pivot means.

2,456,318

ESTERS OF P-DI(OMEGA-HYDROXY-ALKOXY)BENZENES

Edward O. Ramler, North Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 29, 1946, Serial No. 673,156

4 Claims. (Cl. 260—83)

1. As new compounds, p-di(beta-hydroxyethoxy)benzenes in which both hydroxy groups are esterified with an acid from the group consisting of acrylic acid, chloroacrylic, methacrylic, ethacrylic, and crotonic acids.

2,456,319

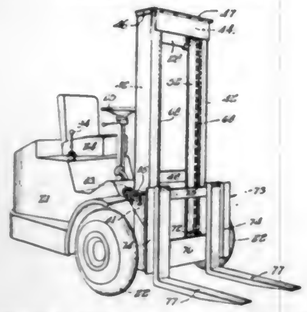
SAFETY WRIST WATCH STRAP

Henry R. Read, Queens Village, N. Y.

Application January 19, 1946, Serial No. 642,314

2 Claims. (Cl. 224—4)

1. A safety wrist watch strap comprising a two-piece wrist encircling band formed with spring pin engaging loops at the adjacent ends of said pieces, and a safety link having looped ends slidably positioned over the two pieces of said wrist encircling band laterally of said spring pin engaging loops adapted to underlie a wrist watch when supported by said spring pins for preventing the loss of said watch and strap should a spring pin become disengaged from said watch.



2,456,320

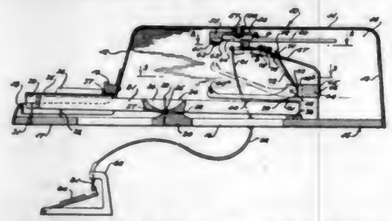
LIFT TRUCK

Edward P. Repke, Coloma, Mich., assignor to The Ross Carrier Company, Benton Harbor, Mich., a corporation of Michigan

Application February 24, 1947, Serial No. 730,355

1 Claim. (Cl. 214—113)

In a vehicle-truck lift of known general form having a first upstanding frame on the front portion of the truck, means rockingly mounting said first frame on said truck to tilt forwardly or rearwardly, hydraulic-means to so tilt said frame and the parts which it carries, a second upstanding frame slidable up and down on said first frame, a load lifting frame, a load lifting and lowering member, a pair of chains each connected to said first frame and to said load lifting and lowering member, and a pair of sprocket-wheels on said second frame intermeshing individually with said chains, the novel combination of a rotarily mounted shaft on the upper portion of said second frame on which shaft said sprocket-wheels are fixed to rotate in unison with the shaft, a pair of upstanding hydraulic-cylinders and their pistons spaced apart horizontally to afford between them front visibility to the operator of the truck, means securing said pistons to said second frame, and means to admit operating fluid under pressure into, and to discharge it from, at least one of said cylinders to operate said lift, and means to feed operating fluid into and from said hydraulic-means to tilt said combined frames simultaneously selectively either forwardly or rearwardly.



2,456,321

PIANO DAMPENING MECHANISM

Harold B. Rhodes, Los Angeles, Calif.

Application November 19, 1947, Serial No. 786,951

11 Claims. (Cl. 84—404)

1. In a piano of the type wherein a tone bar having a plurality of vibratory rods carried thereby is secured to the undersurface of a resonant case, a plurality of piano action assemblies for the rods, each assembly comprising a key pivoted intermediate its ends and projecting forwardly and rearwardly, a hammer pivoted adjacent its rear end, projecting forwardly and having a curved undersurface lying upon the rear end of the key, a spring finger projecting into proximity to the corresponding rod, a cushion carried by the free end of the spring and a flexible strap connection between the spring and the rear end of the hammer beyond the pivot thereof, whereby, when the upward swinging movement of the forward end of the hammer commences, said connection moves downwardly to withdraw the cushion from the rod.

2,456,322

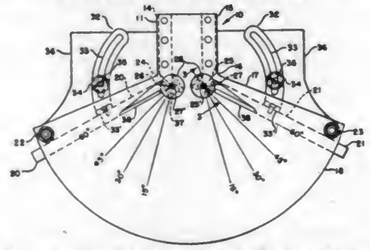
SIMULATED GOLF TARGET UNIT

Marshall L. Richardson, Wakefield, Mass.

Application January 2, 1947, Serial No. 719,873

3 Claims. (Cl. 273—32)

1. A game apparatus consisting of a plate adapted to rest on a floor, said plate having an elevated central boss, a horizontal platform in the shape of three quadrants of a circle about said central boss, said platform being above the floor level and having a plurality of depressions therein, a ramp leading from the floor level to the platform level in a tangential direction, and guide rails along the sides of the ramp and the periphery of the platform.



2,456,323

RADIATING HORN

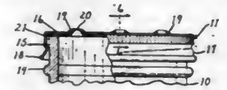
Jacob R. Risser, Belmont, and Raymond J. Wlodkowski, Attleboro, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War

Application January 3, 1946, Serial No. 638,888

4 Claims. (Cl. 250—33.63)

4. A precision test apparatus for predetermining the radiation patterns and impedance characteristics of radiating horn elements and of transition sections between uniform and tapered wave guide, comprising a horn, including a wave guide portion including side walls and a flared portion in communication therewith, the flared portion of the horn having side plates which are movable, the adjacent ends of said movable plates and of said side walls being brought substantially to knife edges at the inside corners thereof, said adjacent knife edges being in very close parallel relation, and means for rotatably mounting said movable plates so that each of said movable plates is adapted to rotate about its knife edge as an axis.

2,456,324



INSECTICIDE DISPENSER

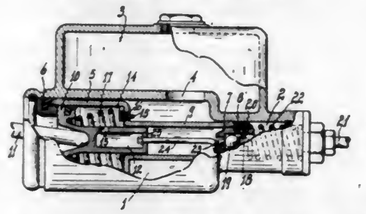
William L. Roessner, Denver, Colo.

Application July 25, 1945, Serial No. 606,962

3 Claims. (Cl. 43—131)

2. In a jar-like container for liquid insecticides having an open end, a supporting closure and dispensing means for said container comprising a closure wall fitted over the open end of said container and embracing the side walls thereof adjacent the opening, said end closure wall consisting of an outer non-absorbent part and an inner absorbent lining having a series of hollow protuberances extending outwardly therefrom, the walls of the protuberances being thinner at their outer ends than at their bases, and said protuberances being arranged adjacent the side

walls of the container to obtain rigid support therefrom, whereby the outer ends of said protuberances consisting of the non-absorbent part only may be readily removed to provide dispensing openings therethrough by abrasion of said ends on an abrasive surface without forming an opening in the lining and distortion or collapsing thereof or of said end wall for subsequent steady support of the inverted container in spaced relation to a supporting surface.



2,456,325

PRESSURE CYLINDER FOR HYDRAULIC BRAKES

Albert E. Roy, Glendale, Calif.

Application July 31, 1944, Serial No. 547,426

11 Claims. (Cl. 60—54.6)

11. A pressure cylinder for hydraulic brakes comprising a primary cylinder of relatively large diameter, a high-pressure cylinder of less diameter coaxial with said primary cylinder, a piston element common to both cylinders having a piston head on the end thereof in said high-pressure cylinder, a low-pressure piston reciprocally mounted in said primary cylinder, means for actuating said low-pressure piston, said piston element having a liquid passage extending longitudinally therethrough from said primary cylinder to said high-pressure cylinder, valve means controlling said passage, and valve tripping means operative by retraction of said low pressure piston to open said valve and permit fluid to return to said primary cylinder.

2,456,326

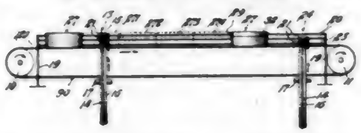
PREPARATION OF SUPPORTED ALUMINUM CHLORIDE CATALYSTS

Walter H. Rupp, Mountainside, and Clarke T. Harding, Hillside, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Original application August 17, 1943, Serial No. 498,974. Divided and this application May 20, 1944, Serial No. 536,642

4 Claims. (Cl. 252—250)

1. A process for the production of a catalysu mass useful in the isomerization of normal paraffins to isoparaffins which consists of dehydrating



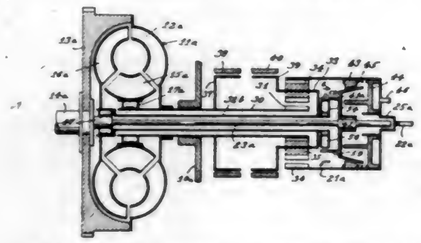
a bauxite containing more than 3 weight per cent of water by passing anhydrous butane at between about 250° F. and about 350° F., under from about 0 to 100 pounds per square inch gauge pressure, through the bauxite until the water content thereof is between about 1.5% and about 3% by weight, followed by passing anhydrous butane under substantially the same temperature and pressure conditions in contact with aluminum chloride also maintained under substantially the same temperature and pressure conditions and passing the resultant vapor admixture through the said dehydrated bauxite mass whereby the aluminum chloride is impregnated thereinto.

2,456,327

METHOD OF AND MEANS FOR SLABBING CAKES

Joseph H. Sauter, Rutherford, N. J., and Joseph Edmund Byrne, New Rochelle, N. Y., assignors to General Baking Company, New York, N. Y., a corporation of New York

Application December 13, 1945, Serial No. 634,796
10 Claims. (Cl. 146—241)



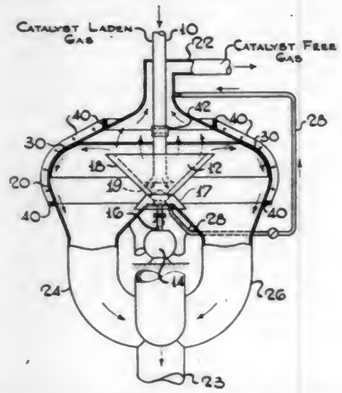
1. A method of slabbing a cake of crumbly material into layers, comprising moving such a cake forward first past a top layering moving cutter, forming a substantially horizontal cut through the cake to define a top layer as the cake is moved past said moving cutter without layer removal and without substantially disturbing the material in the cut faces, moving the cut cake with its defined layer at the top thereof again forward now past a second layering moving cutter, and forming a second substantially horizontal cut through the cake along a plane lower than the plane of the first cut to define a lower second layer as the cut cake is moved past said second cutter without layer removal and without substantially disturbing the material in the cut faces.

2,456,328

VARIABLE SPEED TRANSMISSION

Adolf G. Schneider, Muncie, Ind., assignor, by mesne assignments, to Schneider Brothers Company, a copartnership composed of Heinrich Schneider and Viva Schneider, both of Hamilton, Ohio, and Adolf G. Schneider and Erna Schneider, both of Muncie, Ind.

Application February 27, 1941, Serial No. 380,792
28 Claims. (Cl. 74—189.5)



1. A torque multiplying device comprising a driving shaft and a driven shaft, an impeller, a turbine rotatably mounted by means of a sleeve on an extension of the driving shaft, a planetary gear system connecting the turbine by means of said sleeve with the driven shaft, said planetary gear system comprising a sun gear and a ring gear and one or more pairs of intermeshed planetary gears between the sun gear and ring gear, one of each pair meshing with the sun gear and the other with the ring gear, the planetary gears being carried on a cage turning with said sleeve, said ring gear turning with the driven shaft, a brake drum carried by said sleeve, a brake means, means for applying the brake means to the drum, whereby the driven shaft may be caused to rotate in a direction opposite to the direction of rotation of the driving shaft, a second sleeve rotatably mounted on the first sleeve and having said sun gear turning therewith, a reaction member mounted on the second sleeve, a brake drum carried by the second sleeve, a brake means, means for applying the brake means to said drum, and clutch means for connecting the driving shaft extension directly with the driven shaft.

2,456,329

DUST SEPARATOR EQUIPMENT

Erle F. Schoder, Union, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application October 12, 1945, Serial No. 622,072
1 Claim. (Cl. 183—77)

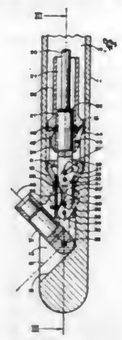
Apparatus for separating finely divided solid materials from gaseous carrier materials comprising a housing, outlet means for the withdrawal of gaseous materials substantially free of solid materials arranged centrally of the top portion of said housing, a rotatable separator bowl of inverted substantially conical shape arranged centrally of the said housing, a plurality of vanes arranged on the inner walls of said rotatable separator bowl, a conical member forming the base of said separator bowl for deflecting materials to the inner walls of said separator bowl, inlet pipe means for the supply of mixtures of finely divided solid materials and gaseous carrier materials to said separator bowl, said inlet pipe means being arranged centrally of the rotatable separator bowl and being flared at its lower end for smooth discharge of incoming mixture directly against said conical member forming the base of said separator bowl, means for rapidly rotating said separator bowl and means for withdrawing separated solid materials from the bottom portion of said housing.

2,456,330

ANTIRATTLING DEVICE FOR ANTENNA MASTS

Russell J. Scott, Kalamazoo, Mich., assignor to Shakespeare Products Company, Kalamazoo, Mich., a corporation of Michigan

Application September 4, 1945, Serial No. 614,349
2 Claims. (Cl. 250—33)



2. In combination with the telescopically engaged cross-sectionally circularly shaped sections of an antenna mast, a length of helically formed strip-like electrically conductive spring material of cross-sectional arcuate shape in and disposed generally longitudinally of one of said sections and spirally engaged about and along an adjacent portion of the other section, the degree of curvature of the arcuate cross-sectionally shaped strip-like spring material being greater than the degrees of the cross-sectional curvature of adjacent portions of said telescopically engaged sections, whereby to effect yieldable and frictional contact between said strip-like spring material and said sections.

2,456,331

CORE BARREL

Benjamin W. Sewell, Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware

Application May 2, 1944, Serial No. 533,725
13 Claims. (Cl. 255—1.4)

5. A sidewall pressure-retaining core assembly to recover a core on the surface of the ground at the same pressure that the core left the formation, comprising an elongated tubular member, a pressure barrel adapted to be lowered into and raised completely out of the elongated tubular member, a seat on the lower end of the elongated tubular member to support the pressure barrel, an open-ended core receiving tube, suspending means connected to said core receiving tube arranged to suspend the core receiving tube below the pressure barrel with its open end free for transverse movement when in a lower position and to retract the core receiving tube into said pressure barrel when in an upper position and cooperating with the pressure barrel and elongated tubular member to lock releasably to the pressure barrel and elongated tubular member when in its lower position, a guide means on the elongated tubular member arranged to project the open end of the core receiving tube transversely outwardly when the pressure barrel is supported by the seat and the suspending means is in its lower position, means associated with the suspending means to receive lifting means lowered within the elongated tubular member to release the suspending means from the elongated tubular member and the pressure barrel, to retract the core receiving tube wholly within the pressure barrel and to lift the pressure barrel completely out of the elongated tubular member when the coring is completed, and means associated with the barrel to make the barrel pressure-tight after the core receiving tube is retracted wholly within said barrel.

2,456,332

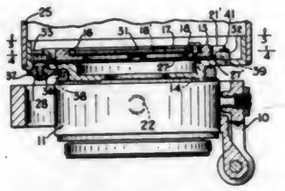
HARDWARE PACKAGE AND DISPLAY

Rome C. Seyforth, Shelby, Ohio, assignor to The Shelby Metal Products Company, Shelby, Ohio, a corporation of Ohio

Application October 4, 1945, Serial No. 620,201
1 Claim. (Cl. 206—80)

In a display device for hardware and like articles requiring screws or equivalent headed fasteners, the combination with a card having a face portion adapted to have such article attached thereto and a series of apertures adapted to receive such fasteners with their shanks projecting therethrough, of a separate flat strip of paper frictionally carrying such fasteners in proper spaced relation to be received in such apertures, and a flap extension to said card adapted to be folded against the back thereof in overlying relation to said strip, said strip and the fasteners carried thereby being held from displacement longitudinally and laterally relative to said card by the apertures in said card through which the shanks of such fasteners project.

2,456,333



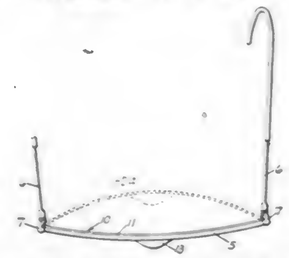
PHOTOGRAMMETRIC PROJECTION APPARATUS AND DIAPOSITIVE ADJUSTMENT MEANS

John V. Sharp, Brighton, and Olin W. Boughton, Victor, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

Application October 24, 1947, Serial No. 781,964
4 Claims. (Cl. 88—24)

1. In a projector for photogrammetric apparatus having a support, stage means on the support for adjustably holding a diapositive carrying a principal point mark, means including an optical system for projecting an image of the diapositive, and means for moving the stage means trans-

versely of the axis of the optical system, the combination of an arm pivotally mounted on the support, a transparent plate carried by the arm, said plate having an index mark thereon and said arm being adapted to be selectively swung so as to place said plate substantially across the optical axis of said optical system adjacent to the diaposi-



tive, and stop means against which said arm engages to place the index mark in registry with said optical axis whereby the diapositive may be moved to place its principal point mark on said optical axis in alignment with said index mark, the relative position of said marks being revealed upon simultaneous projection into said image.

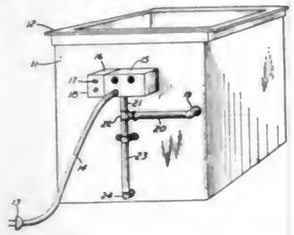
2,456,334

PROTECTIVE GOGGLE

Harry F. Shindel, Reading, Pa., assignor to Willson Products, Inc., Reading, Pa., a corporation of Pennsylvania

Application July 29, 1947, Serial No. 764,312
4 Claims. (Cl. 2—14)

1. A spectacle type of protective goggles comprising, a flexible lens extending across both eyes, and a detachable mounting frame therefor, said frame consisting of a transverse bar extending horizontally across the face above the line of vision and having ears extending from the ends thereof, temples pivotally connected to said ears, said lens having a flat width greater than the lateral spread between said ears, and a notch adjacent the top of each side edge of said lens adapted to be engaged with a corresponding ear by width-narrowing bowing of said lens and retained in seated engagement therewith by contact of a top portion of said lens with said transverse bar.



2,456,335

DEGREASING

James J. Skelly, Cleveland Heights, and Eldon K. Ralston, University Heights, Ohio, assignors to Circo Products Company, Cleveland, Ohio, a corporation of Ohio

Application August 20, 1946, Serial No. 691,686
24 Claims. (Cl. 219—38)

1. A degreaser comprising a tank for containing a solvent, a stand-by heater, a degreasing heater, a thermostat affected by solvent vapor, means for initiating operation of both heaters, lockout means controlled by the thermostat for terminating operation of the degreasing heater, means for deenergizing the heaters, and means

controlled by the thermostat for regulating the operation of the stand-by heater until the deenergizing means is operated.

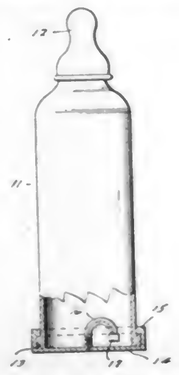
2,456,336

AGENT AND MINERAL OIL LUBRICANT COMPOSITIONS CONTAINING THE SAME

Herschel G. Smith, Wallingford, and Troy L. Cantrell, Lansdowne, Pa., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Application March 24, 1947, Serial No. 736,618
18 Claims. (Cl. 252—46.6)

1. The process of preparing an improvement agent for mineral oil lubricants which comprises heating an essentially paraffinic base lubricating oil with phosphorus pentasulfide in the presence of a surface active silica-containing solid catalyst at a temperature of from 300° F. to a maximum temperature below the minimum cracking temperature of said lubricating oil to incorporate phosphorus and sulfur in said lubricating oil, and recovering the reaction product.



14. A lubricant composition comprising a major amount of a mineral lubricating oil and a minor amount, sufficient to confer improved pressure-carrying, antioxidant and corrosion-inhibiting properties on the composition, of the product obtained by the process of claim 1.

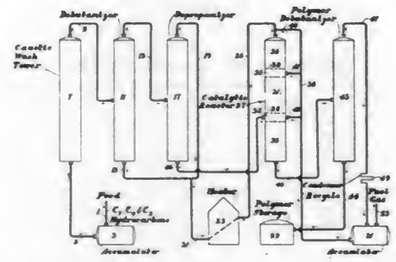
2,456,337

SANITARY NURSING BOTTLE

Roy M. Soper, Tacoma, Wash.

Application April 19, 1946, Serial No. 663,351
3 Claims. (Cl. 215—11)

1. In a nursing bottle, a bottom wall and an upstanding flexible tube carried by said bottom



wall, said tube having a passage therethrough communicating with the atmosphere when the tube is in upright position, and a weight on the upper end of said tube and normally inherently biasing the tube to a laterally bent drooping position to close said passage.

2,456,338

CATALYTIC POLYMERIZATION OF OLEFINIC HYDROCARBONS

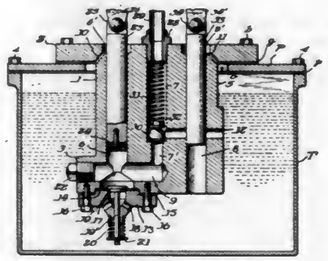
John J. Stadtherr, Newark, Ohio, assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio

Application March 26, 1945, Serial No. 584,979
9 Claims. (Cl. 260—683.15)

1. The method of converting stabilizer gases from an oil cracking operation, having the following approximate composition:

CH_4	6.0
C_2 hydrocarbons	19.2
C_3 hydrocarbons	34.2
C_4 hydrocarbons	35.6
C_5 hydrocarbons	5.0

to hydrocarbons boiling within the gasoline range comprising separating said gases into a fraction composed chiefly of C_4 hydrocarbons and a fraction comprised chiefly of C_2, C_3 and C_5 hydrocarbons, subjecting the C_2, C_3 and C_5 fraction to polymerization in the presence of a solid phosphorus acid catalyst in a first zone, heating the C_4 fraction by means of the reaction products from the C_2, C_3 and C_5 polymerization stage and subjecting the C_4 fraction to catalytic polymerization in a second zone in the presence of a solid phosphoric acid catalyst at a temperature lower than the temperature of the zone in which the C_2, C_3 and C_5 fraction is polymerized.



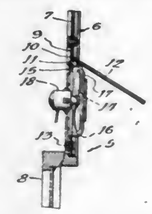
2,456,339

PUMP CONSTRUCTION

Darwin B. Stricklin, Milwaukee, Wis.

Application June 25, 1946, Serial No. 679,158
1 Claim. (Cl. 103—41)

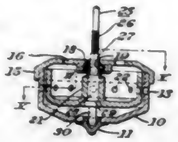
A body block for pumps, consisting of a single piece of material, a flange integral with the upper side of the block extending horizontally and outwardly therefrom entirely thereabout and having its under surface flat throughout the entire area thereof, said body having a plurality of spaced and parallel vertically disposed straight bores therein opening onto its upper side inwardly of said flange, certain of said bores terminating in the block in spaced relation to its lower side, and the remaining bore extending entirely through the block and opening onto its lower side, a portion of said block intermediately of its upper and lower sides having a straight horizontal bore therein opening onto one vertical side thereof and its inner end terminated within the block, said horizontal bore communicating with the lower ends of said certain bores, means normally closing the outer end of said straight horizontal bore, an intermediate and lower side portion of the horizontal bore opening onto said lower side of the body, another portion of the body having a second straight horizontal bore therein communicating with one of said certain bores and said remaining bore intermediately of the opposite ends of the latter bore and opening onto the opposite vertical side of the block, the upper ends of all said bores being enlarged adjacent and at their respective points of opening onto the upper



side of the block, and said block having downwardly directed drain openings in portions of the same communicating with the enlarged upper ends of said certain and remaining bores and opening onto said vertical sides of the block below the under side of said flange, a reciprocal plunger received in one of said certain bores and extending from its upper end, check valve means in the other of said certain bores adjacent its point of communication with the first mentioned horizontal bore, and a cylindrical valve reciprocally received in said remaining bore engageable over and across said second horizontal bore at its points of communication with said remaining bore.

2,456,340

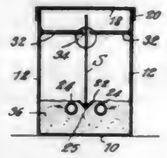
VENTILATOR



Harold F. Tideman, Kenilworth, Ill.

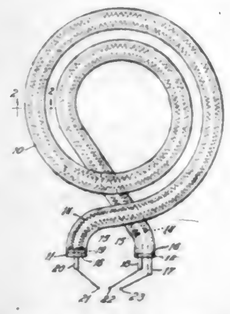
Application June 30, 1945, Serial No. 602,594
3 Claims. (Cl. 98—94)

1. A ventilating fan adapted to replace a window pane in a window comprising a supporting framework having an aperture therein, a fan carrying framework movable into and out of the aperture in said frame, and a closure for the aperture in said frame fixed to the fan carrying framework to move therewith, said closure and fan carrying framework being so positioned with respect to each other that when one is in the aperture in the frame the other one projects laterally from the frame.



2,456,341
SIREN TOP
Oscar Thoresen, Pittsburgh, Pa.
Application October 3, 1946, Serial No. 700,962
4 Claims. (Cl. 46—66)

1. A siren top comprising, an outer spinner housing having a two-part interfitting construction, said outer housing having a substantially vertical side wall portion and a pair of spaced-apart and substantially horizontal wall portions defining a substantially circular primary air chamber therein, one of the horizontal wall portions of said outer housing having a series of spaced-apart holes therethrough for introducing air into said primary chamber, one of the horizontal wall portions of said outer housing having a spin tip rigidly secured thereto and extending substantially centrally-downwardly therefrom; a rotatable shaft extending between the horizontal wall portions of said outer housing and being substantially centrally journaled therein, said rotatable shaft having an upper length extending vertically above the horizontal wall portion of said outer housing that is opposite to the horizontal wall portion having said spin tip; a cup-shaped inner housing securely mounted on said rotatable shaft within said outer housing, said inner housing having a horizontal wall portion and a vertical side wall portion defining a secondary air chamber therein, the side wall portion of said inner housing terminating opposite to the horizontal wall portion thereof in a horizontal portion open to said primary air chamber, said inner housing being mounted on said rotatable shaft with its horizontal open portion in vertical alignment with and facing the spaced-apart holes through one of the horizontal portions of said outer housing; the side wall portion of said inner housing having a series of holes therethrough and in a spaced-apart relationship thereabout and entrant to said secondary air chamber; the side wall portion of said outer housing having a series of holes therethrough and in a spaced-apart relationship thereabout and entrant to said primary air chamber; the holes through said inner and outer housings being located on substantially the same horizontal plane with respect to each other to exhaust air from said secondary air chamber when they register with respect to each other; said rotatable shaft being constructed and arranged to directly actuate said inner housing and to indirectly actuate said outer housing through the journaling of said rotatable shaft to rotate said outer housing at a relatively lower speed than said inner housing.

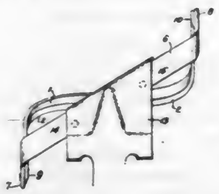


2,456,342
METHOD AND APPARATUS FOR DETERMINING THE APPROXIMATE AMOUNT OF OIL FILM ON AN ARTICLE
Paul F. Trevor, Bessemer, Ala., assignor to Tennessee Coal, Iron and Railroad Company, a corporation of Alabama
Application May 20, 1947, Serial No. 749,396
9 Claims. (Cl. 73—432)

5. The method of determining the approximate amount and distribution of an oil film on a metal sheet which comprises providing a body of flour within an enclosure, positioning a sheet in juxtaposition thereto within said enclosure, blowing jets of air through said flour so as to precipitate some of it on the oil film carried by the sheet and comparing the amount of thus precipitated flour with several like metal standard sheets, each having a definitely predetermined amount of oil thereon and flour adherent thereto.

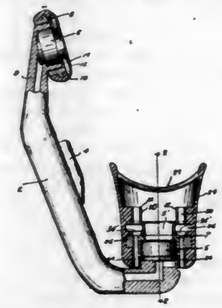
9. An apparatus for determining the amount and distribution of oil film on an oil coated metal sheet comprising a container adapted to enclose the sheet, an angle bar having its vertex disposed downwardly so that the upwardly diverging flanges thereof coact to position the lower edge of the sheet, members extending laterally inward from the upper portion of the container walls, the inner ends of said members being spaced apart a sufficient distance to position the upper portion of the sheet, perforated pipes connected with a source of air pressure, said pipes being positioned in the lower part of said container whereby, when the container is supplied with comminuted oil absorbent material, the air discharged from the pipes creates an air-borne suspension of said comminuted material so as to precipitate some of the material on the oil film carried by said sheet.

2,456,343
ELECTRIC HEATER AND METHOD OF MAKING SAME
William R. Tuttle, Riverside, Ill., assignor to Tuttle & Kift, Inc., Chicago, Ill., a corporation of Illinois
Application December 6, 1944, Serial No. 566,855
14 Claims. (Cl. 201—67)



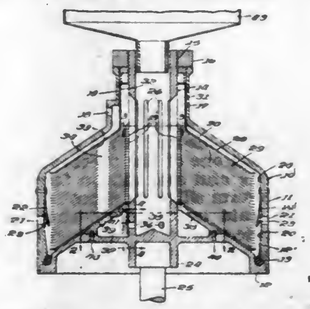
1. An electric heater of the class described comprising a metal sheath of preformed tubing which is bent into a crooked form having a correspondingly crooked non-rectilinear longitudinal axis and has at least two conductors therein correspondingly bent and extending lengthwise thereof, said tubing having insulating powder compressed therein into a hard dense mass within which said conductors are embedded in spaced apart relation throughout their length, and said conductors being connected together within one end of the tubing and each having at the other end of the tubing a separate terminal extending therefrom through that end of the tubing, at least one of said conductors being a helical resistance, said insulating powder and conductors conjointly occupying and completely filling the interior of the metal tube throughout the length of the latter between the ends of the conductors.

2,456,344
POLYAMIDES PLASTICIZED WITH A MIXTURE OF PHENOL AND ESTER TYPE PLASTICIZERS
Gordon T. Vaala, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 1, 1945, Serial No. 591,422
9 Claims. (Cl. 260—31.8)



1. A composition of matter comprising a synthetic linear polyamide having an intrinsic viscosity of at least 0.4 plasticized with a mixture comprising a monomeric phenol plasticizer and a completely esterified ester of a carboxylic acid wherein the carboxyl carbon is attached to a hydrocarbon radical in which ester at least one carboxyl group of said carboxylic acid is esterified with an aliphatic carboalkoxy alcohol wherein the radical connecting the alcoholic hydroxyl and the carboalkoxy group is a saturated hydrocarbon radical and contains not more than 6 carbon atoms, any remaining carboxyl group not so esterified being esterified with an alcohol the non-hydroxyl portion of which is hydrocarbon, said polyamide on hydrolysis with hydrochloric acid yielding material selected from the group consisting of (*a*) monoaminomonocarboxylic acid hydrochloride, (*b*) a mixture of a diamine hydrochloride and dibasic carboxylic acid, and (*c*) a mixture of monoaminomonohydric alcohol hydrochloride and dibasic carboxylic acid, said mixture of phenol plasticizer and said ester being present in said composition of from 10% to 150% by weight of said polyamide, and said ester being present in said mixture in amount of from 25% to 100% by weight of said phenol plasticizer.

2,456,345
GARDEN HAND TOOL FOR SOIL CULTIVATION
Baldwin Vale, San Francisco, Calif.
Application July 26, 1947, Serial No. 763,831
3 Claims. (Cl. 97—65)



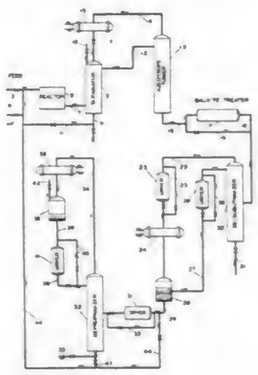
3. A garden tool comprising a handle; a back bar having its central portion fixed to said handle oblique to the axis of said handle; and a helicoidal cutting blade having its ends fixed to the opposite ends of said back bar; whereby the front and rear ends of said blade are respectively forward and rearward of the juncture of said back bar and handle.

2,456,346
SOUND SHIELD FOR TELEPHONE TRANSMITTERS
Paul S. Veneklasen, Saugus, Mass., assignor to the United States of America as represented by the Office of Scientific Research and Development
Application January 24, 1945, Serial No. 574,367
2 Claims. (Cl. 179—187)

2. In a noise shield of the class described, a cup-shaped member adapted to be secured around the periphery of a microphone and shaped to engage the face of a wearer around his mouth to form a voice chamber, an annular chamber formed around the cup adjacent its outer wall and at the rearward part thereof, and around a space symmetrically extending forwardly from the microphone when engaged in the shield, said annular chamber constituting a rearward boundary of the voice chamber, ducts being formed on the inner wall of the voice chamber at diametrically opposite sides in communication with the voice chamber and the interior of the annular chamber, said annular chamber having a substantial dimension longitudinally of the noise shield, ports formed in the rear wall of said annular chamber, and a plurality of ducts of smaller diameter than the first named ducts but in greater number extending from the annular chamber rearwardly to the atmosphere.

2,456,347
CENTRIFUGAL SEPARATOR
Hilmond O. Vogel, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 24, 1946, Serial No. 678,840
9 Claims. (Cl. 233—1)

1. A centrifugal separator, comprising in combination, a revoluble separating bowl, means for driving said bowl, a plurality of discharge ports



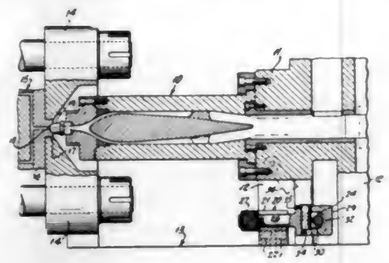
formed in the periphery of said bowl, port valves operable to open and close said ports, a pack of frusto-conical disks disposed within said bowl in spaced superposed relationship and having center holes in axial alinement to form a cylindrical space, a distributor tube projecting into said space, a plurality of circumferentially spaced and vertically extending outlets formed in said distributor tube, means for supplying liquid to be separated and washing liquid to said distributor tube, a distributor chamber formed at the lower end of said distributor tube, said chamber having a plurality of openings in communication with said disk pack, and spring operable valve means associated with said openings for regulating the discharge therethrough, said spring valves being centrifugally operable to open and close said openings and adapted to block the flow of liquid through said distributor chamber thereby diverting the liquid flow through the outlets of said distributor tube.

2,456,348

PREVENTION OF SILICEOUS DEPOSITS IN HYDROCARBON CONVERSION PROCESSES

Paul M. Waddill, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application July 12, 1945, Serial No. 604,598
3 Claims. (Cl. 260—683.4)



3. In a process for the conversion of hydrocarbons in the presence of a hydrofluoric acid catalyst in which a liquid hydrocarbon conversion effluent is contacted with a contact material active in removing organically combined fluorine and containing minor proportions of silica and thereby is contaminated with silicon tetrafluoride and with water in a concentration such that it is soluble in said conversion effluent, and in which components of a resulting hydrocarbon effluent are separated by at least one fractional distillation under conditions such that water is concentrated in at least one of the overhead effluents of the distillations and said silicon tetrafluoride is hydrolyzed to form siliceous deposits during condensation of said overhead effluents containing said concentrated water, the method for preventing the formation of such siliceous deposits which comprises decreasing the water content of at least a portion of said overhead effluents from which such deposits separate below the amount of water which is soluble in said condensed effluents by contacting said overhead effluents showing deposition with a drying agent.

2,456,349

LOCKING DEVICE

Robert S. Ward, Leominster, Mass., assignor to Fosgood Corporation, Leominster, Mass., a corporation of Massachusetts

Application December 22, 1945, Serial No. 636,928
2 Claims. (Cl. 18—30)

1. In a locking device of the character described, a locking arm having a transverse bore through one end, the ends of the bore being laterally enlarged, a cylindrical shaft having portions that extend into the enlarged ends of the bore on which portions the arm is pivotally supported for restricted endwise and tilting movements, relatively to said shaft, said shaft having an eccentric portion of reduced diameter disposed within the bore tangential thereto for actuating the movements of the arm, and a pin fixed to the arm to pass perpendicularly through the bore in position to be engaged by the eccentric as the latter is moved through an arc by angular rotation of the shaft.

2,456,350

PREPARATION AND ISOLATION OF ETHYLENE CHLOROHYDRIN

Charles Weizmann, London, England, assignor to Ketarome Limited, London, England

No Drawing. Application November 27, 1943, Serial No. 512,039
In Great Britain August 18, 1942
8 Claims. (Cl. 260—633)

5. A process suitable for the industrial production of ethylene chlorohydrin by interaction of ethylene and hypochlorous acid which comprises the step of isolation of the ethylene chlorohydrin after the reaction has been sufficiently completed, by contacting the reaction product with a neutral liquid organic solvent which contains a carbonyl group.

2,456,351

ACTIVATION OF CATALYST

Albert B. Welty, Jr., Mountainside, and Clinton H. Holder, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application August 10, 1946, Serial No. 689,813
2 Claims. (Cl. 260—668)

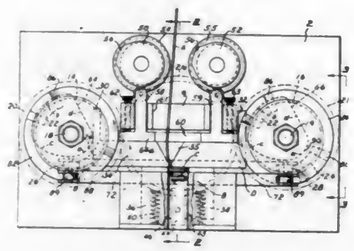
1. The method of forming aromatic hydrocarbons which comprises contacting hydrocarbons containing naphthenes at elevated temperatures and pressures with added hydrogen and a composite catalyst consisting essentially of molybdenum oxide supported on a zinc aluminate spinel base, said catalyst having been calcined prior to use at temperatures of about 1400° F. for about 6 hours.

2,456,352

HEADDRESS

Frances Whitney, Weston, Mass.

Application February 4, 1948, Serial No. 6,291
5 Claims. (Cl. 2—175)



1. In a headdress a substantially U-shaped resilient frame member for engagement with the head, said frame member forming a support for a plurality of loops directly attached to the limbs of the frame member, said loops being situated in different planes, and attached at different points along the limbs of the frame member in advance of the bight thereof so that they occupy different spatial positions with respect to each other.

2,456,353

WIRE-BENDING MACHINE

John L. Wolf, Bloomsburg, and William C. Wolf, York, Pa.

Application August 22, 1947, Serial No. 770,012
3 Claims. (Cl. 140—71)

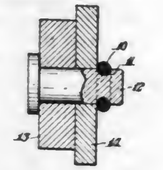
1. A machine for forming straight wire or strip material into sinuous shape to provide a wire ribbon having spaced transverse flights the ends of each of which are connected respectively to the adjacent ends of the preceding and succeeding flights, comprising a die having surfaces shaped to correspond to a flight and the flight-connecting parts respectively and on which these are formed, a shuttle above the die having a passage through which the straight wire is led from a source to the die and being reciprocable to traverse said passage and wire across the flight-forming surface of the die, means for holding the formed ribbon on the outlet side of the die during traversing movement of the shuttle whereby such movement causes wire to be drawn from the source thereof through the shuttle passage and about and over the flight forming surface of the die to form a flight of the wire ribbon, means for moving the shuttle against the formed ribbon to discharge the same from the machine, and means resiliently opposing movement of the shuttle against the formed ribbon and comprising spaced blocks disposed on opposite sides of the die on the discharge side thereof on the upper surfaces of which the shuttle is freely and slidably supported, and springs disposed below the blocks and resiliently supporting them.

2,456,354

COPOLYMERS OF ISO-OLEFINS WITH THIOPHENE SULFONES AND PROCESS FOR MAKING SAME

David W. Young, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 2, 1944, Serial No. 566,396
11 Claims. (Cl. 260—92.6)



1. A polymerization process comprising the steps of mixing together a major proportion of isobutylene with a minor proportion of a dialkyl thiophene-1,1-dioxide having 1–10 carbon atoms per alkyl group at a temperature within the range between 0° C. and —164° C. and copolymerizing the two substances together by the application thereto of a Friedel-Crafts catalyst.

2,456,355

ELASTIC SNAP RING FASTENER

Joseph S. Aber, Philadelphia, Pa.

Application January 13, 1947, Serial No. 721,768
9 Claims. (Cl. 85—7)

1. In combination, a pin member having a substantially cylindrical shank and an annular groove near one end of said shank, a second member having a hole therein through which the pin member projects and substantially fills, and an elastic endless non-metallic ring of a cross sectional area approximately one hundred per cent larger than the cross sectional area of said groove and snugly fitted in and substantially filling said groove and projecting outwardly approximately the depth of the groove to act as a thrust bearing for said second member.

2,456,356

PACKING GASKET AND STATIC SEAL

Joseph S. Aber, Philadelphia, Pa.

Application December 9, 1947, Serial No. 790,635
8 Claims. (Cl. 2[illegible]–26)

6. In a fluid pressure apparatus, a pair of relatively movable elements, one of said elements having a packing groove therein concentric with the adjacent wall of the other of said elements, a restraining ring of elastomeric material having a radial cross sectional dimension normally less than the distance between the bottom of the groove and the adjacent wall of said other element, and an actuator ring of elastomeric material having a cross sectional diameter slightly greater than the distance between the bottom of the packing groove and said adjacent wall of said other element and coacting with the restraining ring to expand the latter radially against said adjacent wall of said other element when the actuator ring is under pressure and said restraining ring contracting when the pressure is relieved.

2,456,357
COMPLEX RESINS AND PROCESS OF MAKING

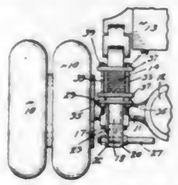
Harry L. Allen, Philadelphia, Pa., and Earl G. Kerr, Haddonfield, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application October 31, 1945, Serial No. 625,959
8 Claims. (Cl. 260—45.1)

1. A process of making resins which comprises reacting together at an elevated temperature from 5 to 35 parts by weight of at least one polymerizable material selected from the group consisting of styrene, coumarone, indene and their homologs boiling up to 210° C., from 5 to 35 parts by weight of a member of the group consisting of urea and thiourea, from 35 to 90 parts by weight of phenolic material of the tar-acid group, and from 1 to 5 mols of a member of the group consisting of formaldehyde and acetaldehyde for each mol of said other reactants, in the presence of an acid catalyst and a solvent for the resin.

2,456,358
THERMOPLASTIC RESINS AND PROCESS OF MAKING

Harry L. Allen, Philadelphia, Pa., and Earl G. Kerr, Haddonfield, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York



No Drawing. Application October 31, 1945, Serial No. 625,960
8 Claims. (Cl. 260—43)

1. A process of making resins which comprises reacting together at an elevated temperature from 1 to 35 parts by weight of at least one polymerizable material selected from the group consisting of indene, coumarone, styrene and their homologs boiling up to 210° C., from 5 to 30 parts by weight of maleic anhydride, from 25 to 75 parts by weight of phenolic material of the tar-acid group and from 0.4 to 1.0 mol of formaldehyde for each mol of said polymerizable material, maleic anhydride and phenolic material.

2,456,359
ADJUSTABLE TRUCK HITCH

Edward F. Andrews, Youngstown, Ohio, assignor, by mesne assignments, to The Miller Spreader Corporation, Youngstown, Ohio, a corporation of Ohio

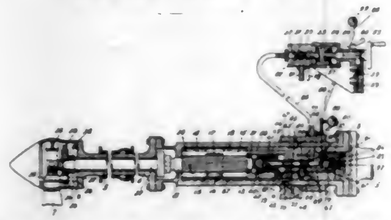
Application June 10, 1947, Serial No. 753,614
3 Claims. (Cl. 280—150)

3. A hitch for application to a truck rear axle and spring assembly, the said hitch including spaced horizontally positioned rails disposed longitudinally of the said truck and beneath the said rear axle thereof, a hitch pin secured to said rails and extending transversely thereof and outwardly therefrom, means spacing the said rails with respect to the rear axle, said means comprising a pair of vertical body members one of which is movable longitudinally of the said rails, cross pieces positioned above and below the said spring of the spring and axle assembly and means attaching the said vertical body members to the said cross pieces positioned on the said spring.

2,456,360
ACRYLONITRILE PROCESS

Harold Wilfred Arnold, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 9, 1944, Serial No. 548,782
3 Claims. (Cl. 260—83)

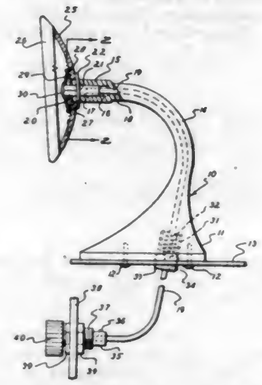


1. In the process of polymerizing an acrylonitrile composition wherein the polymerizable portion is substantially entirely monoethylenically unsaturated and is at least 90% acrylonitrile the improvement which comprises carrying out the polymerization in the presence of from 0.01 to 2%, by weight of the polymerizable components, of dithioglycidol,

2,456,361
DEVICE FOR ADJUSTING THE BLADES OF SHIPS' PROPELLERS

Edouard Atteslander, Winterthur, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland

Application July 15, 1944, Serial No. 545,179
In Switzerland August 14, 1943
3 Claims. (Cl. 170—160.32)



1. In the propelling plant of a vessel having a variable pitch propeller, a propeller driving shaft, a propeller hub carried by said shaft, adjustable propeller blades pivotally mounted on said hub, a blade adjustment actuating shaft extending axially within and mounted rotatably in relation to said driving shaft, mechanical transmission means operatively connecting said actuating shaft to each of said blades, a hydraulic servomotor cylinder extending axially within and carried by said driving shaft and disposed coaxially about said actuating shaft, a cylindrical piston fitted in said cylinder about said actuating shaft, fluid conduit means leading into said cylinder on both sides of said piston, a source of fluid under pressure connectable through said conduit means to either side of said piston at will, and motion transforming means for transforming linear motion of said piston into rotary motion of said actuating shaft comprising a screw gear having helical guide means within said cylinder engaging the piston to one of said shafts and additional guide means within said cylinder engaging the piston to the other of said shafts, the pitches of said screw gear being selected to make the adjustment of the blades in combination with said mechanical transmission means self-locking and at least the ends of the engaging surfaces of said screw gear being exposed to the fluid under pressure when said fluid actuates said piston on either side thereof.

2,456,362
REMOTE-CONTROL ADJUSTABLE MIRROR

Fred J. Aves, Beverly Hills, Calif.

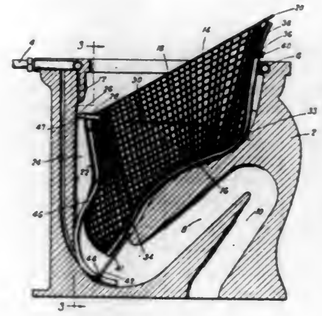
Application May 16, 1945, Serial No. 594,004
3 Claims. (Cl. 88—93)

1. A remotely controlled adjustable rear view mirror for a motor vehicle, comprising: a bracket for attachment to a motor vehicle; said bracket having an end portion adapted for attachment to the side of a vehicle and a hollow rigid arm including a goose-neck portion the end of which, when the bracket is thus attached, is arranged with its axis extending fore and aft with relation to the vehicle; a shaft journalled in said bore, a mirror, a frame in which said mirror is mounted, said frame being secured directly on the rear end of said shaft with the mirror disposed in a plane substantially normal to the axis of said shaft but slightly inclined with reference to the normal whereby rotation of said shaft will rotate the mirror so as to cause the line of sight from the mirror to sweep a conical field of vision about an axis extending rearwardly from the mirror, an operating knob for said shaft, a flexible shaft extending through said hollow arm, rotatable therein and supported thereby, one end of said flexible shaft being secured to the first mentioned shaft and the other end being secured to said knob and friction bearing means comprising a shaft collar and a bearing seat for said collar on said bracket.

2,456,363
BILE ACID DERIVATIVES AND PROCESS FOR THE MANUFACTURE OF SAME

Franz Bergel, Alexander Lang Morrison, Albert Ronald Moss, Marianne Königstein, and Heinrich Rinderknecht, Welwyn Garden City, England, assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application January 18, 1946, Serial No. 642,106. In Great Britain January 24, 1945
15 Claims. (Cl. 260—239.5)

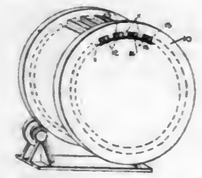


1. A tertiary amino lower alkyl ester of dehydrocholic acid.

2,456,364
DIAPER WASHER

William S. Berry, Buffalo, N. Y.

Application May 13, 1947, Serial No. 747,721
7 Claims. (Cl. 68—235)



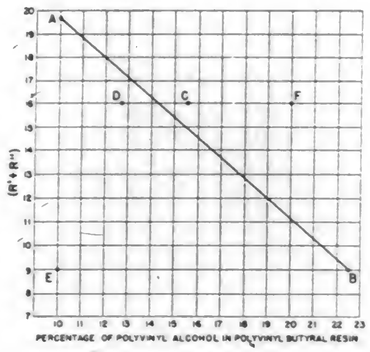
1. A laundry basket of wire mesh for use in a toilet bowl, said basket having a sloping bottom and ovate side wall, a valve on the basket adapted to close the bowl outlet and actuating means therefor, and an overflow pipe terminating upwardly at the upper basket level, and extending through the valve.

2,456,365
BARKING DRUM

Burl Branch, Brantford, Ontario, Canada

Application July 27, 1945, Serial No. 607,376
4 Claims. (Cl. 144—208)

1. A barking drum including a framework made up of a plurality of spaced apart peripheral rings having radially inwardly extending lugs and a plurality of longitudinally extending members connecting said rings in spaced apart relation, said members designed to be fastened to adjacent pairs of said lugs, and including a friction plate having a continuous fin projecting from the outer surface thereof at right angles thereto and extending the length of the plate, and continuous longitudinal elements secured to said surface, spaced inwardly from the marginal edges of the friction plate and disposed on each side of and parallel to said fin, said friction plate being designed to overlap the ends of the lugs, said side elements engaging the inside faces of said lugs, said friction plate being welded to said lugs, said fin thereof being welded to an intervening portion of said rings between the lugs to which said friction plate is attached.



2,456,366
PLASTICIZED POLYVINYL ACETAL COMPOSITIONS

Bozetech C. Bren, West Caldwell, and Jesse O. White, Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application July 26, 1946, Serial No. 686,366
8 Claims. (Cl. 260—32.2)

1. A plastic composition comprising a polyvinyl acetal and, in compatible admixture therewith, a

plasticizer comprising a primary alkyl acyl glycolate having the formula $R'COOCH_2COOR''$ in which R' and R'' are alkyl groups, R' has from

7 to 17 carbon atoms, inclusive, R'' has from 1 to 6 carbon atoms, inclusive, and the total of carbon atoms in R' and R'' is at least 9.

2,456,367

CALCIUM-NICKEL PHOSPHATE CATALYST AND PREPARATION THEREOF

Edgar C. Britton and Andrew J. Dietzler, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Original application April 3, 1944, Serial No. 529,404, now Patent No. 2,442,319, dated May 25, 1948. Divided and this application January 6, 1947, Serial No. 720,488

13 Claims. (Cl. 252—228.2)

1. A normal metal phosphate material prepared by precipitation from a non-acidic solution of a calcium salt, a nickel salt, and a phosphate, which normal metal phosphate material contains between 7.5 and 9.2 atoms of calcium per atom of nickel, separating the precipitate, washing it with water, and drying it.

2,456,368

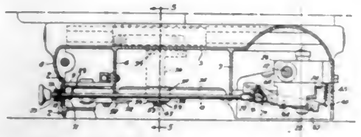
CALCIUM NICKEL PHOSPHATE-CHROMIUM OXIDE CATALYST

Edgar C. Britton and Andrew J. Dietzler, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Original application March 4, 1946, Serial No. 651,985, now Patent No. 2,442,320, dated May 25, 1948. Divided and this application April 4, 1947, Serial No. 739,356

8 Claims. (Cl. 252—228.2)

1. An intimate mixture of a normal calcium nickel phosphate material, formed by precipitation under neutral to alkaline conditions from a solution of a water-soluble phosphate and water-soluble calcium and nickel salts, which calcium nickel phosphate material contains between 6 and 12 atoms of calcium per atom of nickel, and a lesser amount by weight of chromium oxide, said mixture being effective as a catalyst for the dehydrogenation of an aliphatic mono-olefine having at least four carbon atoms in the unsaturated carbon chain of the molecule.



2,456,369

SWITCH CONTROL MEANS FOR SLICING MACHINES

Morris Brustowsky, Brooklyn, N. Y., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana

Original application May 8, 1942, Serial No. 442,186. Divided and this application December 22, 1942, Serial No. 469,797

8 Claims. (Cl. 146—102)

1. A control mechanism for a food slicing machine having a knife and a supporting table movable toward and away from the knife to bring the article being sliced into operative relation to the knife and embodying an electric motor, a clutch in a transmission adapted to transmit power from said electric motor to said table, a first control device to control the starting and stopping of said electric motor, a second control device being separately operable from the first control device and adapted to control the engagement and disengagement of said clutch, and interlocking means between said control devices, said interlocking means embodying a recess in one of the control devices in which a portion of the other control device slides, and the other control device having a recess movable into and out of register with the first said recess, and operating to permit the engagement of said clutch only when the first control device is in a predetermined position and to permit the stopping of the motor only when the second control device is in its disengaged position.

2,456,370

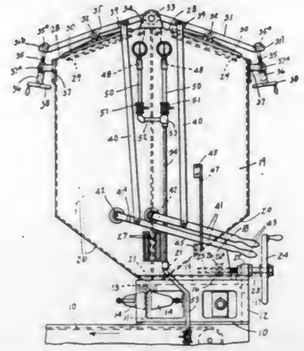
PROCESS FOR PRODUCING ELECTRODEPOSITED NICKEL STRIP CONTAINING BORON

Mortimer Pierce Buck, Huntington, W. Va., assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application April 6, 1945, Serial No. 587,024. In Canada February 19, 1945

13 Claims. (Cl. 204—37)

1. A process for producing electrodeposited nickel strip containing boron which comprises plating a layer of nickel having a thickness of at least 0.003 inch upon a starting sheet from an aqueous nickel plating bath containing about 0.0001 to about 0.02 ounce per gallon of powdered elemental boron, agitating the bath during plating to maintain said elemental boron suspended therein, stripping said layer of nickel from said starting sheet, plating nickel upon said layer of nickel from an electrolyte containing no elemental boron until a thickness of about 0.050 inch to about 0.250 inch is obtained, annealing the resultant cathodic electrodeposit for about ½ hour to about 2 hours at a temperature of about 1500° F. to about 2400° F., and working said cathodic electrodeposit to reduce the thickness thereof at least 20% to produce electrodeposited nickel strip having substantially no tendency to blister when exposed to temperatures in excess of about 1000° F., said electrodeposited nickel strip having a ductility of about 90 to about 105 Erichsen, a value of 100 being taken as the average value for annealed nickel.



2,456,371

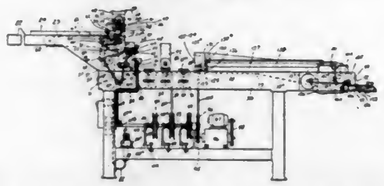
PRESSURE SHEETING OF DOUGH

John Buechek, Kokomo, Ind., assignor, by mesne assignments, of one-half to American Bakers Machinery Company, St. Louis, Mo., a corporation

Application September 16, 1943, Serial No. 502,555

3 Claims. (Cl. 107—14)

1. Pressure apparatus for continuously sheeting baking dough from a plurality of dough masses including a sealable reservoir for each mass, means securing the reservoirs together as a unit, a single elongated tubular throat, each reservoir having a hopper type bottom closure with a dough outlet selectively registrable with said throat, means for applying fluid pressure to each dough mass when the reservoir outlet thereof is registered with said throat, means slidably supporting the unit above the throat and sealing the outlet not registered therewith, and means reciprocating the unit on the support means for selectively and alternately registering said outlets, one at a time, with said throat.



2,456,372

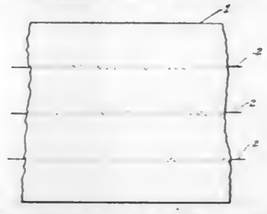
METHOD OF ROLLING BAKING DOUGH

John Buechek, Kokomo, Ind., assignor, by mesne assignments, of one-half to American Bakers Machinery Company, St. Louis, Mo., a corporation

Original application October 13, 1941, Serial No. 414,760, now Patent No. 2,337,539, dated December 28, 1943. Divided and this application September 25, 1943, Serial No. 503,740

1 Claim. (Cl. 107—54)

The method of continuously forming a dough roll for subsequent baking from a continuously advancing sheet of dough of uniform width and thickness without stratifications or tears therein comprising, applying, continuously, prior to rolling, oil to the major width of the sheet except for the longitudinal edge portion to be last rolled, applying continuously water to that edge portion, progressively turning upwardly the oiled edge of the sheet and then progressively turning inwardly the turned up edge upon the sheet while turning up the adjacent portion of the sheet until the watered edge is finally turned upon the resulting roll, the second turning being accompanied by continuous application of uniform pressure to the roll as formed and regardless of roll diameter.



2,456,373

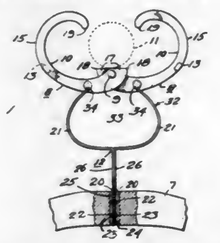
RUBBER FLOORING

William E. Campaigne, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

Application September 11, 1942, Serial No. 457,945

1 Claim. (Cl. 175—264)

Electrically conductive rubber flooring material which is adapted to be grounded for the dissipation of static electrical charges created on the surface of the material comprising a vulcanized rubber compound having enhanced electroconductive properties and embedded in the rubber a plurality of spaced mutually parallel extensible electroconductive elements extending in the same general direction therein and without interconnection therebetween within the body of the material, said elements being of continuous undulated form with said undulations lying in a common plane substantially parallel to the surfaces of the flooring facilitating adjustment of said elements on expansion and contraction of the material and enabling the interconnection of the several elements with a ground exteriorly of the material.

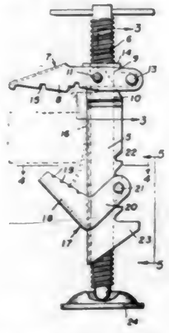


2,456,374

SUSPENSION HOOK

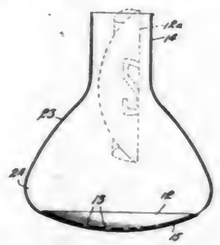
Charles H. Carter, Mount Pocono, Pa.

Application September 16, 1947, Serial No. 774,192



5 Claims. (Cl. 24—233)

1. A suspension hook for supporting a load from a pole or the like, comprising a pair of substantially C-shaped leaves, a first pivot connecting said leaves at their lower end portions with their concave portions confronting one another and arranged to overlap at their upper portions forming a closed ring-like unit in one position, to encircle the pole, and arranged to separate at their upper portions in a second position to provide an entrance and exit for the pole, a mounting connected to and extending above the load and including an upper U-shaped spring portion, the arms of which engage said leaves at opposite sides of said first pivot, and second pivots con-



necting said arms to the leaves with the arms tending to move toward each other to yieldably retain said leaves in either of said first or second positions, when said second pivots are in a plane above or below the axis of said first pivot.

2,456,375
VEHICLE BUMPER JACK
Oscar R. Cedarholm, Quincy, Mich., assignor of twenty per cent to Oscar R. Cedarholm, Jr., Fairfield, Conn.
Application July 21, 1947, Serial No. 762,465
6 Claims. (Cl. 254—133)

1. A jack of the class described comprising in combination with a jack post of a pair of coacting vehicle bumper clamping members, and means supporting the clamping members for vertical adjustment on the post, one of said clamping members being pivoted to said supporting means and movable into and out of clamping engagement with the bumper by the vertical adjustment of the supporting means.

2,456,376
DISPLAY LAMP
Nathan Chireistein, Maplewood, N. J.
Application March 27, 1948, Serial No. 17,512
4 Claims. (Cl. 176—16)

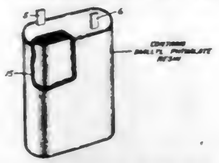
1. The herein disclosed method of manufacturing a display lamp comprising inserting a mask carrying the delineation of the desired design in a folded condition through the restricted neck of a lamp globe, unfolding the mask within the globe and spreading the same in close-fitting engagement with the inner surface of the globe and then flashing the interior of the globe with said mask in the unfolded condition and thereby coating the inner surface of the globe with reflective material outlining the character depicted by the mask.

2,456,377
PROCESS OF SEPARATING 2,4-LUTIDINE AND 2,5-LUTIDINE
Francis E. Cislak and Merritt M. Otto, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application May 27, 1943, Serial No. 488,744
4 Claims. (Cl. 260—290)

1. The process of separating a mixture consisting substantially of the bases 2,4-lutidine and 2,5-lutidine, which consists in reacting the mixture with an anhydrous hydrohalide, in an amount which is the molecular equivalent of the 2,4-lutidine present, to precipitate the 2,4-lutidine in the form of a solid, anhydrous, simple hydrohalide, and separating the precipitate from the liquid 2,5-lutidine.

2,456,378
PROCESS OF SYNTHESIZING CARBAZOLE
Francis E. Cislak and Arthur L. Kranzfelder, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application December 4, 1943, Serial No. 512,980
8 Claims. (Cl. 260—315)

1. The process of producing carbazole which comprises the steps of mixing orthoamino diphenyl with an excess of a mildly oxidizing gas, and passing the mixture through a reaction chamber at a space velocity in excess of 150 at a temperature above about 450° C.



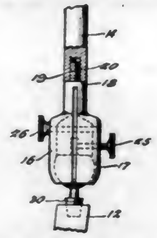
2,456,379
2-AMINO-5-METHYL PYRIDINE AND PROCESS OF MAKING IT
Francis E. Cislak and Arthur L. Kranzfelder, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application January 11, 1946, Serial No. 640,672
2 Claims. (Cl. 260—296)

1. The process of preparing crystalline 2-amino-5-methylpyridine which comprises reacting 3-methylpyridine with sodamide isolating the reaction products containing 2-amino-5-methylpyridine and 2-amino-3-methylpyridine, fractionally distilling said mixture and recovering a crystalline 2-amino-5-methylpyridine.

2,456,380
CATALYTIC OXIDATION OF NICOTINE
Francis E. Cislak, Indianapolis, Ind., and William R. Wheeler, Cincinnati, Ohio, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana
No Drawing. Original application May 31, 1941, Serial No. 396,175. Divided and this application August 14, 1947, Serial No. 768,706
9 Claims. (Cl. 260—296)

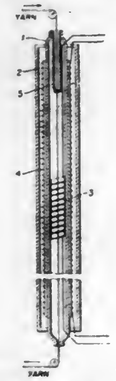
1. The process of producing nicotinonitrile, which consists in subjecting nicotine to partial oxidation in vapor phase with a mildly oxidizing oxygen-containing gas at elevated temperature in comparison with room temperature and in the presence of an oxidation catalyst essentially comprising an oxide of an element of the A subgroups of groups V and VI of the periodic system.

2,456,381
ELECTRIC CAPACITOR
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application July 29, 1944, Serial No. 547,128
2 Claims. (Cl. 175—41)



1. An electric capacitor adapted for operation at a high temperature of the order of 100° C., comprising the combination of cooperating metal armatures, an interposed absorbent spacer and solid, resinified diallyl phthalate permeating said spacer, said capacitor having an average life in excess of 1500 hours when operated at approximately 1000 volts D. C. per mil of dielectric and at ambient temperatures approximating 100° C.

2,456,382
COPOLYMER OF CYCLOHEXYL ALPHA CHLOROACRYLATE AND BUTADIENE-1,3
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Original application November 29, 1940, Serial No. 367,771. Divided and this application January 13, 1943, Serial No. 472,257

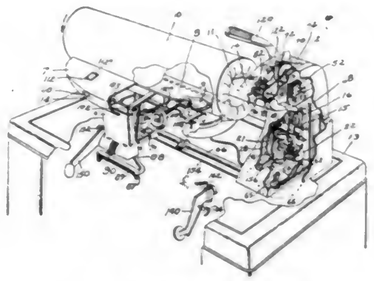


A copolymer of cyclohexyl alpha chloroacrylate and butadiene-1,3.

2,456,383
ADJUSTABLE HOLDER FOR PRECISION INDICATORS
Richard D. Collins, Baltimore, Md.
Application November 24, 1944, Serial No. 565,028
1 Claim. (Cl. 287—12)

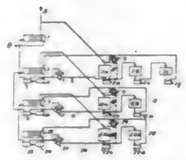
Means for holding a dial gage against a work piece which includes a supporting shank adapted to be fixed to a support, said shank having an axial internally screw threaded socket entering its end remote from the support, a clamp having an axial externally screw threaded stem at one end for entrance into the socket in the end of the supporting shank, said clamp having an axial socket entering its end remote from the threaded stem and a pair of opposed spherical clamping surfaces in the socket adjacent the end remote from the stem, a clamp screw extending transversely through the clamp for advancing said clamping surfaces toward one another, a spheroidal head within the socket in the clamp between the spherical clamping surfaces, said head having a flat, a neck projecting from the spheroidal head opposite the flat and through the end of the socket remote from the stem, an externally screw threaded head on the neck for entrance into the threaded socket in a dial gage detachably to couple the gage to the spheroidal head, a tongue on the spheroidal head diametrically opposite the neck, said tongue extending transversely of the flat and an adjusting screw threaded through the wall of the clamp for engagement with the tongue on the spheroidal head for rotating the head in one direction about an axis which lies perpendicular to the longitudinal axis of the clamp.

2,456,384
THERMAL-STRETCHING APPARATUS FOR YARN
Rollin F. Conaway, Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application June 4, 1946, Serial No. 674,353
2 Claims. (Cl. 28—71.3)



1. In apparatus for the dry heating and thermal stretching of artificial thermoplastic filaments, yarns, threads and like filamentary structures which comprises a heated long cell having a yarn inlet opening at one end of said cell and a yarn outlet opening at the opposite end whereby yarn treated in said cell traverses the length thereof, the improvement which comprises a yarn inlet means consisting of a tube, small relative to the size of the cell and projecting into the inlet end of said cell a distance of from 5% to 20% of the length of said cell and aligned on the longitudinal axis of said cell.

2,456,385
IRONING MACHINE
Arthur R. Constantine, South Bend, Ind., assignor to Bendix Home Appliances, Inc., South Bend, Ind., a corporation of Delaware
Application April 24, 1944, Serial No. 532,511
32 Claims. (Cl. 38—61)

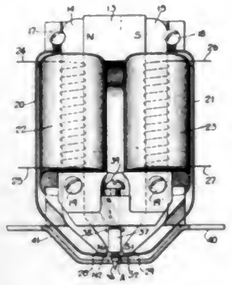


29. In an ironing machine: a roll, a shoe, mechanism for moving said shoe from a normal down position into engagement with said shoe, said mechanism including a linkage system pivotally supporting said shoe, a rotatable element for actuating said linkage, an electromagnetically controlled member for holding said rotatable element in a position to effect engagement of said shoe with said roll when the electromagnet is energized, said linkage system including a latch actuatable to release said shoe from engagement with said roll even though said rotatable element is being held stationary by said electromagneti-

cally controlled member, and means operable to substantially simultaneously release said latch

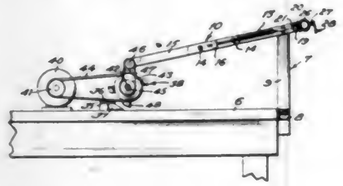
and to effect de-energization of the electromagnet.

2,456,386
CASCADE REFRIGERATION UNIT WITH CONTROLS THEREFOR
Howell C. Cooper, Sewickley, Pa.
Application May 7, 1946, Serial No. 667,883
2 Claims. (Cl. 62—115)



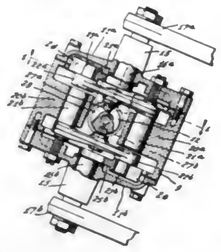
1. In refrigeration means including a plurality of refrigerant circuits in cascade relation wherein the refrigerants of adjacent circuits have change of state by heat exchange therebetween, each circuit having positive displacement pump means for compression and circulation of its refrigerant, motor means arranged for common drive of said pump means with fixed speed relation therebetween, one of said circuits providing, for its refrigerant, circulation in sequence through multistage compressor means, and condenser means wherein the refrigerant is liquefied, flash tank means wherein a portion of the refrigerant is regasified, a connection providing return of said refrigerant portion to said compressor means between stages thereof, and condenser means wherein the refrigerant remainder boils: by-pass means associated with a compressor stage ahead of said connection to provide recirculation in said stage and arranged to be responsive to refrigerant pressure ahead of said compressor means.

2,456,387
NONTACKY SYNTHETIC FILM
Charles W. Cooper, Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 7, 1944, Serial No. 557,723
7 Claims. (Cl. 117—145)



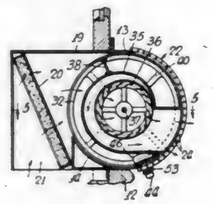
1. A wrapping tissue comprising a non-fibrous, transparent base sheet of organic, synthetic, film-forming material and a moistureproof coating thereon comprising from 0.05% to 2.0% by weight, based upon the weight of the coating, of ethylene-1,3-dioxolane copolymer.

2,456,388
MAGNETIC SOUND TRANSLATING HEAD
Lionel B. Cornwell, New Canaan, Conn.
Application April 3, 1946, Serial No. 659,246
7 Claims. (Cl. 179—100.41)



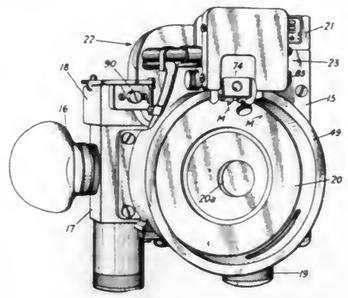
1. In a pickup device of the magnetic type, the combination of magnet means having a first pair of pole pieces of opposite polarity providing pole ends spaced apart laterally and a second pair of pole pieces of opposite polarity providing pole ends spaced apart laterally and spaced vertically from said first pair of pole ends, a laterally extending armature disposed entirely within a field of movement defined by planes representing said lateral and vertical spacing of said pole ends, resilient supporting means for said armature affording vibratile motion of said armature throughout its operative range and so constructed and arranged that during the maximum movements of said armature it remains entirely within said field of movement, and a signal generating circuit responsive to movement of said armature.

2,456,389
LAWN MOWER SHARPENER
Orville Grant Craver, Sr., Chester, S. C.
Application January 31, 1947, Serial No. 725,428
7 Claims. (Cl. 51—105)

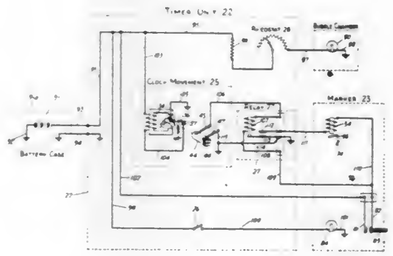


1. In a sharpener for reel type lawn mowers, a supporting base, means for detachably supporting a reel type lawn mower thereon, driving means partially supported by said base and adapted to be connected to the lawn mower axle for revolving the lawn mower reel, a pair of uprights connected to and extending upwardly from said base, supporting members projecting from said uprights and in a direction toward the reel, and a sharpening stone disposed between the free ends of said supporting members and positioned to engage and sharpen the cutting edges of the rotary blades of the reel, when said reel is revolved, and means for extending and retracting said supporting members for adjustably moving the sharpening stone toward and away from the rotary blades.

2,456,390
STEERING GEAR
William K. Creson and Rollie H. Jordan, La Fayette, Ind., assignors to Ross Gear & Tool Company, La Fayette, Ind., a corporation of Indiana
Application November 7, 1945, Serial No. 627,204
9 Claims. (Cl. 74—497)



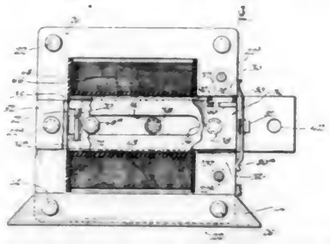
1. In a steering gear, a rotatable cam provided with a generally helical cam groove, a pair of levers pivoted respectively on parallel axes located on opposite sides of and equally spaced from the axis of said cam, a pair of rock shafts disposed on a common axis perpendicular to and coplanar with the cam-axis, and adapted for independent connection to dirigible vehicle wheels, said levers extending past and on opposite sides of said cam and being provided respectively with bosses slidably received in the cam groove, said bosses being equally spaced from the axes of their respective levers, arms rigid respectively with said rock shafts and extending in opposite directions therefrom into association with the free ends of said levers, and means operatively interconnecting the free end of each lever with its associated arm.



2,456,391
VENTILATOR
Charles Davies, New Rochelle, N. Y.
Application December 12, 1944, Serial No. 567,831
9 Claims. (Cl. 98—94)

1. In a ventilator for a wall opening, a fixed cylindrical housing mounted in said opening with its axis horizontal and provided with apertures on the inner and outer sides of said wall respectively, a hollow cylindrical drum mounted for concentric rotation within said housing in snugly contacting relation thereto, said drum having closed ends and being provided with circumferentially-spaced inlet and outlet ports lying respectively in diametrically opposite semicircular segments of the drum periphery, and a blower mounted within the drum to draw air through the inlet port and expel it through the outlet port, the drum interior being unobstructed except for said blower.

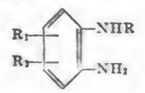
2,456,392
SEXTANT MARKING DEVICE
Irving W. Doyle, Massapequa, N. Y., assignor to Fairchild Camera and Instrument Corporation, Jamaica, N. Y., a corporation of Delaware
Application January 31, 1945, Serial No. 575,499
10 Claims. (Cl. 346—2)



8. In apparatus of the character described, in combination, a sextant, manually operable means for adjusting said sextant, recording means including a marking device on said sextant operable for recording successive instantaneous readings as the navigator adjusts the sextant, energizable means connected to said recording means and operable during energization to effect continuous operation of said marking device, and switch means in the circuit of said energizable means for manual operation by the navigator to effect energization of said energizable means, whereby as long as the navigator holds said switch means closed said recording means operates continuously.

2,456,393
DRYING OF SODIUM NITRITE TO OBTAIN A RELATIVELY NONCAKING GRANULAR FORM
Douglas R. Duncan, Gibbstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 20, 1945, Serial No. 606,289
6 Claims. (Cl. 23—104)

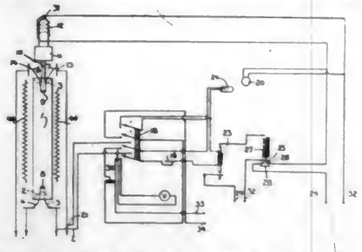
1. The process of producing sodium nitrite in dry, free-flowing form, which comprises subjecting a mass of solid wet sodium nitrite to a temperature above 158° C., drying said sodium nitrite substantially completely at this elevated temperature without agitation, and disintegrating the resulting adherent agglomerate into discrete particles.



2,456,394
NONCHATTERING ALTERNATING CURRENT SOLENOID AND PLUNGER
Hardin Y. Fisher, Hillside, Ill., assignor to Soreng Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Application November 23, 1945, Serial No. 630,420
9 Claims. (Cl. 175—338)

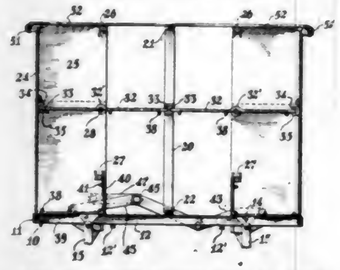
1. A solenoid of the class described, comprising a generally C-shaped frame, an electrical coil located in said frame and having a central opening aligned with the opening between the ends of said frame, said electrical coil being adapted for connection to a source of alternating current, a plunger slidable in said openings, means for guiding said plunger therein, said plunger having a portion of increased height between the ends of said frame, said portion having upper and lower extremities of substantially the same area as the ends of said frame and being of such height as to provide air gaps between said extremities and the ends of said frame, said guides permitting limited lateral movement of said plunger, means biasing said upper extremity toward the adjacent end of the frame as the plunger moves inwardly through the opening, and a shading coil carried by the plunger in a plane adjacent the upper surface of said extremity.

2,456,395
SYNTHESIS OF RIBOFLAVIN
Leo A. Flexser, Elizabeth, and Walter G. Farkas, Palisades Park, N. J., assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application April 4, 1946, Serial No. 659,662
13 Claims. (Cl. 260—211)



1. The process which comprises condensing a member of the class consisting of componds of the general formula:

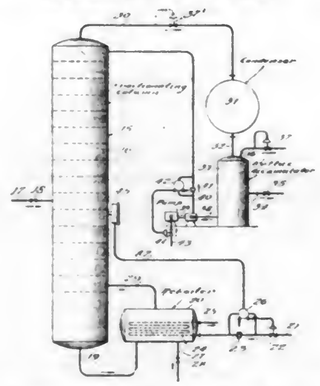
and salts thereof, with alloxan in the presence of alloxantin, wherein R is a member of the group consisting of alkyl, polyhydroxyalkyl, and polyacyloxyalkyl, and wherein R_1 and R_2 are members, not necessarily identical, selected from the group consisting of hydrogen and lower alkyl, the alloxan and alloxantin being employed in approximately equi-molecular proportions.



2,456,396
CONTROL OF VAPORIZABLE MATERIAL
Warren S. Frohock, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application November 20, 1945, Serial No. 629,848
2 Claims. (Cl. 316—26)

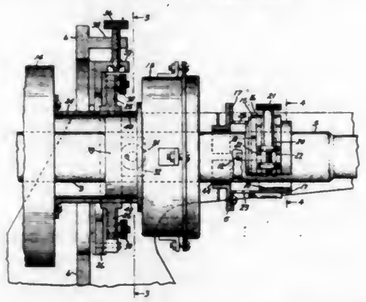
1. Apparatus for insuring that at least a determined amount of mercury is present in a low pressure discharge lamp having two electrodes said apparatus comprising: means for heating said lamp to a temperature sufficient to vaporize the determined amount of mercury, means for passing current through the resultant vapor to

produce a voltage between said electrodes, and means directly responsive to the voltage between said electrodes for adding more mercury to the lamp if said voltage is below a determined value corresponding to the determined amount of mercury.



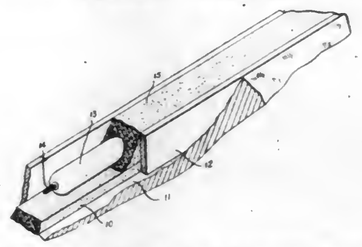
2,456,397
BROILER
Paul Gallichio and Frank Ferrari, New York, N. Y.
Application May 3, 1946, Serial No. 667,146
4 Claims. (Cl. 126—9)

1. A portable broiler comprising a frame, charcoal burners having open top ends slidably mounted on said frame in upright parallel relation to each other, means for moving said burners, grills carried by said burners in vertical position forming a side wall for the fuel compartments, means for suspending a grill in vertical position between said burners, means for moving said grills to a horizontal position for forming a bottom wall for the fuel compartment and rods pivotally supported on the top of the frame and adapted to be swung over the tops of the burners for forming an upper supporting wall for the fuel compartment whereby an article of food may be cooked when arranged in a horizontal position or a cooking utensil supported thereon.



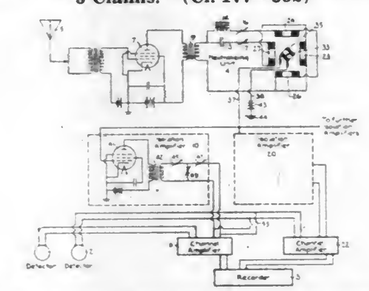
4. In a broiler, a charcoal burner comprising a base, solid outer and side walls, a grill member forming the inner wall thereof, said grill member including a bar extending between and journaled in the side walls and a series of spaced vertically disposed bars secured centrally to said journaled bar for rotation therewith, means including lugs on the outer wall for limiting the rotating movement of the grill member and for supporting said grill member in horizontal position to form the bottom wall for the burner, a removable grate member supported by said base, means for moving said grill member to horizontal position and pivotally mounted rods on the outer wall adapted to be swung across the top of the burner.

2,456,398
FRACTIONATION CONTROL APPARATUS
Clarence G. Gerhold, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Original application December 10, 1942, Serial No. 468,509. Divided and this application October 27, 1944, Serial No. 560,527
10 Claims. (Cl. 196—132)



1. In a fractionating column, the combination of a variable volume closed chamber disposed at a selected control point within said column and containing a fixed quantity of a reference fluid of known vapor pressure characteristics, the volume of said chamber being variable in response to variations in differential pressure between the inside and outside of the chamber, and means for adjusting the pressure differential between the interior and exterior of said chamber in response to changes in volume of said chamber.

2,456,399
CATHODE-RAY APPARATUS
Richard B. Gethmann, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application October 24, 1945, Serial No. 624,275
7 Claims. (Cl. 250—161)

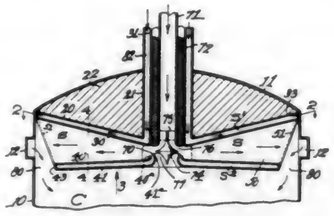


1. In an electron discharge apparatus of the cathode ray type including an envelope having therein a screen and an electron gun for projecting a cathode ray beam onto the screen, a magnetic focusing means arranged about the axis of the beam and having its central axis extending in the desired direction of the beam, means near the origin of the beam for adjusting the direction of the beam to make it parallel to the central axis of said focusing means, and means for moving said focusing means transversely of the direction of said beam for bringing the central axis of said focusing means into coincidence with the axis of said beam.

2,456,400
IRRIGATION PIPE AND METHOD OF CONSTRUCTING SAME
Alexander Giannopulos, Fresno, Calif.
Application December 11, 1945, Serial No. 634,233
2 Claims. (Cl. 138—80)

1. In concrete conduit of the continuous type, the combination, which comprises a continuous concrete base slab providing a permanent foundation, a square conduit with a circular opening extending longitudinally therethrough integrally associated with said base, and a substantially solid non-porous cement lining encircling said longitudinally extending opening.

2,456,401
INTERFERENCE ELIMINATOR FOR SEISMIC RECORDING SYSTEMS
Ronald P. Gilmore, Fulton, Mo., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application September 24, 1945, Serial No. 618,166
3 Claims. (Cl. 177—352)



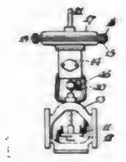
1. In a system for neutralizing interfering signals induced in a seismic recording network by outside magnetic field oscillations, electronic circuit means for converting said oscillations into an alternating current, means for passing a portion of this current through a circuit comprising in series a set of Helmholtz coils and an inductive reactance, means for passing another portion of this current through a second circuit comprising in series a set of Helmholtz coils and a capacitive reactance, said sets of Helmholtz coils being arranged so that their magnetic fields intersect at right angles, a coil rotatably positioned at the intersection of said magnetic fields, means for adjusting the phase of the current induced in said coil when said alternating current is passed through said Helmholtz coil circuits, means for amplifying said induced current, and means for introducing said amplified current into said seismic recording network to neutralize said interfering signals.

2,456,402

COMBUSTION CHAMBER AND MEANS FOR SUPPLYING PLURAL LIQUID FUELS THERETO

Robert H. Goddard, Roswell, N. Mex., assignor of one-half to The Daniel and Florence Guggenheim Foundation, New York, N. Y., a corporation of New York

Application October 20, 1942, Serial No. 462,709
14 Claims. (Cl. 158—4)



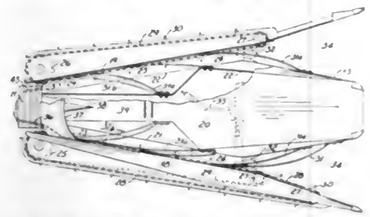
1. In a combustion apparatus, means forming a combustion chamber having an end wall, means forming an entrance passage adjacent the chamber axis for a combustion liquid, a hollow double disc communicating near its center with said passage and closed around its outer edge portion, a second hollow double disc also closed about its outer edge portion and having an annular port orifice at its middle portion, hollow partition members fixed between said discs and connecting the hollow interiors of said discs and maintaining said discs in axially aligned but substantially separated fixed relation, and means to supply a coacting combustion liquid to said first liquid adjacent said annular port orifice.

2,456,403

DIAPHRAGM CONTROL VALVE

Francis Rudolph Goehring, Philadelphia, Pa., assignor to H. Belfield Company, Philadelphia, Pa., a corporation of Pennsylvania

Application February 12, 1944, Serial No. 522,035
5 Claims. (Cl. 137—153)



1. In a control valve having a stem operated member for controlling fluid flow and expansible chamber means including a plate member responsive to changes in fluid pressure, the means for connecting said plate member and the upper end of said stem including a hollow portion on said plate, an outer annulus secured in said hollow portion, said outer annulus having a concave inner surface, an inner annulus on the upper end of said stem and within said outer annulus, said inner annulus having a convex outer surface, a plurality of balls disposed between the surfaces of said annuluses, and interengaging portions carried by said plate member and the upper end of said stem to permit angular movement of said annuluses with respect to each other but preventing rotation of said stem with respect to said plate member.

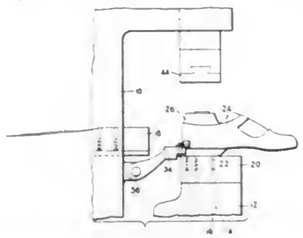
2,456,404

GATHERER FOR SILAGE HARVESTERS

Harvey G. Good, East Earl, Pa.

Application February 10, 1947, Serial No. 727,588
10 Claims. (Cl. 56—98)

1. A plural row silage harvester having a forward stalk receiving portion, a rear stalk orienting and discharging portion and comprising a frame, a plurality of stalk receiving longitudinally disposed guideways inclined upwardly from said forward portion to said rear portion, each guideway having substantially vertical and parallel side walls, said guideways converging from the forward ends thereof toward the rear, stalk cutting means at the forward end of each guideway, upper and lower longitudinally arranged conveyors disposed adjacent one wall of each guideway, stalk engaging means on each conveyor whereby stalks will be moved along said guideways upon operation of said conveyors, a plurality of elongated resilient members secured to said frame and extending rearwardly and laterally across each guideway adjacent said conveyors whereby stalks engaged by said resilient members will be urged into engagement with said conveyors, said resilent means adjacent said upper conveyors terminating forwardly of the rear ends thereof the resilient means adjacent said lower conveyors terminating substantially at the rear ends thereof, upper stalk release means secured to said frame adjacent said upper conveyors and forwardly of the rear ends thereof, said upper release means having a portion for engaging and positively releasing said stalks from said upper conveyors, a concave stalk engaging bridge disposed above said release means and extending across said guideways, separator means projecting forwardly from the concave surface of said bridge substantially midway between said guideways whereby intermingling of the upper portions of said stalks is prevented, a stalk receiving platform disposed between said guideways and below said bridge, lower stalk release means secured to said frame adjacent said lower conveyors at the rear ends thereof, said lower release means having a portion for engaging and positively releasing said stalks from said lower conveyors subsequent to release thereof from said upper conveyors whereby the stalks from both guideways merge and are deposited on said platform in substantially parallel intermingled relationship forming a mat, and conveyor means disposed to engage the butt ends of said stalks prior to release from said lower conveyors whereby said stalks are removed from said platform, said stalks being continually moved by conveying means from the time of entry into said guideways until discharged from said harvester.



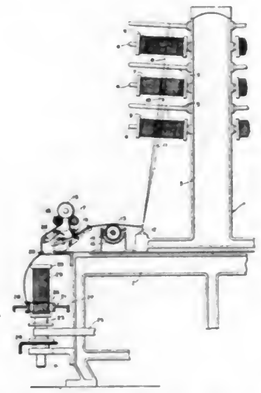
2,456,405

WORK POSITIONING MEANS FOR HEEL NAILING MACHINES

Willis R. Goodwin, Malden, Mass.

Application August 10, 1946, Serial No. 689,692
1 Claim. (Cl. 1—32)

Apparatus for nailing spring heels and the like to shoes, comprising a fixed anvil having a horizontal top face and vertical bores for nails, nail-driving members in said bores, a support member behind the anvil, a bracket pivotally mounted on said support member and rockable from an operative to an inoperative position, said bracket member having heel gauging elements engageable by a shoe heel to position said heel when



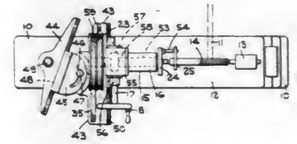
the bracket is in its operative position, gauging members for shoe uppers secured to said bracket above said elements and adjustable relatively thereto, and an upper anvil supported above said fixed anvil and movable downward to press on the last of a lasted shoe placed on said fixed anvil.

2,456,406

THREAD FEED ARRESTING DEVICE

John T. Gordon and Raymond E. Solliday, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

Application October 10, 1946, Serial No. 702,526
2 Claims. (Cl. 57—86)



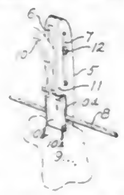
1. Thread feed arresting mechanism for controlling the travel of thread and the like through apparatus embodying the delivery of individual threads from each of a plurality of supply packages to a collecting means on which said threads are collected in the form of a composite thread bundle, said arresting mechanism comprising an abutment about which the individual threads pass; severing means co-acting with the abutment for simultaneously cutting all of the individual threads; means swingably supporting the severing means; means holding the severing means out of contact with the abutment; trip means for releasing the holding means and causing the severing means to operate; a weighted lever arm supported by each individual thread for actuating the trip means upon the interruption of the supply of said thread; a guide means in contact with which the thread bundle passes; biasing means for retracting the guide means which actuates the trip means when the thread bundle is broken; and disengageable locking means for temporarily retaining the several elements of the mechanism in inoperative relation until the mechanism has been completely threaded up.

2,456,407

MACHINE FOR PRODUCING SCREWTHREADS

Arthur Green, Coventry, England

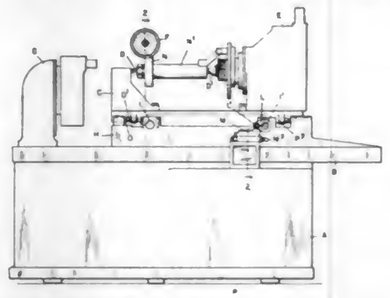
Original application June 14, 1944, Serial No. 540,285, now Patent No. 2,403,075, dated July 2, 1946. Divided and this application September 25, 1945, Serial No. 618,553. In Great Britain April 14, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 23, 1963
3 Claims. (Cl. 90—11.62)



1. A machine for producing screwthreads comprising an element for rotatably supporting the work upon which the screwthread is to be produced at both ends, means for rotating said work, an element adapted to support a tool for forming the screwthread, said work supporting elements being mounted on said tool supporting element for reciprocatory movement relative thereto in a direction substantially along the axis of the thread to be formed; a disc mounted rotatably on said work supporting element with its plane transverse to the direction of reciprocation of said work supporting element and adapted to reciprocate therewith, means for imparting rotary movement to said disc, a slide member mounted in a rectilinear guide on said work supporting element for reciprocation thereon in a direction transverse to the direction of reciprocation of said work supporting element and parallel to the plane of the disc, abutments mounted on said slide member and said tool support, said abutments having interengaging faces adapted for relative sliding movement disposed at an inclination to the direction of relative reciprocation of said two elements and to the direction of reciprocation of the slide member, said abutments being adjustable relative to the slide member and work support to vary the angle of inclination of said interengaging abutment faces with respect to the said directions of reciprocation, a pair of flexible bands arranged side by side and engaging the periphery of the disc, one end of each of said bands being secured to the disc, the other end of each of said bands being secured to the slide member with the said other ends extending in opposite directions with respect to each other and substantially parallel to the direction of reciprocation of said slide member the interengaging faces on said abutments producing lateral movement of the slide which is directly transmitted to the work supporting element by pressure on the rectilinear guide.

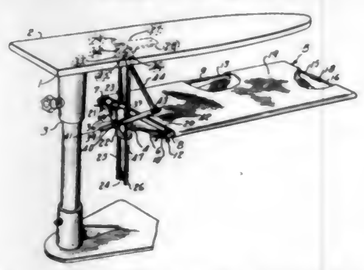
2,456,408
SYNTHETIC DRYING COMPOSITIONS
Sylvan Owen Greenlee, Louisville, Ky., assignor to Devoe & Raynolds Company, Inc., Louisville, Ky., a corporation of New York
No Drawing. Application September 14, 1943, Serial No. 502,317
16 Claims. (Cl. 260—410.5)

1. Drying compounds capable of hardening by air oxidation and by heat treatment to form insoluble and infusible protective coatings, said compounds being synthetic esters of polymeric polyhydric alcohols having alternating aliphatic chains and aromatic nuclei united through ether oxygen, said alcohols containing from 3 to 20 hydroxyl groups per molecule, esterified with higher fatty acids, said esters containing from 6 to 20 double bonds per molecule in the fatty acid radicals, said esters being soluble in hydrocarbon solvents to form varnish compositions and with added pigments to form pigmented varnish compositions.



2,456,409
TWO-PART CLOTHESPIN WITH PIVOT JOINT
Raymond K. Grewe, Silverton, Tex.
Application August 1, 1947, Serial No. 765,336
2 Claims. (Cl. 24—137)

1. In a clothes pin of the kind referred to, an elongated and straightly formed primary handle and jaw member, rectangular in cross section and longitudinally slotted clear through the upper or handle end of the member on two perpendicular planes to provide handle and lock-pin slots, the lower or jaw end of the member being left intact, a secondary and complementally formed handle and jaw member, the upper or handle end thereof being flatly and arcuately formed and passed freely into the handle slot of the primary member with its convexed margin foremost, the lower or jaw end of this secondary member being left intact for co-operation with the lower jaw end of the primary member, the two handle and jaw members being pivotally pinned together in said intermeshed relation, and a lock pin slidably mounted through the lock-pin slots of the primary member.

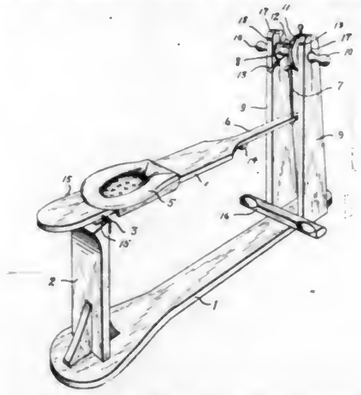


2,456,410
GEAR GRINDING MACHINE
Ivor J. Gruenberg, Pleasant Ridge, and Samuel G. Brady, Royal Oak, Mich., assignors to The Gear Grinding Machine Company, Hamtramck, Mich., a corporation of Michigan
Application January 21, 1946, Serial No. 642,494
2 Claims. (Cl. 51—94)

1. In a gear grinding machine, a frame, a grinder wheel mounted thereon, a horizontal reciprocatory carriage, a work supporting platen above said carriage, a pair of parallel shafts between said platen and carriage each shaft having a central portion journaled in said platen and corresponding eccentric end portions journaled in said carriage the axes of said central and eccentric end portions being in parallel substantially vertical planes, a crank arm on one of said shafts, a cam adjustably mounted on said frame in the path of said crank arm to rock the latter and

thereby raise and lower said platen at predetermined points in the travel of said carriage, cooperating stops respectively on said platen and carriage for limiting the relative horizontal movement thereof in one direction, and resilient means for yieldably holding said stops in contact.

2,456,411
GARMENT SUPPORTING DEVICE FOR IRONING BOARDS
Aro M. Harvey, deceased, late of Kansas City, Mo., by Neva J. Harvey, administratrix, Kansas City, Mo., assignor to Neva J. Harvey, Kansas City, Mo.
Application March 11, 1946, Serial No. 653,556
2 Claims. (Cl. 38—111)

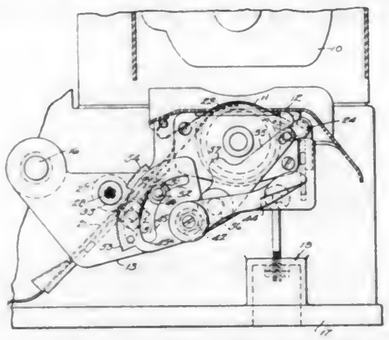


1. In combination with an ironing board, a guide suspended from said board, a basket frame, a sleeve on the basket frame and having sliding engagement with the guide, a link having fixed pivotal connection with respect to the ironing board, a rock lever pivotally mounted on said sleeve and having pivotal connection with the link, and means including an arcuate-shaped web carried by said sleeve having a series of stops for selectively engaging the rock lever to retain the basket frame in a selected position on said guide.

2,456,412
EXERCISING DEVICE
Clyde L. Heimbaugh, Duluth, Minn.
Application February 5, 1945, Serial No. 576,268
5 Claims. (Cl. 272—79)

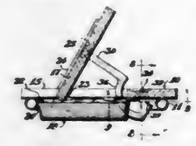
5. An exercising device comprising an elongated base portion, a fixed upright standard upon one end of said base, a pair of upright spaced standards fixed to the opposite end of said base, a foot rest member fixed transverse said base portion

adjacent said spaced standards, a seat supporting runway hinged adjacent one end upon said standard with its opposite end extending intermediate said spaced standards, a winding shaft supported within and transverse the upper end of said spaced standards and extending laterally beyond each of same to form handholds, a rope fixed



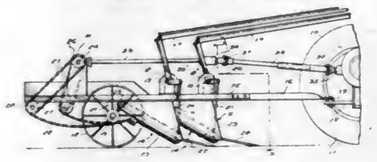
at one end to said shaft and wound therearound with its opposite end fixed to said runway so as to adjustably support same, and a seat slidably mounted upon said runway whereby an operator may slide back and forth in said seat upon said runway by contacting said handholds and foot rest.

2,456,413
POLYVINYL ACETAL RESIN COMPOSITIONS
Richard H. Hunt, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application September 6, 1945, Serial No. 614,811
12 Claims. (Cl. 260—33.6)



1. A polyvinyl acetal resin plasticized with from 1 to 50 parts of a terphenyl per 100 parts of resin.

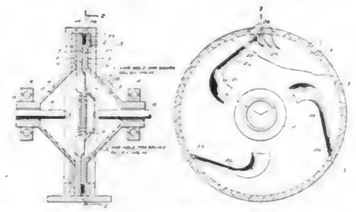
2,456,414
TAPE ADVANCING AND RETRACTING MEANS
Frederick W. Heyel, East Port Chester, Conn., assignor to Pitney-Bowes, Inc., Stamford, Conn., a corporation of Delaware
Application January 24, 1947, Serial No. 723,915
5 Claims. (Cl. 101—235)



4. In a letter and tape printing device, the combination with a printing member arranged to print impressions upon letters or tape at the same printing position and means for cutting the tape; of tape advancing and retracting devices comprising, a feed roller engaging one surface of the tape and including a toothed member connected therewith, an idler roller cooperating with the feed roller, a driving toothed sector adapted to mesh with the toothed member and including hand control means therefor to effect movement of the sector in one direction to advance the tape to a cutting position after the printing thereof, means normally urging said sector in an opposite direction, said sector having stop means cooperating with a relatively fixed stop to limit the return of the leading tape edge to a printing position, and a lost motion drive between the driving sector and roller operable to effect a predetermined movement of the sector and toothed member before the feed roller is rotated, whereby the return movement of the tape becomes less than the advance movement thereof to thereby provide a margin at the leading tape edge when printing is again effected.

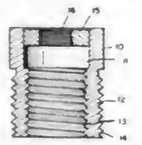
2,456,415
TABLE CONSTRUCTION
William A. Hillenbrand, Franklin County, Ind., assignor to Hill-Rom Company, Inc., Batesville, Ind., a corporation of Indiana
Application December 12, 1945, Serial No. 634,484
1 Claim. (Cl. 311—38)

In a table top structure, a supporting frame, a top element on said supporting frame, an adjustable section disposed centrally of the top element within an opening thereof, said section fitting closely within the opening, hinges pivotally and rotatively connecting said section to the underside of the table top and clearance notches in the side surfaces of the opening, said hinges consisting of links having inner end portions of arcuate form disposed on the axes of the pivotal connections to the table top and straight portions extending from the arcuate portions to the connections on the movable top section, and a bar connecting the hinges at their portions adjacent the pivotal connections to the table top, said straight portions adapted to nest in the notches when the section is within the opening.



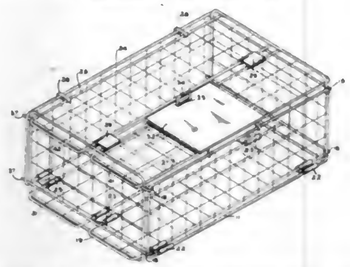
2,456,416
POTATO DIGGING MACHINE
Louis W. Hogan, Houlton, Maine
Application April 7, 1945, Serial No. 587,083
2 Claims. (Cl. 55—51)

1. In a tractor-drawn and driven double-row potato digging machine, the combination with a tractor having a power shaft, of a pair of similar



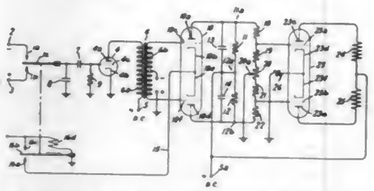
connected-together potato diggers each including a main frame supported near its rear end by wheels and each having a vertically adjustable pivoted gathering head at its forward end, each potato digger having a single endless conveyor chain mechanism, one digger being completely arranged in advanced relation to the other, a vertically rigid draft connection between said tractor and the main frame of each potato digger, and driving connections between the power shaft of the tractor and the conveyor chain mechanisms of the two potato diggers including an overhead universally jointed transverse shaft mounted upon and extending across and above the rear portions of the potato diggers, gearing connections between said shaft and the conveyor chain mechanisms of the diggers, and universally jointed telescopic shaft connections between said transverse shaft and said power shaft, and means including angular levers mounted on said diggers and extending forwardly within reach of the driver's seat of the tractor for adjustably raising and lowering said gathering heads.

2,456,417
STEAM AND COMBUSTION GAS TURBINE
Paul Horsdal, Ottawa, Ontario, Canada
Application June 4, 1947, Serial No. 752,477
8 Claims. (Cl. 60—108)



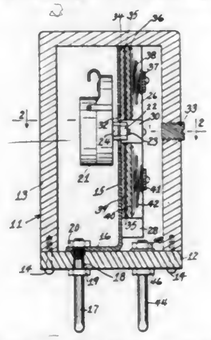
8. A power plant comprising an annular stator, a rotor peripherally mounted in the stator, walls forming an axial chamber on the rotor, the axial portion of the rotor constituting the inner wall of the chamber, means for heating the axial portion of the rotor, and a water jet in axial alignment with and extending into the chamber and arranged to impinge on the heated axial portion of the rotor, said rotor having steam passages therein each having an inlet in the chamber and an outlet on the surface of the stator.

2,456,418
BUSHING AND METHOD OF MANUFACTURING SAME
Stanley Imerman, Detroit, Mich.
Application August 28, 1944, Serial No. 551,600
4 Claims. (Cl. 285—160)



2. The method of manufacturing bushings comprising forming a bushing member having a portion which is internally and externally threaded and a portion which is externally polygonal and has an internal recess of greater diameter than the internal threads, separately forming a disk member which externally fits within said recess and has an internally threaded aperture therein, and brazing said disk within said aperture.

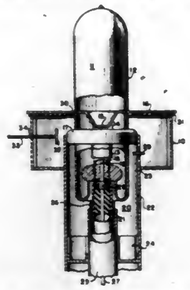
2,456,419
FOLDING BOX
Alphonsus L. Jackson and Herbert A. Brown, St. Clair, Mo.
Application February 24, 1948, Serial No. 10,388
3 Claims. (Cl. 220—6)



1. In a folding box, a first side for said box, two ends for said box one each of which is hinged to said first side at the ends thereof, first and second slots extending substantially throughout the length of each of said ends at the tops and bottoms thereof, a bottom for said box comprising two sections, the first of which is hinged to the said first side and the second of which is hinged to the first, a second side for said box hinged to the second section of said bottom, a slot formed at each end of said second side each extending substantially from its top to bottom, a top for said box comprising two sections, the first of which is hinged to said second side and the second of which is hinged to the first, a projection on each of said box ends adapted to pass into one of the slots in the ends of said second side, means for slidably hinging the first of said box top sections to said second box side whereby both box top sections may be moved laterally with respect to said second side, and a cover hinged to the top of said first side for closing an opening in the second section of said box top.

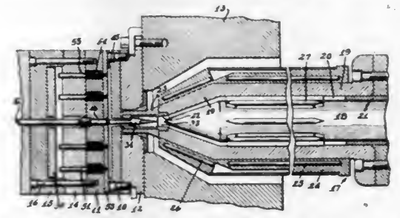
2,456,420
ELECTRONIC DIRECT-CURRENT CONTROL SYSTEM
Edwin J. Jackson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 31, 1946, Serial No. 694,345
4 Claims. (Cl. 179—171)

1. A control system comprising a pair of input terminals adapted to be connected to a source of direct voltage, vibratory contacts with terminals for deriving from said direct voltage a square wave periodically varying voltage, means for amplifying said square wave voltage comprising an electric valve provided with an input circuit connected to said vibratory contacts and an output circuit, a discriminator stage having an output circuit nd having an input circuit connected to the output circuit of said amplifier comprising a pair of electric valves connected push pull and each having an anode, a cathode, and a control grid, connections for energizing said anodes and cathodes from a source of direct voltage, auxiliary vibratory contacts included in said cathode connection, and means for mechanically connecting said auxiliary vibratory contacts with said first mentioned contacts for interrupting and completing said cathode connection synchronously with said square wave voltage thereby to provide a rectified voltage at the terminals of the output circuit having a polarity that reverses with the polarity of the voltage at said input terminals.



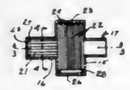
2,456,421
DUAL CRYSTAL UNIT
Robert J. Jahrling, Jamaica, N. Y., assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y.
Application March 15, 1948, Serial No. 14,938
7 Claims. (Cl. 171—327)

1. A dual crystal holder comprising a base, an upstanding metal plate member secured to said base, a pair of insulating bars secured to opposing marginal portions of said plate member on one side thereof, said bars being formed with pairs of opposing projections defining with respect to said plate member a pair of crystal-receiving cavities, said plate member being formed between one pair of said opposing projections with an opening, and an adjustable impedance secured to the opposite side of said plate member and having an adjusting element aligned with said opening.



2,456,422
HIGH-FREQUENCY OSCILLATOR
Emrys Gwynne James, Pinner, England, assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application June 15, 1944, Serial No. 540,369
In Great Britain February 11, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 11, 1963
15 Claims. (Cl. 315—39)

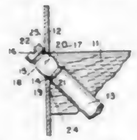
1. A high-frequency oscillator comprising, a wave guide having walls with dimensions proportioned substantially to attenuate oscillations of a fundamental frequency and to translate oscillations of higher frequency harmonically related to said fundamental-frequency oscillations, a vacuum tube having input and output electrodes positioned with at least one pair of said electrodes lying within said wave guide and continued electrically by the walls thereof, and means resonant at said fundamental frequency and having substantial regenerative coupling to said wave guide



for providing a resonant circuit between another pair of said electrodes to cause said vacuum tube to generate in said wave guide oscillations having said fundamental frequency but including a frequency component of said higher frequency.

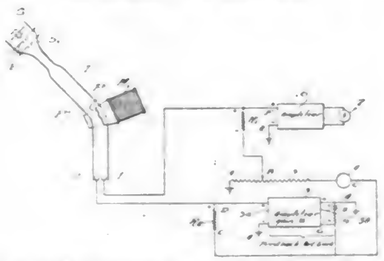
2,456,423
INJECTION MOLDING MACHINE
Conrad Jobst, Toledo, Ohio, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application March 2, 1945, Serial No. 580,635
17 Claims. (Cl. 18—30)

1. An injection molding machine comprising a nozzle having a passageway therethrough for the passage of molten molding material, said passageway including a valve chamber, a valve located entirely within said chamber and movable to closed position by the pressure of the molding material within said chamber, thereby preventing bleeding of the molten material, and means separate from the valve and mounted for movement relative thereto into and out of the path of movement of the valve and operable independently of the molding material to move the valve to open position.



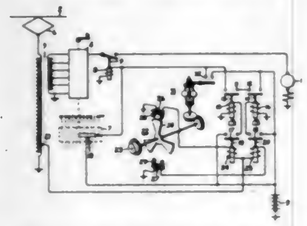
2,456,424
MEANS FOR PRODUCING COMMERCIAL CASTINGS
Robert Neiman, Louisville, Ky., assignor to Edmund A. Steinbock, Louisville, Ky.
Application July 9, 1945, Serial No. 603,992
6 Claims. (Cl. 22—158)

1. A pattern formed of plastic having the exterior conforming accurately to the exterior of the part to be produced and the mold cavity



forming portion formed of spaced apart walls of thin sections and with hollow space between the inner surfaces of said walls whereby they will collapse, during dissipation, inwardly, and ribs projecting from the inner surface of said spaced apart walls for reinforcing the thin sections thereof against distortion except when the pattern is being dissipated.

2,456,425
DEVICE FOR THE MUTUAL AND DETACHABLE SUPPORT OF TWO OBJECTS
Frantisek Nemec, Prague-Brevnov, Czechoslovakia
Application December 30, 1946, Serial No. 719,166
In Czechoslovakia April 22, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires April 22, 1959
4 Claims. (Cl. 248—28)



1. A device for the mutual and detachable support of two objects comprising a bolt adapted to be secured with its one end to the one of said objects and, associated with said bolt, an apertured thin-walled structure disposed at the other of said objects, said bolt having on its shaft at least two circumferential grooves of substantially rectangular profile, the faces of said profile each inclined relatively to the axis of said bolt at about 45°; the depths of said faces substantially corresponding to the thickness of the wall of said apertured thin-walled structure; said grooves spaced from each other at a distance to allow said bolt when inserted into the aperture of said apertured thin-walled holding structure and tilted into inclined position, to engage by means of one of said grooves one edge of said aperture and by means of the other of said grooves the diametrically opposed edge of said aperture on the opposite face thereof; said bolt thus being held in position relatively to said apertured thin-walled holding structure against unintentional displacement.

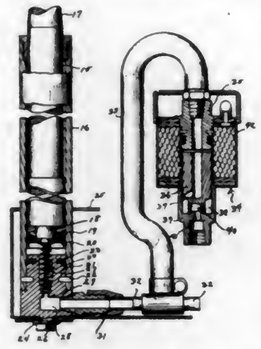
2,456,426
MASS SPECTROMETER SYSTEM
Alfred O. C. Nier, New York, N. Y., and Edward P. Ney, Charlottesville, Va., assignors to the United States of America as represented by the United States Atomic Energy Commission
Application August 8, 1944, Serial No. 548,588
12 Claims. (Cl. 250—41.9)

1. A direct current electrical measuring system comprising, in combination, means for developing two direct current voltages having the same polarity with respect to ground, a potentiometer resistor having outer terminals and an adjustable inner terminal, negative feedback amplifying means for reversing one of said voltages with respect to ground and amplifying the current developing said voltage by at least 10^3 times and for applying the reversed voltage and amplified current across said outer terminals of said potentiometer resistor, and means for nulling, by the other of said voltages, the voltage portion existing between an outer terminal and said inner terminal of said potentiometer resistor to determine the ratio of said voltages by the setting of said inner terminal.

2,456,427
PROTECTIVE SYSTEM FOR ELECTRIC MOTORS
Harold S. Ogden, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application November 28, 1944, Serial No. 565,553
9 Claims. (Cl. 318—397)

1. An electric vehicle control system comprising an electric traction motor, switching means for connecting said motor to a source of electric current supply for starting said motor, means responsive to the speed of said vehicle and operable below a predetermined minimum speed to disable said switching means, means for accelerating said motor during starting operation, and means controlled by said accelerating means for rendering said speed responsive means ineffective during starting operation.

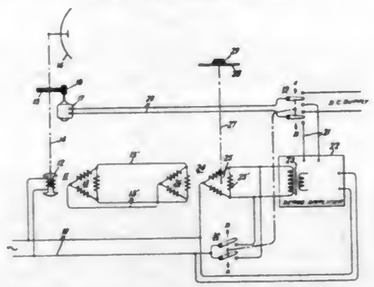
2,456,428
POLYALLYL AMINE AND RELATED POLYMERIC AMINES
James H. Parker, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 11, 1944, Serial No. 558,282
8 Claims. (Cl. 260—80)



1. The product obtained by hydrogenating the homopolymer having a degree of polymerization of at least four of a compound of the formula

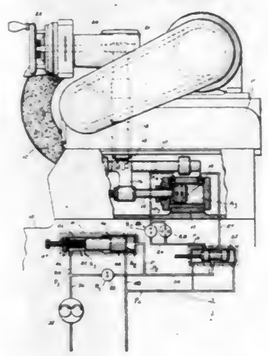
$$\begin{matrix} R & R \\ | & | \\ CH=C-CN \end{matrix}$$

wherein each R is a member of the class consisting of hydrogen, an alkyl group and a mononuclear aryl group, said groups containing only hydrogen and carbon, and all the nitrogen in said product being present in amino groups.



2,456,429
ACTUATING MECHANISM FOR REFRIGERATOR TOPS OR THE LIKE
John B. Parsons, Toledo, Ohio
Application October 18, 1944, Serial No. 559,214
2 Claims. (Cl. 60—97)

2. A structure adapted for up and down movement, supporting means for said structure including two pistons connected to said structure, cylinders for said piston rods respectively, hydraulic means associated with said cylinders for controlling the conjoint movement of said pistons, said hydraulic means including a closed system comprising a motor driven pump, a reservoir associated with said pump, means providing passages from said pump to the lower ends of said cylinders, whereby in the operation of said pump, liquid is forced from said reservoir to said cylinders for raising said pistons, a valve

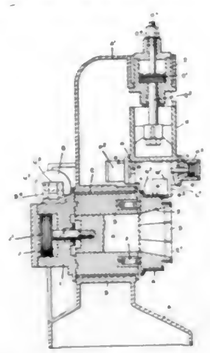


adapted to be seated by the pressure of liquid in the cylinders thereby to retain said piston rods in position of adjustment, electro responsive means for unseating said valve thereby to allow the liquid from said cylinders to return to said reservoir, a ported plug secured to the lower end of each cylinder through which liquid flows to and from the respective cylinder, and resilient means on said plug and against which the piston rod abuts immediately prior to the lower limit of movement of said structure.

2,456,430
TELEMETERING APPARATUS
Franklin G. Patterson, Schenectady, N. Y., and Marion W. Sims, Fort Wayne, Ind., assignors to General Electric Company, a corporation of New York
Application October 15, 1947, Serial No. 779,950
7 Claims. (Cl. 318—24)

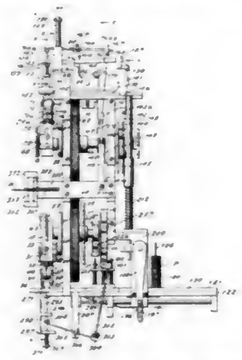
2. Telemetering apparatus comprising a plurality of electrically inductive devices having relatively movable primary windings at least one of which has a pair of single phase windings whose respective magnetic axes are axially displaced substantially ninety degrees with respect to each other, an alternating current circuit for energizing said primary windings in phase with each other, a plurality of rotating means coupled to said primary windings and adapted to rotate coincidentally in response to the in-phase motion of said primary windings, and switching means associated with the pair of single phase primary windings of one of said devices for shifting the phase relation between said primary windings in a manner to alter the function of the device having said pair of single phase primary windings from motor operation to transformer operation without affecting the coincidence of said rotating means.

2,456,431
VALVE MEANS TO COMPENSATE FOR VISCOSITY IN HYDRAULIC SYSTEMS
Ralph E. Price, Highfield, Md., assignor to Landis Tool Company, Waynesboro, Pa.
Application November 8, 1940, Serial No. 364,921
5 Claims. (Cl. 60—52)



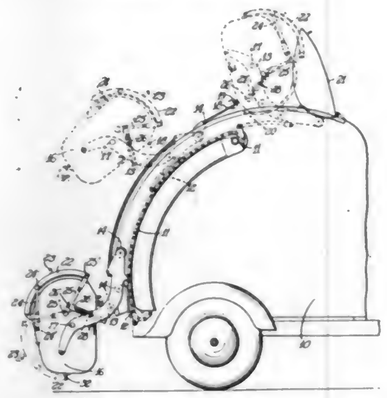
1. In a hydraulic system, a motor and a mechanism actuated thereby, a constant delivery pump for supplying fluid under pressure to said motor, a conduit for conducting the fluid to said motor, a throttle valve in said conduit, a pressure operated relief valve, the area of one end of said relief valve being smaller than the area of the other end, a connection from said conduit ahead of said throttle valve to said smaller area, a connection from said conduit beyond the throttle valve to said larger area, a discharge port at the large area end of the relief valve located so that the size of said port opening is regulated by movement of said valve, means to control the speed of said motor including a second throttle valve located in an exhaust passage from said motor, and resilient means operable on the small area end of said relief valve and supplementing said pump pressure.

2,456,432
FLASH TRIMMING MACHINE
Alfred H. Lewis, Huntington Woods, Mich., assignor to Swift Electric Welder Company, Detroit, Mich., a corporation of Michigan
Application January 31, 1944, Serial No. 520,576
4 Claims. (Cl. 29—33)



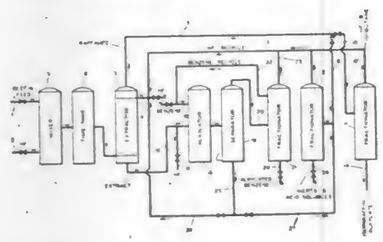
1. A flash shearing machine comprising a frame, a rotary head mounted therein, an expansion chuck mounted at one end of said head and adapted to engage and circularize an annular work member to expose the outer flash bearing surface thereof, means for expanding said chuck, a fluid motor mounted on said head for operating said expanding means, a shearing cutter formed of a plurality of overlapping sections conforming to different portions of a cross con-

tour of the exposed surface of the work, slides for holding the respective sections in contact with the work surface, a cross head mounted on said frame to be vertically adjustable with respect to the work and having guideways for said slides,



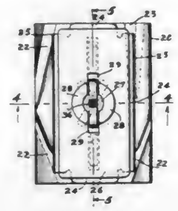
fluid pressure means for moving said slides to hold said cutter sections in contact with the adjacent portions of the surface of the work, and fluid motor means for rotating said first mentioned head to effect the shearing of the flash by said cutter.

2,456,433
MACHINE FOR APPLYING FASTENERS TO WEB MATERIAL
Carl H. Lofgreen, New York, N. Y., assignor to Equitable Paper Bag Co. Inc., Long Island City, N. Y., a corporation of New York
Application April 26, 1946, Serial No. 665,251
18 Claims. (Cl. 218—15)



1. A machine of the character described comprising co-planar rotary arms, means on one of said arms for retaining a washer-eyelet combination thereon, means on the other of said arms for retaining a perforated reinforcement thereon, means for rotating the said arms at synchronous speed to bring the washer-eyelet combination and the reinforcement into an aligned position on opposite sides of a moving web, means on said arms for then uniting the reinforcement with the washer-eyelet combination and the web, and means for operating the said two retaining means to release the said reinforcement and said washer-eyelet combination just prior to their union with said web.

2,456,434
SELF-LOADING VEHICLE
Otto F. Manthie, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a corporation of Wisconsin
Application December 1, 1945, Serial No. 632,255
13 Claims. (Cl. 214—67)

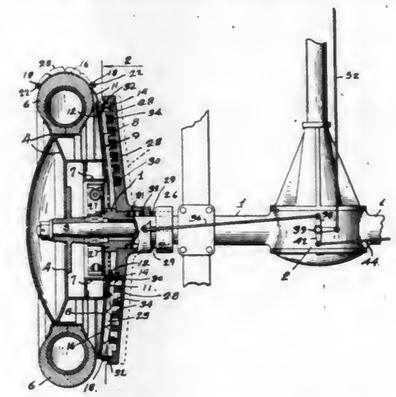


1. In a self-loading vehicle of the type including a hollow body having a forwardly located receiving station, an open mouthed loading bucket adapted to traverse said body longitudinally between said station and a rearwardly spaced bucket-charging point, and supporting and actuating means to shift said bucket longitudinally of said body from said point to said station and to pivot the same so as to discharge the contents thereof at the station, a closure for said bucket operative to cover the mouth of the same during travel between said loading point and receiving station, means pivoting said closure on said bucket to permit shifting of the closure to inoperative withdrawn position, and means connected to said last named means and to said supporting and actuating means and operative upon arrival and pivoting of the bucket adjacent said receiving station to cause shifting of said closure to inoperative position.

2,456,435
ALKYLATION PROCESS
Maryan P. Matuszak, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 6, 1945, Serial No. 609,214
20 Claims. (Cl. 260—345)

1. An improved process for reacting a low-boiling olefin and an alkylatable cyclic organic compound to produce alkyl derivatives of said cyclic organic compound by replacement of hydrogen atoms on the ring with alkyl groups corresponding to said olefin in the presence of a hydrofluoric acid catalyst, which comprises intimately admixing a hydrocarbon material containing a low-boiling olefin with liquid hydrofluoric acid in an amount substantially equimolar to said olefin, maintaining said admixture for not more than about 30 minutes, intimately admixing with the resulting material a substantial excess of liquid concentrated hydrofluoric acid as an extraction liquid in an extraction step at an extraction temperature not greater than about 100° F. and subsequently separating a hydrocarbon phase and a first liquid hydrofluoric acid phase, intimately admixing an alkylatable cyclic organic compound with said liquid hydrofluoric acid extract phase under reaction conditions such as to effect alkylation of said cyclic organic compound to produce said alkyl derivatives thereof, separating effluents of said reaction into an organic phase and a second liquid hydrofluoric acid phase, recovering said alkyl derivatives of said cyclic organic compound from said organic phase, passing a major portion of said second acid phase to said extraction step as a part of said extraction liquid, passing said hydrocarbon phase to a distillation step for recovery of dissolved hydrogen fluoride therefrom, passing a minor portion of said second acid phase to said distillation step for removal of organic impurities, and recovering from said distillation step purified hydrogen fluoride and passing same to said extraction step.

2,456,436
ENVELOPE OPENER
Edmund C. Metzger, Chicago, Ill.
Application May 11, 1945, Serial No. 593,127
2 Claims. (Cl. 30—294)

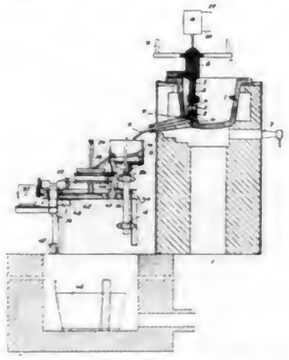


1. A device of the class described comprising a substantially rectangular body having upstanding longitudinal edge portions, a blade supporting area between said edge portions having the upper surface thereof transversely convex, the upper surface of said area being below said edge portions, a longitudinal channel at each side of said blade supporting area connecting said area with said edge portions, a blade adjustably mounted on said area and having the longitudinal cutting edge portions thereof extending into said channels, and an envelope guideway in each of said edge portions located diagonally with respect to said edge portions and intersecting the adjacent channel at one end thereof, said guideways also disposed angularly with respect to said channels so that a side of each of said guideways tapers downwardly from the upper side of the edge portion in which it is located, whereby to properly guide an envelope being drawn through a guideway, and means to adjust the position of the cutting edges of said blade in said channels to compensate for envelopes of different thicknesses.

2,456,437
NONDUSTING SOAP COMPOSITION AND METHOD FOR MAKING SAME
Gilbert De Wayne Miles, New York, N. Y., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application November 24, 1943, Serial No. 511,595
7 Claims. (Cl. 252—368)

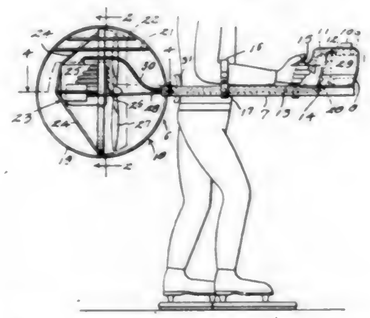
6. As a new article of manufacture, a nondusting, free-flowing particulate soap comprising spray-dried soap particles including beads and fines having a dry coating of material from the group consisting of starch, gum and glue.

2,456,438
NONSKID DEVICE APPLIER AND REMOVER
Dola F. Miller and Frank Puslecki, San Francisco, Calif.
Application January 30, 1948, Serial No. 5,354
6 Claims. (Cl. 152—214)



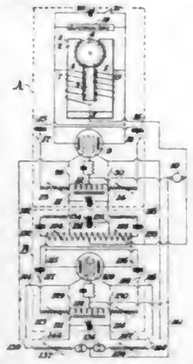
4. A nonskid device applier and remover comprising the combination with a motor vehicle axle, wheel and tire thereof, of a plurality of flexible cleats arranged to be bent transversely around the tread of said tire; a disk having radial grooves in one face thereof mounted upon one side of said wheel; links slidably mounted within said radial grooves and operatively connected to said cleats; a second disc having a spiral groove therein and slidably mounted for longitudinal movement only upon said axle, said spiral groove being arranged to operatively engage said links and to extend the same and said cleats connected thereto transversely around the tread of said tire; and spring means arranged normally to move said second disk to disengage the spiral groove thereof from said links.

2,456,439
MACHINE FOR THE MANUFACTURE OF METAL GRAINS
Roger Morane, Paris, and Roger Martinet, Ville D'Avray, France
Application March 17, 1945, Serial No. 583,268
In France January 20, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 20, 1963
7 Claims. (Cl. 18—2.6)



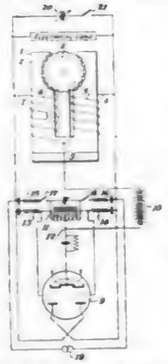
2. An apparatus for manufacturing metal grains and particularly grains of non-ferrous metal or alloys, comprising a pot for molten metal, a metal distributing ladle, a conduit pro-

vided at said pot for feeding said ladle, rotatable cups with sieve bottoms for dividing said metal into grain, said ladle having nozzles and a chute for each nozzle for feeding said cups; said ladle and said cups carried by a structural unit; said unit also carrying means for heating said chutes



and said ladle, a drive likewise carried on said structural unit for imparting to said cups a rotational motion at uniform speed and an oscillatory motion to said chutes, and means connected to said drive for imparting jolts to said cups at certain intervals of time with means for adjusting the extent of the jolts.

2,456,440
PROPELLING DEVICE
Horace M. Morrill, Pontiac, Mich.
Application July 10, 1946, Serial No. 682,481
4 Claims. (Cl. 180—1)

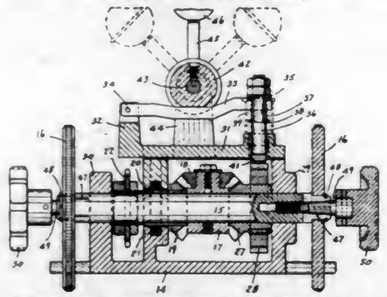


1. In a propelling device for occupant supporting vehicles such as skates, a substantially spherical cage, a prime mover mounted therein, a propeller driven by said prime mover and rotatable within said cage for exerting a forward thrust thereon, a supporting bar connected to the forward end of said cage and extending forwardly therefrom and adapted to be disposed along one side of the body of the user, a hanger adapted to detachably engage a horizontally disposed forearm of the user and connected to said supporting bar for supporting the latter therebeneath, and a handle extending upwardly from said supporting bar, forwardy of the hanger, to be engaged by the hand of the arm engaged by said hanger for receiving the forward thrust of the propeller through said cage and supporting bar.

2,456,441
ELECTRONIC TUBE MOTOR DEVICE
Montford Morrison, Upper Montclair, N. J.
Application January 10, 1948, Serial No. 1,594
8 Claims. (Cl. 318—171)

3. In an electric motor device, a first grid controlled electron discharge tube oscillation system having an oscillatory element included in the grid circuit of said system, said oscillatory element set to oscillate at one frequency, an operating winding of an electric motor included in the plate circuit of said system, a second grid controlled electron discharge tube oscillation system having an oscillatory element included in the grid circuit of said system, said oscillatory element set to oscillate at a frequency different from first said frequency, a load included in the plate circuit of said system, and the plate circuit of said second system coupled to the grid circuit of said first system.

2,456,442
ELECTROMECHANICAL OSCILLATOR
Montford Morrison, Upper Montclair, N. J.
Application November 6, 1945, Serial No. 627,055
8 Claims. (Cl. 250—36)



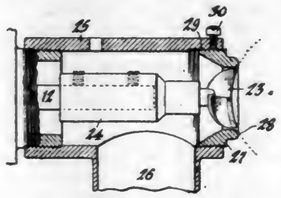
1. An audio-frequency oscillation generating system comprising an electronic discharge tube having a cathode and a plate with an electrostatically cooperating discharge-control electrode, a plate circuit having an aperiodic natural motional impedance and including a source of discharge energy, a control-electrode tank circuit having a natural period of oscillation independent of said motional impedance, a feed-back circuit from said plate circuit to said tank circuit including a feed-back circuit member having a high impedance compared to the plate resistance of said tube, an integral source of voltage having a predetermined periodic oscillation independent of said tank circuit, and a coupling circuit between said source and said tank circuit including a coupling circuit member having a high impedance compared to the plate circuit of said tube, whereby said motional impedance is caused to follow the periodic oscillations of said source.

2,456,443
PROCESS FOR PREPARING NORDIHYDROGUAIARETIC ACID AND INTERMEDIATES
George P. Mueller, Eric T. Stiller, and Samuel V. Lieberman, Philadelphia, Pa., assignors to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 6, 1946, Serial No. 714,658
8 Claims. (Cl. 260—338)

7. The process of preparing 2,3-bis(3,4-carbonyldioxybenzyl)-butane comprising reacting safrole with hydrogen bromide to form 1-piperonyl-1-bromethane, reacting the latter compound with magnesium to form the corresponding Grignard reagent, treating the Grignard reagent with iodine to form 2,3-dipiperonylbutane, reacting the latter with a chlorinating agent and treating the reaction product with a dilute alkaline solution to form 2,3-bis(3,4-carbonyldioxybenzyl)-butane.

8. The new compound 2,3-bis(3,4-carbonyldioxylbenzyl)-butane.

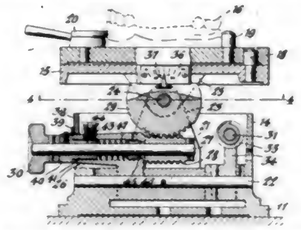
2,456,444
ELECTRIC MOTOR POWERED WHEEL DRIVE AND CONTROL FOR TOOL CARRIAGES
Ralph W. Reid and Chester L. Reid, Indianapolis, Ind., assignors to John R. Brant, Indianapolis, Ind.
Application July 12, 1945, Serial No. 604,688
6 Claims. (Cl. 180—65)



5. In a tool carriage, the combination with a tractor unit including a pair of traction wheels, a drive shaft for said wheels, a collar secured to said shaft having a pinion rotatable thereon, and a pair of spaced gears about said shaft in meshing engagement with said pinion in opposed relation, of an electrically operated motor circuit for driving an electric motor connected to one of said gears to rotate said pinion, a plunger carried by said unit movable into and out of interlocking engagement with the other of said gears for rendering said pinion operative to rotate said shaft when in interlocking position while rendering said pinion inoperative when disengaged therefrom, an actuating drum having a cam surface operable to move said actuating pin into and out of interlocking engagement with said gear, contact switches in said circuit carried by said drum for making and breaking said circuit, and manually actuated means for rotating said drum to close said circuit and to effect movement of said plunger to engage and render said pinion operative to drive said shaft and movable to another position for effecting movement of said plunger out of engagement and rendering said pinion inoperative to drive said shaft and open said circuit, the cam portion of said drum and switches being so related as to first close said circuit and thereafter render said pinion operative to drive said shaft when moved to the first mentioned position and when moved to the second mentioned position render said pinion inoperative to drive said shaft and open said circuit.

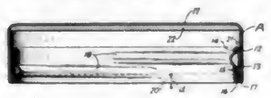
2,456,445
ARTICLE-HOLDING DEVICE
Gladys Rees and Janet Rees, Chicago, Ill.
Application August 20, 1945, Serial No. 611,458
2 Claims. (Cl. 224—28)

1. An article-holding device adapted to be worn upon the wrist of the wearer and including a flexible wrist-encircling member having a mounting plate attached thereto, a unitary article-holding member including a fastening portion arranged between the ends thereof and attached to the said mounting plate, the said article-holding member embodying a pair of resilient article-clamping jaws formed therein one at each side of the said fastening portion and normally urged toward each other under the force of their own resiliency so as to releasably clamp an article therebetween, the said unitary article-holding member embodying an article-holding arm formed therein as an integral extension of one of the said resilient article-clamping jaws, and the said article-holding member embodying another article-holding arm formed therein as an integral extension of the other one of the said resilient article-clamping jaws.



2,456,446
COCONUT PEELING MACHINE HAVING ROTARY RADIAL CUTTER BLADES WITH FAN PORTIONS
Otto G. Rieske, Buffalo, N. Y.
Application July 27, 1944, Serial No. 546,867
1 Claim. (Cl. 146—7)

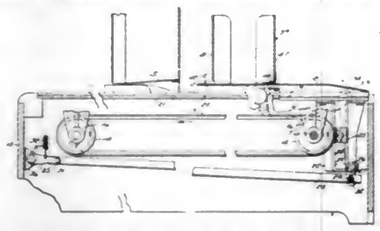
A machine for peeling coconuts, comprising a standard, a power unit including a shaft having an axially-disposed, outwardly-facing, blade-like cutter on the outer end of said shaft, a housing about said shaft and cutter having a peeling-discharge opening in its bottom and an axial opening in its outer end containing an annular seat in correlation to said cutter and against which the coconut is engaged for peeling, the cutter blades having their cutter edges concavely curved



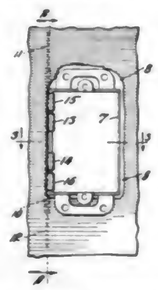
and thence deflected rearwardly into the housing to serve as fan blades, and a receptacle detachably mounted on the housing in communicating relation with the discharge opening.

2,456,447
DENTAL SURVEYING INSTRUMENT
Charles J. Ringle and Roy W. Smith, Buffalo, N. Y., assignors to Williams Gold Refining Company, Inc., a corporation of New York
Application November 2, 1945, Serial No. 626,327
2 Claims. (Cl. 32—32)

1. A dental instrument of the character described, comprising a supporting member, a table surmounting the same for tilting movement, a bearing bracket having a longitudinal bore therein converging inwardly at one end thereof, a bearing sleeve extending loosely into one end of said bore, an axially-displaceable swivel bearing in the opposite converging end thereof, a shaft extending through and journaled in said bearing sleeve and said swivel bearing, gearing between the shaft and the table for tilting the latter in response to the actuation of said shaft, the shaft-gear being mounted on the extended end of the shaft beyond the swivel bearing and abutting at its other end against the opposing end of the bearing bracket, and a spring applied to said shaft and interposed between said sleeve and said swivel bearing.



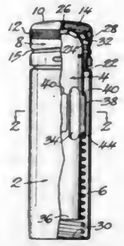
2,456,448
RECEPTACLE CLOSURE
Robert M. Ross, Katonah, N. Y.
Application October 5, 1945, Serial No. 620,466
8 Claims. (Cl. 215—43)



1. A receptacle closure of sheet material comprising an end wall portion; an outer side wall portion integral with said end wall portion; an intermediate wall portion integral with, and turned back upon, said outer side wall portion; and a substantially cylindrical inner side wall portion integral with, and turned back upon, said intermediate portion, said inner side wall portion having in its wall an indentation in the shape of a screw thread.

2,456,449
CARD STRIPPING AND FEEDING DEVICE
Francis J. Rouan, Stamford, and Frederick W. Uthenwoldt, Glenbrook, Conn., assignors to Pitney-Bowes, Inc., Stamford, Conn., a corporation of Delaware
Application November 23, 1946, Serial No. 711,890
3 Claims. (Cl. 271—44)

1. In a device for stripping and feeding the lowermost card from a stack of superimposed cards and comprising, a member having a card engaging portion and adapted to feed a card from a pick-up position to a discharge position, intermittently rotatable stripper means having a frictional portion engageable with the lower surface of the lowermost card to move said card from the stack to the pick-up position, a reciprocating drive for said member, and means associated with said reciprocating drive and connected with the stripper means to actuate said stripper during the card feeding motion of the drive.

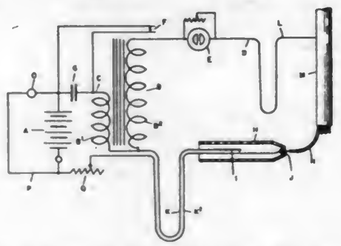


2,456,450
SWITCH BOX HOLDER
Joseph L. Sauter, Poughkeepsie, N. Y.
Application January 25, 1946, Serial No. 643,423
5 Claims. (Cl. 248—27)

1. A holder for securing an electric switch box or the like in a wall and comprising a base piece of thin sheet material of approximately the length of the box to be supported and short enough to be inserted at the side of the box through the hole provided to admit the box in the wall and an extension piece slidably mounted on said base piece and having a handle portion projecting at the front edge and at the inner end of the same and by which said extension piece may be slidably adjusted on said base piece and longitudinally extended to engage in back of the wall at a point beyond the end of the base piece and said front extending handle portion being bendable over the adjoining side edge of the box after said extensible piece has been so extended.

2,456,451
INHALER
Donald A. Seaver, West Cheshire, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application May 31, 1946, Serial No. 673,548
6 Claims. (Cl. 128—200)

1. An inhaler comprising a casing, a medicament holder slidably movable within said casing and having a lower portion and a nozzle portion, air channels formed in said holder and positioned extending longitudinally in the lower portion thereof, said holder lying entirely within said casing when in one position to which it is movable, longitudinally extending ribs located between said air channels and projecting outwardly from the exterior surface of said holder to engage said casing and guide the holder on movement thereof,

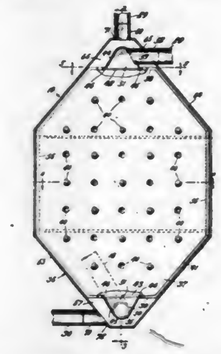


said ribs presenting downwardly facing shoulders on the lowermost ends thereof and spring means engaging said shoulders and casing for moving said holder with respect to said casing to a position in which portions only of said air channels are exposed to the exterior of said casing.

2,456,452
2-CHLOROINDONE
Nelson V. Seeger, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
No Drawing. Application May 8, 1946, Serial No. 668,309
3 Claims. (Cl. 260—590)

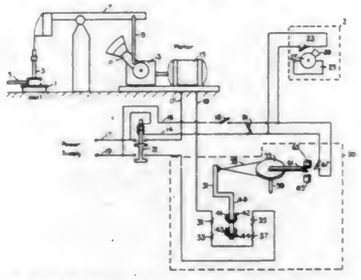
1. 2-chloroindone.

2,456,453
INSULATION BREAK DETECTOR
Douglas Shailor, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application March 20, 1944, Serial No. 527,281
2 Claims. (Cl. 175—183)



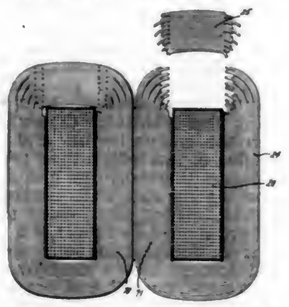
1. An insulation break detector for insulated electrical conductors, comprising an electric generator of pulsating current, a transformer operatively connected to said generator and having primary and secondary coils, a hand probe having a flexible casing, a circuit closing switch within said casing biased to open and a contact for electrical connection with an insulated conductor to be tested, a flexible connection between said transformer and probe including a plurality of electrical conductors forming portions of both primary and secondary circuits of said transformer, the secondary circuit extending to said contact and said switch being in series with both primary and secondary circuits, a flexible conductor for connecting the other terminal of said secondary coil with a conductor in proximity to the insulated conductor to be tested, and a neon lamp in series with said secondary circuit whereby pressure on the flexible casing of said probe will close said switch and primary circuit and will illuminate said lamp if the insulation of the conductor is defective.

2,456,454
BUTADIENE-ACRYLONITRILE COPOLYMER MIXED WITH VINYLIDENE CHLORIDE-ACRYLONITRILE COPOLYMER
Ralph J. Signer, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
No Drawing. Application January 17, 1946, Serial No. 641,875
16 Claims. (Cl. 260—45.5)



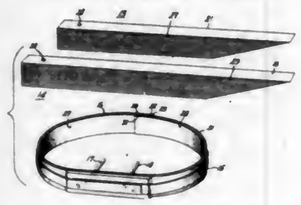
1. A composition consisting essentially of a volatile solvent and a mixture of (*a*) butadiene-acrylonitrile copolymer in which the acrylonitrile content is between 25% and 60% and (*b*) vinylidene chloride-acrylonitrile copolymer in which the vinylidene chloride is the predominant constituent.

2,456,455
HEAT EXCHANGER
Walter M. Simpson, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application October 17, 1944, Serial No. 559,083
4 Claims. (Cl. 257—245)



2. A liquid heat exchanger comprising a casing having inwardly converging sides at opposite ends with inlet and outlet ports at said opposite ends adjacent the apex of the converging sides, a series of separate closed compartments in the casing arranged in spaced relation to each other and having peripheral openings at their opposite ends in side by side abutting engagement, said compartments being of substantially the same contour as the casing and providing parallel paths of flow throughout the width of the casing for circulating liquids through the compartments and between the compartments and said compartments being of less length than the casing to provide chambers therebetween, and a header in each chamber having side walls spaced from the side walls of the casing and welded to the ends of the compartments to connect the peripheral openings therein and seal the joints between the headers and compartments whereby the entire area of the compartments and headers constitute heat transfer surfaces without any dead spaces of trapped liquid in the two paths of flow for the circulating liquids.

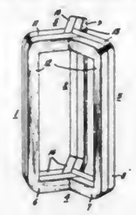
2,456,456
OIL WELL PUMP CONTROL SYSTEM
Grafton A. Smith, Tulsa, Okla., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application January 4, 1946, Serial No. 639,117
5 Claims. (Cl. 103—25)



5. In a method for intermittently pumping a well producing small quantities of fluid, the steps of pumping a well throughout a time period longer than that necessary for the pumping equipment to deplete the fluid in the well, recording the rate of energy consumption by the pumping equipment throughout said period, determining from said record the exact length of that effective portion of said period during which the fluid was being pumped from the well with a high rate of energy consumption, shutting the well down for an arbitrary period of time, repeating and recording the pumping and shut-down operations, determining from the record the optimum length of the shut down period necessary for the well to accumulate the desired quantity of fluid, and adjusting the well for automatic pumping operation wherein said well is started for consecutive pumping operation periods at intervals of time equal to the sum of an effective pumping period and an optimum shut down period and is stopped after the start of each pumping period in response to a decrease in the rate of energy consumption by the pumping equipment indicative of the depletion of the fluid in the well.

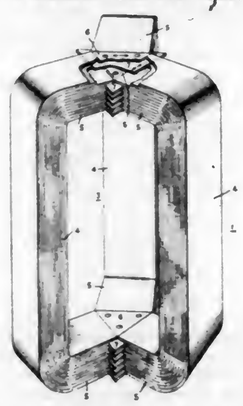
2,456,457
ELECTROMAGNETIC INDUCTION APPARATUS AND METHOD OF FORMING SAME
Gareth G. Somerville, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application May 22, 1944, Serial No. 536,748
16 Claims. (Cl. 175—356)

1. A closed curved iron type magnetic core including two groups of flatwise assembled magnetic sheets formed of magnetic strip material having the most favorable magnetic direction lengthwise of said strip, each of said groups forming a portion of the closed core, said sheets of at least one of said groups being flatwise curved forming a substantially strain-free core portion and providing continuous magnetic paths at corners, said second group of sheets being assembled with ends thereof in abutting relation with ends of said sheets of said first group so that flux passes between the abutting ends, said sheets of said first group being formed with a hole slightly displaced longitudinally from the center of said sheets, said sheets being assembled with the holes thereof in alignment and adjacent sheets being assembled longitudinally reversed from each other so as to provide overlapping ends and thereby stagger said butt joints.



2,456,458
ELECTROMAGNETIC INDUCTION APPARATUS AND METHOD OF FORMING SAME
Gareth G. Somerville, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application May 22, 1944, Serial No. 536,749
7 Claims. (Cl. 29—155.61)

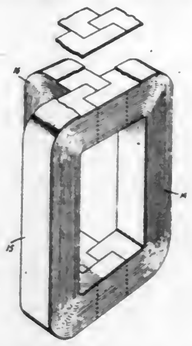
1. The method of producing an assembled magnetic core and winding for an electromagnetic induction apparatus including the steps of cutting from magnetic strip material at least two groups of sheets each having a length less than the total length of the perimeter of the finished core and with the lengths of the sheets of each group having progressively different lengths, assembling the sheets of both groups to provide a closed core of a plurality of layers and providing the longer sheets of each group at the outer periphery with each layer including one sheet from each group and with the sheets of each group being assembled alternately, aligning the ends of the sheets to provide aligned joints in one portion of the core and staggering the opposite ends to provide staggered butt joints in another portion of the core, applying pressure at both the inside and outside surfaces of the assembled core structure so as to abut relatively closely adjacent ends of the sheets of each layer and to provide a relatively tight laminated structure with the shape the core will have in the finished apparatus, annealing the core, and disassembling the groups of sheets into two core portions and reassembling the two core portions around the winding.



2,456,459
MAGNETIC CORE
Gareth G. Somerville, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application January 18, 1947, Serial No. 722,838
4 Claims. (Cl. 175—356)

3. A three phase magnetic core comprising in combination at least six similar U-shaped magnetic members of radially nested laminations, said members being joined by pairs at their ends to form three closed loops whose halves are in planes making 120 degrees with each other, the three closed loops being placed side by side around

a circle so as to form three parallel split core legs joined at their ends by Y-shaped yokes, the laminations at the ends of the members which form each loop being interleaved.

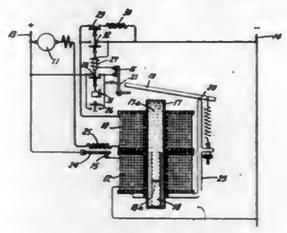


2,456,460
MAGNETIC CORE
Gareth G. Somerville, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application January 18, 1947, Serial No. 722,839
2 Claims. (Cl. 175—356)

1. A three phase magnetic core comprising, in combination, three generally U-shaped core portions made of nested curved U-shaped laminations, each having a most favorable magnetic direction coinciding with its length, the ends of the core portions having an alternating tongue and groove configuration produced by offsetting the ends of the laminations, and magnetic inserts fitted into the grooves of corresponding ends of said portions for joining them together, said inserts each having a most favorable magnetic direction, successive inserts having their most favorable magnetic direction progressively rotated at 120°.

2,456,461
MAGNETIC CORE
Cecil G. Dunn, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application January 18, 1947, Serial No. 722,843
9 Claims. (Cl. 175—356)

7. A three phase core comprising, in combination, three generally U-shaped bundles of flatwise curved laminations of magnetic strip material, the ends of the laminations in said bundles being uneven, said bundles being arranged with their corresponding ends adjacent to and facing



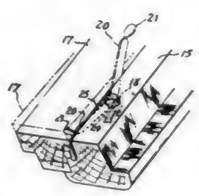
each other, and magnetic inserts interleaved between the uneven ends of the laminations of said bundles.

2,456,462
STABILIZATION OF POLYVINYL BUTYRAL RESINS
Gelu S. Stamatoff, Nutley, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 16, 1944, Serial No. 558,962
5 Claims. (Cl. 260—73)

1. Process of treating a crude, water-insoluble polyvinyl butyral resin which comprises suspending said resin in finely divided form in a preponderantly water solution maintained at a pH of 6.0–7.5 and an alkalinity of between 100 and 200, said solution containing, after said resin is substantially neutralized, at least 0.04%, by weight of said resin, of a saturated aliphatic amine containing from 2 to 6 carbon atoms, inclusive, and having two primary amino groups.

2,456,463
MOTOR PROTECTIVE DEVICE
George B. Starie, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 23, 1943, Serial No. 511,488
8 Claims. (Cl. 175—294)

8. A protective device for an electric motor comprising a biased open starting switch for connection in the circuit of the motor, a coil for closing said switch, a biased closed control switch in circuit with said coil, a manually operated biased open switch for closing the circuit of said coil through said control switch for closure of said starting switch, interlock switch means operated by said coil for maintaining said coil circuit closed through said control switch



after said control switch has been closed by said manually operated switch, an inverse time relay arranged to be connected in circuit with the motor provided with a member moved in response to the motor current to a predetermined position after a time interval thereby to effect the opening of said control switch for deenergization of said motor, said member being arranged to return to its starting position substantially instantaneously after the deenergization of the motor thereby to provide for the immediate restarting of the motor by said manually operated switch for operation until said member opens said control switch, disabling means for preventing movement of said member in response to motor current, and thermal motor current responsive means for controlling said disabling means to render said disabling means effective until said current responsive means is heated to a predetermined temperature whereupon said member of said inverse time relay moves to open said control switch.

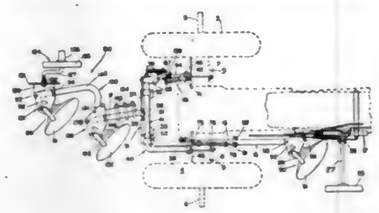
2,456,464

COMBINATION LATCHING, UNLATCHING, AND EJECTING MEANS FOR WINDOWS AND DOORS

Norman C. Steinicke, East Cleveland, Ohio, assignor to Weather-Seal, Inc., Barberton, Ohio, a corporation of Ohio

Application March 15, 1945, Serial No. 582,906
2 Claims. (Cl. 292—241)

1. In a window and door construction having a frame member and a sash member adapted to fit into the frame member with the side edges of both members facing each other and in abutting relation, the combination of means for moving the sash member into and out of such relation by substantially lateral movement of translation normal to the plane of the sash member comprising an annular pin mounted on one of said side edges of one of said members and projecting toward the abutting side edge of the other of said members, a pivoted arm mounted on said last mentioned side edge, and an arcuate flange on said arm engaging the outer periphery of said pin, the pivot point of said arm being eccentric with respect to said pin and said flange, while said pin and flange are concentric with respect to each other.



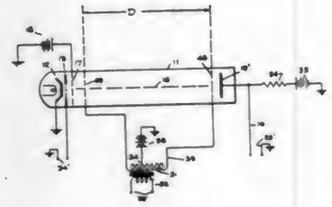
2,456,465

CONVERTIBLE DISK PLOW

Carl G. Strandlund, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application August 7, 1944, Serial No. 548,418
6 Claims. (Cl. 97—53)

2. In a convertible plow of the type having a main beam and an extension beam, attaching means for detachably connecting said extension beam to said main beam forward of the rear end of said main beam, a detachable furrow opener unit comprising bracket means, means engageable with both of said beams for detachably con-



necting said bracket means with both of said beams rearwardly of said attaching means when one beam is connected to the other beam, and a furrow opener carried by said bracket means.

2,456,466

VARIABLE TIME DELAY ELECTRONIC APPARATUS

David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application September 20, 1944, Serial No. 554,962
3 Claims. (Cl. 179—171.5)

1. In combination, means for producing an electron beam, a collector arranged to receive the electrons of said beam, a velocity controlling electrode disposed athwart the path of said beam, means for applying a modulating potential to said electrode, a second electrode disposed athwart the path of said beam in spaced relation to said first electrode, and means for supplying said second electrode with a potential opposite in phase to the potential of said first electrode.

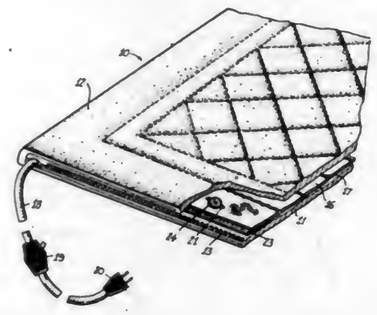
2,456,467

LAMINATED TRANSPARENT PLASTIC

David A. Swedlow, North Hollywood, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware

No Drawing. Application March 9, 1942, Serial No. 434,018
6 Claims. (Cl. 154—139)

5. A method of producing a laminate comprising coating one side of each of two sheets of polymethyl methacrylate with a solution of polyethyl acrylate in a volatile solvent, drying the resulting coatings, assembling said sheets, coated faces inward, with an intermediate flexible polyvinyl butyral sheet, and with films comprising methyl methacrylate monomer interposed between said polyvinyl butyral sheet and said coatings, and polymerzing said monomer.



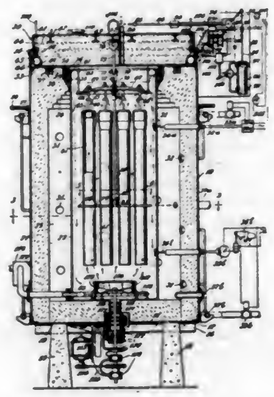
6. A laminate comprising a polymethyl methacrylate sheet cemented to a polyvinyl butyral sheet by means of the cementing action of a polymerizable acrylic monomer comprising methyl methacrylate and of a solution of polyethyl acrylate in a volatile solvent.

2,456,468

ELECTRICALLY HEATED COMFORTABLE

Henry P. Theodore, New York, N. Y., assignor to Bobrich Manufacturing Corp., New York, N. Y.

Application December 29, 1945, Serial No. 637,843
3 Claims. (Cl. 219—46)



1. A comfortable comprising a bottom layer, a top layer superimposed thereover and forming a pocket therewith, a heating unit comprising a sheet disposed within said pocket, means for detachably attaching said sheet to one of said layers, and an electric heating element attached to said sheet.

2,456,469

METALLURGICAL FURNACE

Charles E. Thomas, North Arlington, John S. Felter, Livingston, and Harold J. Ness, Newark, N. J., assignors to Metallurgical Processes Co., Newark, N. J., a partnership

Application June 10, 1943, Serial No. 490,256
25 Claims. (Cl. 263—40)

4. In a furnace structure, the combination of two co-operative chamber forming members movable into inter-engaging relation to form a closed chamber, a displaceable sealing medium carried by one of said members and engaged by the otner to seal said chamber and means for vibrating one of said members to facilitate displacement of said medium.

2,456,470

REFINING OF INOSITOL SOLUTIONS

McCalip J. Thomas, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware

No Drawing. Application December 5, 1945, Serial No. 633,047
2 Claims. (Cl. 260—631)

1. A process for refining crude aqueous solutions of inositol obtained by reacting phytin with aqueous media to yield hydrolyzates whose final pH values do not exceed about 9, which comprises subjecting the hydrolyzate to the combination of actions produced thereon by alkalizing the hydrolyzate to a pH of not less than about 9 with an effective alkalizing agent selected from the group consisting of the hydrates of the alkaline earth metals and heating said hydrolyzate to a temperature of not less than about 125° F., separating liquor from solids that precipitate from the hydrolyzate, acidifying said separated liquor to a pH not exceeding about 6.5 with an acid capable of forming a difficultly soluble salt with an alkaline earth metal cation, contacting said acidified liquor with a decolorizing carbon, and separating decolorized liquor from solids including the decolorizing carbon.

2,456,471

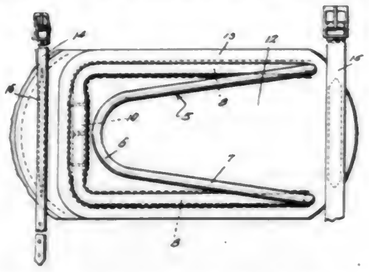
PROCESS AND PASTE FOR PRINTING FABRICS MADE OF CELLULOSE, SUCH AS TEXTILE FABRICS, PAPER AND THE LIKE, WITH CHROMIUM MORDANT DYESTUFFS

Ernst Tschan, Basel, Switzerland, assignor to Durand & Huguenin A. G., Basel, Switzerland, a Swiss firm.

No Drawing. Application March 15, 1945, Serial No. 583,007. In Switzerland February 17, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 17, 1964
14 Claims. (Cl. 8—72)

1. A process for printing cellulosic material with chrome dyestuffs, which comprises printing onto the said cellulosic material a printing paste containing, besides the dyestuff, a thickener, a water-soluble carboxylic acid amide, as chromium mordant an alkali metal chromate, a substance which splits off a strong acid in the heat and, as characteristic additions, a water-soluble salt of an inorganic acid derived from an oxygen compound of sulphur and possessing reducing properties, an aromatic compound capable of performing the reversible reaction quinone ⟷ hydroquinone, and ω:ω'-dihydroxydiethyl sulphide, and subjecting the obtained prints to a drying operation.

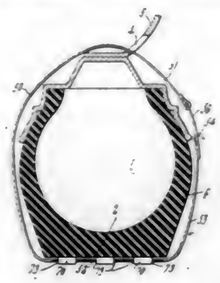
2,456,472



KNEEPAD

Douglas Frederick Turner, Detroit, Mich.

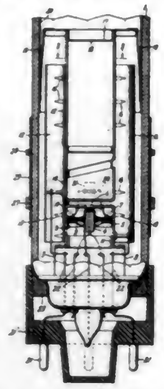
Application July 24, 1946, Serial No. 685,965
1 Claim. (Cl. 2—24)



A knee pad comprising a base constructed of rod material and including a U-shaped lower portion and a pair of spaced parallel arms integrally formed with the ends of said lower portion and supported above the latter, inwardly projecting ends at the front of said arms, a sleeve rigidly

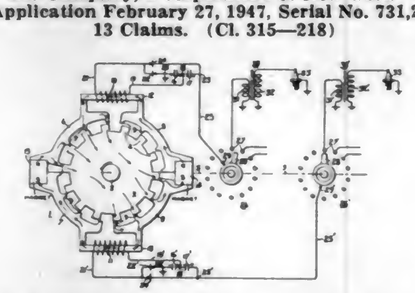
connecting said ends, a resilient pad and strips of flexible material secured to said pad and ex-

tending along and enclosing said arms, ends and sleeve to secure the same to said pad.



2,456,473
VEHICLE TIRE ANTISKID DEVICE
John Turner, Boston, Mass.
Application January 21, 1947, Serial No. 723,429
7 Claims. (Cl. 152—226)

6. An anti-skid device comprising a resilient normally open loop of flat strap metal for extension laterally across the tread face of a vehicle tire and for passage through an opening through the wheel body inwardly of said tire, the portion of said loop extending across said tread face being substantially flat, the ends of said loop being complementally formed for releasable interengagement to hold said device in position, said skid device being normally out of contact with said tire and wheel except along said tread face and adjacent to said wheel opening.

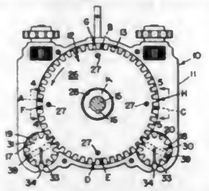


2,456,474
ELECTRIC DISCHARGE DEVICE
Joseph A. Wainwright, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application July 2, 1946, Serial No. 680,895
7 Claims. (Cl. 250—157)

1. In combination, an electric discharge device of the beam type including an envelope, a source of electrons including an electron gun positioned at one end of said envelope, means including said gun for producing a beam of electrons and subjecting said beam to an electrostatic field having a component transverse to the axis of said beam, and means for subjecting said beam to a transverse magnetic field to deflect the electrons of said beam in a direction opposite to the deflection produced by said electrostatic field, said last mentioned means including a substantially complete ring of permanently magnetized material magnetized to produce a flux in the direction of

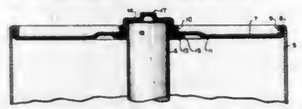
a diameter of said ring resiliently supported on the exterior of said envelope.

2,456,475
IGNITION SYSTEM
Edward F. Wargin, San Anselmo, Calif., and Joseph R. Harkness and Donald C. Peroutky, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application February 27, 1947, Serial No. 731,230
13 Claims. (Cl. 315—218)



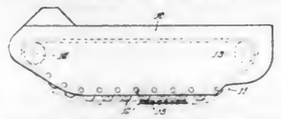
1. In an ignition system, a generator for producing periodic voltage impulses, voltage doubler type circuit means including a plurality of condensers connected series aiding, whereby a voltage impulse from said generator charges one of said condensers and a later voltage impulse from said generator charges another of said condensers, and discharging means arranged to simultaneously discharge said series connected condensers through ignition apparatus, said generator and said discharging means being synchronized and correlated so that each of said condensers receives a charging impulse from said generator prior to discharge through said ignition apparatus.

2,456,476
WIRE TYING MECHANISM
James Rex West and Frank D. Jones, Ottumwa, Iowa, assignors to Deere Manufacturing Co., a corporation of Iowa
Application July 12, 1945, Serial No. 604,673
16 Claims. (Cl. 140—93)



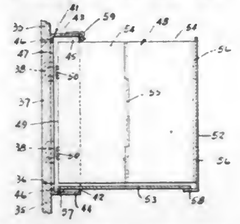
1. In wire tying mechanism, a rotatable twister member having a slot therein for receiving two strands of wire to be twisted together by rotation of said member, a cutting element, and

means mounting said element on said member providing for rotation of the element with the member and for shifting movement of said element relative to said member, said element hav-



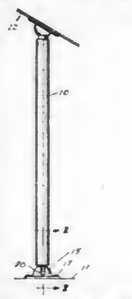
ing a shearing edge and said member having a cooperable shearing edge, and means engageable with said element during rotation of said member to shift said element to move said shearing edges together to sever said wire strands.

2,456,477
ELECTRIC BATTERY IMPROVEMENT
Victor Alvear, Clifton, N. J.
Application February 12, 1948, Serial No. 7,785
3 Claims. (Cl. 136—133)



3. A dry cell comprising a tubular outer electrode, a cylindrical inner electrode, a top secured to the outer electrode and coated with insulating material on its inner face, a terminal cap on the inner electrode, an insulating shield interposed between said cap and said top, said top having an outwardly flaring neck embracing said shield.

2,456,478
SELECTIVE PROPULSION MEANS FOR AMPHIBIOUS CRAFT
Milton B. Anderson, Rockford, Ill., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application January 15, 1944, Serial No. 518,364
20 Claims. (Cl. 115—1)

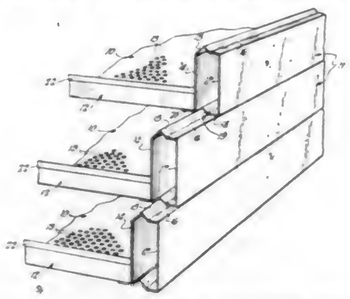


1. In a boat, the combination of means on the exterior of the boat for propelling the boat, a pair of motors in the boat disposed on opposite sides thereof, power transmitting means for operatively connecting said motors and said propelling means and including a transmission for each of said motors, each of said transmissions being adapted to be conditioned for neutral or to be power transmitting in two different speed ratios, means for shifting said transmissions, a control lever connected to said shifting means and adapted in a single movement to actuate the shifting means to simultaneously shift the transmissions to provide successively all of said conditions, and means selectively operable for limiting the movement of said lever whereby the transmissions may be shifted into only said power transmitting conditions and exclusive of neutral.

2,456,479
COLLAPSIBLE CONTAINER
Michael Antil, Cortland, N. Y.
Application December 5, 1946, Serial No. 714,216
2 Claims. (Cl. 220—6)

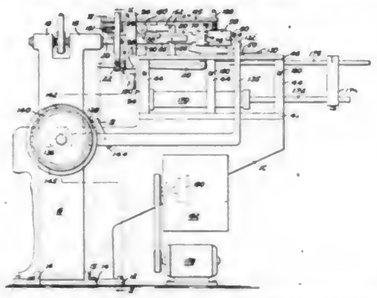
1. A device of the class described, comprising a casing for attachment on a vertical support and having an open front surrounded by top, bottom and end walls, accordion-like side walls mounted at their inner ends within said casing, a front wall mounted across the outer ends of said accordion-like side walls, a base wall hingedly mounted at its bottom edge within said casing for forming the bottom of said container when extended, said casing being frame-like and having a back wall with an opening, a support for and extended across the back of said container and having an opening aligned with said opening, and a panel for closing said opening in said support, whereby when said panel is open said side walls and said front wall and said base wall may be extended by pushing forward through said opening.

2,456,480
STANCHION CONNECTION
Dwight E. Austin, Kent, Ohio, assignor to Samuel Moore & Company, Cleveland, Ohio, a corporation of Ohio
Application March 26, 1945, Serial No. 584,977
4 Claims. (Cl. 248—351)



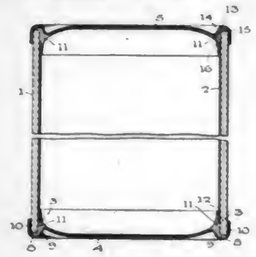
1. A device for supporting a hollow stanchion comprising a resilient bushing adapted to be disposed within the stanchion, means within the bushing adapted to expand it radially against the wall of the stanchion, said means including a ball and socket device for attaching the stanchion to a supporting surface.

2,456,481
RIGID LIGHTWEIGHT METAL TRAY
William Gammell Ballantyne and Julien Adams Thompson, Portland, Oreg.
Application April 25, 1946, Serial No. 664,939
2 Claims. (Cl. 34—238)



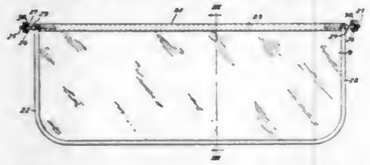
2. A tray of the class described comprising a single piece of sheet metal shaped and conformed

to provide a rectangular horizontal foraminous floor, a first pair of flanges coextensive with and upturned from opposite edges of said floor, each flange of said first pair extending substantially upwardly from said floor to provide an inner wall, thence further upwardly and outwardly and thence downwardly and outwardly to provide a stacking ridge, thence substantially horizontally



outwardly to provide a supporting shoulder, thence substantially downwardly to provide an outer wall spaced from the inner wall, thence substantially horizontally inwardly to provide a seating shoulder, thence upwardly and inwardly and thence downwardly and inwardly to provide a stacking groove, and thence substantially horizontally inwardly contiguously to underlie a marginal portion of the floor.

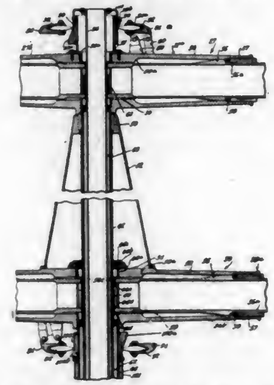
2,456,482
KNIFE BLADE GRINDING MACHINE
Harlin W. Barnard, Olean, N. Y., and Carl Oscar Johnson and Fred P. Carey, Bradford, Pa., assignors to W. R. Case & Sons Cutlery Co., Bradford, Pa.
Application March 15, 1946, Serial No. 654,590
6 Claims. (Cl. 51—85)



1. In a knife blade grinding machine, a base, a pair of beams movably fastened to said base and each mounting a grinding wheel whereby said grinding wheels are disposed in edge-to-edge relation for grinding a knife blade therebetween and relatively movable to regulate the grinding gap therebetween, a cross head slidably mounted upon said base for reciprocation in the direction of the grinding gap between said wheels, means for pivotally mounting a blade blank at its handle end portion on said cross head, a knife blade guide pivotally mounted upon said base and having an edge portion slidably engaging under the tip end portion of said knife blank, said guide edge being disposed closely adjacent said grinding wheels and said mechanism being so constructed and arranged as to dispose the knife edge portion of said blade blank between said grinding wheels at approximately the elevation of the plane of the grinding wheel axes throughout all phases of the blade blank movement through said grinding gap, means for relatively moving said grinding wheels to regulate the gap therebetween in response to reciprocations of said crosshead, and means for automatically tilting the longitudinal attitude of said blade blank as it reciprocates through said grinding gap.

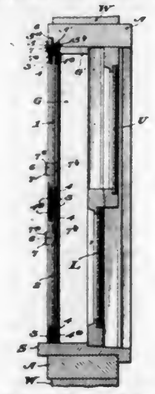
2,456,483
CONTAINER
Robert Beattie, Plainfield, N. J., assignor to Tide Water Associated Oil Company, Bayonne, N. J., a corporation of Delaware
Application March 13, 1945, Serial No. 582,493
3 Claims. (Cl. 229—14)

1. A unit container for lubricating oils and the like proofed to prevent seepage or leakage, comprising a non-metallic, deformable, substantially tubular body portion, a lining of separate, preformed sheet proofing material substantially completely covering the interior surfaces of said tubular body portion but extending to a point appreciably removed from either end thereof, a resilient and flexible film of adhesive material extending from the ends of the body portion over the unlined surfaces and to a point beyond the lateral extremities of said lining, and flanged, deformable top and bottom caps fitted over the ends of the body portion, the surfaces of the caps being appreciably removed from the edges of said lining so that, in the event of shock from accidental dropping, the surfaces of the cap, the film of adhesive material and the unlined body portion absorb the shock before it reaches the lining.



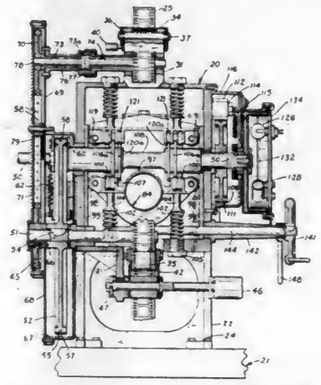
2,456,484
GLARE SCREEN
Lee Alexander Bell, Valencia, Pa.
Application September 23, 1946, Serial No. 698,626
2 Claims. (Cl. 296—97)

1. A glare screen comprising a rod, a frame member of split sleeve form partly embracing the rod, and having its longitudinal edges spaced apart to receive an edge of a glass plate between them, a frame member of yoke-like form having a channel to receive the other edges of the glass, screws extending through the yoke adjacent to its ends and into axially-extending tapped holes



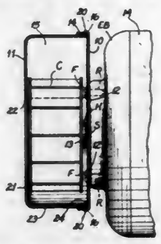
in the ends of the rod, the screws having ball-shaped heads, bracket arms having yieldable sockets partially embracing the ball heads, and clamping nuts screw-threaded on the arms and movable to contract the sockets on the ball heads, to thereby hold the frame against idle tilting movements relative to the brackets.

2,456,485
HELICOPTER WITH COAXIAL ROTORS
Vincent Bendix, Flemington, N. J., assignor to Helicopters, Inc., a corporation of Delaware
Application November 23, 1943, Serial No. 511,408
19 Claims. (Cl. 170—135.24)



1. In a helicopter, the combination of a pair of eccentric counter-rotatable drive shafts, a rotor mounted on each drive shaft, each rotor having a plurality of variable pitch wings, means for varying the pitch of the wings of said rotors selectively in the same or in the opposite sense, a propeller blade extending longitudinally of each wing, and means for intermittently projecting and retracting said propeller blade with respect to said wing.

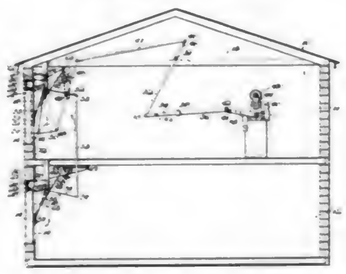
2,456,486
INSIDE STORM WINDOW
Mathew W. Berghoff, La Fayette, Ind., assignor, by direct and mesne assignments, to The B-J Company, Inc., West Lafayette, Ind., a corporation of Indiana
Application January 2, 1946, Serial No. 638,689
13 Claims. (Cl. 20—55)



1. A storm window adapted to be mounted at the inside of window openings or the like, comprising a rigid panel of less area than the window opening, a continuous resilient rubber frame of substantial width around the periphery of the panel, said frame being normally of larger area than the window opening and adapted to be slightly compressed when positioned in said opening, thereby forming an effective air and moisture seal between the contacting edges of the panel and the walls of the opening.

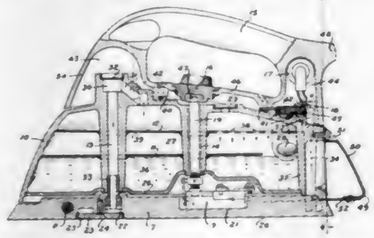
2,456,487
STROBOSCOPIC PROJECTOR OF THE CONTINUOUSLY MOVING FILM TYPE
John Brosius, Jr., Seattle, Wash.
Application September 10, 1946, Serial No. 695,968
9 Claims. (Cl. 88—16.8)

8. A motion picture projector comprising a housing, means driving a film at constant speed through said housing, a lens supporting member slidable in said housing, a counter-balance member slidable in said housing, a drive shaft rotatable between said members, and cam means operatively connected to said drive shaft engaging said members for sliding said members in opposite directions upon rotation of said shaft for counterbalancing the thrust torque on said shaft.



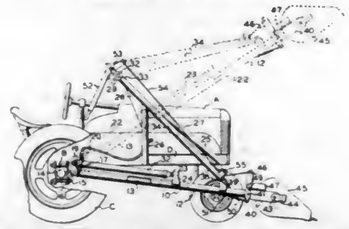
2,456,488
CENTRIFUGAL BLOWER HOUSING
Raymond H. Brown, New Hartford, Conn., assignor to The Torrington Manufacturing Co., Torrington, Conn., a corporation of Connecticut
Application March 15, 1945, Serial No. 582,941
2 Claims. (Cl. 230—133)

2. A housing adapted to enclose and coact with a blower wheel, the housing being formed of a pair of component closure portions one of which is a substantially planar element for attachment to a motor frame or the like, and provided with an intermediate shaft opening, the planar ele-



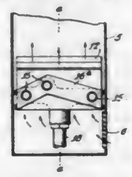
ment being provided with a narrow, continuous, peripheral flange provided with rectangular slots immediately adjacent the planar plate portion, the companion closure portion of the housing consisting of a drawn metal cup, the cup portion being formed with short integral right angular outstanding tongues corresponding in number to the slots therefor in the flange of the first said housing portion, the tongues being so formed that the base of each fills and seals the slot it occupies, the tongues being spaced along the free margin of the cup-like element and being extended radially outwardly of such margin said tongues each having its opposite end margins diverging toward the base of the tongue, thereby adapting the tongues for wedge-seating in said slots, the location of tongues in assembly further being such that they lie along and parallel to the planar portion of the first said housing element, and the length of the tongues being such that they extend through to interlock with, and seal, yet do not project substantially outwardly of the slots therefor, when the parts are in assembly, the material of the cup-like housing portion being sufficiently flexible to enable depression of the peripheral areas thereof adjacent the tongues to permit withdrawal of the tongues from and their insertion in the slots.

2,456,489
POULTRY HOUSE
John D. Burkholder, Jr., Harrisonburg, Va.
Application April 28, 1945, Serial No. 590,758
6 Claims. (Cl. 98—32)



1. A poultry house having upper and lower stories, a plurality of pairs of lower ventilator sashes for each story arranged at one side of the house, means to pivotally support each pair of ventilator sashes, a plurality of pairs of ventilators for each story arranged above the ventilator sashes and at the same side of the house, the pairs of ventilator sashes of the two stories and the pairs of ventilators of the two stories forming vertical units, a generally horizontal rock shaft extending longitudinally within the upper story adjacent to the pairs of ventilator sashes, depending cranks corresponding in number and arrangement to the pairs of ventilator sashes in the upper story and connected with such pairs of ventilator sashes and mounted upon the rock shaft, pairs of cranks connected with the rock shaft and corresponding in number and arrangement to the ventilators of the upper story, means connecting the pairs of cranks with the pairs of ventilators, generally vertical cranks mounted upon the rock shaft and depending therefrom and arranged in spaced relation thereto, generally vertical operating levers pivotally supported between their ends and corresponding in number and arrangement to the generally vertical cranks, means connecting the lower ends of the generally vertical operating levers with the generally vertical cranks, a main operating rock shaft extending longitudinally within the upper story, generally vertical cranks mounted upon the main operating rock shaft, links connecting the last-named generally vertical cranks and the upper ends of the operating levers, a lever mounted upon the main operating rock shaft and longer than the cranks carried thereby, means to move the last-named lever, a generally horizontal rock shaft extending longitudinally within the lower story near the ventilator sashes, generally vertical cranks mounted upon the last-named rock shaft and corresponding in number and arrangement to the pairs of ventilator sashes of the lower story and connected therewith, pairs of generally vertical cranks mounted upon the last-named rock shaft and corresponding in number and arrangement to the pairs of ventilators of the lower story, means connecting the last-named cranks and last-named ventilators, a plurality of generally horizontal cranks mounted upon the first-named rock shaft of the upper story, a plurality of generally horizontal cranks mounted upon the rock shaft of the lower story and corresponding in number and arrangement to the generally horizontal cranks of the upper story, and links connecting the generally horizontal cranks of the upper story with the generally horizontal cranks of the lower story.

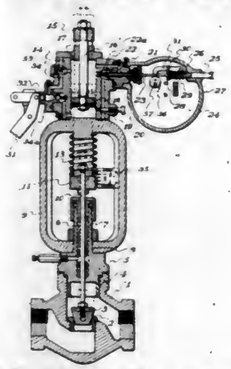
2,456,490
STEAM-PRESS IRON AND STEAM BAFFLE AND SEPARATOR THEREFOR
Fred Busch, Wauwatosa, and August J. Nelson, Milwaukee, Wis., assignors, by mesne assignments, to Milsteel Products Co., Milwaukee, Wis., a corporation of Wisconsin
Application November 10, 1945, Serial No. 627,870
2 Claims. (Cl. 38—77)



1. A steaming and pressing flatiron comprising, a lower sole plate, a body forming a liquid confining and steam generating chamber normally disposed above said sole plate, a manipulating handle for said body and sole plate, a heater for said sole plate and for the liquid in said chamber, means for conducting steam generated by said heater from the upper portion of said chamber to the lower face of said sole plate, means for admitting liquid to the lower portion of said chamber, and a pair of vertically spaced partitions spanning said chamber and dividing the same into a lower liquid confining section and an upper dry steam section and an intermediate drainage section all extending substantially throughout the length of said sole plate and body, the lower of said partitions being relatively flat and approximately parallel to said lower sole plate face and also being imperforate but terminating short of the rear wall of said chamber, and the upper partition being trough shaped and inclined downwardly and rearwardly and having therein front steam passages and rear liquid drainage openings but extending throughout the chamber length.

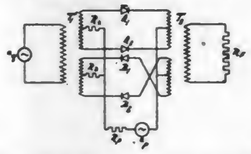
2,456,491
TRACTOR IMPLEMENT
Johnnie C. Collins, Dallas, Tex., assignor to Servis Equipment Company, Dallas, Tex.
Application September 4, 1945, Serial No. 614,183
7 Claims. (Cl. 214—141)

1. A tractor implement including, a pair of push bars each comprising a sleeve and a plunger, bell-cranks secured to the rear ends of the plungers, means for pivotally supporting the bell-cranks on the rear axle of a tractor, fluid-actuated cylinders overlying the push bars attached to the bell-cranks and having piston rods secured to the sleeves of the push bars, linkage for swingably supporting the sleeves of the push bars, and an earth tool carried by the push bar sleeves.



2,456,492
CONVECTOR HEATING UNIT
Arthur G. Dixon, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application February 15, 1945, Serial No. 578,091
6 Claims. (Cl. 257—136)

1. The combination with an enclosure having an air inlet opening adjacent the lower end of its front wall, and a discharge air opening adjacent the upper end of the said wall, of a convector heating unit supported in said enclosure entirely above the air inlet opening and comprising headers connected by tubes, and inverted V-shaped fins traversing said tubes with their apexes disposed closer to the rear of the enclosure than the front thereof, and there being a greater proportion of tubes adjacent the rear of the enclosure than at the front thereof.

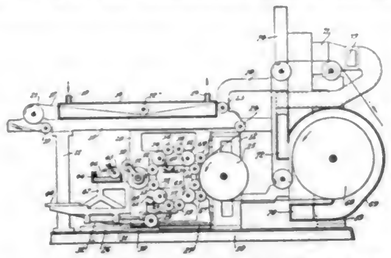


2,456,493
TIME CONTROLLED VALVE
Phillips B. Drane and Clarence D. Laidley, Tulsa, Okla.
Application February 26, 1947, Serial No. 730,938
8 Claims. (Cl. 161—7)

1. The combination with a reciprocating valve in a valve casing, of a time controlled mechanism for said valve, said mechanism comprising an upwardly extending frame rigidly connected to the valve casing, a valve rod extending upwardly into said frame, a yoke of an endless type having its lower end arched through the frame, expansion spring means interposed between the adjacent ends of the yoke and frame for normally urging the valve to closed position, a chambered block carried by the upper end of the frame within the yoke, a piston rod extending downwardly from the yoke and into the chamber of the block, a piston carried by said piston rod and means for

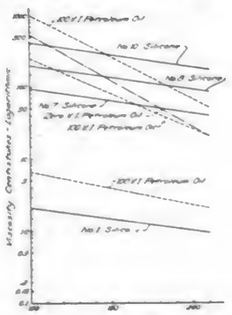
transferring fluid from either side of the piston in the chamber and holding the piston at various elevations and releasing and allowing the transfer of fluid from one side of the piston to the other at a predetermined time.

2,456,494
CIRCUIT ARRANGEMENT FOR THE MODULATION OF ELECTRICAL OSCILLATIONS
Johannes Ensink, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application February 11, 1947, Serial No. 727,780
In the Netherlands March 29, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 29, 1964
3 Claims. (Cl. 332—43)



1. A circuit arrangement for modulating electric oscillations, comprising a double push-pull balanced modulator having a plurality of rectifiers arranged to cooperate in pairs, one of said pairs being connected in phase opposition with respect to the other, means to apply the electric oscillation to be modulated in the same phase to each of the pairs of rectifiers of said modulator, means to apply a modulating oscillation voltage to the rectifiers of said modulator in phase opposition to each of the pairs of rectifiers of said modulator to modulate said electric oscillation, and a circuit element having appreciable impedance at the frequency of said oscillation interposed between said means to apply said electric oscillation and each of said pairs of rectifiers.

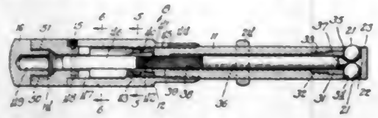
2,456,495
COATING MACHINE
Harry W. Faeber, Larchmont, N. Y., assignor to Time, Inc., New York, N. Y., a corporation of New York
Application August 1, 1945, Serial No. 608,228
6 Claims. (Cl. 91—50)



2. Coating mechanism comprising means for supporting a web and moving it continuously, a

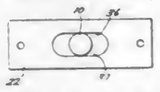
first series of distributing rollers substantially contacting each other in seriatim, a second similar series of distributing rollers spaced from and substantially parallel to the first series of rollers, a distributor roller common to said first and second series and in constant film transferring relationship with the first roller in each of said series,

a source of coating material, means to apply the coating material from said source to said common distributor roller, and separate applicator roller means in contact with the last distributing roller of each series, respectively, said applicator roller means being adapted to successively and in superimposed relationship deposit the coating material onto the moving web.



2,456,496
LUBRICANTS
James G. Ford, Sharon, and Robert N. Wenzel, Swissvale, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 15, 1942, Serial No. 439,066
5 Claims. (Cl. 252—49.6)

1. A lubricant composed of a mixture of liquid polymers of dialkyl silicones in which the alkyl groups each have at least two carbon atoms substantially free of the monoalkyl and trialkyl silicone derivatives, the lubricant being characterized by resistance to deterioration at high temperatures.

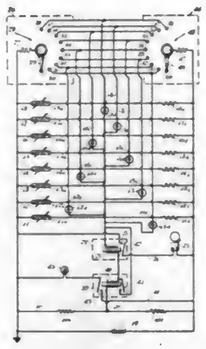


2,456,497
MICROMETER BORE GAUGE
Harold R. Forsmark, Chicago, Ill., assignor to Stiger Precision Products, Inc., Chicago, Ill., a corporation of Illinois
Application March 1, 1947, Serial No. 731,736
2 Claims. (Cl. 33—178)

1. A bore gage comprising, in combination, a cylindrical tubular body internally threaded at one end and externally and internally threaded at the other end, a cylindrical head having a diameter equal to that of said body and a reduced hollow externally threaded portion for entering said one end of said body whereby the head constitutes a cylindrical extension of said body, said head having a transverse cylindrical opening therein, a pair of balls having diameters slightly less than that of said cylindrical opening, movable apart therein to project beyond said head for engaging the surface of said bore, the end of said body adjacent said head being undercut to provide a circumferential lip abutting said head and intersecting said cylindrical opening therein to prevent said balls from escaping therefrom, a rod axially disposed within said body and hollow portion of said head and cone shaped at one

end for engaging said balls to move the same apart, said rod being threaded intermediate its ends for engagement with the internal threads at the other end of said body and having the other end flattened on two opposite sides and projecting from said body, an internally threaded thimble threaded on said other end of said body, an adjusting sleeve secured to the outer end of said thimble and having a slotted opening slightly greater in width than the distance between said flattened sides of said rod for receiving and rotating the same on rotation of said thimble while permitting relative longitudinal movement therebetween, and indicia on said body and sleeve to indicate the diameter of the bore being gaged.

2,456,498
DIRECTION SIGNAL
Paul L. Franck, Washington, D. C.
Application September 29, 1947, Serial No. 776,665
1 Claim. (Cl. 200—6)

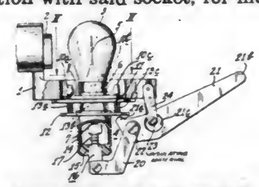


In a motor vehicle signal light actuating switch, the combination, which comprises, a relatively thin rectangular-shaped casing having outwardly disposed mounting flanges at the ends of the upper end, a cover plate having a slot therein positioned on the flanges, a U-shape block having a base and upwardly extending arms mounted in the casing with a press fit, contact screws threaded into the inner surfaces of the arms spaced from the upper ends thereof, a flat resilient strip mounted on the base of the block positioned midway between the arms thereof, a button mounted on the upper end of the strip and extending through the slot in the cover, and wires connected to the contact screws and strip extending through openings in the arms of the block and ends of the casing.

2,456,499
ELECTRICAL CONTROL AND/OR MEASURING SYSTEM
George H. Fritzinger, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application December 26, 1947, Serial No. 794,043
19 Claims. (Cl. 177—311)

1. An electrical system comprising a plurality of electrical bridges connected to a D. C. source

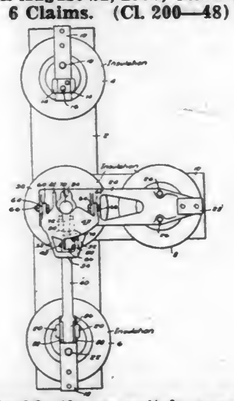
of current and having a common branch and respective other branches in parallel therewith, an electrical receiving instrument, a cross arm for each of said bridges including said instrument and a rectifier in series, said instrument being common as to all of said cross arms and each of said rectifiers being poled in the same direction relative to said instrument, each of said other branches including a varying resistor and a fixed



resistor in series and said common branch being arranged so that as any of said varying resistors reach a predetermined threshold value the respective rectifier becomes conducting to pass current to operate said instrument; and test means for said bridges selectively, comprising a test resistor and a selector switch for connecting said test resistor selectively across said varying resistors of the respective other branches.

2,456,500
PURIFICATION OF DIARYL MONOSULFIDES
Everett E. Gilbert, New York, and Howard D. Segool, Flushing, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application June 11, 1946, Serial No. 676,100
8 Claims. (Cl. 260—609)

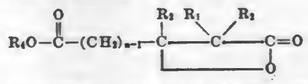
1. A process for the purification of crude diphenyl monosulfide of objectionable color and odor to produce a substantially colorless product boiling over a range of not more than 3° C. which comprises subjecting said diphenyl monosulfide to the action of a mixture of a metal above hydrogen in the electromotive series and an inorganic acid reactable with said metal to yield nascent hydrogen, at a temperature between about 30° and about 110° C., separating the thus treated diphenyl monosulfide from the reaction mixture and distilling to remove thiophenol.



2,456,501
LAMP SOCKET
George H. Goble, Haddon Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 2, 1946, Serial No. 700,609
4 Claims. (Cl. 173—328)

1. In a socket for a lamp having a base provided with an external electrical terminal, an electrical contact mounted for movement on said socket in register with said lamp terminal, a spring for biasing said contact into engagement with said lamp terminal, and a compound lever, operatively connected to said contact and having a lost motion connection with said socket, for moving said

contact out of engagement with said lamp terminal against the biasing force of said spring.

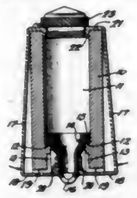


2,456,502
DOUBLE THROW SWITCH
Howard W. Graybill, Honey Brook, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 21, 1947, Serial No. 769,909
6 Claims. (Cl. 200—48)

1. In a double throw switch, spaced line contacts, a switch blade mounted on a support intermediate said contacts for pivotal movement of the blade into and out of engagement with either of said contacts, rotatable operating means for said blade located adjacent said blade support, cam track and follower means associated with said blade and operating means, respectively, said cam track means comprising similar displaced portions joined at a location which substantially corresponds to the medial position of said blade and being cooperable with said follower means for causing movement of said blade at each side of a medial position, respectively, and means separate from said cam means for switching said follower means to one or the other of said cam track portions dependent upon the direction of rotation of said operating means.

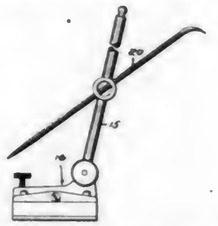
2,456,503
CONDENSATION OF KETENES WITH ESTERS OF KETO ACIDS
Hugh J. Hagemeyer, Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 7, 1946, Serial No. 675,304
9 Claims. (Cl. 260—344)

9. The method of forming a lactone having the general structure:



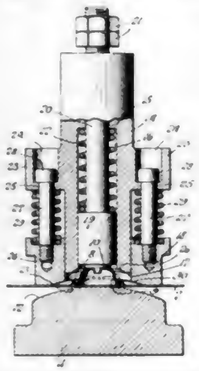
which comprises condensing a ketene having the

general structure $R_1R_2C{=}C{=}O$ with a compound having the general structure:



in the presence of a condensation catalyst selected from the group consisting of halides of boron, zinc, aluminum, tin, titanium, and iron, in which formulae R_1 and R_2 each represents a hydrogen atom; R_3 and R_4 each represents a member selected from the class consisting of a hydrogen atom, a methyl group, an ethyl group, a phenyl group, a benzyl group and a phenylethyl group; and n is a whole number.

2,456,504
DISPENSING DEVICE
Arthur Hammerstein, Palatine, Ill.
Application October 4, 1946, Serial No. 701,181
4 Claims. (Cl. 222—214)

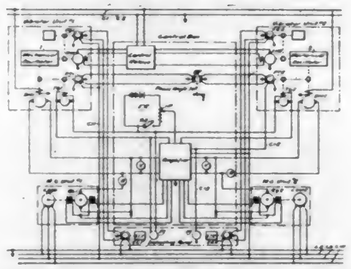


4. In a dispensing device, a casing providing a chamber open at both ends, a removable closure for one end of said chamber, a resilient thimble closing the other end of said chamber and having a slit therein which is normally closed by the resiliency of the material, and a pair of levers carried by said casing for movement toward and from said casing and having inwardly-turned arms engaging said thimble substantially in alignment with said slit, said inwardly-turned arms having end portions extending along the sides of said thimble.

2,456,505
CLAMPING UNIT FOR SURFACE GAUGES OR THE LIKE
James E. Hastings, Athol, Mass., assignor to The L. S. Starrett Company, Athol, Mass., a corporation of Massachusetts
Application January 5, 1946, Serial No. 639,480
6 Claims. (Cl. 248—124)

1. A clamping device adapted for use on a tool, such as a surface gage having a standard as an integral part thereof, said clamping device comprising a clamping bolt provided with a body portion having a hole therethrough and a threaded portion, a thumb screw on the threaded portion, and a plurality of pairs of gripping elements rotatably mounted on said bolt and slidable by the thumb screw axially along said bolt into engagement with each other, one pair of such gripping elements firmly gripping a standard inserted through said hole in the bolt and the other pair of said gripping elements simultaneously gripping a scriber or other instrumentality inserted therebetween and wherein one of the pair of gripping elements which grips the scriber or other instrumentality has a pair of circular holes therethrough and the cooperating gripping element of said pair has a pair of diametrically opposite semi-circular grooves therein which register with said pair of holes.

2,456,506
METHOD OF CLINCHING BAIL EARS TO CAN BODY BLANKS AND APPARATUS THEREFOR
John Henchert, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application December 21, 1945, Serial No. 636,428
5 Claims. (Cl. 113—116)

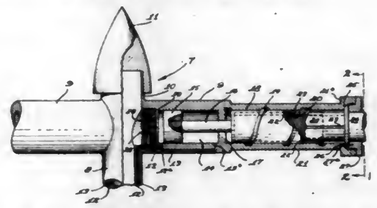


1. The method of clinching bail ears to can body blanks which comprises forming an upstanding annular rib on said blank, assembling an ear with a peripheral flange within said upstanding rib, shaping the blank around the rib into a cylindrical arc having a uniform continuous curvature, pressing the ear down with its flange in partial contact with the curved blank and clinching the rib over the flange, and simultaneously therewith causing the flange of the ear and rib to conform to the curvature of the blank.

2,456,507
METHOD OF APPLYING TUBULAR BANDAGES
Emil G. Hendrickson and Fritz La Cour, Lake Charles, La., assignors to The Scholl Mfg. Co., Inc., Chicago, Ill., a corporation of New York
Application October 3, 1946, Serial No. 701,022
4 Claims. (Cl. 128—157)

1. The method of applying a tubular bandage to a part of the body with the aid of an applicator shaped to slidingly embrace the part of the body to be bandaged, including the steps of threading a substantially double length bandage on the applicator, passing the applicator over a part of the body, holding the adjacent end of the bandage to the body part while drawing off the applicator with substantially half the bandage still thereon, turning the applicator to twist the bandage between the applicator and body part, and then reapplying the applicator to the body part to retrovert the remainder of the bandage over the portion first applied to the body part.

2,456,508
ELECTRIC MOTOR CONTROL SYSTEM
Seymour W. Herwald and Harold M. Watson, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 14, 1945, Serial No. 599,345
15 Claims. (Cl. 318—77)



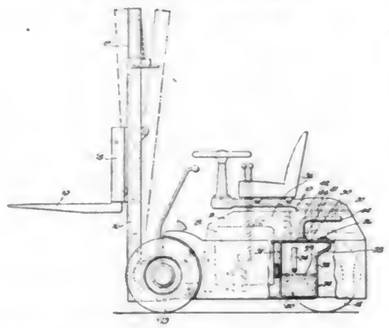
15. Control means for a motor comprising, in combination, an electrical system for energizing said motor, said system having a pair of input terminals and being normally balanced when said terminals are of like potential and being unbalanced and having an electrical output of magnitude and direction depending upon the potential differences of said pair of terminals, electrical means for producing a first electrical potential representative of a selected operating speed of said motor, means for applying said first electrical potential to one of said pair of terminals, means responsive to rotative movements of said motor for producing a second electrical potential corresponding to said rotative movements, means for applying said second electrical potential to the other of said pair of terminals, and means for instantaneously reducing said first electrical potential to zero.

2,456,509
MANUFACTURE OF HYDROGEN FLUORIDE
Abner C. Hopkins, Jr., Hempstead, and Richard M. Stephenson, Long Island City, N. Y., and William E. Watson, West Orange, N. J., assignors to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application October 6, 1944, Serial No. 557,548
4 Claims. (Cl. 23—153)

4. The process for making substantially pure anhydrous hydrogen fluoride comprising contacting a substantially dry gas mixture containing HF and SiF_4 with a substantially anhydrous absorbing liquor consisting essentially of fluosulfonic acid which contains not more than a minor contaminating amount of sulfuric acid, carrying out said contacting operation at temperature not higher than 40° C., whereby HF is absorbed by said liquor, the absorbing liquor is maintained in substantially anhydrous condition, and gaseous SiF_4 is discharged from said contacting operation, thereafter heating said liquor to temperature of the order of 160–164° C. to thereby strip HF out of said liquor, and recovering substantially pure anhydrous hydrogen fluoride in liquid condition.

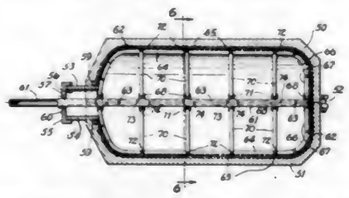
2,456,510
FLUID CONTROLLED FEATHERING MEANS FOR PROPELLERS
Hansford D. Hurt, Pasadena, Calif.
Application July 10, 1946, Serial No. 682,480
9 Claims. (Cl. 170—135.24)

1. In a structure of the kind described, a T-member the arms of which are tubular, there being a closed-in piston chamber in the inner end portion of each of said arms, a sleeve carried within each of said arms and having an axial stem which carries a head having a working fit in the adjacent piston chamber, means for sealing off the end portions of each of said piston chambers from the adjoining parts of the arm in which they are located, one of said sealing means for each piston chamber consisting of a cross wall having through it an aperture in which one of said stems has a working fit, ducts leading through the side wall of each of said tubular arms and opening into opposite end portions of said piston chambers to supply hydraulic pressure to operate said pistons and to relieve the hydraulic pressure from the portions of the piston chambers toward which the piston heads advance, the aforesaid sleeves each having a spiral interfitted spline and groove relation to the tubular arm in which it is contained so that the reciprocation of said pistons imparts reverse turning movements to said sleeves, and a plurality of propeller blades, one carried axially by each of said sleeves, each of said propeller blades having a cylindrical shank which is fastened in a turnable non-slidable manner in the outer end portion of the sleeve at its side of the T-member.



2,456,511
GOLF TEE
Siegfried Gordon Isserstedt, Toronto, Ontario, Canada
Application February 2, 1946, Serial No. 645,075
3 Claims. (Cl. 273—33)

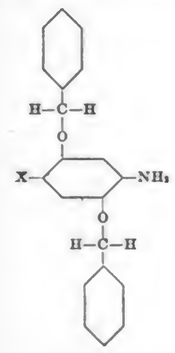
1. A golf tee comprising a blade pointed to form a shank designed to pierce the ground, said blade in its upper portion having an integral wing disposed to overlie a face of the blade in spaced apart relation thereto, the upper edge of said wing and the upper edge of said blade being disposed in substantially the same plane and jointly forming a support for a golf ball, said wing being connected to the blade along one edge thereof, the opposite edge of the blade and the opposite



edge of the wing being free from one another, said opposite edges being disposed at the front of the tee forming a channel therebetween opening towards the front of the tee to provide, in effect, a guideway to cause free projection of the ball from the tee when said ball is struck, said upper edges of the blade and the wing being slightly inclined rearwardly and downwardly, said tee being formed with an upwardly projecting shoulder substantially at the point of connection between the wing and the blade and forming with said upper edges a firm seat for the ball.

2,456,512
MUFFLER FOR INTERNAL-COMBUSTION ENGINES
George V. Johnson, Portland, Oreg., assignor to Hyster Company, Portland, Oreg., a corporation of Oregon
Original application December 31, 1943, Serial No. 516,405. Divided and this application August 17, 1945, Serial No. 611,082
3 Claims. (Cl. 180—54)

1. In an automotive vehicle the combination of a chassis provided with a pair of side panels joined by a top panel, each of said side panels carrying a muffler housing integrally formed therewith comprising side walls, bottom wall, and top wall, each of said side panels serving as one outer wall of the chassis and also as one side wall of each muffler housing, said housing containing a predetermined amount of extinguishing liquid, an exhaust pipe extending into said housing into proximity with the free surface of said liquid, and a tail pipe extending out of said housing adjacent the top thereof.

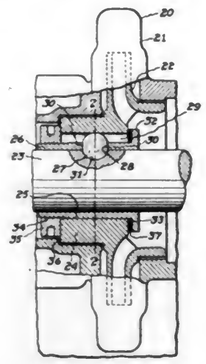


2,456,513
MOLDING OF HOLLOW ARTICLES
Theodore L. Johnson, St. Louis, Mo.
Application April 20, 1945, Serial No. 589,364
9 Claims. (Cl. 18—45)

1. The described method of molding in a mold cavity and concurrently thermally treating a plastic material, between companion rigid and flexible mold elements, which consists in structurally bracing the wall portions of the flexible element to a degree to cause a slightly subnormal distention thereof while located exteriorly of the mold cavity, winding predetermined lengths of the material to be molded, about the flexible mold element, introducing the flexible element carrying the material to be molded, to the cavity, conducting a temperature controlling fluid under pressure and into contact with the flexible element, and thereby controlling the temperature of the mold cavity through heat exchanging action of the heating fluid with the plastic material, and thereby more fully distending the flexible mold element substantially throughout the molding period, then withdrawing the heating fluid, relieving the flexible element of structural bracing, positively withdrawing the walls of the flexible element from a molding position and away from the molded article, and removing the molded article.

2,456,514
DIAZOTYPE LIGHT-SENSITIVE MATERIALS
Derland Johnston, Evanston, Ill., assignor to Charles Bruning Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application September 7, 1945, Serial No. 615,084
5 Claims. (Cl. 95—7)

1. A light-sensitive diazotype material, comprising a light-sensitive diazo derivative of a compound having the general formula:

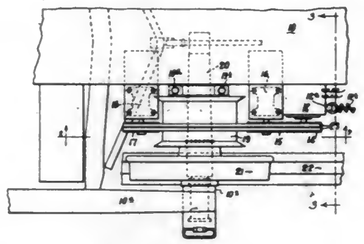


in which X is an acylamino-radical selected from the group consisting of formamido, acetamido, propionamido, butyramido, benzamido, phenylacetamido, methoxyformamido, ethoxyformamido, propoxyformamido and succinimido.

2,456,515
ANIMAL FEED COMPOSITION
Jonas Kamlet, New York, N. Y., and Ralph P. Reece, Highland Park, N. J., assignors to Thiokol Corporation, Trenton, N. J., a corporation of Delaware
No Drawing. Application January 6, 1948, Serial No. 816
2 Claims. (Cl. 99—2)

1. An animal feed containing 0.05 to 2.0 per cent by weight of 4-methyl, 2-thiouracil.

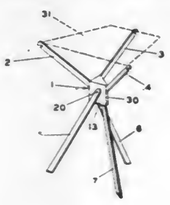
2,456,516
LOCKING AND ADJUSTING DEVICE
Carleton B. Kidney, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application February 19, 1946, Serial No. 648,699
2 Claims. (Cl. 287—52)



1. In a locking and adjusting device, a wheel having a key-slot therein, opposed seating surfaces on the wheel, a shaft for the wheel, a tubular holder interposed between the wheel and the shaft and having a hole extending therethrough, a key in the shaft to extend through the hole into the key-slot and having opposed sides to engage the wall of the hole for preventing axial movement in either direction of the holder with respect to the shaft, a shoulder on the tubular holder to serve as an abutment for one seating surface, and a nut threaded onto the tubular member to act against the other seating surface to hold the wheel against movement axially of the holder.

2,456,517
CYANOETHYL, ACETO-SUCCINIC ACID ESTERS
Elbert C. Ladd, Passaic, and Homer W. Paxton, Lodi, N. J., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application February 27, 1948, Serial No. 11,862
4 Claims. (Cl. 260—465.4)

1. An alpha-acyl-alpha-(2-cyanoethyl) succinic acid ester.

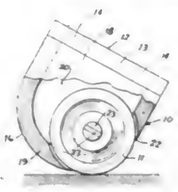


2,456,518
V-FLAT DRIVE
Edgar K. Lofton, Lake Bluff, Ill., assignor to The Dayton Rubber Company, a corporation of Ohio
Application December 29, 1944, Serial No. 570,273
7 Claims. (Cl. 74—221)

7. In combination, in a V-belt drive, a relatively long flat pulley, a plurality of V-shaped pulleys arranged on opposite sides of said flat pulley and having their axes of rotation normally parallel to the axis of rotation of said flat pulley, a V-shaped belt engaging the grooves of said V-shaped pulleys through its side walls and said flat pulley through its back, and yielding means continuously urging at least one of said V-shaped pulleys toward belt tightening position, and means supporting said flat pulley for pivoting movements about a line spaced from the axis of the pulley

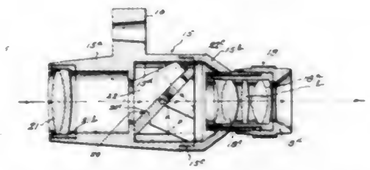
and generally perpendicular to the axes of all of said pulleys.

2,456,519
FOLDING STOOL SUPPORTING STRUCTURE
Ralph B. Long, Flint, Mich.
Application December 18, 1946, Serial No. 716,900
1 Claim. (Cl. 155—136)



In a folding stool having a center member, a group of seat supporting arms extending therefrom and a group of legs extending therefrom, the improvement in said center member comprising: a polygonal central section; a depending leaf perpendicularly disposed with relation thereto extending downwardly from each side of said central section and extending along each of said sides from one end thereof to a point close to but spaced from the other end; a stop near the lower edge of each of said leaves and on the edge of said leaf which connects with said one end of a side of the central section to which side a given leaf is attached; means pivotally holding said seat supporting arms on said leaves within the space partially defined thereby and permitting them in one pivotal position to extend outwardly and upwardly between the said leaves and means pivotally holding the legs outside of the space defined by said center member in position with respect to said stop for limiting movement of said leg with respect to said center member at a predetermined position.

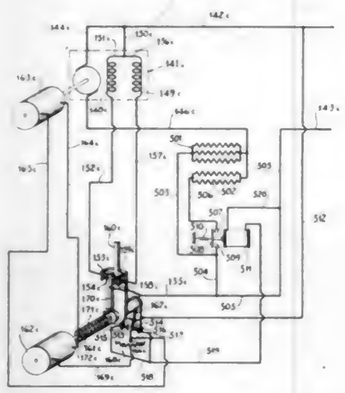
2,456,520
CASTER
Joseph G. Maresco, Bronx, N. Y.
Application December 31, 1946, Serial No. 719,458
1 Claim. (Cl. 16—40)



A caster, comprising a casing, a roller mounted on said casing a short distance above its bottom, said casing having a top weight supporting surface for attachment on the bottom of an article which is to be supported, and said casing also having a bottom curved cam-like surface for resting on the floor or ground for normally supporting said article in a stationary working posi-

tion and for tilting said casing when said article is tilted for lowering and engaging said roller against the floor or ground for receiving the weight of said article so that it may be easily moved about, said casing having side walls and

a bottom wall completely enclosing a space within said casing, and said roller being mounted within said casing and having a small edge portion projecting through an opening in the walls of said casing.

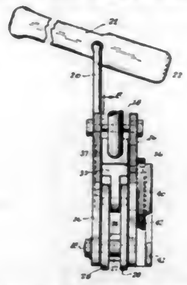


2,456,521
PRISM SYSTEM AND PRISM SYSTEM MOUNT FOR OPTICAL VIEWING INSTRUMENTS
Bernard T. Maxwell, Fairport, N. Y.
Application September 8, 1945, Serial No. 615,113
10 Claims. (Cl. 88—33)

1. In a prism system for optical viewing instruments including two prisms, each having three optically active faces, one of said prisms being a roof prism, two adjacent optically active faces of the two prisms facing each other being arranged obliquely with respect to the line of sight, said prism system being adapted to align a central entrant ray of one prism with the central exit ray leaving the second prism, an opaque diaphragm between the adjacent surfaces of said prisms provided with an aperture, located eccentrically with respect to the straight line along which the central entrant and exit rays are aligned and providing a passage for the picture forming rays passing through the said adjacent prism faces, while the opaque diaphragm intercepts the passage of undesirable rays.

2,456,522
CONTINUOUSLY ADJUSTABLE SPEED ELECTRIC DRIVE
Peter J. McLaren, deceased, late of New York, N. Y., by Central Hanover Bank and Trust Company, executor, New York, N. Y., John A. Vaughan, Hempstead, N. Y., and Macon Fry, Harrington Park, N. J.; said McLaren, Vaughan, and Fry, assignors, by mesne assignments, to The W. L. Maxson Corporation, New York, N. Y., a corporation of New York
Continuation of application Serial No. 473,800, January 28, 1943. This application May 18, 1948, Serial No. 27,807
5 Claims. (Cl. 318—257)

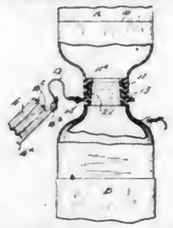
1. A reversible, adjustable speed, electric drive comprising, in combination, a shunt wound motor having an armature and a pair of opposed field windings, circuit means for connecting the armature in circuit with a source of current supply, circuit means for rendering the field windings alternatively effective that one to drive the motor in one direction and the other to drive the motor in the opposite direction, comprising a first pair of contacts for establishing a circuit including the first of said field windings but not the second, and a second pair of contacts for establishing a circuit including the second of said field windings but not the first, each pair of contacts including a manually settable contact and a cooperative speed responsive contact, a manual control member operable selectively in opposite directions from a neutral position throughout a prescribed range to cause one or the other pair of contacts to become engaged, means for causing the en-



gaged contacts to be pressed together with progressively increased force as the extent of departure of the manual control member from neutral is increased, and means operated by the motor for shifting the engaged speed responsive contact out of engagement with the cooperative manually settable contact against the force tending to hold them in engagement, when the motor speed exceeds a value characteristic of the position to which the manual control member has been moved, said means operated by the motor for shifting the speed responsive contacts out of engagement with the manually settable contacts comprising a generator driven by the motor, and a galvanometer operated by the generator and including a galvanometer output arm for shifting the speed responsive contacts

---

2,456,523
BANDING MACHINE
John H. Mead, Kalamazoo, Mich.
Application September 14, 1944, Serial No. 554,123
8 Claims. (Cl. 81—9.1)

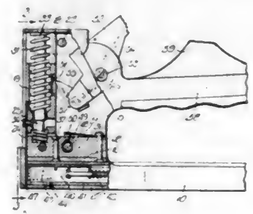


1. In a device for securing a band around an article with a seal, the combination comprising a support, a pair of crimping jaws pivotally attached to the support, an anvil disposed between said jaws and rigidly affixed to said support, a toggle joint connecting said jaws, a cutter connected to said toggle joint and slidable on said support, a guide means for said cutter affixed to said support, said guide means being provided with a shearing edge at the lower portion thereof to cooperate with said cutter, said cutter and said

jaws being spaced laterally from each other and means to actuate the toggle joint whereby said

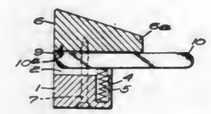
jaws and cutter are moved in crimping and cutting positions.

2,456,524
APPARATUS SUITABLE FOR USE IN THE TREATMENT OF WATER CONTAINING CHLORIDES DISSOLVED THEREIN
Howard D. Meincke, Jr., Glencoe, Ill., assignor to Howard D. Meincke, Sr., Glencoe, Ill.
Application May 12, 1944, Serial No. 535,336
4 Claims. (Cl. 210—16)



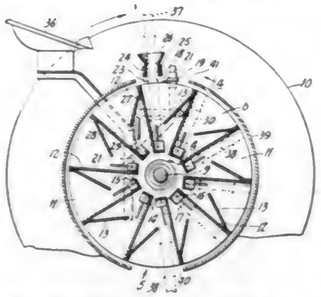
1. An apparatus suitable for the treatment of water containing a chloride in solution for the purpose of removing chlorine from said chloride dissolved therein, the said apparatus comprising a container of collapsible waterproof material having a neck of semi-rigid material, the neck having a mouth for the introduction thereinto and into said container of the water and a chemical suitable for precipitating chlorine from said chloride, dissolved therein, as an insoluble chloride, a second container of collapsible waterproof material having a neck of semi-rigid material provided with a mouth, a filter element of collapsible material within the second container and having its receiving portion secured in proximity to the inner end of the neck of the second container whereby water introduced into said second container must pass through said filter element, the necks of said containers being complementary in shape, one to the other, whereby the containers may be united through a movement of the neck of one of said containers longitudinally of the neck of the other container.

2,456,525
SUPPORTED SODIUM CATALYST AND PREPARATION THEREOF
George Alexander Mills, Swarthmore, Pa., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 6, 1947, Serial No. 726,957
6 Claims. (Cl. 252—204)



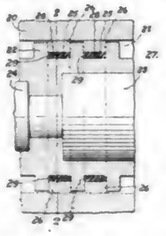
1. The process of preparing active surfaces of substantially pure metallic sodium which comprises treating an inert non-porous material with a solution of sodium in liquid ammonia, and evaporating the ammonia, while preventing access of air and moisture to the treated material during evaporation.

2,456,526
TACKER
Kenneth F. Morberg, Chicago, Ill., assignor to Henry A. Torstenson, Chicago, Ill.
Application December 21, 1946, Serial No. 717,692
5 Claims. (Cl. 1—49)



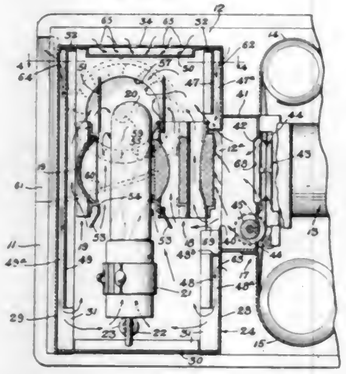
1. In a fastener driving mechanism comprising a housing having an upright guideway, a hollow driver mounted in said guideway, spring means for forcing the driver downwardly to drive a fastener, means for feeding fasteners to a driving position beneath the driver, means for raising the driver against the action of the spring to a predetermined position and then releasing the same, a bumper block having cushioning spring means beneath the driver and a guide member extending upwardly from the bumper block within the hollow driver and both said spring means whereby upon descent of the driver to deliver a blow to drive a fastener the driver will engage said spring means near the end of its movement to cushion the same.

2,456,527
TIE RACK
Guy S. Moore, Fall River, Mass., assignor to Alfred Lagasse, Boston, Mass.
Application April 9, 1947, Serial No. 740,456
2 Claims. (Cl. 211—89)



1. A tie rack having a base member adapted to be secured to a vertical surface, a series of slots extending across said base member in a direction away from the vertical surface, a cross-piece mounted in a groove in the base member at the inner end of each slot depending therein adjacent the upper edge thereof, a vertically disposed hole adjacent the outer edge of each slot, a compression spring in each hole; a tie-supporting bar in each slot, fulcrumed on said cross-piece, resting on said spring, and extending outward beyond said base member; and a cover member secured to the top of said base member and extending therebeyond over a portion of the tie bar whereby a tie may be yieldingly held between the tie bar and said cover.

2,456,528
STATIONARY CUTTER WITH ROTARY DRUM FEED FOR CUTTING SUGAR CANE INTO SEED LENGTHS
Robert Joseph Moyle, Innisfail, Queensland, Australia
Application October 16, 1946, Serial No. 703,597
In Australia April 3, 1945
3 Claims. (Cl. 146—166)

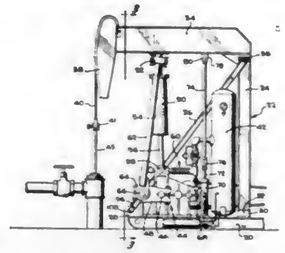


1. In an agriculture implement, a planting mechanism for sugar cane and the like comprising a rotary member having a horizontal axis, radially extending compartments formed in the member each adapted to receive a cane stalk upon rotation of the member to a charging position, means for rotating the member, a stationary cutting blade located parallel to the axis of the rotary member adjacent the periphery of the same in a position to sever the cane stalk as it is carried thereagainst during rotation of the member, movable guide means adjacent the periphery of the rotary member and spaced radially beyond the cutting blade arranged to direct successive lengths of the cane stalk into successive compartments during rotation of the member, spring means biasing said guide means toward normal operating position, and means for supporting said guide means for movement by the portion of the cane in the respective compartments against spring bias from a normal operating position in the front of the cutting blade toward the cutting blade to accommodate severance of the cane stalk and to return the guide means to normal operating position upon severance.

2,456,529
SEALING DEVICE
Julius Naab, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application October 20, 1945, Serial No. 623,579
1 Claim. (Cl. 309—43)

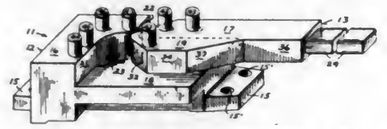
In a sealing device, a body having an annular groove in its periphery, sealing means in the groove consisting of a plurality of segments, a rubber ring in the groove to urge the segments radially outward and being in sealing engagement with the bottom of the groove and with the inner surfaces of the segments, and recesses arranged in staggered relation in the opposed edges of the rubber ring to permit the flow thereinto of rubber displaced by the segments.

2,456,530
PROJECTOR LAMP HOUSING AND COOLING SYSTEM THEREFOR
Otto R. Nemeth, Chicago, Ill.
Application May 22, 1944, Serial No. 536,725
3 Claims. (Cl. 88—24)



1. In combination in a projector lamp housing, external walls surrounding a space to be occupied by a projection lamp within the housing, respective inner heat shielding walls mounted in spaced relation to said external walls and cooperating therewith to provide air ducts, said air ducts being open to atmosphere at their upper ends and being open to the interior of the housing at their lower ends, additional heat shielding structure arranged on at least three sides of said projection lamp space and spaced from the lamp and from said heat shielding walls whereby to provide air flues about the lamp and between the heat shielding walls and said heat shielding structure in communication with the inner ends of said air ducts, and means for creating forced circulation of air from atmosphere downwardly through the air ducts and thereafter upwardly through said air flues, thus providing three insulating and cooling layers of moving air between the lamp and the exterior walls.

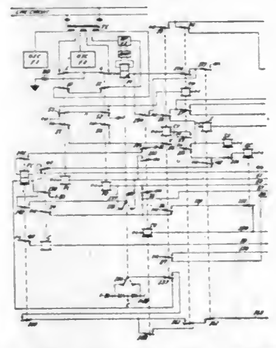
2,456,531
SETBACK MEANS FOR PUMPING UNITS
Edgar W. Patterson, Downey, Calif.
Application June 30, 1947, Serial No. 758,130
1 Claim. (Cl. 255—17)



In a well pumping unit including a base, a post pivoted at its lower end to said base and extending upwardly therefrom, a walking beam pivotally secured to the upper end of said post with one end arranged to extend over a well to be pumped, a strut connected at its upper end to said post, and releasable means for positively securing the upper end of said post against pivotal movement relative to said base during pumping operation of said unit: the improvement which comprises a horizontal shaft rotatably mounted transversely of said base, a crank arm secured to said shaft, with the outer end of said crank arm pivotally secured to the lower end of said strut, a worm wheel secured to said shaft, a self locking worm

gear rotatably mounted on said base for meshing engagement with said worm wheel, and means for rotating said worm gear to rotate said shaft and crank arm to cause said strut to pivot said post relative to said base to selectively position said

end of said walking beam over a well or to retract such end from over the well without movement of said base, said worm gear being operative to lock said worm wheel, shaft, crank arm, strut and post against movement from any position of adjustment thereof.

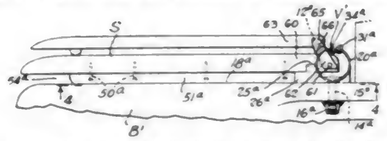


2,456,532
ROD BENDER
Peter L. Perazzo, Napa, Calif.
Application December 1, 1945, Serial No. 632,237
5 Claims. (Cl. 153—15)

1. In a rod bender, a base providing a flat upper face, former pins extending upwardly from said base face, a lever arm mounted on said base for swinging about a fixed axis perpendicular to the upper base face and having a flat upper face coplanar with said base face, and former pins extending from the upper face of said lever arm in eccentric relation to its axis of swinging, said former pins of the base and lever arm being so related as to engage a rod disposed upon said upper faces of the base and arm as the sole means for bending the rod about one of them as the lever arm is swung from the position it had when the rod was placed upon the base and lever arm.

2,456,533
CENTRALIZED TRAFFIC CONTROL SYSTEM FOR RAILROADS
Neil D. Preston and Forest B. Hitchcock, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application May 14, 1945, Serial No. 593,576
35 Claims. (Cl. 177—353)

2. A code communication system operating by carrier frequency transmission for providing indications from a plurality of field stations one at a time in a predetermined order during successive operating cycles to a distant control office comprising, transmitting means at the control office including self-propelled stepping means operable to transmit to all field stations impulses of carrier frequency of different selected characters at successive intervals, transmitting means associated with each field station and including stepping means automatically operated in response to the transmission of said impulses from the control office regardless of their selected characters for selectively transmitting or not a pulse of carrier frequency during each of the off intervals between said impulses from the control office dependent upon the code call allotted to that station, control means at the control office governed by the respective pulses received from the field stations then acting for determining the character of the next succeeding frequency impulse to be transmitted from the control office, said control means acting to transmit an impulse of one character in preference to the other if such character should be called for by any one of the field stations, station registration means in the control office operated in accordance with the character of the successive impulses transmitted by the control office, and station selecting means at each field station initially conditioned at the beginning of each operating cycle, and maintained effective after the transmission of the series of impulses from the control office only if the character of such impulses matches the code call belonging to that field station.

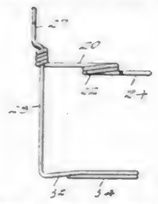


33. In a code communication system of the type described for establishing communication between a control office and a field station by space radiation during successive operating cycles, transmitting means and receiving means at the control office and at the field station, each transmitting means acting while in operation to render its associated receiving means ineffective, means in the control office including step-by-step means for governing the associated transmitting means to send a series of distinctive signal pulses to comprise a control code ending with a characteristic clear-out signal, means at the field station including step-by-step means governed by the associated receiving means for controlling the associated transmitting means for a relatively short time during successive off intervals in accordance with the indication code to be transmitted from that station, and means at said field station responsive to said characteristic clear-out signal to restore said step-by-step means to its normal condition.

2,456,534
VENTILATED TOILET
Andrew P. Riedele, Los Angeles, Calif.
Original application December 2, 1941, Serial No. 421,302. Divided and this application November 13, 1945, Serial No. 628,243
5 Claims. (Cl. 4—217)

1. In a ventilated toilet, a bowl; a seat therefor having a tail portion; a ventilating adapter having a tubular portion with a peripheral inlet and with an outlet adapted for connection to a vent pipe; means for securing the adapter to the bowl; and means pivotally mounting the

seat on the adapter, with said inlet disposed between the bowl and the undersurface of said seat and with the tail portion of the seat projecting through said inlet into said tubular portion when the seat occupies its lowered position on the bowl.



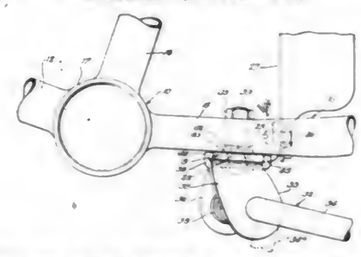
2,456,535

UNIVERSAL ALL WIRE BRACKET

Raymond R. Rundell, Miami, Fla.

Application October 8, 1945, Serial No. 621,140
7 Claims. (Cl. 248—302)

5. A wire bracket comprising a pair of vertical supporting bars, a circular base extending forwardly of the lower ends of said bars, a pair of confronting V-shaped jaw members, and means resiliently securing said jaw members to said bars adjacent the upper ends of the latter, each jaw including a loop at the apex of the V.



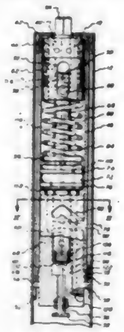
6. A wire bracket comprising a pair of base forming members, a pair of confronting V-shaped article gripping jaw members, means integral with said base forming members and said jaw members supporting the latter above said base forming members, confronting extensions carried by the rear ends of said base forming members, a vertical bar integral with at least one extension, a resilient coil integral with another extension and engaging about said bar, and a looped supporting member integral with said coil and said bar, said looped member being disposed perpendicular to the axis of said coil.

2,456,536

PARKING STAND AND MOUNTING THEREFOR

Frank W. Schwinn, Chicago, Ill.

Application December 29, 1945, Serial No. 637,841
1 Claim. (Cl. 280—301)



For use on a bicycle, motorcycle or the like including a frame having a rear fork with laterally separated side legs and a mud guard having an end portion extending between the side legs, the combination comprising a stamped metal strap of substantial thickness having a body portion secured to and extending laterally across the lower surfaces of the side legs of said fork at a position forwardly of said legs from the extending end of the mud guard, said strap having integrally formed on the body portion thereof a lug projecting angularly from one edge of said body portion intermediate said legs of the fork to serve as an anchor for said end portion of the mud guard, a parking stand support bracket having a portion of a size and shape to fit against the exposed lower surface of said strap, said portion of the bracket having integral flanges along opposite edges thereof for embracing the laterally disposed opposite side edges of the strap, the rear flange having a portion cut away to receive the base of said lug on the strap, and fastening means for removably securing the bracket to the strap with the cut-away flange embracing the sides of the lug laterally offset from said fastening means and in the plane of the body portion of the strap.

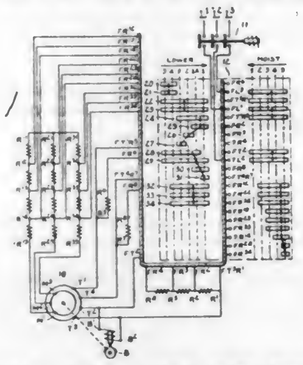
2,456,537

HYDRAULIC DOOR CHECK

David J. Seaman and Albert E. Wood, Battle Creek, and Clarence A. Hathaway, Lansing, Mich.; said Wood and said Hathaway assignors to said Seaman

Application August 7, 1944, Serial No. 548,388
4 Claims. (Cl. 16—55)

1. A hydraulic door check comprising spring means in which energy is stored up on opening movement of a door, a cylinder, a piston operating in said cylinder, said spring means acting against said piston to displace hydraulic fluid from said cylinder, valve means for controlling movement of said piston and the rate of dissipation of said spring, and means associated with said valve means including axial spaced portions of similar cross section separated by portions of lesser cross section for providing first an increasing then a decreasing and finally an increasing rate of restriction during movement of said piston prior to an increasing restriction at the time of complete closing.



2,456,538

CONTROL FOR ALTERNATING CURRENT MOTORS

Edwin W. Seeger, Wauwatosa, and Norbert L. Schmitz, Milwaukee, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware

Application November 12, 1946, Serial No. 709,342
11 Claims. (Cl. 318—225)

11. In combination, a polyphase multi-voltage alternating current motor having separate sets of terminals for each winding section in each phase of the motor primary, through the medium of which the winding sections in each phase may be connected in either series or parallel relation, a resistor, a polyphase alternating current supply circuit, and means to connect to said supply circuit all phases of the motor primary for single phase supply thereof, said means providing for connection of the winding sections in one phase of the motor primary in parallel or series relation

selectively and in changing them from parallel to series relation, first inserting said resistor in the connection to one terminal of the last mentioned winding sections, at the same time shifting to said one terminal from the opposite terminal of said last mentioned winding section its interconnection with the other of the last mentioned winding sections and then interrupting said connection through said resistor to said last mentioned winding sections.

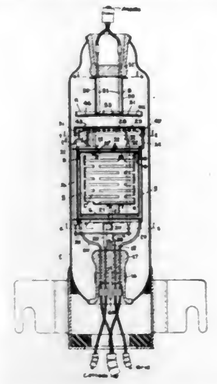
2,456,539

COAGULATION OF NEOPRENE LATEX

David G. Slovin, Providence, R. I., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application December 28, 1946, Serial No. 719,131
3 Claims. (Cl. 260—92.7)

1. The method of coagulating polychloroprene latex containing zinc oxide which comprises treating the polychloroprene with an aqueous solution comprising hydroxyacetic acid having a concentration between 15 and 70 percent and hydrochloric acid having a concentration between 0.5 and 5 percent, the concentrations being based on the weight of the aqueous solution.



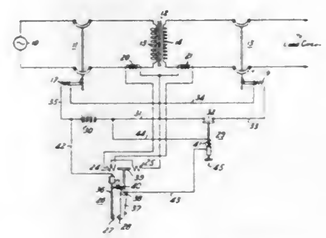
2,456,540

ELECTRODE STRUCTURE FOR ELECTRON DISCHARGE TUBES

Earl K. Smith, West Orange, N. J., assignor to Electrons, Incorporated, Newark, N. J., a corporation of Delaware

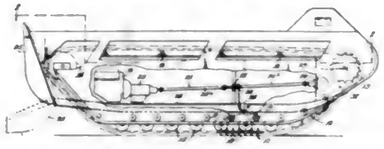
Application June 7, 1946, Serial No. 674,953
19 Claims. (Cl. 250—27.5)

1. A grid control electron discharge tube comprising, a thermionic emissive cathode, a heat shield surrounding said cathode and having a discharge opening therein, a control grid adjacent said discharge opening, and means supporting and insulating said grid from said heat shield including a plurality of insulating elements of ceramic material attached to said heat shield, and a plurality of metallic elements attached to said control grid, said insulating and metallic elements cooperating to shield certain surfaces of the insulating elements from the accumulation of evaporated material, thereby preventing formation of a continuous film of evaporated material on the exposed surfaces of said insulating element to constitute a surface leakage path of reduced resistance from the control grid to said heat shield.



2,456,541

DIFFERENTIAL RELAY

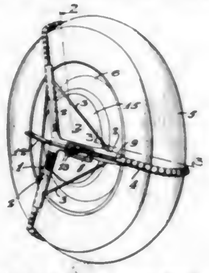


Josef Stoecklin, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland, a joint-stock company of Switzerland

Application October 24, 1945, Serial No. 624,189
In Switzerland October 28, 1944
5 Claims. (Cl. 175—294)

1. A device for protecting alternating current power apparatus including inductively coupled windings subject to transient magnetizing currents such as transformers and the like, and which are connected and disconnected from the power system by a circuit breaker having an electro-responsive tripping device therefor, said protective device comprising, a trip relay controlling energization of the circuit containing the tripping device of the circuit breaker, said trip relay having a delay closing characteristic, and an energizing circuit for said trip relay controlled jointly by contact means of a differential relay energized in accordance with the respective current flows in the inductively coupled windings of the power apparatus and by contact means of an electro-mechanical vibration contactor resonant at the frequency of the power system and operated therefrom.

2,456,542
AMPHIBIAN CARGO CARRIER
Benjamin A. Swennes, Rockford, Ill., assignor, by mesne assignments, to United States of America as represented by the Secretary of the Navy
Application October 30, 1943, Serial No. 508,304
30 Claims. (Cl. 115—1)

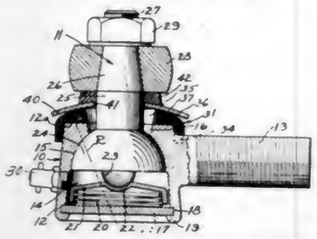


1. In an amphibian vehicle, the combination of movable tracks on the exterior of the vehicle adapted to propel the vehicle either over land or through the water, a motor in said vehicle and connected to drive said tracks, an accelerator for said motor, a transmission providing a plurality of speed ratios and operatively connected between said motor and said tracks, and governor means responsive to the speed of said tracks, said transmission being under the joint control of said accelerator and said governor means to down-shift the transmission when said accelerator is moved toward fully open throttle position or when the speed of said tracks decreases and to upshift the transmission when said accelerator is moved toward fully closed position or the speed of said tracks increases, whereby when the vehicle is driven from land to water or vice versa a proper change in speed ratio is provided.

2,456,543
METHOD OF PREPARING BUTANE-1,2,4-TRICARBOXYLIC ACID
Pliny O. Tawney, Passaic, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application March 3, 1948, Serial No. 12,893
1 Claim. (Cl. 260—537)

A method of preparing butane-1,2,4-tricarboxylic acid which comprises treating diethyl alpha-acetyl-alpha-(2-cyanoethyl) succinate with an alkali-metal hydroxide.

2,456,544
ANTISKID DEVICE
Charles E. Varner, Toledo, Ohio
Application January 23, 1946, Serial No. 642,901
3 Claims. (Cl. 152—225)

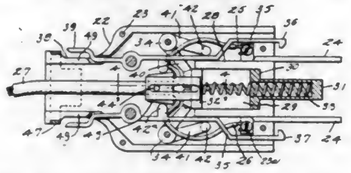


3. An anti-skid device comprising a body member having three outwardly opening tubular arms equally spaced in one plane, three tire engaging members, each having an outer hooked end of a shape and size to engage an automobile tire and an inwardly directed shank telescoped into one of said arms, two of said engaging members having their shanks threaded into the respective arms and the third engaging member having its shank slidable in its arm, and a quick-acting clamping device for drawing said third shank towards the center of the body member and locking it in that position.

2,456,545
SYNTHESIS OF CHLORAL
Thomas H. Vaughn, Grosse Ile, Mich., assignor to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan
No Drawing. Application November 26, 1945, Serial No. 630,995
7 Claims. (Cl. 260—601)

1. The method of making chloral which comprises chlorinating ethylene chlorohydrin at a temperature not over 90° C.

2,456,546
TIE ROD JOINT SEAL
Anthony Venditty, Detroit, Mich., assignor to Thompson Products, Incorporated, Cleveland, Ohio, a corporation of Ohio
Application January 1, 1944, Serial No. 516,740
1 Claim. (Cl. 287—90)

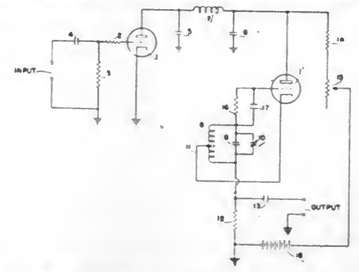


A universal joint seal comprising a deformable plastic member providing a deformable arcuate rocking surface on a joint part, a metal seal part having an arcuate rocking surface of greater radius than said deformable arcuate rocking surface and riding thereon, and resilient means urging said rocking surfaces into sealing engagement.

2,456,547
ELECTRIC FENCE WIRE FASTENER
Arthur E. Weber, Monee, Ill.
Application January 21, 1948, Serial No. 3,626
5 Claims. (Cl. 174—211)

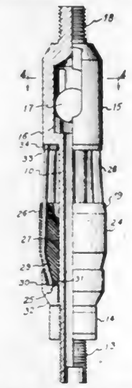
1. A device for detachably securing a strand of electric wire to a support comprising a strap having lateral offset portions formed at each end, one of said offset portions terminating in an inturned portion, means supported parallel to the strap by the other offset portion for securing the strap to a support, a radially slotted ring secured to said clamp, a feather edged insulated inner circumference on said ring upon which the electric wire is seated.

2,456,548
ELECTRICAL PLUG AND SOCKET
Leon Weiner and Bernard I. Bell, Houston, Tex.
Application March 25, 1946, Serial No. 656,801
2 Claims. (Cl. 173—361)



1. An improved electric connecting plug comprising a hollow body, conducting prongs extending from an end of said body, a pair of elongated levers pivoted intermediate their length in said body extending therefrom adjacent said prongs at one end and extending outwardly from said body at the other end, hooks on said levers at said one end, a pair of bellcranks rockable in said body, a plunger slidable in said body, a plug slidable in said body, a compressible spring between said plunger and said plug, one arm of each bellcrank abutting an end of said plug, the other arm of said bellcranks engaging said levers for biasing said levers in opposite directions, a cam slidable in said housing fixed on an electric cord extending therein engageable with said levers for rocking said levers against the spring tension for releasing the plug from hooked engagement with a correlated socket.

2,456,549
PREPARATION OF CARBOXYLIC ACIDS BY THE OXIDATION OF ALDEHYDES
Charles Weizmann, London, England, assignor to Polymerisable Products Limited, London County, England, a British company
No Drawing. Application January 29, 1947, Serial No. 725,147. In Great Britain April 18, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 18, 1961
11 Claims. (Cl. 260—530)

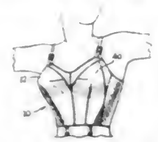


10. A process of oxidizing an aldehyde to a fatty acid which comprises passing a gaseous fluid containing free oxygen into contact with a mixture of such aldehyde with a catalyst which is a mixture of the manganese, cobalt and lead salts of an unsaturated aliphatic acid.

2,456,550
KEYED OSCILLATOR
Finley B. Wilson, San Antonio, Tex., assignor to the United States of America as represented by the Secretary of the Navy
Application July 16, 1946, Serial No. 684,049
9 Claims. (Cl. 250—36)

1. An electronic device for the generation of pulses at a frequency harmonically related to a trigger pulse frequency comprising, a free running inductance capacity oscillator including a vacuum tube having a plate and a cathode, a source of voltage having its positive terminal connected to said plate, a resistance connected between the cathode and the negative terminal of said source, output terminals connected to the ends of said resistance, and means responsive to a trigger pulse for rendering said oscillator inoperative for a predetermined interval whereby the oscillator will commence to oscillate at a predetermined time relative to initiation of the trigger pulse.

2,456,551
WELL SWAB
Robert A. Wilson, Dallas, Tex.
Application November 19, 1945, Serial No. 629,637
4 Claims. (Cl. 309—4)



1. A swab unit for a well swab including, a flat base collar, a plurality of upright wickers having their lower ends secured in the outer marginal portion of the base collar, said wickers being bowed outwardly at their lower medial portions, a flat retaining ring in which the upper ends of the wickers terminate substantially flush with the top of the retaining ring, and an elastic cup molded solidly around the bowed and lower portions of said wickers and having an annular lip at its upper end, the cup having an elongate elastic bore throughout its length.

2,456,552
BUST MOLDING AND UPLIFTING GARMENT
Max Emanuel Wittner, Brooklyn, N. Y.
Application June 28, 1947, Serial No. 757,698
3 Claims. (Cl. 2—42)

1. A bust molding and uplifting garment constituting a pair of like bust covering portions and means to hold the same in position on a wearer, each said bust covering portion including a panel of bias-cut material comprising a dome-shaped zone the boundaries of which are within the area covered by the base of a breast which the bust covering portion is adapted to mold, the upper

side edges of said panel converging upwardly from below said dome-shaped zone to substantially a point at the top of said dome-shaped zone, each said bust covering portion further comprising a pair of straight-cut bands one disposed along-

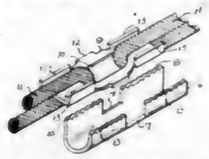
side of and secured to each of the converging upper side edges of said panel, the lower end of each band being below said zone, each said band being widest at about the middle thereof and tapering toward both ends.

2,456,553

FASTENER CLIP

Wilmer H. Churchill, Saugus, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application June 14, 1944, Serial No. 540,305
5 Claims. (Cl. 24—81)



2. A fastener clip for attachment to a support having angularly disposed web and leg portions, said clip comprising an article-supporting base and a loop-shaped attaching portion extending in angular relation thereto, and a resilient hinge connecting the attaching portion and the base, said loop portion having opposed clamping portions cooperating to engage opposed surfaces of said leg portion whereby said clip is secured to said support.

2,456,554

CONNECTOR FOR CORDS OR CABLES

Wilmer H. Churchill, Saugus, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application October 12, 1945, Serial No. 621,914
3 Claims. (Cl. 24—123)

3. A connector for cord and the like comprising a snubbing member comprising an elongated plate provided with shoulders on opposite edges and an elongated sheet metal sleeve member normally of U-shaped cross section having side portions of deformable material and notches therein, said snubbing member being disposed between said side portions, said shoulders being engaged in said notches, said side portions being adapated to be crimped so as to curve over the snubbing member and direct edges thereof toward the upper face of said plate whereby a cord may be gripped and snubbed by being looped with a bight at an edge and with portions thereof gripped on each face of the plate.

2,456,555

SECONDARY ALKYL (SECONDARY) AMINO ALCOHOL ESTERS OF ARYL-SUBSTITUTED ALIPHATIC ACIDS

Arthur C. Cope, Belmont, Mass., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland

No Drawing. Application October 6, 1945, Serial No. 620,839
12 Claims. (Cl. 260—477)

1. Esters of secondary alkyl(secondary)amino alcohols, of the general formula X—COOR$_1$NHR, in which R represents a secondary alkyl group attached to the amino nitrogen and has a total of at least three and less than eleven carbon atoms, R$_1$ is a divalent alkylene group having a total of from two through four carbon atoms and with at least two carbon atoms linked in sequence between the oxygen and the nitrogen, and X is selected from the group consisting of the styryl radical, diphenylmethyl radical, alpha-cyclohexyl-alpha-phenylmethyl radical and alpha-phenylpropyl radical.

2,456,556

SECONDARY - ALKYL (SECONDARY) AMINO ALCOHOL ESTERS OF PARA-DIALKYL AMINO BENZOIC ACID

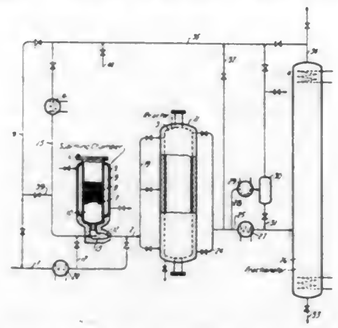
Arthur C. Cope, Belmont, Mass., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland

No Drawing. Application October 6, 1945, Serial No. 620,840
9 Claims. (Cl. 260—472)

1. Esters of secondary-alkyl(secondary)amino alcohols of the general formula

$$(R_2)_2NC_6H_4COOR_1NHR$$

in which R is a secondary alkyl group with less than 10 carbon atoms; R$_1$ is an alkylene group having 2 through 4 carbon atoms with at least 2 carbons linked in sequence between the oxygen and the nitrogen; R$_2$ is an alkyl group containing less than 5 carbon atoms; and the dialkyl amino group is linked to the benzene nucleus in para-position to the carbonyl group.



2,456,557

HYDROCARBON CONVERSION

Adam Dyduszynski, Chester, England, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application November 12, 1946, Serial No. 709,317
In Great Britain November 12, 1945
5 Claims. (Cl. 260—683.15)

1. In a process for the catalytic conversion of hydrocarbons wherein hydrocarbons are contacted with aluminum chloride under conversion conditions in an unpacked reaction chamber, the steps which comprise maintaining a circulating stream of gaseous reactants comprising gaseous hydrocarbons containing sublimed aluminum chloride uniformly dispersed therein in a substantially closed circuit, said circuit comprising said unpacked reaction chamber in communication by means of a restricted zone of fluid flow in a confined stream with an aluminum chloride dispersing zone, continuously subliming solid aluminum chloride out of contact with said hydrocarbons, introducing said sublimed aluminum chloride into said aluminum chloride dispersing zone, continuously circulating effluence from said reaction chamber comprising gaseous hydrocarbons containing sublimed aluminum chloride dispersed therein through said restricted zone of fluid flow and said aluminum chloride dispersing zone back into said reaction chamber, thereby continu-

ously dispersing fresh sublimed aluminum chloride into said circulating stream of reactants, continuously introducing fresh gaseous hydrocarbons to be converted into said circuit, continuously withdrawing a portion of said reactants comprising gaseous hydrocarbons and aluminum chloride from said circuit, and separately removing aluminum chloride and hydrocarbons from said withdrawn portion of reactants.

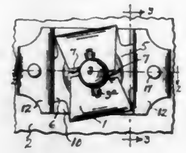
2,456,558

PROCESS FOR THE POLYMERIZATION OF STYRENE AND RELATED COMPOUNDS

Sanford E. Glick, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application October 25, 1944, Serial No. 560,341
3 Claims. (Cl. 260—91)

1. A process for the mass polymerization of aromatic vinyl compounds taken from the group consisting of styrene, para methyl styrene, para ethyl styrene, ortho chlorostyrene, meta chlorostyrene, para chlorostyrene, 2,5-dicholorostyrene, 3,4-dichlorostyrene, vinyl diphenyl and vinyl naphthalene in the absence of polymerization catalysts which comprises initiating polymerization by heating the mass at 80° C. to 110° C. for 10 to 16 hours, thereafter gradually raising the temperature of the mass to 120° C. to 140° C. during a period of 20 to 30 hours, continuing the polymerization at 120° C. to 140° C. for 10 to 16 hours and completing the polymerization at 165° C. to 185° C. for 10 to 30 hours.



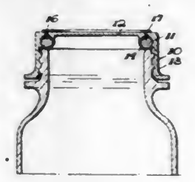
2,456,559

SHIFTABLE ROTARY OPERATIVE FASTENER

Frank E. Johnson, Malden, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application October 12, 1944, Serial No. 558,418
4 Claims. (Cl. 24—221)

4. Attaching means for shiftably attaching a female fastener of the rotary operative type to an apertured support comprising a plate having a relatively flat centrally apertured body providing a slidable bearing surface for said fastener member, opposed extensions for connecting said plate to a support, and a retainer formed on and as an overlying continuation of each of said extensions adapted to overlie a part of a fastener member, lateral spacing means disposed between said retainers and said plate and providing a side-



limiting means for limiting lateral shifting of a fastener member on the plate, and said opposed extensions and said retainers having cooperating apertures for receiving fastening means for securing said retainer against outward displacement from said extension.

2,456,560

RECEPTACLE CLOSURE MEANS

Glenn Keith, East Detroit, Mich., assignor of one-fourth to Milton M. Weinstein, one-tenth to Elias Goldberg, one-tenth to Harry Weinstein, one-tenth to Barnett B. Covent, and one-tenth to William Mintz, all of Detroit, Mich.

Application February 14, 1944, Serial No. 522,355
4 Claims. (Cl. 215—43)

1. A sealing member for the orifice of a container vessel of the class consisting of bottles and jars, said member comprising a cap having a closed chamber of annular shape defined by a wall which is integral with the cap and is formed of distensible material, and a liquid fill in the chamber, said cap being adapted to be pressed onto the vessel so as to engage said wall with a seat formed on the vessel and distend the wall into sealing engagement with said seat.

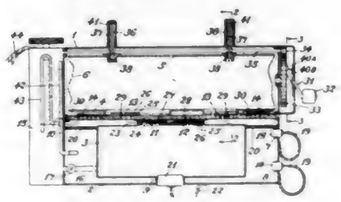
2,456,561

AZEOTROPIC SEPARATION OF XYLENE ISOMERS

George R. Lake, Long Beach, and Josephine M. McDowell, Wilmington, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application March 27, 1943 Serial No. 480,854
9 Claims. (Cl. 202—42)

1. A process for the treatment of a xylene fraction containing non-aromatic hydrocarbons boiling in the same temperature range as said xylene fraction to separate therefrom the non-aromatic hydrocarbons, a fraction consisting of meta- and para-xylene and a fraction consisting of ortho-xylene which comprises distilling said xylene fraction in the presence of a sufficient amount of a compound having a boiling point within about



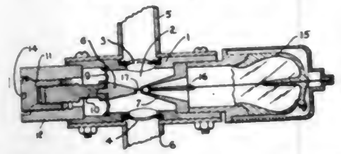
10° F. to 15° F. above to about 30° F. to 40° F. below the average boiling point of said xylene fraction and selected from the class of compounds consisting of mono-glycols, ethers of mono-glycols and esters of ethers of mono-glycols to vaporize the non-aromatic hydrocarbons together with said compound thereby leaving the xylenes substantially completely separated from the non-aromatic hydrocarbons in the residue and subsequently distilling said separated xylenes in the presence of a sufficient amount of said compound to vaporize the meta- and para-xylene together with said compound leaving ortho-xylene substantially completely separated from meta- and para-xylene in the residue.

2,456,562

MANUALLY OPERATED VAPOR COMPRESSION SEA WATER STILL

Duncan D. Lindsay, Scunthorpe, England

Application May 7, 1946, Serial No. 667,777
In Great Britain April 13, 1944
4 Claims. (Cl. 202—205)



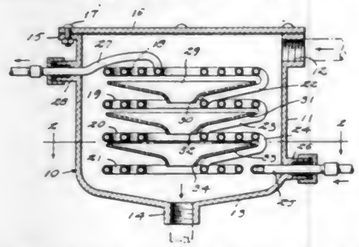
1. Apparatus for producing drinking water from sea water, said apparatus comprising a closed casing, a partition plate in said casing and dividing the latter into an upper and lower part, said lower part constituting an evaporator-vessel adapted to be filled with the sea water, a condenser-vessel mounted within said lower part, concentrically therewith, and spaced from the sides and bottom thereof and from said partition plate, so that the sea water in the evaporator substantially encloses the bottom and sides of the condenser-vessel, fine-mesh wire gauze extending between the evaporator-vessel and the condenser-vessel at the top of the latter and obviating the passage of sea water above same but allowing the passage of vapour, a manually operable double-acting bellows pump arranged in the upper part of said casing, outlet and inlet non-return valves in said partition plate to control the passage of vapour from the evaporator-vessel through the pump to the condenser-vessel, a manually operable evacuating pump mounted on the outside of said casing and connected to the condenser-vessel for initial withdrawal of air from the interior of the casing, and a closable outlet for drinking water in the bottom of the condenser-vessel and extending through the bottom of the evaporator-vessel, the arrangement being such that when the air from the casing has been withdrawn by the evacuation pump, and water-vapour forms above the evaporator-vessel, operation of the bellows-pump causes said vapour to pass from the evaporator-vessel through the pump to the condenser-vessel and to condense therein against a pressure built-up by said pump, the latent heat of condensation passing through the walls of the condenser-vessel to the sea water and heating same to assist vaporisation and being such that the apparatus is compact, portable and manually operable.

2,456,563

ULTRA HIGH FREQUENCY ELECTRONIC TUBE

Henry J. McCarthy, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts

Application October 21, 1944, Serial No. 559,727
5 Claims. (Cl. 315—5)



1. An electronic resonator tube comprising an envelope, a gas filling therein, a cavity resonator within said envelope, a pair of frequency adjusting electrodes spaced apart and forming a part of said resonator, means acting on one of said electrodes to move said electrode axially with respect to the other electrode to tune the resonator, an extension on one of said tuning electrodes and spaced radially from the other electrode a predetermined discharge distance and having a surface parallel to the axis of said other electrode, whereby the discharge distance remains constant as the means acting on one of said electrodes moves said electrode axially to tune the resonator.

2,456,564

FLUID HEATER

Otto Muller, Bronx, N. Y.

Application June 7, 1945, Serial No. 597,981
1 Claim. (Cl. 257—229)

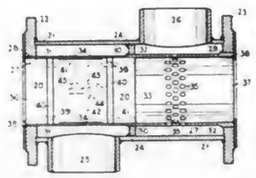
In a fluid heater a tank having a lower discharge port and an upper inlet port, a plurality of superposed coils, each of said coils including spiral coplanar convolutions of tubing, a tubular connection between the center of a lower coil and the outer periphery of an upper coil, said coils being spaced inwardly from the walls of said tank, a concave centrally apertured baffle between successive coils, said baffle formed with a downwardly opening discharge spout at the apex thereof engaging within the center of the lower coil, the uppermost and lowermost of said coils being spaced from their respective ends of the tank whereby fluid in said tank may be vertically circulated from the center to the periphery thereof.

2,456,565

STABILIZED VINYL RESIN

Harold F. Park, East Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application April 25, 1947, Serial No. 744,032
7 Claims. (Cl. 260—78.5)



1. A stabilized polymer from the group consisting of polyvinyl chloride and copolymers of vinyl chloride and unsaturated materials copolymerizable therewith having intimately mixed therewith an amount of tri-parachlorophenyl stibine effective to increase the light-stability of said polymer.

2,456,566

REVERSE FLOW BY-PASS VALVE

Norris Plank, East Chicago, Ind., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application November 18, 1946, Serial No. 710,570
3 Claims. (Cl. 251—118)

1. A reverse flow by-pass valve for pipe lines comprising an inner tubular member open at both ends, an elongated outer housing member radially spaced from the inner tubular member, transverse flange means defining first and second closed chambers between said members, first aperture means through the inner tubular member opening to the first chamber, second aperture means through the inner tubular member opening to the second chamber, first radial port means through the outer member opening to the first chamber, second radial port means through the outer member opening to the second chamber, and a pressure responsive piston member slidably movable within the inner tubular member for selectively closing one of said aperture means, said by-pass valve being connectible at either end into a pipe-line, whereby the reciprocation of said pressure-responsive piston is limited to the axial length of said inner tubular member by the abutment of said valve with said pipe line.

2,456,567

AMINOTRIAZINE PRODUCT

Milton J. Scott, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application September 1, 1944, Serial No. 552,381
6 Claims. (Cl. 260—67.6)

1. A process which comprises adding a water-soluble compound of a metal selected from the group consisting of aluminum, magnesium, the heavy metals and the metals of group 2A of the periodic system, to the product obtained by reacting at a pH of 8–9.5 ammeline and an aqueous solution of an aldehyde having a solubility in water of at least 3 parts for each 100 parts of water at 20° C., whereby said reaction product of ammeline and said aldehyde is precipitated, the ammeline being reacted with the aldehyde to an extent which is insufficient to cause the ammeline-aldehyde reaction product to precipitate from the aqueous alkaline medium prior to addition of the metal compound and the amount of the metal compound being sufficient to provide a chemical equivalent of the metal for each molecule of ammeline.

2,456,568

TEXTILE TREATING RESINS

Milton J. Scott and Stuart H. Rider, Springfield, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application November 8, 1946, Serial No. 708,806
8 Claims. (Cl. 260—67.6)

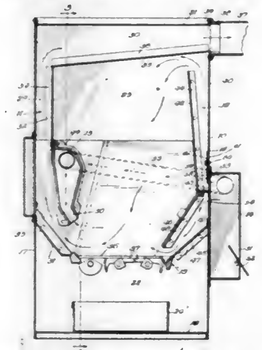
1. A process for preparing stable resins for treating textile fibers and fabrics which comprises reacting a water-soluble, substantially monomeric, monohydric alcohol ether of a methylol melamine with thiourea and formaldehyde at a pH of 8–9, the molar ratio of thiourea to chemically combined melamine varying between 90:10 and 10:90.

2,456,569

MOTOR FUEL

Andrew I. Smith, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No Drawing. Application December 18, 1944, Serial No. 568,779
16 Claims. (Cl. 44—57)



1. A hydrocarbon Diesel fuel consisting essentially of a Diesel fuel normally subject to the formation of gums containing from about 0.01% to about 2.0% of an oil soluble surface active agent selected from the alkyl monoamines and fatty acid amides characterized by molecular weight greater than about 150 and the presence of at least one carbon chain of more than eight carbon atoms for the purpose of preventing the precipitation of said gums.

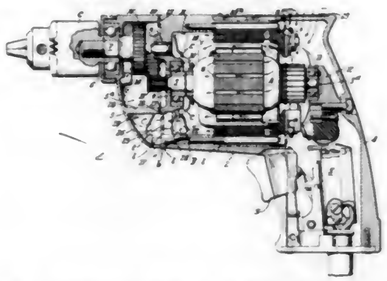
2,456,570

SMOKELESS HEATER FOR BURNING COAL AND OTHER SOLID FUEL

Warren A. Stuckey and Matthew Gregurich, Joliet, Ill., assignors to The Moore Corporation, Joliet, Ill., a corporation of Illinois

Application October 21, 1946, Serial No. 704,586
4 Claims. (Cl. 126—77)

1. A smokeless solid fuel burning heater comprising an upstanding shell having an ash chamber in its lower portion, a combination fuel and combustion chamber above the ash chamber, and a horizontal grate between the two chambers, means within the shell forming an outlet duct for the products of combustion leading upwards from a point a small distance above the grate and located at one side of the second mentioned chamber, a primary air duct arrangement disposed within the shell in spaced relation with the outlet duct and at the opposite side of the second



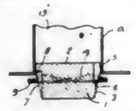
mentioned chamber and embodying an upwardly extending upper branch having the upper end thereof communicating with the upper part of the second mentioned chamber and adapted to deliver primary air thereto, and a separate or independent downwardly extending lower branch having its lower end communicating with the lower part of said second mentioned chamber and facing downwards and inwards in order to deliver primary air in such manner that it flows over the grate towards the lower end of the outlet duct, said primary air duct arrangement being provided between the two branches thereof with an imperforate cross plate whereby said branches are rendered separate and independent of one another, a secondary air conduit disposed in the shell directly above and inwards of the lower end of the outlet duct, provided in the bottom thereof with a downwardly and inwardly facing opening for delivering secondary air downwards and inwards into the lower part of said combination fuel and combustion chamber, and having the interior thereof closed against communication with the last mentioned chamber except for said opening, common means operative to supply outside air in controlled quantity to the two branches of the primary air duct arrangement and to the secondary air conduit and embodying an air distribution box disposed exteriorly of the shell, provided with a damper controlled inlet for outside air and having its interior connected to, and in communication with, said two branches and the ends of said conduit, and valve means adjustable from the outside of the shell and operative to control the amount of air that is delivered from the interior of the air distribution box into one of the branches.

2,456,571

PORTABLE ELECTRIC TOOL

Edgar P. Turner, Fanwood, and Reynold Happe, Pittstown, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application September 13, 1947, Serial No. 773,814
8 Claims. (Cl. 172—36)



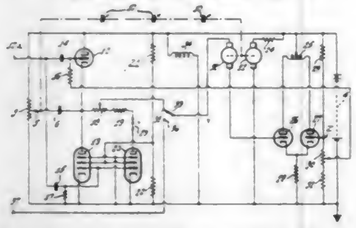
1. A portable electric tool including a motor casing comprising united front and rear sections, said rear section having an air inlet, said front section comprising a substantially cylindrical outer wall and a substantially circular front end wall formed integrally with and segmentally spaced from said outer wall, the forward portion of said outer wall being bevelled forwardly and outwardly adjacent a portion of said end wall to afford an outwardly and forwardly inclined air passageway; a motor mounted in said casing and having a rotory shaft; a gear casing secured to said front section but spaced therefrom in the region adjacent the beveled portion of the outer wall of said motor casing; and a fan on said motor shaft for drawing air into said motor casing through said inlet and through said motor and ejecting it forwardly and outwardly through the space between the motor casing and the gear casing.

2,456,572

HOLDER FOR THERMIONIC VALVES AND OTHER ELECTRICAL DEVICES

George Wagstaff, Long-Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass.

Application February 28, 1945, Serial No. 580,251
In Great Britain March 27, 1944
3 Claims. (Cl. 174—35)



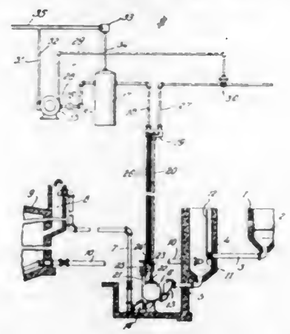
1. A holder for thermionic valves and like electrical devices comprising a body adapted to fit within an aperture in a support, the peripheral wall of said body having two sets of axially spaced abutments, a locking ring disposed around said body on one side of said support having projections engageable with one set of said abutments and a screening member disposed around said body on the other side of said support having elements engageable with the other set of said abutments whereby said locking ring and said screening member cooperate to secure said holder to said support.

2,456,573

ELECTRICAL MOTOR CONTROL SYSTEM

Eric Lawrence Casling-White, Iver, Maurice Geoffrey Harker, Pinner, and John Philip Wynn Houchin, Burnham, England, assignors to Electric and Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain

Application December 21, 1945, Serial No. 636,472
In Great Britain June 10, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires June 10, 1963
8 Claims. (Cl. 318—18)



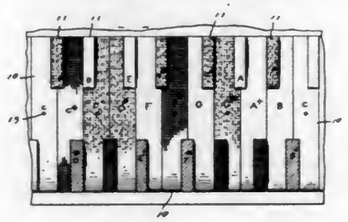
7. A system for stopping a moving element in a predetermined position, said element tending to overshoot the desired position due to its inertia, comprising means for producing an electrical potential representative of the instantaneous position of said element, motor means for normally moving said element at a constant rate, means for deenergizing said motor means in response to said element reaching said predetermined position, means for deriving from said potential an error potential proportional to the extent of movement of said element beyond said predetermined position, and means responsive to said error potential for returning said element to said predetermined position.

2,456,574

PNEUMATIC PUMPING SYSTEM

Charles Yeomans, Hubbard Woods, Ill., assignor to Yeomans Brothers Company, Chicago, Ill., a corporation of Delaware

Application January 19, 1946, Serial No. 642,243
6 Claims. (Cl. 103—234)



6. In pneumatic ejector apparatus adapted for the pneumatic pumping of sewage screenings and other coarse material, a receiver having inlet and outlet openings of large cross-sectional area, a compressed air storage tank connected to said receiver, means operable, when the material contained in said receiver reaches a predetermined level, to admit compressed air from said tank into said receiver, thereby to effect the discharge of said material through said receiver outlet opening, means including an exhaust valve for venting compressed air from said receiver following each ejection operation, and a control for said exhaust valve which is operable, in response to the pressure in said storage tank, to hold said exhaust valve closed and thereby maintain a positive pressure in said receiver, thus preventing the inflow of material into said receiver through said inlet opening during periods when the pressure in said storage tank is below a predetermined value.

2,456,575

DECATONIC KEYBOARD

Lyman Young, San Francisco, Calif.

Application December 18, 1947, Serial No. 792,405
4 Claims. (Cl. 84—427)

4. A keyboard formed of a plurality of elongated digitals, each of said digitals formed with a rectangular cut-out on one side at one end thereof, and a second rectangular cut-out along the opposite side at the opposite end of said digital, a row of short digitals extending upwardly in said cut-outs along one end of said first digitals and a second row of short digitals extending upwardly from said opening at the other end of said first digitals.

2,456,576

PROCESS OF STABILIZING TREATMENT OF INORGANIC OXIDE GELS AGAINST WETTING

Ernest A. Bodkin, Mickleton, and John W. Payne, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application October 16, 1945, Serial No. 622,680
8 Claims. (Cl. 252—254)

1. A method of stabilizing a dry inorganic oxide gel against disruption upon wetting with an aqueous liquid, comprising effecting a substantial saturation of the gel under ordinary temperature conditions with a water-soluble, non-aqueous, normally gaseous material which is chemically inert toward said aqueous liquid and maintaining said substantial saturation of the gel until contact thereof with said aqueous liquid.

2,456,577

PROCESS OF STABILIZING INORGANIC OXIDE GELS AGAINST WETTING

Ernest A. Bodkin, Mickleton, and John W. Payne, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application October 23, 1945, Serial No. 624,096
14 Claims. (Cl. 252—254)

1. A method of stabilizing a dry inorganic oxide gel against disruption upon wetting with an aqueous liquid, comprising effecting a substantial saturation of the gel under ordinary temperature conditions with a water-miscible, substantially water-free organic liquid, in which the gas contained in the pores of said gel is soluble to a greater extent than in water, and maintaining said substantial saturation of the gel until contact thereof with said aqueous liquid.

2,456,578

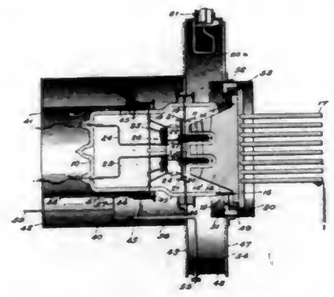
PROCESS OF STABILIZING INORGANIC OXIDE GELS AGAINST WETTING

Ernest A. Bodkin, Pitman, and John W. Payne, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application December 18, 1945, Serial No. 635,760
9 Claims. (Cl. 252—254)

1. A method of stabilizing a dry inorganic oxide gel against disruption upon wetting with an aqueous liquid capable of causing said disruption, comprising effecting a substantial saturation of the gel with a water-miscible liquid having a viscosity of at least about 20 centipoises at the temperature of treatment and maintaining said substantial saturation of the gel until contact thereof with said aqueous liquid.

2,456,579



ELECTRON DISCHARGE DEVICE FOR ULTRA HIGH FREQUENCIES

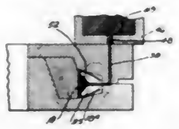
Don G. Burnside, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application October 30, 1942, Serial No. 463,972
27 Claims. (Cl. 250—27.5)

1. An electron discharge device having an elongated envelope closed at one end by an anode, said anode being sealed to said envelope and extending inwardly of said envelope, the inner end of said anode being of smaller trans-

verse section than the part sealed to said envelope, said anode having a channel extending transversely of the inner end and a cathode and grid supported within said channel, said cathode

being of flat construction and having oppositely disposed emitting surfaces registering with the opposite faces of said channel, the grid being positioned between said cathode and said anode.



2,456,580

METHOD OF MAKING TRANSMISSION BELTS

Raymond S. Carter, Cuyahoga Falls, and Marvin L. Dorf, Akron, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

Application January 24, 1944, Serial No. 519,448

11 Claims. (Cl. 18—59)

8. The method of molding a belt which comprises forming an endless band comprising fabric with a superimposed layer of substantially inextensible elements, superimposing a body layer of vulcanizable material thereon, heating said band and body layer to vulcanize and unite them while maintaining an outwardly directed force on the band independent of any force exerted on said band by the body layer, to thus tension and align said elements, and reversing the belt thus formed after vulcanization.

2,456,581

PROCESS FOR PREPARING METACRESOL-1,3,4-XYLENOL

Francis E. Cislak and Merritt M. Otto, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 20, 1945, Serial No. 611,694

10 Claims. (Cl. 260—619)

4. The process of producing metacresol-1,3,4-xylenol, which consists in mixing 1,3,4-xylenol and a mixture consisting mainly of metacresol and paracresol with the metacresol content being of from 25% upward, and producing in the resulting mixture a sufficiently low temperature to form crystals of metacresol-1,3,4-xylenol.

2,456,582

PROCESS FOR SEPARATION OF ISOMERIC XYLENOLS

Francis E. Cislak and Merritt M. Otto, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana

No Drawing. Application August 20, 1945, Serial No. 611,695

8 Claims. (Cl. 260—619)

1. The process of separating 1,3,4-xylenol from a mixture consisting mainly of 1,3,4-xylenol and 1,4,2-xylenol, with the 1,3,4-xylenol content being at least 55%, which consists in mixing such a mixture with metacresol and producing in the resulting mixture a sufficiently low temperature to form crystals of metacresol-1,3,4-xylenol, separating such crystals, and recovering 1,3,4-xylenol in purified form from the crystals.

2,456,583

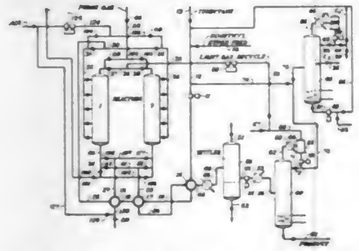
METHOD FOR PREPARING LEAD NITROAMINOGUANIDINE

Le Roy V. Clark, New Castle, Pa., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 5, 1944, Serial No. 534,346

4 Claims. (Cl. 260—435)

1. A method of preparing lead nitroaminoguanidine having an apparent density greater than 0.4 gram per cc. which includes the steps of reacting an aqueous suspension of nitroaminoguanadine with an aqueous slurry of lead hydroxide in the presence of a hydrophilic colloid.



2,456,584

CONVERSION OF DIMETHYL ETHER

Everett Gorin, Woodbury, N. J., and Manuel H. Gorin, San Francisco, Calif., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application November 18, 1946, Serial No. 710,476

8 Claims. (Cl. 260—668)

1. The process for the conversion of dimethyl ether to normally liquid hydrocarbons which comprises the steps of (1) passing a feed stream comprising dimethyl ether and a normally gaseous hydrocarbon diluent containing at least two carbon atoms and not more than four carbon atoms per molecule in contact with a dehydration-polymerization catalyst at a temperature within the range of from about 300° C. to about 475° C. to form a product mixture comprising methane, normally gaseous hydrocarbons containing from 2 to 4 carbon atoms per molecule, normally liquid hydrocarbons, and water, (2) separating methane and water from the product mixture of step 1, (3) fractionating the residual hydrocarbon product from step 2 to obtain a stream consisting substantially of normally liquid hydrocarbons and at least one stream of normally gaseous hydrocarbons containing from 2 to 4 carbon atoms per molecule, (4) recycling the stream of normally gaseous hydrocarbons of step 3 to step 1, and (5) recovering said normally liquid hydrocarbons from step 3 of the process.

2,456,585

PROCESS FOR THE PRODUCTION OF NITROHYDROXY COMPOUNDS

Henry B. Hass, West Lafayette, Ind., and James F. Bourland, Martinsville, N. J., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana

No Drawing. Application February 16, 1944, Serial No. 522,626

5 Claims. (Cl. 260—638)

1. In a process for the production of aliphatic nitrohydroxy compounds, the step which comprises adding an aldehyde-inert acidic material having an effective hydrogen-ion dissociation constant in water for the first hydrogen of less than 5×10^{-2} but in excess of 1×10^{-7}, to a solution of a salt of a nitro hydrocarbon having a nitro group and a hydrogen atom attached to a common carbon atom to produce the corresponding aci-nitro hydrocarbon, an aliphatic aldehyde being present in the mixture to react with said aci-nitro hydrocarbon before substantial conversion thereof to the normal form occurs.

2,456,586

2-BUTOXYETHYL FLUOROACETATE

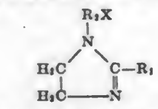
Ingenuin Hechenbleikner, Norwalk, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application December 3, 1946, Serial No. 713,818

1 Claim. (Cl. 260—487)

2-butoxyethyl fluoroacetate.

2,456,587



SOLUBLE OIL COMPOSITION

Robert M. Koppenhoefer, Jackson Heights, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application September 20, 1946, Serial No. 698,407

6 Claims. (Cl. 252—8.57)

1. An emulsifiable oil composition comprising: a major proportion of at least one oil suitable for fat liquoring, which oil is selected from the group consisting of animal, mineral and vegetable oils; from about 6 to about 12 per cent by weight of a rosin acid; from about 6 to about 10 per cent by weight of a polyoxyalkylene derivative of a fatty acid ester of a hexitol anhydride, said fatty acid having at least six carbon atoms; from about 1 to about 4 per cent by weight of a fatty acid ester of a hexitol anhydride, said fatty acid having at least six carbon atoms; from about 3 to about 6 per cent by weight of a low molecular weight fatty acid of less than five carbon atoms; and from about 10 to about 16 per cent by weight of a compound having the general formula:

where R_1 is selected from the group consisting of alkyl and alkenyl radicals containing from 10 to 18 carbon atoms and R_2 is an alkyl group containing 1 to 5 carbon atoms substituted with a radical selected from the group consisting of hydroxyl and amino radicals.

2,456,588

PROCESS FOR PRODUCTION OF ORGANIC MERCAPTANS

Anthony Loverde, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York

No Drawing. Application May 24, 1945, Serial No. 595,656

1 Claim. (Cl. 260—609)

The process for production of benzyl mercaptan by reaction of benzyl chloride with an alkali metal hydrosulphide in a two phase system, with relatively high yield thereof, which comprises adding the organic chloride gradually, with agitation and refluxing, to a solution consisting of the hydrosulphide dissolved in water, in presence of a small quantity of dichlor ethyl ether, the hydrosulphide being in substantial molecular excess of the final quantity of organic chloride; continuing the refluxing until the reaction is complete; and recovering the organic layer from the inorganic layer.

2,456,589

GRAY VAT DYESTUFFS AND METHOD OF MAKING THE SAME

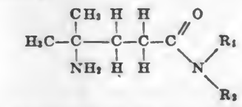
Lawrence D. Lytle, Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application March 23, 1944, Serial No. 527,857

4 Claims. (Cl. 260—274)

1. A process of preparing a vattable composition capable of dyeing cellulosic fibers greenish-gray shades of excellent light-fastness, good wash-fastness, and extraordinary peroxide-fastness, which comprises chlorinating benzanthrone in sulfuric acid of 85–100% concentration at temperatures between 10° and 50° C. until a sample precipitated by water shows a chlorine content between 11.5 and 13.5%, discontinuing the chlorination and recovering the so chlorinated benzanthrone mixture containing 11.5 to 13.5% combined chlorine thus obtained, condensing the said chlorinated benzanthrone mixture with approximately one molecular equivalent of alpha-amino anthraquinone in nitrobenzene in the presence of an acid-binder and a cupriferous catalyst to produce a mixture of secondary amines and recovering the mixture of secondary amines so produced and subjecting said mixture of secondary amines thus produced to fusion with alcoholic caustic alkali and recovering the vat dyestuff so obtained.

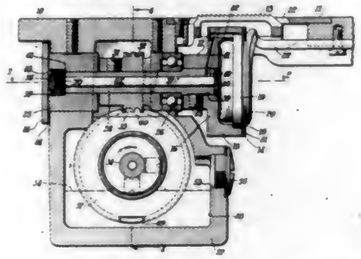
2,456,590



4-AMINO-4-METHYLVALEROALKYLAMIDES AND METHOD FOR PREPARING THEM

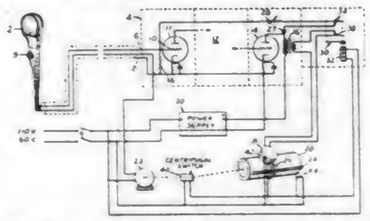
Glen H. Morey, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application December 26, 1947, Serial No. 794,133



9 Claims. (Cl. 260—561)

1. As new compositions of matter 4-amino-4-methylvaleroalkylamides having the following general formula



wherein R^1 is a member selected from the group consisting of hydrogen and alkyl radicals, and R^2 is an alkyl radical.

2,456,591
LUBRICATING DEVICE FOR SEWING MACHINES
Frank Parry, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application March 20, 1945, Serial No. 583,700
8 Claims. (Cl. 112—256)

1. In a sewing machine having a bed-plate, a substantially oil-tight chamber disposed below the level of the bed-plate and providing a lubricant-supply reservoir in the lower portion of said chamber, a rotary actuating shaft having at least a portion thereof extending into said chamber, a horizontally disposed loop-taker shaft provided with a longitudinal lubricant-conducting bore and being disposed above the level of said lubricant-supply with each of the opposite end portions thereof journaled in a respective one of a pair of opposing wall sections of said chamber, said loop-taker shaft being operatively connected to and disposed transversely of said rotary actuating shaft, a loop-taker having a thread-carrier raceway and being mounted upon one end of said loop-taker shaft with said raceway in communication with said shaft bore, a lubricant-conducting wick disposed outside the confines of said loop-taker shaft and above the level of said lubricant-supply, said wick extending to one end of said bore in said loop-taker shaft for delivering lubricant to said bore, and means disposed within said chamber and rendered effective upon rotation of said rotary actuating shaft for delivering lubricant from said lower portion of said chamber to said wick.

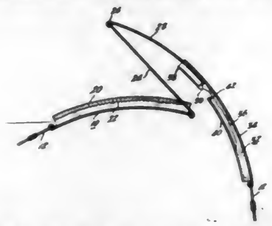
2,456,592
COMMERCIAL PHONOGRAPH SIGNAL DEVICE
Lucius P. Petruschell, Mount Dora, Fla., assignor to Dictaphone Corporation, New York, N. Y., a corporation of New York
Application October 2, 1946, Serial No. 700,689
12 Claims. (Cl. 179—100.4)

1. In a sound recording machine having an amplifier, a signal arangement for indicating the existence of a predetermined condition of operation of the sound recording apparatus comprising, in combination, are generative feed-back connection from an output circuit to an input circuit of said amplifier to produce an audio-frequency feed-back, switching means in said feed-back connection operative upon the occurrence of said predetermined condition of said apparatus to complete said feed-back circuit, and a translating means connected to the input circuit of said amplifier for producing an audible signal upon completion of said feed-back circuit.

2,456,593
SILVER BRAZING ALLOY CONTAINING INDIUM
Joseph F. Polak, Newark, N. J., assignor to Monroe Sherman, New York, N. Y.
No Drawing. Application March 22, 1945, Serial No. 584,248
3 Claims. (Cl. 75—134)

1. An alloy consisting of, by weight, silver between 35% and 48%, copper between 10% and 15%, zinc between 12% and 17%, cadmium between 12% and 20%, and indium between 9% and 20% with no other metals therein.

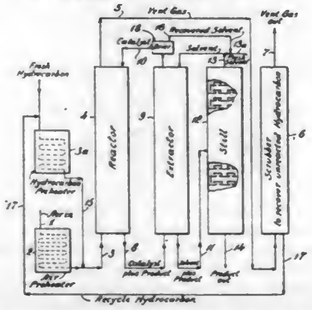
2,456,594
BRAZING ALLOY
Joseph F. Polak, Newark, N. J., assignor to Monroe Sherman, New York, N. Y.
No Drawing. Application March 22, 1945, Serial No. 584,249
4 Claims. (Cl. 75—134)



1. An alloy consisting of by weight between 10 and 25 percent of silver, 3 and 10 percent of copper, 25 and 40 percent of zinc, the balance consisting of between 30 and 50 percent of cadmium.

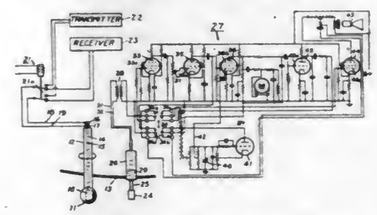
2,456,595
SOLID WATER-REPELLENCY COMPOSITION
Clifford T. Rood, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
No Drawing. Application December 26, 1946, Serial No. 718,596
8 Claims. (Cl. 106—270)

1. A solid water-repellency composition of matter containing not more than 15% of water by weight and readily dispersable in hot water consisting essentially of paraffin wax, a polyvalent metal salt selected from the group consisting of aluminum formate, aluminum acetate, zirconium acetate, zirconium oxychloride and zirconium ammonium carbonate and a fixed dispersing agent comprising sorbitan monopalmitate and polyoxyalkylene sorbitan monopalmitate in a ratio within the range of from 4:6 to 6:4 by weight.



2,456,596
CLASP
Irving Rowen, Bronx, N. Y., assignor to Glen Jewelry Company, Inc., New York, N. Y., a corporation of New York
Application March 16, 1946, Serial No. 654,918
3 Claims. (Cl. 24—71)

1. In a bracelet clasp, a channel member adapted to be attached to one end of a bracelet, said channel member having a transverse wall and vertical side flanges forming a U-shaped cross section and an inturned element on at least one of said flanges spaced from said transverse wall to receive a slide flange therebetween, elements adapted to be nested in said channel member comprising a second member adapted to be connected to the other end of the bracelet, and a pair of links pivotally connected together, one of said links being pivotally connected to one of said members and the other link being slidably connected to the other of said members; said links being receivable in said channel member between said side flanges, and said second member being slidable into said channel member and having a flange at least as long as the sliding distance positioned to slide in the space between said inturned element and said transverse wall for preventing the parts from unfolding, cooperating latching elements on the contacting surfaces of said inturned element and on one of the elements adapted to be nested and which is slid-



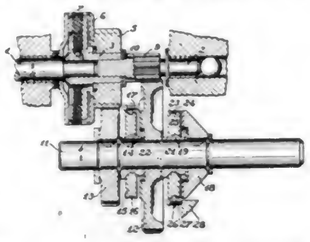
able in said channel member between said inturned element and said transverse wall, engageable upon displacement of said one of said nestable elements toward the open side of said channel to prevent said second member from sliding outwardly and being releasable when said second member is pressed toward nested position in said channel member, one of said latching elements comprising ratchet teeth shaped to permit inward sliding adjustment of said second member.

2,456,597
PRODUCTION OF PHENOL BY CATALYTIC OXIDATION OF BENZENE
Carleton H. Schlesman, Camden, William I. Denton, Woodbury, and Richard B. Bishop, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application September 9, 1944, Serial No. 553,350
10 Claims. (Cl. 260—621)

3. A process for producing phenol by catalytic vapor phase oxidation of benzene, comprising contacting, at an elevated temperature, a mixture of benzene vapor and oxygen-containing oxidizing gas with a moving mass of solid porous adsorbent metal oxide catalyst suitable for promoting the conversion of benzene to phenol, said catalyst mass moving through a reaction zone maintained at a temperature of at least 600° F. at such a rate that phenol produced in said zone is removed therefrom substantially as rapidly as it is formed by adsorption on said moving catalyst mass, bringing the catalyst containing adsorbed phenol in contact with a solvent for phenol, separating the resulting solution from said catalyst and thereafter separating phenol from said solvent to yield a product of phenol substantially uncontaminated by other oxidation products of benzene.

2,456,598
METHOD AND APPARATUS FOR MONITORING UNDERWATER ECHO RANGE AND BEARING SYSTEMS
Oscar Hugo Schuck, Belmont, Mass., assignor to the United States of America as represented by the Secretary of the Navy
Application August 31, 1944, Serial No. 552,058
4 Claims. (Cl. 177—386)

1. The method of bringing wave energy transmitter and receiver units alternatively connected to a transducer to an optimum frequency for transmitting energy therefrom and receiving energy at said optimum frequency which consists of the steps of measuring at a selected position in space with reference to the transducer the intensity of the wave energy emitted by said transducer, adjusting the transmission frequency of said transmitter unit until said measured energy is a maximum, transmitting energy at said adjusted frequency from an auxiliary source for reception by said transducer and the receiver unit, and tuning said receiver unit until the energy received by it is a maximum.



2,456,599
PROCESS FOR PREPARING METHYLAMINES
Everet Foy Smith, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
Application July 5, 1945, Serial No. 603,372
1 Claim. (Cl. 260—585)

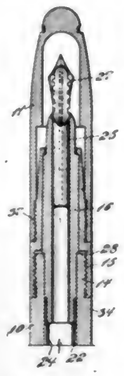
In the catalytic synthesis of methyl amines, the process which comprises mixing methanol and ammonia in the molecular proportions of about 1 to 2, vaporizing the mixture, passing the vaporized mixture over an alumina catalyst at a temperature within the range of about 425° C. to about 500° C. and under high atmospheric pressures and relatively repressing the formation of trimethyl amine in said process by adding to the reaction mixture, prior to passage over said catalyst, water in amount ranging from about 1 to 2 moles per mole of methanol.

2,456,600
VARIABLE-SPEED TRANSMISSION
Norwood S. Trout, Jr., Elmira, N. Y., assignor to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application February 4, 1947, Serial No. 726,412
8 Claims. (Cl. 74—368)

1. In a variable speed transmission, a drive shaft arranged to be rotated either forward or backward by a source of power, a high speed gear journalled thereon, a high speed clutch for connecting the high speed gear to rotate with the drive shaft, a low speed pinion connected to ro-

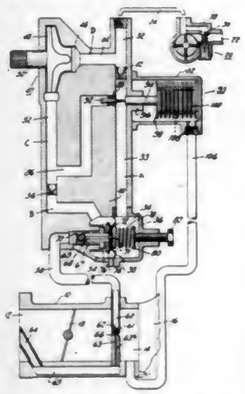
tate with the drive shaft, a driven shaft, a high speed pinion fixed thereon meshing with the high speed gear, a low speed gear journalled on the driven shaft meshing with the low speed pinion, a self-tightening clutch between the low speed gear and driven shaft arranged to transmit forward rotation of the low speed gear to the driven

shaft, and means including a reversely acting self-tightening clutch for connecting the low speed gear to rotate the driven shaft when the low speed gear is rotated backward by the drive shaft, both said self-tightening clutches being arranged to overrun freely when the driven shaft is rotating forwardly at high speed by closure of the high speed clutch.



2,456,601
SOLDERLESS CONTACT TERMINAL
Sidney M. Weisberg, Newark, N. J., assignor to Allied Electric Products, Inc., Irvington, N. J., a corporation of New Jersey
Application December 13, 1945, Serial No. 634,704
2 Claims. (Cl. 173—324)

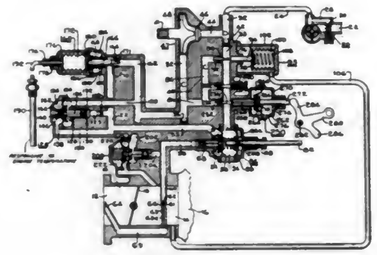
2. A solderless wire connector comprising a terminal member having a wire receiving passage and an annular seat in one end about the end of said wire receiving passage, a wire in engagement with the wall of said passage at one side and a headed pin driven into said passage longitudinally over that portion of the wire disposed therein and in binding engagement with the wall of the passage at the opposite side, the head of said pin being of less diameter than said annular seat to enter said seat when the pin is fully driven into the passage and substantially in engagement with the wall of said seat to pinch and bind any portion of the wire projecting from the end of the passage thereagainst and the engagement of the pin with the side wall of the passage enabling said pin to hold it in binding engagement with the wire as described.



2,456,602
FOUNTAIN PEN
James W. Welsh, Providence, R. I., assignor to Welsh Manufacturing Company, a corporation of Rhode Island
Application January 9, 1946, Serial No. 640,045
7 Claims. (Cl. 120—50)

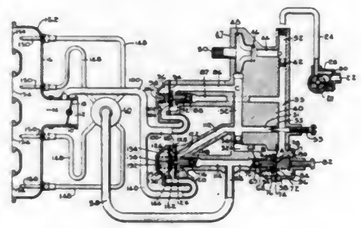
1. A fountain pen comprising a barrel member having an open top and a threaded external surface, a pen holding member having an external shoulder and a ferrule having a lip to engage said shoulder and internally threaded at one end

to engage said external threads and hold said members assembled.



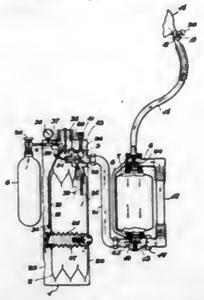
2,456,603
FUEL SUPPLY SYSTEM
Frederik Barfod, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 7, 1945, Serial No. 592,397
40 Claims. (Cl. 123—119)

1. In a fuel system for an internal combustion engine: a source of fuel; a conduit connecting said source of fuel with the engine; a pump for creating a fuel pressure and effecting a flow of fuel through said conduit, the quantity of which will vary directly as the engine speed; means for controlling said flow; and a passage adapted to transmit a variable control pressure developed by said pump to said means for influencing the functioning thereof.



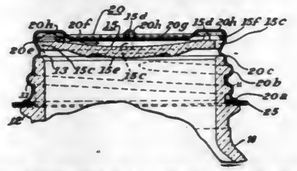
2,456,604
FUEL SUPPLY SYSTEM
Frederik Barfod and Emil O. Wirth, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application July 27, 1945, Serial No. 607,290
46 Claims. (Cl. 123—119)

14. In a fuel system for an internal combustion engine: a conduit for supplying fuel to the engine; fuel metering means in said conduit; fuel flow control means posterior to the metering means; means, having an inlet and an outlet, for supplying fuel to said metering means at a pressure varying as a function of engine speed; means for creating a pressure intermediate the pressures at said inlet and outlet; means for subjecting the fuel flow control means to the fluid



pressure posterior to the metering means, and to the intermediate pressure acting in opposition to said fluid pressure; means for varying the intermediate pressure, said means being responsive to engine charging pressure; and temperature responsive means for modifying the quantity of fuel supplied to the engine in accordance with engine temperature.

2,456,605
FUEL SUPPLY SYSTEM
Emil O. Wirth and Frederik Barfod, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application August 6, 1945, Serial No. 609,230
19 Claims. (Cl. 123—119)

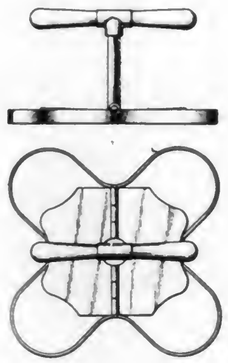


1. A fuel supply system for an internal combustion engine comprising a conduit adapted to connect a source of fuel with the engine; means for creating a fuel pressure in and effecting a flow of fuel through said conduit, the quantity of which will vary directly as the engine speed; means for controlling said flow; means adapted to contain a control pressure developed by the first mentioned means and acting on the second mentioned means for influencing the functioning thereof; and means, including a valve, for varying the control pressure, said means being so constructed and arranged that at engine speeds below a predetermined value the valve is open to provide an economical mixture to the engine, and at speeds above said value said valve is closed to provide for power enrichment.

2,456,606
INERT GAS ELIMINATOR FOR HIGH ALTITUDE OXYGEN APPARATUS
Don Stanley Martin, Jr., Santa Fe, N. Mex., Norman D. Nachtrieb, Chicago, Ill., and Jarvis Edwin Seegmiller, Salt Lake City, Utah, assignors to the United States of America as represented by the Secretary of the Navy
Application August 10, 1944, Serial No. 548,882
7 Claims. (Cl. 128—191)

1. In an oxygen apparatus comprising a flexible breathing bag which expands and contracts with the entrance and exit of gases therefrom; a face mask; means forming passageways by which the wearer breathes from and into said breathing bag; means by which oxygen is supplied to make up for the loss of oxygen in the apparatus; and automatic means operated by said breathing bag in its movements and operable to discharge a portion of the gases from the aparatus to prevent an accumulation of inert gases therein, a pump having inlet valve means communicating with the breathing bag and outlet valve means exhausting to the atmosphere.

2,456,607
LINER LID FOR CONTAINERS
Stewart Shaffer, Muncie, Ind.
Application August 14, 1946, Serial No. 690,509
8 Claims. (Cl. 215—43)



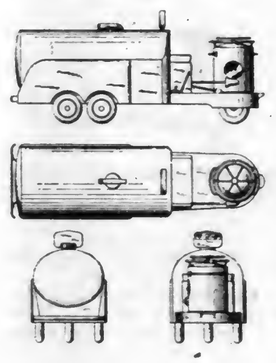
1. A fully sterilizable closure for an open mouth container comprising, a metal cap having a closed-off top wall and a skirt wall integral with said top wall and depending downwardly therefrom, said skirt wall being constructed and arranged to fit over and securely engage an outer wall portion of the container adjacent its mouth, said closed-off top wall having an annular rim thereabout adjacent its outer periphery, said skirt wall having a spacer wall portion adjacent to said top wall, the spacer wall portion having a downwardly-inwardly sloped annulus; a liner of a material such as glass that is substantially inert to contents of the container, said liner being constructed and arranged to be securely mounted within said cap to extend along said closed-off top wall of said cap, said liner having an annular top rim adjacent its outer periphery constructed and arranged to closely abut the annular rim of said top wall of said cap, said liner having a side rim annulus about its outer periph-

ery that is sloped downwardly-inwardly from its annular top rim and is constructed and arranged to be held in close-wedging engagement and abutment with the downwardly-inwardly sloped annulus of the spacer wall portion of said cap; said liner having open-end side grooves spaced about and extending upwardly across the side rim annulus thereof, said liner having open-end top grooves spaced about the annular top rim thereof and extending transversely thereacross, the open-end side grooves of said liner being connected to and in axial alignment with the open-end top grooves of said liner; said liner having a circular groove about the outer periphery and between the annular top rim and the side rim annulus thereof, said circular groove extending across the open-end top and side grooves of said liner and being open thereto, all of the grooves in said liner being substantially fully open and spaced inwardly from inner adjacent portions of said cap when said liner is in a mounted relationship within said cap with its annular top rim and its side rim annulus respectively in abutment with the annular rim and the downwardly-inwardly sloped annulus of said cap, a central portion of said top wall of said cap and a central portion of said liner defining a spacing therebetween when said liner is mounted within said cap; inner ends of the open-end top grooves of said liner being open to the above-mentioned spacing between the central portions of said cap and liner; and all of said grooves being of sufficient size and number to freely flush washing fluid through the spacing between the central portions of said cap and said liner when the closure has been removed from the container.

DESIGNS

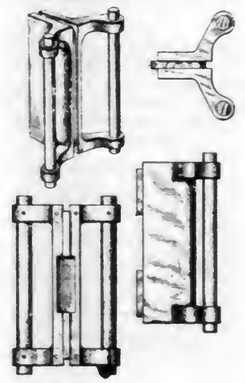
DECEMBER 14, 1948

152,053
DESIGN FOR A BOTTLE CARRIER
Albert L. Barnes, Longview, Wash.
Application April 18, 1947, Serial No. 138,474
Term of patent 3½ years
(Cl. D58—4)



The ornamental design for a bottle carrier, as shown.

152,054
DESIGN FOR A SHOWER HEAD
Ralph E. Bletcher and Ernest H. Bucknell, Los Angeles, Calif., assignors of ten per cent to Ralph E. Bletcher, twelve and one-half per cent to Ernest H. Bucknell, twelve and one-half per cent to Mabel Bucknell, ten per cent to Pearl White Bletcher, twenty-five per cent to Marcia Bucknell Liston, ten per cent to James H. Bletcher, ten per cent to Hazel Bletcher Skinner, ten per cent to Charlotte R. B. Robertson
Application November 26, 1946, Serial No. 135,108
Term of patent 3½ years
(Cl. D91—1)

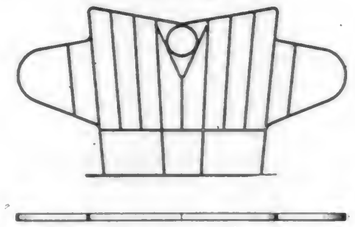


The ornamental design for a shower head, as shown.

152,055
DESIGN FOR A TANK VEHICLE
George A. Brasfield, Berkeley, Calif.
Application May 9, 1947, Serial No. 138,948
Term of patent 7 years
(Cl. D14—3)

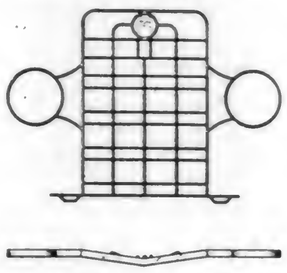
The ornamental design for a tank vehicle, substantially as shown.

152,056
DESIGN FOR A DOOR HANDLE
Stephen C. Brull, Chicago, Ill.
Application February 28, 1948, Serial No. 144,829
Term of patent 14 years
(Cl. D10—8)



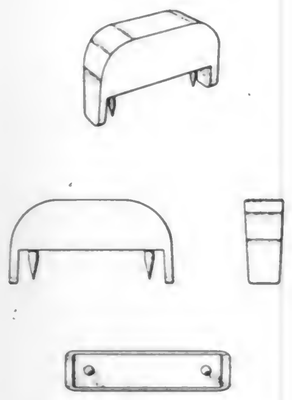
The ornamental design for a door handle, as shown.

152,057
DESIGN FOR A SWEATER
Betty Ann Bryce, Tacoma, Wash., now by decree of marriage Betty Ann Dobiash
Application July 30, 1946, Serial No. 132,100
Term of patent 7 years
(Cl. D3—4)



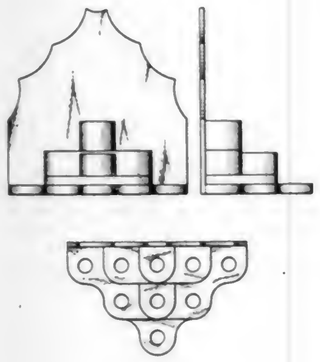
The ornamental design for a sweater, as shown and described.

152,058
DESIGN FOR A GRILLE GUARD FOR MOTOR VEHICLES
Leo Bustin, New York, N. Y.
Application May 7, 1947, Serial No. 138,886
Term of patent 3½ years
(Cl. D14—6)



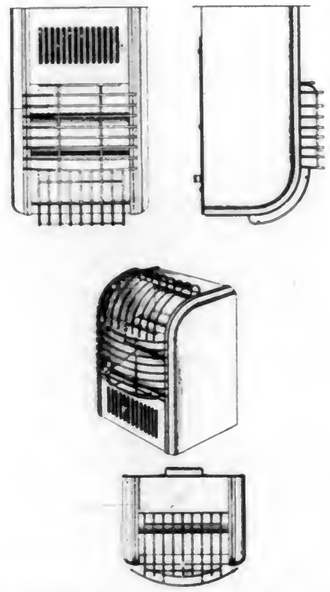
The ornamental design for a grille guard for motor vehicles, as shown.

152,059
DESIGN FOR A GRILLE GUARD FOR MOTOR VEHICLES
Leo Bustin, New York, N. Y.
Application June 28, 1947, Serial No. 139,995
Term of patent 3½ years
(Cl. D14—6)



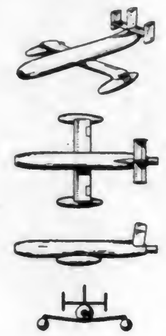
The ornamental design for a grille guard for motor vehicles, as shown.

152,060
DESIGN FOR A CAN PUNCH
Walter A. Campion, South St. Paul, Minn.
Application January 23, 1947, Serial No. 136,316
Term of patent 3½ years
(Cl. D22—2)



The ornamental design for a can punch, as shown.

152,061
DESIGN FOR A BOTTLE DISPLAY FIXTURE
William I. Carr, Eldon, Mo.
Application October 6, 1947, Serial No. 141,763
Term of patent 3½ years
(Cl. D80—9)

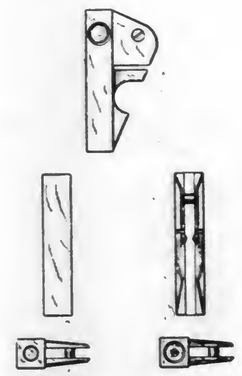


The ornamental design for a bottle display fixture, as shown.

152,062
DESIGN FOR AN ELECTRIC HEATER CASING
William W. Chatfield, Huntington, W. Va., assignor to Armstrong Products Corporation, Huntington, W. Va., a corporation of West Virginia
Application July 1, 1947, Serial No. 140,038
Term of patent 14 years
(Cl. D81—10)

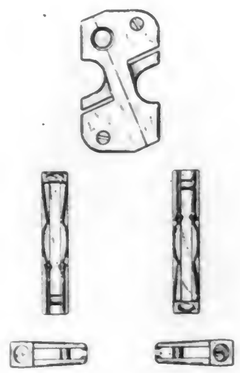
The ornamental design for an electric heater casing, as shown.

152,063
DESIGN FOR AN AIRPLANE
William J. Clark, Bexley, Ohio, assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application March 17, 1947, Serial No. 137,673
Term of patent 14 years
(Cl. D71—1)



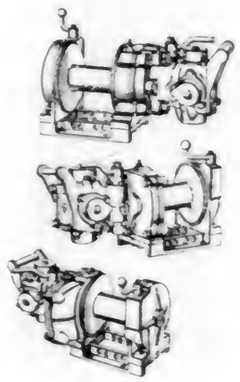
The ornamental design for an airplane, as shown.

152,064
DESIGN FOR A BRASSIÈRE
Joseph A. Coleman, New York, N. Y., assignor to Maiden Form Brassiere Company, Inc., New York, N. Y., a corporation of New York
Application October 22, 1947, Serial No. 142,079
Term of patent 14 years
(Cl. D20—4)



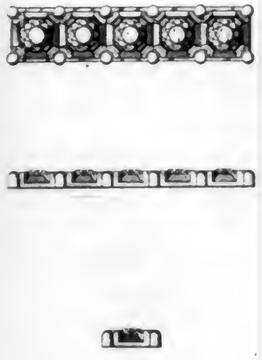
The ornamental design for a brassière, as shown.

152,065
DESIGN FOR A COMBINED TIRE GAUGE AND KEY HOLDER
John C. Crowley, Willoughby, Ohio
Application February 26, 1947, Serial No. 137,183
Term of patent 14 years
(Cl. D52—1)



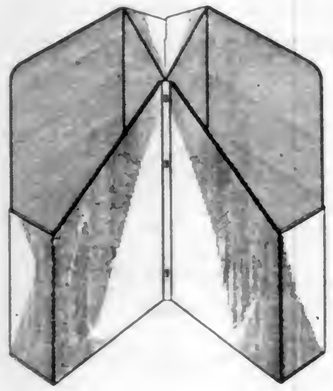
The ornamental design for a combined tire gauge and key holder, as shown and described.

152,066
DESIGN FOR A COMBINED TIRE GAUGE AND KEY HOLDER
John C. Crowley, Willoughby, Ohio
Application February 26, 1947, Serial No. 137,184
Term of patent 14 years
(Cl. D52—1)



The ornamental design for a combined tire gauge and key holder, as shown and described.

152,067
DESIGN FOR A POWER WINCH
John C. Curtis, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application July 16, 1946, Serial No. 131,635
Term of patent 14 years
(Cl. D41—1)



The ornamental design for a power winch, substantially as shown.

152,068
DESIGN FOR A MULTIGEM SETTING OR SIMILAR ARTICLE
Samuel R. Donchi, South Orange, N. J.
Application January 15, 1948, Serial No. 143,808
Term of patent 14 years
(Cl. D45—1)

The ornamental design for a multigem setting or similar article, as shown.

152,069
DESIGN FOR A DISPLAY CARTON
John G. Fettinger, Utica, N. Y., assignor to Robert Gair Company, Inc., New York, N. Y., a corporation of Delaware
Application March 26, 1947, Serial No. 137,905
Term of patent 14 years
(Cl. D58—12)

The ornamental design for a display carton, as shown.

152,070
DESIGN FOR A NEGLIGEE
Violet Giovagnoni, New York, N. Y.
Application July 30, 1947, Serial No. 140,602
Term of patent 7 years
(Cl. D3—26)

The ornamental design for a negligee, substantially as shown and described.

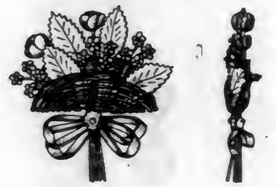
152,071
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application July 22, 1948, Serial No. 147,713
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,072
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application July 22, 1948, Serial No. 147,714
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,073
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application August 28, 1948, Serial No. 148,361
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

152,074
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application August 28, 1948, Serial No. 148,362
Term of patent 3½ years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

152,075
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application August 28, 1948, Serial No. 148,363
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,076
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application August 28, 1948, Serial No. 148,364
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,077
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application August 28, 1948, Serial No. 148,365
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,078
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application August 31, 1948, Serial No. 148,388
Term of patent 3½ years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

152,079
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application September 10, 1948, Serial No. 148,531
Term of patent 3½ years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

152,080
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application September 10, 1948, Serial No. 148,533
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

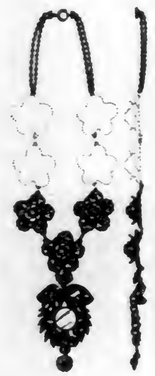
152,081
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application September 21, 1948, Serial No. 148,681
Term of patent 3½ years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

152,082
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application September 21, 1948, Serial No. 148,682
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,083
DESIGN FOR A NECKLACE
William W. Hobé, New York, N. Y.
Application September 21, 1948, Serial No. 148,683
Term of patent 3½ years
(Cl. D45—16)

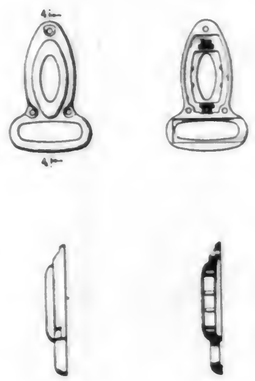


The ornamental design for a necklace, substantially as shown and described.

152,084
DESIGN FOR A NECKLACE
William W. Hobé, New York, N. Y.
Application September 23, 1948, Serial No. 148,727
Term of patent 3½ years
(Cl. D45—16)

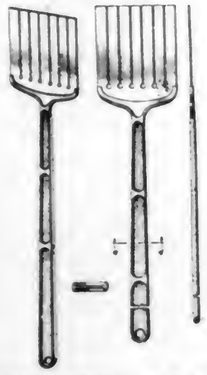
The ornamental design for a necklace, substantially as shown as described.

152,085
DESIGN FOR A NECKLACE
William W. Hobé, New York, N. Y.
Application September 23, 1948, Serial No. 148,728
Term of patent 3½ years
(Cl. D45—16)



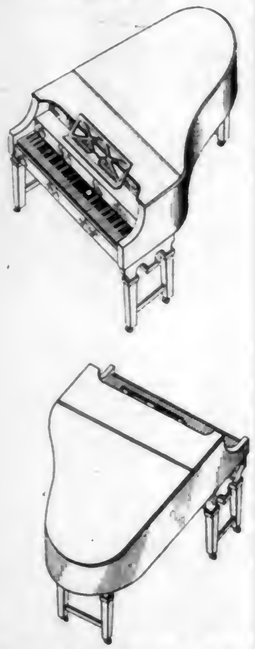
The ornamental design for a necklace, substantially as shown and described.

152,086
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application September 23, 1948, Serial No. 148,729
Term of patent 3½ years
(Cl. D45—16)



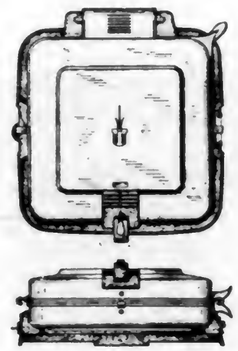
The ornamental design for a necklace or similar article, substantially as shown.

152,087
DESIGN FOR AN ELECTRICAL PUSH BUTTON COVER PLATE
William Huppert, New York, N. Y.
Application October 30, 1946, Serial No. 134,392
Term of patent 14 years
(Cl. D26—1)



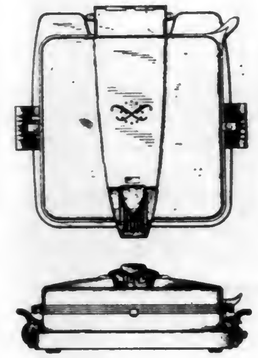
The ornamental design for an electrical push button cover plate, substantially as shown.

152,088
DESIGN FOR A FLY SWATTER
Herbert Jahn, Garfield, and Chester S. Zaremba, Paterson, N. J., assignors to Cascade Plastics Inc., a corporation of New Jersey
Application April 26, 1947, Serial No. 138,620
Term of patent 14 years
(Cl. D31—3)



The ornamental design for a fly swatter, as shown.

152,089
DESIGN FOR A GRAND PIANO
Elwood D. Kapphan, Fort Lauderdale, Fla., assignor of one-half to Edwin B. Goldsmith, Pittsburgh, Pa.
Application May 4, 1946, Serial No. 129,309
Term of patent 14 years
Cl. D56—9)



The ornamental design for a grand piano, substantially as shown and described.

152,090
DESIGN FOR AN ELECTRIC COOKING APPLIANCE
Clarence Karstadt, Glen Ellyn, Ill.
Application February 14, 1947, Serial No. 136,914
Term of patent 7 years
(Cl. D81—10)

The ornamental design for an electric cooking appliance, as shown.

152,091
DESIGN FOR AN ELECTRIC COOKING APPLIANCE
Clarence Karstadt, Glen Ellyn, Ill.
Application February 14, 1947, Serial No. 136,915
Term of patent 7 years
(Cl. D81—10)

The ornamental design for an electric cooking appliance, as shown.

152,092
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 24, 1948, Serial No. 147,756
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,093
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 2, 1948, Serial No. 147,881
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,094
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 2, 1948, Serial No. 147,882
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,095
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 4, 1948, Serial No. 147,942
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,096
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 6, 1948, Serial No. 147,975
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

152,097
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 11, 1948, Serial No. 148,056
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

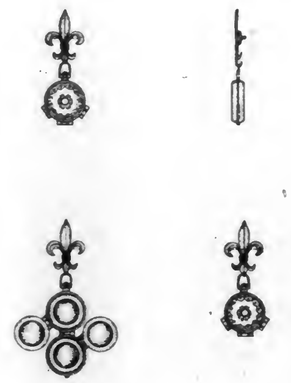
152,098
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 11, 1948, Serial No. 148,057
Term of patent 7 years
(Cl. D45—9)

Th ornamental design for an earring or similar article, substantially as shown.

152,099
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 11, 1948, Serial No. 148,060
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,100
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 12, 1948, Serial No. 148,081
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

152,101
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 21, 1948, Serial No. 148,240
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

152,102
DESIGN FOR A COMBINED BROOCH AND LOCKET
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,425
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a combined brooch and locket, substantially as shown.

152,103
DESIGN FOR A COMBINED BROOCH AND LOCKET
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,426
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a combined brooch and locket, substantially as shown.

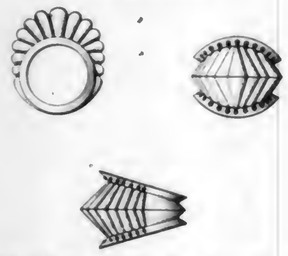
152,104
DESIGN FOR A COMBINED BROOCH AND LOCKET
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,427
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a combined brooch and locket, substantially as shown.

152,105
DESIGN FOR A COMBINED BROOCH AND LOCKET
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,428
Term of patent 7 years
(Cl. D45—19)

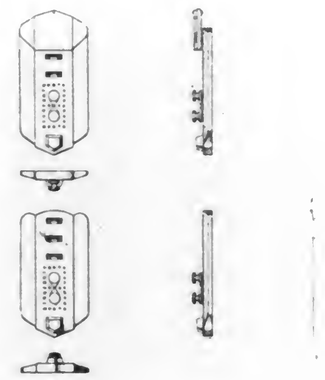
The ornamental design for a combined brooch and locket, substantially as shown.

152,106
DESIGN FOR A COMBINED BROOCH AND LOCKET
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,429
Term of patent 7 years
(Cl. D45—19)



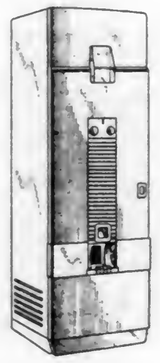
The ornamental design for a combined brooch and locket substantially as shown.

152,107
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 10, 1948, Serial No. 148,529
Term of patent 7 years
(Cl. D45—9)



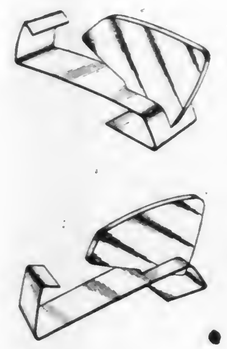
The ornamental design for an earring or similar article, substantially as shown.

152,108
DESIGN FOR A RING OR SIMILAR ARTICLE
Marc Koven, New York, N. Y.
Application May 1, 1947, Serial No. 138,743
Term of patent 3½ years
(Cl. D45—10)



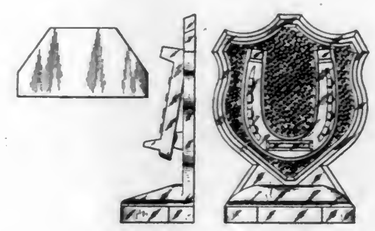
The ornamental design for a ring, or similar article, substantially as shown and described.

152,109
DESIGN FOR A LOCK FOR PORTFOLIOS OR THE LIKE
Samuel H. Lifton, New York, N. Y.
Application January 30, 1948, Serial No. 144,151
Term of patent 14 years
(Cl. D50—7)



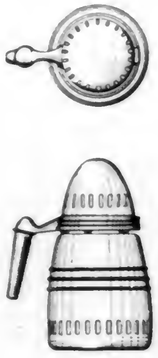
The ornamental design for a lock for portfolios or the like, substantially as shown.

152,110
DESIGN FOR A CABINET FOR BOTTLE VENDING MACHINE
Walter Lockwood Martling, Jr., Chicago, Ill., assignor to Mills Industries, Incorporated, Chicago, Ill., a corporation of Illinois
Application November 12, 1946, Serial No. 134,708
Term of patent 14 years
(Cl. D52—3)



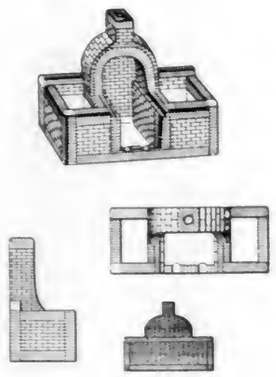
The ornamental design for a cabinet for bottle vending machine, as shown and described.

152,111
DESIGN FOR A DISPLAY STAND OR SIMILAR ARTICLE
Lockwood Martling, Jr., Chicago, Ill.
Application June 28, 1947, Serial No. 140,004
Term of patent 7 years
(Cl. D80—9)



The ornamental design for a display stand or similar article, substantially as shown and described.

152,112
DESIGN FOR A BOOK END
Albert W. McGowen, Boulder, Colo.
Application April 7, 1947, Serial No. 138,212
Term of patent 14 years
(Cl. D33—1)

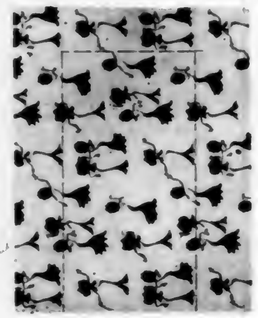


The ornamental design for a book end, as shown.

152,113
DESIGN FOR A REFLECTOR ASSEMBLY FOR A HEAT LAMP
Jacob A. Mehr, St. Louis, Mo.
Application September 13, 1947, Serial No. 141,381
Term of patent 7 years
(Cl. D48—20)

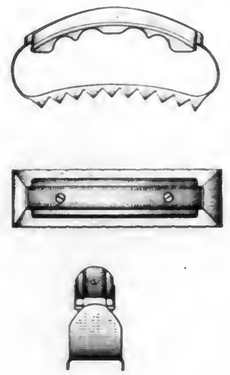
The ornamental design for a reflector assembly for a heat lamp, as shown.

152,114
DESIGN FOR AN ASH TRAY
Joseph Melillo, Great Neck, N. Y., assignor to De Groodt & Associates, Inc., Woodhaven, N. Y.
Application January 6, 1947, Serial No. 135,967
Term of patent 3½ years
(Cl. D85—2)



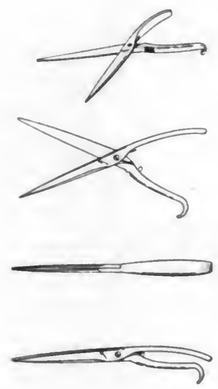
The ornamental design for an ash tray, substantially as shown and described.

152,115
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Robert E. Minger, Manhattan Beach, Calif., assignor to Mabs, Inc., Los Angeles, Calif., a corporation of California
Application November 6, 1947, Serial No. 142,340
Term of patent 3½ years
(Cl. D92—1)



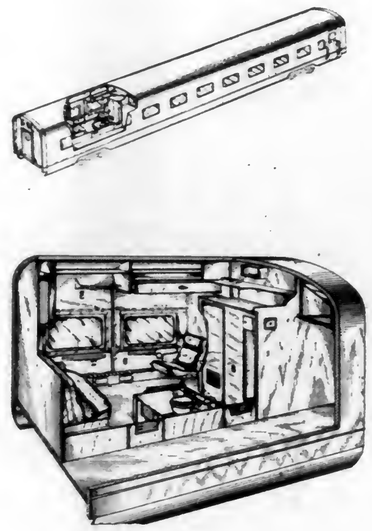
The ornamental design for a textile fabric or similar article, substantially as shown and described.

152,116
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Robert E. Minger, Manhattan Beach, Calif., assignor to Mabs, Inc., Los Angeles, Calif., a corporation of California
Application November 6, 1947, Serial No. 142,342
Term of patent 3½ years
(Cl. D92—1)



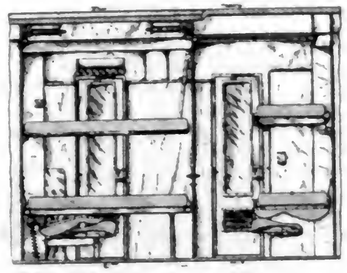
The ornamental design for a textile fabric or similar article, substantially as shown and described.

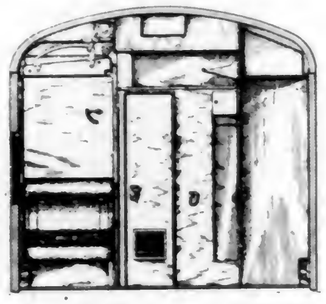
152,117
DESIGN FOR A MEAT HOLDER
Eugene S. Morfesi, Flushing, N. Y.
Application January 11, 1947, Serial No. 136,107
Term of patent 7 years
(Cl. D44—29)



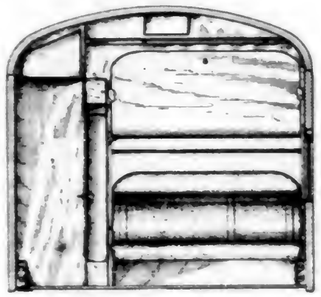
The ornamental design for a meat holder, as shown.

152,118
DESIGN FOR SHEARS
Clarence L. Mortensen, Dallas, Tex.
Application March 28, 1947, Serial No. 137,980
Term of patent 7 years
(Cl. D22—5)

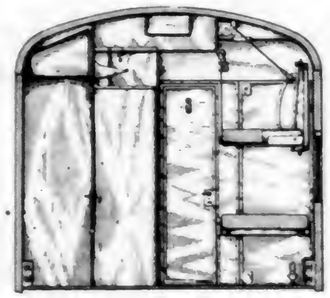




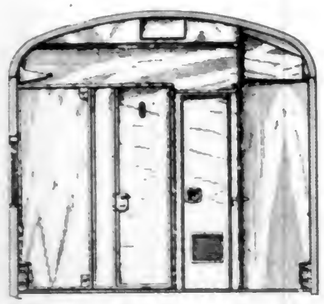
The ornamental design for shears, substantially as shown.

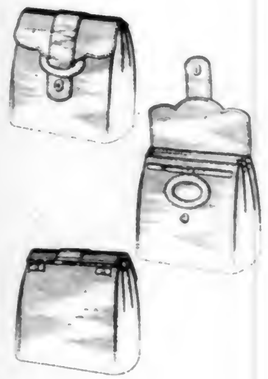


152,119
DESIGN FOR A RAILWAY CAR BODY
Frank L. Murphy and James E. Candlin, Jr., Chicago, Ill., assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application May 26, 1947, Serial No. 139,290
Term of patent 14 years
(Cl. D66—1)

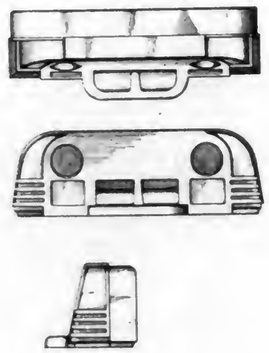


152,119—Continued



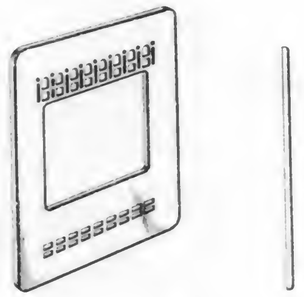


152,119—Continued



The ornamental design for a railway car body, substantially as shown and described.

152,120
DESIGN FOR A HANDBAG OR THE LIKE
Gerald Murphy, New York, N. Y., assignor to Mark Cross Company, New York, N. Y., a corporation of New York
Application March 26, 1948, Serial No. 145,385
Term of patent 14 years
(Cl. D87—3)

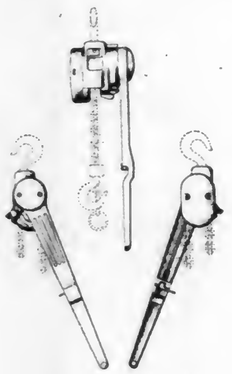


The ornamental design for a handbag or the like, substantially as shown and described.

152,121
DESIGN FOR A COIN HEAD
John W. Nimitz, also known as John W. Nimtz, Chicago, Ill., assignor to Raymond T. Moloney, Chicago, Ill.
Application February 6, 1947, Serial No. 136,720
Term of patent 14 years
(Cl. D52—3)

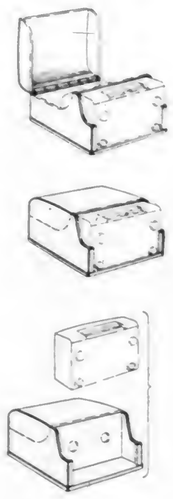
The ornamental design for a coin head, as shown and described.

152,122
DESIGN FOR A FRONT PLATE FOR ELECTRIC ROOM HEATING UNITS
Albert J. D. Ohm, Buffalo, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a corporation of New York
Application January 15, 1947, Serial No. 136,154
Term of patent 7 years
(Cl. D81—10)



The ornamental design for a front plate for electric room heating units, as shown.

152,123
DESIGN FOR A PULLER HOIST
Humphrey F. Parker, Buffalo, N. Y.
Application November 19, 1946, Serial No. 134,907
Term of patent 14 years
(Cl. D41—1)

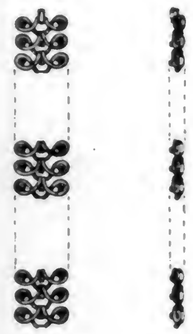


The ornamental design for a puller hoist, as shown and described.

152,124
DESIGN FOR A PULLER HOIST
Humphrey F. Parker, Buffalo, N. Y.
Application January 14, 1947, Serial No. 136,144
Term of patent 14 years
(Cl. D41—1)

The ornamental design for a puller hoist, as shown and described.

152,125
DESIGN FOR A COMBINATION RECORD PLAYER AND RADIO
Clyde A. Peterson, Lewisburg, Pa., assignor to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application August 22, 1946, Serial No. 132,731
Term of patent 7 years
(Cl. D56—4)



The ornamental design for a combination record player and radio, substantially as shown and described.

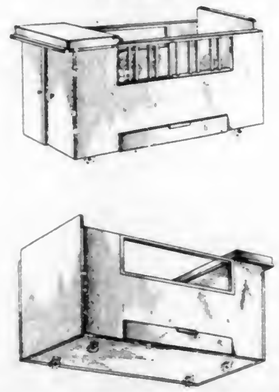
152,126
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 26, 1948, Serial No. 144,053
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

152,127
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 26, 1948, Serial No. 144,054
Term of patent 7 years
(Cl. D45—4)

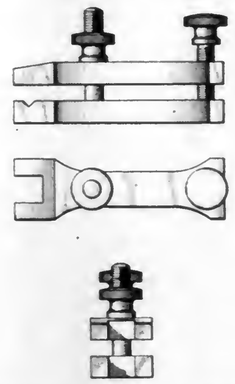
The ornamental design for a bracelet or similar article, substantially as shown and described.

152,128
DESIGN FOR A DOLL
Florence B. Salter, New Orleans, La.
Application April 9, 1947, Serial No. 138,257
Term of patent 3½ years
(Cl. D34—4)



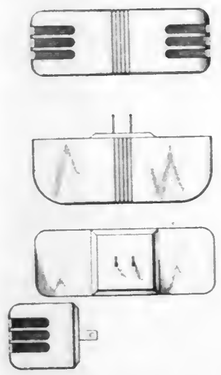
The ornamental design for a doll, as shown.

152,129
DESIGN FOR A CHAIR
James Curtis Sanford, Dallas, Tex.
Application March 3, 1947, Serial No. 137,273
Term of patent 7 years
(Cl. D15—1)



The ornamental design for a chair, substantially as shown.

152,130
DESIGN FOR A COMBINED CRIB AND BUREAU
Johannes Staartjes, Amsterdam, Netherlands, assignor to Bruynzeel's Deurenfabriek N. V., Zaandam, Netherlands
Application January 22, 1946, Serial No. 125,845
In the Netherlands July 19, 1945
Term of patent 14 years
(Cl. D5—5)



The ornamental design for a combined crib and bureau, as shown.

152,131
DESIGN FOR A PARALLEL VISE AND CLAMP
Dell Wright, Elgin, Ill.
Application March 18, 1946, Serial No. 127,638
Term of patent 14 years
(Cl. D54—13)

The ornamental design for a parallel vise and clamp, as shown.

152,132
DESIGN FOR AN ALARM CABINET
Richard E. Young, Detroit, Mich.
Application May 9, 1947, Serial No. 138,937
Term of patent 7 years
(Cl. D72—1)

The ornamental design for an alarm cabinet, as shown.

MANUFACTURER—PRODUCER—BANKER—LAWYER
TEACHER—STUDENT—AVERAGE CITIZEN

Condition of Applications Under Examination at Close of Business Nov. 30, 1948

Total number of patent applications awaiting action, 153,939. Date of oldest new application, November 8, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	6-16-47	5-14-47	2820
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-17-47	10-25-46	2954
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	3-1-48	3-3-48	1277
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	4-1-47	2-26-47	4092
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	6-24-47	1-4-47	1699
6. SURLE, H., Carbon Chemistry (part)	12-19-47	11-12-47	1707
7. HANLIN, GEORGE, Optics; Photographic Apparatus	3-4-48	11-24-47	1655
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	4-10-47	1-17-47	4494
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-10-47	2-24-47	2458
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	3-4-48	2-10-48	1534
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	1-24-48	3-17-48	813
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	11-28-47	10-5-46	2265
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	11-8-46	12-12-46	2430
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	2-9-48	11-25-47	1337
15. HENKIN, B. Plastics; Plastic Block and Earthenware Apparatus; Glass	7-23-47	5-15-47	2049
16. LOVEWELL, N. N., Television; Telephony	3-1-48	8-15-47	1613
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	4-26-47	10-25-46	2101
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	8-27-47	10-30-46	2090
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	12-3-47	3-17-47	1883
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	5-6-47	2-10-47	2071
21. MADER, R. C., Textiles	12-19-47	10-22-47	1241
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	1-12-48	3-11-47	1709
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	1-2-48	12-13-46	1154
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	10-18-47	10-10-47	2810
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	3-4-48	4-9-47	1748
26. YOUNG, R. R., Electricity—Generation and Motive Power	6-25-47	3-7-47	1331
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	7-28-47	1-31-47	3639
28. BRAUNER, R. H., (Acting), Internal-Combustion Engine (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Vehicle Fenders.	11-25-47	10-31-47	964
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	4-7-47	3-31-47	3212
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	2-10-48	12-15-47	1131
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	3-19-48	3-19-48	2086
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	5-8-47	11-5-46	3163
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	3-11-47	12-19-46	3605
34. SAPERSTEIN, S., Electricity—Transmission of Vehicles; Railways; Track Sanders; Signals and Indicators	6-2-47	1-17-47	1383
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	7-9-47	12-11-46	3464
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	1-3-47	11-13-46	2014
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	3-5-48	4-24-47	1360
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	9-9-47	7-15-47	1663
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	7-29-47	10-2-46	3058
40. DRUMMOND, E. J., Receptacles (part); Packages	1-21-48	1-28-47	3282
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	2-27-48	11-15-46	2310
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	4-10-48	3-6-48	1180
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	3-20-48	1-13-48	1234
44. HARVEY, L. P., Refrigeration	12-19-46	9-28-46	1150
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	5-27-47	11-22-46	2527
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	8-7-47	12-12-46	1848

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 153,939. Date of oldest new application, November 8, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	2-3-48	8-23-47	2185
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	3-6-48	6-14-47	1515
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	10-24-47	9-10-47	1560
50. LEVIN, SAMUEL, Synthetic Resins	3-16-48	12-1-47	2166
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	3-1-48	11-1-47	1725
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	10-23-47	1-7-47	3889
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	6-10-47	11-6-46	3591
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	3-1-48	8-18-47	1706
55. HERTZ, M., Artificial Body Members; Dentistry; Surgery; Toilet	11-29-47	11-4-47	1896
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making	2-29-48	12-9-47	980
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys.	6-4-47	2-6-47	3562
58. DOWELL, E. F., Abrading Processes and Apparatus; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	1-3-47	3-18-47	2110
59. SHEPARD, P. W., Inorganic Chemistry; Fertilizers; Gas, Heating and Illuminating; Preserving	10-30-47	5-28-47	2063
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	4-17-48	10-15-47	1320
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	1-17-47	8-19-46	3831
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	12-24-47	10-26-46	1745
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Carbon Chemistry (part)	3-4-48	9-23-47	1220
64. NASH, P. M., Compositions—Coating or Plastic (part); Abrasive Tool Making Processes and Materials; Fuel and Miscellaneous.	4-28-48	4-29-48	1500
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	3-1-48	8-21-47	2245
66. LISANN, I., Geometrical Instruments	3-19-47	4-16-46	2028
67. Krafft, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	1-2-48	7-10-47	1953
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	4-12-48	10-15-47	1493
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	8-6-47	2-6-47	2096
70. BREWRINK, J. L., Chairman (Mechanical Arts); NILSON, R. G., (Electrical Arts); SPECK, J. R., (Chemical Arts).	12-24-46	3-3-47	651
DESIGNS: BREHM, G. L.	4-3-47	3-15-48	7283

Total number of trade-mark applications awaiting action (including renewals and republications), 37,162. Date of oldest new application, Oct. 10, 1947; date of oldest amended application, Mar. 27, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	2-24-48	6-25-48	3149
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	10-27-47	6-23-48	5709

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

A. G. Company, Haledon, N. J. Narrow fabric beltings. Serial No. 494,205, Dec. 21. Class 40.

Abbott Laboratories, North Chicago, Ill. Concentrations of a chemical compound. Serial No. 556,723, Dec. 21. Class 6.

Abrams, M. L., Company, Cleveland, Ohio. Electrically operated agitating and paper aligning machines. Serial No. 506,720, Dec. 21. Class 21.

Adams, William, & Sons (Potters) Limited, Tunstall, England. Dinner ware, tea ware, breakfast ware, etc. Serial No. 528,394, Dec. 21. Class 30.

Ades-Lexington Dry Goods Co., Lexington, Ky. Shoes and overalls. Serial No. 543,048, Dec. 21. Class 39.

Adler, Albert, Philadelphia, Pa. Jewelry. Serial No. 520,788, Dec. 21. Class 28.

Adler Bros. Lace Corp., New York, N. Y. Shoe laces. Serial No. 525,755, Dec. 21. Class 40.

Advance Silk Co.: *See*—
Philips, Joel M.

Albany Billiard Ball Company, Albany, N. Y. Billiard balls, pocket billiard balls and cue balls. Serial No. 540,237, Dec. 21. Class 22.

Aldon Rug Mills, Inc., Philadelphia, Pa. Textile rugs and carpets. Serial No. 554,069, Dec. 21. Class 42.

Allied Display Materials, Inc., New York, N. Y. Display stands, shelves for the same. Serial No. 517,030, Dec. 21. Class 32.

Allied Mills, Inc., Chicago, Ill. Vitamin and protein supplment, poultry feed, etc. Serial No. 517,174, Dec. 21. Class 46.

American Aviation Associates, Inc., Washington, D. C. Periodical published twice each month. Serial No. 529,848, Dec. 21. Class 38.

American Fork and Hoe Company, The, Cleveland, Ohio. Fishing rods and fishing rod handles. Serial No. 527,837, Dec. 21. Class 22.

American Scientific Laboratories, Inc., Madison, Wis., and Polo, Ill. Medicinal and pharmaceutical preparations. Serial No. 534,502, Dec. 21. Class 6.

American Writing Paper Corporation, Holyoke, Mass. Writing and printing paper. Serial No. 537,393, Dec. 21. Class 37.

Anderson Tool & Die Works, Inc., Providence, R. I. Key chains. Serial No. 518,808, Dec. 21. Class 28.

Arcos Corporation, Philadelphia, Pa. Consumable metal welding electrodes. Serial No. 553,245, Dec. 21. Class 14.

Arcos Corporation, Philadelphia, Pa. Consumable metal welding electrodes. Serial No. 553,251, Dec. 21. Class 14.

Arcos Corporation, Philadelphia, Pa. Consumable metal welding electrodes. Serial No. 553,253, Dec. 21. Class 14.

Arcos Corporation, Philadelphia, Pa. Consumable metal welding electrodes. Serial No. 553,255, Dec. 21. Class 14.

Armour and Company, Chicago, Ill. Animal glandular products. Serial No. 528,404, Dec. 21. Class 6.

Armstrong Cork Co., Lancaster, Pa. Nursing bottles. Serial No. 534,862, Dec. 21. Class 44.

Artex Products, Philadelphia, Pa. Bedroom slippers. Serial No. 546,541, Dec. 21. Class 39.

Atlas Powder Company, Wilmington, Del. Emulsifying, dispersing, solubilizing and wetting agents. Serial No. 543,871, Dec. 21. Class 6.

Atomic Distributors, Inc., Miami, Fla., and Columbus, Ohio. Laxative compound, iron tonic, liniment. Serial No. 553,566, Dec. 21. Class 6.

CLASS 5

Sealing-wax. Dennison Manufacturing Company. 70,257, Aug. 18, 1908. Republished Dec. 21.

Tape, Adhesive and gummed. Kleen-Stik Products, Inc. 504,981, Dec. 21; Serial No. 532,939, published Mar. 30, 1948.

Tape, Adhesive-coated, strand-reinforced paper. Angier Corporation. 504,970, Dec. 21; Serial No. 531,286, published Sept. 14, 1948.

Tape, Pressure-sensitive adhesive. Industrial Tape Corporation. 505,067, Dec. 21; Serial No. 543,186, published Sept. 14, 1948.

CLASS 6

Acidic compound. Wyandotte Chemicals Corporation. 504,985, Dec. 21; Serial No. 533,095, published Sept. 7, 1948.

Acidic compound. Wyandotte Chemicals Corporation. 504,987, Dec. 21; Serial No. 533,100, published Sept. 7, 1948.

Alkaline composition. Wyandotte Chemicals Corporation. 504,988, Dec. 21; Serial No. 533,103, published Sept. 7, 1948.

Antacid preparation. Eaton Laboratories, Inc. 505,100, Dec. 21; Serial No. 552,443, published Sept. 14, 1948.

Antiseptic mouth wash. Altone Chemical Company, Inc. 505,097, Dec. 21; Serial No. 552,104, published Sept. 14, 1948.

Antiseptic salve. Dressoline Manufacturing Company. 252,531, renewed Feb. 12, 1949. O. G. Dec. 21.

Antiseptic skin remedy. A. A. Fox. 505,110, Dec. 21; Serial No. 506,812.

Astringents, astringent cerates, bleach creams, etc. M. Handman. 433,170, Sept. 30, 1947. Republished Dec. 21.

Chemical compounds. Bird-Archer Company. 50,995, Apr. 3, 1906. Republished Dec. 21.

Chemical compounds and substances. Pure Oil Company. 505,029, Dec. 21; Serial No. 538,812, published Sept. 7, 1948.

Chemical preparation. Ralph L. Dombrower Company, Inc. 316,033, Aug. 14, 1934. Republished Dec. 21.

Chemical preparation for the prevention of rust. Saverite Engineering Company. 421,354, May 28, 1946. Republished Dec. 21.

Chemical solution. A. L. Whiting. 270,526, May 6, 1930. Republished Dec. 21.

Coating composition. Armour and Company. 504,933, Dec. 21; Serial No. 527,869, published Sept. 7, 1948.

Compounds to be sprayed on sheets after they have been printed. American Type Founders Sales Corporation. 347,556, June 29, 1937. Republished Dec. 21.

Cosmetic preparations. Walgreen Co. 384,140, Jan. 7, 1941. Republished Dec. 21.

Cream, Cleansing. M. Di Giovanni. 504,973, Dec. 21; Serial No. 531,996, published Sept. 14, 1948.

Cream, Hand. Delaware Valley Chemicals, Inc. 505,066, Dec. 21; Serial No. 543,146, published Sept. 14, 1948.

Cream, Sachet. Interstate Sales Co. 505,086, Dec. 21; Serial No. 551,461, published Sept. 14, 1948.

Cuticle remover, fingernail enamel, fingernail polish, etc. Schnefel Bros., Inc. 287,475, Sept. 29, 1931. Republished Dec. 21.

Deodorant. Better Drug Products, Inc. 337,780, Aug. 18, 1936. Republished Dec. 21.

Deodorants, Ingredient in, anti-perspirants, and toiletries. Pearson Pharmacal Company, Inc. 505,079, Dec. 21; Serial No. 547,274, published Aug. 17, 1948.

Dextrose, thiamine, nicotinamid, etc. Cutter Laboratories. 441,654, Dec. 21; Serial No. 512,389, published Aug. 24, 1948.

Disinfectants. West Disinfecting Company. 433,593, Oct. 21, 1947. Republished Dec. 21.

Extracts, Tanning. International Products Corporation. 504,957, Dec. 21; Serial No. 530,512, published Oct. 5, 1948.

Extracts, Tanning. International Products Corporation. 504,958, Dec. 21; Serial No. 530,514, published Sept. 7, 1948.

Face powder. A. W. Curtis, Jr. 504,913, Dec. 21; Serial No. 520,618, published Aug. 17, 1948.

Flush, Drain pipe. Enoz Chemical Company. 343,961, Mar. 9, 1937. Republished Dec. 21.

Flux, Soldering. Tinit Manufacturing Co. 385,237, Feb. 18, 1941. Republished Dec. 21.

Hair coloring rinses. Noreen, Inc. 505,052, Dec. 21; Serial No. 541,169, published Sept. 7, 1948.

Hair colors, hair tonics, lotions, etc. M. Langhaus. 441,638, Dec. 21; Serial No. 507,008, published Mar. 30, 1948.

Hair tint. Eugene, Ltd. 505,047, Dec. 21; Serial No. 540,653, published Sept. 14, 1948.

Inhalant useful to shrink congested membranes and promote drainage of the nose, etc. Western Pharmacal Company. 314,697, July 3, 1934. Republished Dec. 21.

Insecticide. Enoz Chemical Company. 150,349–50, Jan. 3, 1922. Republished Dec. 21.

Insecticide. Xterminator Products Corporation. 505,099, Dec. 21; Serial No. 552,303, published Sept. 14, 1948.

Insecticide or preparation to kill lice. Burrell-Dugger Company. 251,735, renewed Jan. 15, 1949. O. G. Dec. 21.

Insecticides. Enoz Chemical Company. 430,100, June 10, 1947. Republished Dec. 21.

Insecticides. Shell Oil Company, Incorporated. 505,103, Dec. 21; Serial No. 554,331, published Sept. 7, 1948.

Insecticides. Shell Oil Company, Incorporated. 505,104, Dec. 21; Serial No. 554,332, published Sept. 14, 1948.

Internal remedies. W. D. Duncan. 36,131, Mar. 26, 1901. Republished Dec. 21.

Liquid preparation applied externally to the body for relief of sprains and muscular soreness. R. R. Barra. 505,117, Dec. 21; Serial No. 526,566.

Lotion, Face and hand. Better Drug Products, Inc. 335,033, May 19, 1936. Republished Dec. 21.

Mannitol hexanitrate, Brand of. Mannitone Corporation. 441,629, Dec. 21; Serial No. 490,500, published Feb. 26, 1946.

Medical compound, Antiseptic and detergent. Reed & Carnrick. 20,193, Oct. 6, 1891. Republished Dec. 21.

Medicinal preparation. Schering Corporation. 504,960, Dec. 21; Serial No. 530,774, published Sept. 7, 1948.

Medicinal preparation containing natural fish liver oil. J. B. Roerig and Company. 504,966, Dec. 21; Serial No. 531,151, published Aug. 24, 1948.

Medicinal preparation containing oxbile and vitamins. J. B. Roerig and Company. 504,965, Dec. 21; Serial No. 531,150, published Aug. 24, 1948.

Medicinal preparation containing vitamin. J. B. Roerig and Company. 504,967, Dec. 21; Serial No. 531,152, published Aug. 24, 1948.
Medicinal preparation for the treatment of indigestion. Norgine Laboratories, Inc. 505,088, Dec. 21; Serial No. 551,576, published Sept. 14, 1948.
Medicinal tonic preparations. H. R. Napp, Limited. 399,407, Jan. 5, 1943. Republished Dec. 21.
Medicine. Home Drug Company. 365,326, Mar. 7, 1939. Republished Dec. 21.
Mineral ingredient. Ubiko Milling Company. 304,982, July 25, 1933. Republished Dec. 21.
Moth proofing fluid. Feller-Jones Corporation. 505,084, Dec. 21; Serial No. 549,142, published Sept. 14, 1948.
Nasal jelly. Hart Drug Corporation. 254,864, renewed Apr. 2, 1949. O. G. Dec. 21.
Nitrogen solution. Spencer Chemical Company. 504,920, Dec. 21; Serial No. 526,501, published Sept. 7, 1948.
Odor counteractant, Diaper. Airkem, Inc. 505,085, Dec. 21; Serial No. 550,641, published Sept. 14, 1948.
Oil composition, Self emulsifying. Arkansas Company, Inc. 441,639, Dec. 21; Serial No. 507,291, published Oct. 28, 1947.
Ointment, Medicated. Pharma-Craft Corporation. 505,096, Dec. 21; Serial No. 551,816, published Sept. 14, 1948.
Perfume hair tonic, shampoo, etc. W. S. Forman. 505,034, Dec. 21; Serial No. 539,405, published Sept. 14, 1948.
Perfume, lipstick, hand and face lotion, etc. Societe Mury-Exportation. 441,640, Dec. 21; Serial No. 507,413, published Aug. 10, 1948.
Perfumes. Dorothy Gibson Perfumes Corp. 505,078, Dec. 21; Serial No. 547,112, published Aug. 17, 1948.
Perfumes. E. Lawrence. 505,098, Dec. 21; Serial No. 552,248, published Sept. 14, 1948.
Pharmaceutical preparation in the form of capsules. First Texas Chemical Mfg. Co. 441,665, Dec. 21; Serial No. 523,952, published Sept. 7, 1948.
Pharmaceutical preparations of sulphathiazole compounds. Boots Pure Drug Company Limited. 441,645, Dec. 21; Serial No. 509,691 published Sept. 7, 1948.
Phosphate, Defluorinated. International Minerals & Chemical Corporation. 505,043, Dec. 21; Serial No. 540,418, published Sept. 14, 1948.
Poison in paste form. Sterns' Electric Paste Company, Inc. 304,350, July 4, 1933. Republished Dec. 21.
Poison in paste form. Stearns' Electric Paste Company, Inc. 305,025, July 25, 1933. Republished Dec. 21.
Polyoxyalkylene glycols of relatively higher molecular weights. Wyandotte Chemicals Corporation. 504,986, Dec. 21; Serial No. 533,096, published Sept. 7, 1948.
Powder, Douche. Better Drug Products, Inc. 312,711, May 8, 1934. Republished Dec. 21.
Preparation for the relief of rheumatism, arthritis, and neuralgia. J. S. Brazier. 505,087, Dec. 21; Serial No. 551,513, published Sept. 14, 1948.
Preparation for the treatment of athletes foot, and itching toes. S. E. Cover. 505,094, Dec. 21; Serial No. 551,694, published Sept. 14, 1948.
Preparation for the treatment of psoriasis and similar skin affections. Siroil Laboratories, Inc. 327,129, Aug. 20, 1935. Republished Dec. 21.
Rodent poison. Enoz Chemical Company. 150,348, Jan. 3, 1922. Republished Dec. 21.
Salt, Ice cream. Worcester Salt Company. 308,037, Nov. 21, 1933. Republished Dec. 21.
Shampoo. W. H. Lange. 505,082, Dec. 21; Serial No. 547,464, published Sept. 14, 1948.
Shampoo, Dog. Vowel Company. 505,041, Dec. 21; Serial No. 539,922, published Sept. 14, 1948.
Shampoo, Preparation for. R. B. Semler, Inc. 504,915, Dec. 21; Serial No. 520,973, published Sept. 7, 1948.
Shampoo preparations. John H. Breck, Inc. 353,163, Dec. 28, 1937. Republished Dec. 21.
Soda ash (sodium carbonate). Solvay Process Company. 189,968, Sept. 30, 1924. Republished Dec. 21.
Soil testing chemicals. Urbana Laboratories. 505,055, Dec. 21; Serial No. 541,612, published Sept. 14, 1948.
Starch, Liquid. Candy Crafters, Inc. 441,631, Dec. 21; Serial No. 496,196, published June 18, 1946.
Tablets, Breath purifying. J. W. Mills, Jr. 505,108, Dec. 21; Serial No. 498,301.
Talcum powder, hair tonic, after shave lotion, etc., Men's. H. F. Taylor. 441,622, Dec. 21; Serial No. 475,705, published July 3, 1945.
Toiletries, Gentlemen's. S. Perr. 441,642, Dec. 21; Serial No. 508,001, published July 1, 1947.
Tooth pastes. Cavendish Chemical Corp. 248,258, renewed Oct. 16, 1948. O. G. Dec. 21.
Vitamin preparation for internal use. Olafsen Vitamins, Inc. 411,392, Jan. 16, 1945. Republished Dec. 21.
Vitamin preparation for internal use. Valentine Laboratories, Inc. 399,939, Feb. 9, 1943. Republished Dec. 21.
Vitamin tablets. Consolidated Grocers Corporation. 441,661, Dec. 21; Serial No. 521,723, published Sept. 2, 1947.
Wetting agent. Monarch Soap & Chemical Co. 505,059, Dec. 21; Serial No. 541,869, published Sept. 14, 1948.
Worming compound, Poultry. Burrell-Dugger Company. 505,095, Dec. 21; Serial No. 551,764, published Sept. 14, 1948.

CLASS 7

Ribbon. Freydberg Brothers, Incorporated. 301,640, Mar. 7, 1933. Republished Dec. 21.

CLASS 9

Coffee, chocolate, flour and other named food products; candles, laundry articles and preparations, scouring and polishing compounds, matches, brooms, and brushes. Charles & Co. 32,574, re-renewed Feb. 21, 1949. O. G. Dec. 21.
Matches. F. H. Fromm. 209,806, Mar. 2, 1926. Republished Dec. 21.
Matches, Friction. Ohio Match Company. 41,599, Dec. 8, 1903. Republished Dec. 21.

CLASS 10

Fertilizers. Virginia-Carolina Chemical Corporation. 252,670, renewed Feb. 12, 1949. O. G. Dec. 21.

CLASS 11

Printing ink. Sun Chemical Corporation. 441,653, Dec. 21; Serial No. 511,969, published Sept. 7, 1948.
Printing inks. American Type Founders Company. 313,863, June 12, 1934. Republished Dec. 21.
Printing inks. American Type Founders Sales Corporation. 327,104, Aug. 13, 1935. Republished Dec. 21.
Textile ink. John P. Nissen Company. 505,119, Dec. 21; Serial No. 530,240.

CLASS 12

Anchor plates, Steel, and concrete blocks. N. V. Betonfabriek de Meteoor. 504,995, Dec. 21; Serial No. 534,235, published Aug. 24, 1948.
Articles made from artificial stone. Dextone Company. 505,057, Dec. 21; Serial No. 541,653, published Sept. 7, 1948.
Asphalt compositions. E. L. Blum. 441,625, Dec. 21; Serial No. 486,454, published Aug. 17, 1948.
Asphalt, Waterproofing, cotton cloth saturated with hot asphalt, etc. Lewis Asphalt Engineering Corporation. 504,969, Dec. 21; Serial No. 531,224, published Aug. 31, 1948.
Awnings, Metal. Pearce Metal Products, Incorporated. 505,008, Dec. 21; Serial No. 536,129, published Aug. 17, 1948.
Brick, Fire. Malvern Brick and Tile Company. 505,011, Dec. 21; Serial No. 536,262, published Aug. 17, 1948.
Cable suspension cars, Safety. A. B. Chance Company. 505,027, Dec. 21; Serial No. 538,719, published Aug. 17, 1948.
Cement, Air-entraining Portland. Northwestern States Portland Cement Company. 504,905, Dec. 21; Serial No. 515,445, published Aug. 17, 1948.
Cement, Asphalt roof, and asphalt roof coating. United States Gypsum Company. 344,256, Mar. 16, 1937. Republished Dec. 21.
Cement, Building. H. H. Robertson Company. 365,535, Mar. 14, 1939. Republished Dec. 21.
Cement, Building. H. M. Robertson Company. 405,119, Jan. 11, 1944. Republished Dec. 21.
Cement, Hydraulic. Southern Cement Company. 114,837, Jan 2, 1917. Republished Dec. 21.
Cement, Portland. Hawkeye Portland Cement Company. 113,381, Oct. 17, 1916. Republished Dec. 21.
Cement, Portland, and mason's cement. Dewey Portland Cement Company. 505,018, Dec. 21; Serial No. 537,296, published Aug. 24, 1948.
Cement, Portland, and mason's cement. Northwestern States Portland Cement Company. 504,906, Dec. 21; Serial No. 515,446, published Aug. 24, 1948.
Cross-arms, Wooden. American Crossarm & Conduit Company. 505,031, Dec. 21; Serial No. 539,378, published Aug. 31, 1948.
Doors, Sheet steel. Richards-Wilcox Manufacturing Company. 504,928, Dec. 21; Serial No. 527,185, published Aug. 17, 1948.
Enamels, Varnish, clear varnishes, paint primers, etc. Valentine & Company. 312,626, May 1, 1934. Republished Dec. 21.
Fiber board, thermal insulating board, composite board, etc. Masonite Corporation. 505,038, Dec. 21; Serial No. 539,823, published Aug. 24, 1948.
Firebrick. Mexico Refractories Company. 505,061, Dec. 21; Serial No. 542,038, published Sept. 7, 1948.
Firebrick. Mexico Refractories Company. 505,062, Dec. 21; Serial No. 542,042, published Sept. 7, 1948.
Lime. Marblehead Lime Company. 97,258, May 26, 1914. Republished Dec. 21.
Lime, White, and hydrated lime. Marblehead Lime Company. 277,606, Nov. 18, 1930. Republished Dec. 21.
Lumber and lumber products. St. Paul & Tacoma Lumber Co. 504,994, Dec. 21; Serial No. 533,941, published Sept. 7, 1948.
Metal articles, protected. H. H. Robertson Company. 347,781, July 6, 1937. Republished Dec. 21.
Metal, Expanded. Chess Brothers, The Central Expanded Metal Company. 72,061, re-renewed Dec. 29, 1948. O. G. Dec. 21.
Panel board, Veneer covered. Panel-Ette Corporation. 505,114, Dec. 21; Serial No. 511,494.

Plaster. United States Gypsum Company. 267,938, Mar. 4, 1930. Republished Dec. 21.
Plaster of paris. J. B. King & Co. 57,535, Nov. 13, 1906. Republished Dec. 21.
Plaster of paris and calcined plaster. J. B. King & Co. 80,662, Jan. 17, 1911. Republished Dec. 21.
Plaster, Stucco and wall. United States Gypsum Company. 196,139, Mar. 10, 1925. Republished Dec. 21.
Refractory materials for furnace lining and repairing. Basic Refractories, Incorporated. 505,024, Dec. 21; Serial No. 538,088, published Aug. 3, 1948.
Refractory shapes or bricks. E. J. Lavino and Company. 504,912, Dec. 21; Serial No. 520,563, published Aug. 24, 1948.
Roof and siding material, Skylights and windows in. H. H. Robertson Company. 238,812, Feb. 14, 1928. Republished Dec. 21.
Roofing materials, siding materials. Tilo Roofing Company, Inc. 441,666, Dec. 21; Serial No. 524,634, published Aug. 24, 1948.
Roofing, Prepared roll. Logan-Long Company. 248,065, renewed Oct. 16, 1948. O. G. Dec. 21.
Roofing, Roll and shingle. American Asphalt Roof Corporation. 441,621, Dec. 21; Serial No. 475,037, published June 29, 1948.
Roofing shingles, Asphalt. Lehon Company. 505,023, Dec. 21; Serial No. 538,014, published July 20, 1948.
Sheet piling, beams and channel bars, etc. Inland Steel Company. 505,019, Dec. 21; Serial No. 537,317, published Aug. 24, 1948.
Sheets covered with asbestos, Metal. Protected Metal Company. 57,415, Nov. 13, 1906. Republished Dec. 21.
Sheets covered with asbestos, Metal. Protected Metal Company. 57,472, Nov. 13, 1906. Republished Dec. 21.
Sheets, Protected metal. H. H. Robertson Company. 153,203, Mar. 14, 1922. Republished Dec. 21.
Shingles, Asphalt roofing. McHenry-Millhouse Mfg. Co. 221,319, Nov. 30, 1926. Republished Dec. 21.
Steel beam units, Cellular. H. H. Robertson Company. 395,248, May 19, 1942. Republished Dec. 21.
Tile bearing numbers, Individual sections of. Cambridge Tile Mfg. Co. 505,025, Dec. 21; Serial No. 538,354, published Aug. 17, 1948.
Waterproofing material. Stopall Waterproofing Manufacturers, Inc. 505,035, Dec. 21; Serial No. 539,457, published Aug. 24, 1948.

CLASS 13

Chain, Base-metal, base-metal chains, base-metal loops, etc. American Chain Company, Inc. 154,861, May 16, 1922. Republished Dec. 21.
Fences, Ornamental metal, gates and gate posts, door knockers, etc. Fred S. Gichner Iron Works, Inc. 381,798, Oct. 8, 1940. Republished Dec. 21.
Pipe, Metal. Wheeling Steel Corporation. 245,301, renewed Aug. 7, 1948. O. G. Dec. 21.

CLASS 14

Bronze sheets. U. T. Hungerford Brass & Copper Co. 214,661, June 29, 1926. Republished Dec. 21.
Castings. Buffalo Foundry & Machine Co. 408,772, Aug 29, 1944. Republished Dec. 21.
Electrolytic copper of various forms. Union Miniere du Haut Katanga. 243,378, renewed June 19, 1948. O. G. Dec. 21.
Metal stampings, Miscellaneous. Midwest Metal Stamping Company. 348,085, July 13, 1937. Republished Dec. 21.
Metallic welding materials. American Brake Shoe Company. 413,237, Apr. 17, 1945. Republished Dec. 21.
Metals, Bearing, cored and solid bars, gear blanks. Sumet Corporation. 418,356, Dec. 18, 1945. Republished Dec. 21.
Metals, Bearing, cored and solid bars, gear blanks, etc. Sumer Corporation. 417,629, Nov. 5, 1945. Republished Dec. 21.
Steel sheets, Black and galvanized. Wheeling Steel Corporation. 248,674, renewed Oct. 30, 1948. O. G. Dec 21.
Type. American Type Founders Sales Corporation. 325,337, June 18, 1935. Republished Dec. 21.
Type, Printer's. American Type Founders, Incorporated. 375,091, Feb. 6, 1940. Republished Dec. 21.
Type, Printer's. American Type Founders, Incorporated. 377,840, May 14, 1940. Republished Dec. 21.
Type, Printer's. American Type Founders, Incorporated. 398,294, Oct. 20, 1942. Republished Dec. 21.
Welding materials in the form of bare rods or coated electrodes, Metallic. American Brake Shoe Company. 413,237, Apr. 17, 1945. Republished Dec. 21.
Welding rods and metal alloys having a ferrous base. American Brake Shoe Company. 412,810, Mar. 27, 1945. Republished Dec. 21.
Welding rods, Bare and coated metallic. American Brake Shoe Company. 414,309, June 5, 1945. Republished Dec. 21.

CLASS 15

Coffee, chocolate, flour, and other named food products; candles, laundry articles and preparations, scouring and polishing compounds, matches, brooms, and brushes. Charles & Co. 32,514, re-renewed Feb. 21, 1949. O. G. Dec. 21.
Gasoline, motor oils, lubricating grease, etc. Oil Workers International Union. 371,187, Sept. 19, 1939. Republished Dec. 21.
Greases, Lubricating, and lubricating oils. New York Lubricating Oil Company. 72,380, Jan. 19, 1909. Republished Dec. 21.
Oils and greases, Lubricating. Gun-Fil Corporation. 247,833, renewed Oct. 9, 1948. O. G. Dec. 21.

CLASS 16

Enamels, ready-mixed paints, varnishes, etc. Valentine & Company. 97,293, May 26, 1914. Republished Dec. 21.
Enamels, Varnish, clear varnishes, paint primers, etc. Valentine & Company. 312,626, May 1, 1934. Republished Dec. 21.
Paint, Barn. Wadsworth-Howland Company. 146,395, Sept. 6, 1921. Republished Dec. 21.
Paint enamel. Wadsworth-Howland Company. 148,556, Nov. 15, 1921. Republished Dec. 21.
Paint enamels and varnishes. Great Lakes Varnish Works, Inc. 247,879, Oct. 9, 1928. Republished Dec. 21.
Paint enamels, stains, and varnishes. Valentine & Company. 296,887, Aug. 23, 1932. Republished Dec. 21.
Paint enamels, stains, and varnishes. Valentine & Company. 304,158, June 20, 1933. Republished Dec. 21.
Paint, Plastic. Saverite Engineering Company. 422,778, Aug. 3, 1946. Republished Dec. 21.
Paints. H. H. Robertson Company. 425,236, Nov. 12, 1946. Republished Dec. 21.
Paints, Mixed. Detroit Graphite Co. 104,251, May 11, 1915. Republished Dec. 21.
Paints, Ready-mixed, varnish stains, and varnish enamels. Valentine & Company. 272,768, July 15, 1930. Republished Dec. 21.
Paints, Roof. Kling-Tite Paint Products Co. 233,363, renewed Sept. 27, 1947. O. G. Dec. 21.
Plastic composition for filling seams in woodwork. H. B. F. Kuhls. 77,737, May 3, 1910. Republished Dec. 21.
Stains, Varnish, and paint enamels. Con-Ferro Paint & Varnish Company. 368,842, July 4, 1939. Republished Dec. 21.
Stains, Varnish, color varnishes, clear varnishes, etc. Valentine & Company. 126,224, July 29, 1919. Republished Dec. 21.

CLASS 17

Cigarettes. Fleming-Hall Tobacco Co., Inc. 432,236, Aug. 26, 1947. Republished Dec. 21.
Cigarettes, cheroots, little cigars, etc. M. Simpson. 231,708, Aug. 23, 1927. Republished Dec. 21.
Cigarettes. P. Lorillard Company. 505,017, Dec. 21; Serial No. 536,912, published Sept. 14, 1948.
Cigars. De Nobili Cigar Company. 248,608, renewed Oct. 23, 1948. O. G. Dec. 21.
Cigars. De Nobili Cigar Company. 250,597–8, renewed Dec. 11, 1948. O. G. Dec. 21.
Cigars. De Nobili Cigar Company. 251,390, renewed Jan. 8, 1949. O. G. Dec. 21.
Cigars. Garcia Grande Cigars, Incorporated. 317,582, Oct. 2, 1934. Republished Dec. 21.
Cigars. D. Emil Klein Co., Inc. 504,946, Dec. 21; Serial No. 529,782, published Sept. 14, 1948.
Cigars. Jose Lovera Co. 59,354, Jan. 8, 1907. Republished Dec. 21.
Cigars. M. Simpson. 221,737, Dec. 7, 1926. Republished Dec. 21.
Cigars and all-tobacco-cigarettes. D. Emil Klein Co., Inc. 504,943, Dec. 21; Serial No. 529,775, published Sept. 14, 1948.
Cigars and all-tobacco cigarettes. D. Emil Klein Co., Inc. 504,947, Dec. 21; Serial No. 529,785, published Sept. 14, 1948.
Cigars, cigarettes, and smoking and chewing tobacco. D. Emil Klein Co., Inc. 504,945, Dec. 21; Serial No. 529,781, published Sept. 14, 1948.
Cigars, cigarettes, and tobacco pipe mixtures. D. Emil Klein Co., Inc. 504,944, Dec. 21; Serial No. 529,777, published Sept. 14, 1948.
Cigars, cigarettes, cheroots, etc. D. Emil Klein Co., Inc. 504,942, Dec. 21; Serial No. 529,773, published Sept. 14, 1948.
Tobacco, Chewing. R. C. Owen Company. 504,916, Dec. 21; Serial No. 521,275, published Sept. 14, 1948.
Tobacco products. Walgreen Co. 257,944, June 25, 1929. Republished Dec. 21.
Tobacco, Smoking. Benson & Hedges. 505,056, Dec. 21; Serial No. 541,636, published Aug. 31, 1948.

CLASS 19

Earth-moving machinery, Mobile. Euclid Crane & Hoist Company. 282,468, Apr. 21, 1931. Republished Dec. 21.
Motor-driven and trailer materials-handling equipment. Euclid Road Machinery Company. 373,795, Dec. 26, 1939. Republished Dec. 21.
Reflecting and signal lenses and buttons, Automobile safety. Globe Specialty Company. 343,695, Mar. 2, 1937. Republished Dec. 21.

CLASS 20

Covering, Plastic floor, wall, counter, or furniture. United States Stoneware Co. 505,006, Dec. 21; Serial No. 536,020, published Sept. 14, 1948.

Floor covering. B. F. Goodrich Company. 441,659, Dec. 21; Serial No. 519,981, published Sept. 14, 1948.
Sheet material compounded of rubber. L. E. Warford. 441,635, Dec. 21; Serial No. 504,722, published Sept. 14, 1948.

CLASS 21

Antenna and antenna mounts, Television, clamps, and standoffs. Video Television, Inc. 505,128, Dec. 21; Serial No. 543,549.
Conduits, Electrical, and conduits systems, and equipment therefor. Bulldog Electric Products Co. 222,525, Mar. 12, 1935. Republished Dec. 21.
Dishwashing machines, Electric. Hurley Machine Company. 119,537, Nov. 27, 1917. Republished Dec. 21.
Electric range units and immersion heaters, and parts thereof. Edwin L. Wiegand Company. 505,118, Dec. 21; Serial No. 527,582.
Insulating compound, Electric. Sure-Rite Products Company. 417,723, Nov. 13, 1945. Republished Dec. 21.
Irons, Electrical soldering. Sound Equipment Corporation of California. 505,109, Dec. 21; Serial No. 502,852.
Radio transformers and radio condensers. M. H. Kranzberg. 414,188, May 29, 1945. Republished Dec. 21.
Splicers, connectors, couplings, etc. Bulldog Electric Products Company. 328,981, Oct. 15, 1935. Republished Dec. 21.
Storage batteries and storage battery cases. Vitalic Battery Company, Inc. 505,122, Dec. 21; Serial No. 533,797.
Storage batteries, Automobile. Laher Spring and Tire Corporation. 505,120, Dec. 21; Serial No. 530,519.
Storage batteries, Electric. A. Setzer. 359,758, Aug. 30, 1938. Republished Dec. 21.
Switches, Electrical, and electrical contact sets. Bulldog Electric Products Co. 336,817, July 21, 1936. Republished Dec. 21.

CLASS 22

Amusement machines, Coin-operated. J. F. Meyer. 291,378. Feb. 9, 1932. Republished Dec. 21.
Athletic and sporting goods. Amco Sports Distributors. 504,968, Dec. 21; Serial No. 531,180, published Aug. 17, 1948.
Balls, Bowling. Raybestos-Manhattan, Inc. 504,974, Dec. 21; Serial No. 532,057, published Aug. 17, 1948.
Cover for fisherman's casting rod handle and reel. O. Cordes. 505,125, Dec. 21; Serial No. 538,804.
Dolls. A. L. Clark. 441,664, Dec. 21; Serial No. 523,094, published Aug. 17, 1948.
Dolls, Stuffed, and stuffed toy animals. St. Nick's Workshop, Inc. 441,660, Dec. 21; Serial No. 521,469, published Aug. 17, 1948.
Fish bait comprising an edible food composition in the form of pellets. C. E. Eslick. 505,127, Dec. 21; Serial No. 540,059.
Fish bait, Edible. J. C. Fuller. 441,641, Dec. 21; Serial No. 507,897, published Aug. 17, 1948.
Fishing flies, Artificial. V. Clark. 504,901, Dec. 21; Serial No. 509,635, published Aug. 17, 1948.
Games, Mechanical. Academy Award Products, Inc. 441,633, Dec. 21; Serial No. 500,349, published Aug. 17, 1948.
Golf balls. Walgreen Co. 302,302, Apr. 11, 1933. Republished Dec. 21.
Golf balls. Walgreen Co. 302,356, Apr. 11, 1933. Republished Dec. 21.
Golf clubs, golf balls, golf bags, etc. Krordon Company. 247,816, renewed Oct. 9, 1948. O. G. Dec. 21.
Horseshoe sets, Lightweight. W. D. Hedenkamp. 504,894, Dec. 21; Serial No. 496,787, published Aug. 17, 1948.
Play vehicle. Hettrick Manufacturing Company. 505,050, Dec. 21; Serial No. 540,997, published July 20, 1948.
Playing cards. Walgreen Co. 344,402, Mar. 23, 1937. Republished Dec. 21.
Playing cards. Walgreen Co. 347,504, June 29, 1937. Republished Dec. 21.
Slot machines. J. F. Meyer. 316,662, Aug. 28, 1933. Republished Dec. 21.
Sporting and recreational articles. Gemloid Corporation. 504,891, Dec. 21; Serial No. 478,683, published Aug. 17, 1948.
Sporting goods. Boye Manufacturing Company. 441,667, Dec. 21; Serial No. 525,781, published Aug. 17, 1948.
Swings, Baby, baby sulkies, doll swings. Welsh-Hartman Company. 276,239, Oct. 14, 1930. Republished Dec. 21.
Tennis racquets and tennis balls. Walgreen Co. 344,519, Mar. 30, 1937. Republished Dec. 21.
Toy. E. W. Koepnick. 504,899, Dec. 21; Serial No. 507,985, published Aug. 17, 1948.
Toy banks. Duro Pattern and Mold Company. 504,975, Dec. 21; Serial No. 532,127, published Aug. 3, 1948.
Toy, Educational. M. Marx. 441,657, Dec. 21; Serial No. 515,440, published Aug. 17, 1948.
Toy engine, Electrically operated. Tot-Tested Toys Ltd. 441,648, Dec. 21; Serial No. 511,191, published Aug. 17, 1948.
Toy rattles, Children's, and children's toy combs and brushes. Joseph Davis Plastics Company. 504,934, Dec. 21; Serial No. 528,196, published Aug. 17, 1948.
Toy sailboats. P. Lewis. 441,658, Dec. 21; Serial No. 518,084, published Aug. 17, 1948.
Toy tops. Spyro Toy Company. 505,121, Dec. 21; Serial No. 530,867.
Toys. A. Smidth. 441,643, Dec. 21; Serial No. 509,106, published Aug. 17, 1948.

CLASS 23

Acid concentrators, acid and thenol skills, acid eggs, etc. Buffalo Foundry & Machine Co. 185,959, July 1, 1924. Republished Dec. 21.
Ball bearings and roller bearings and their parts. Norma Company of America. 107,501, Dec. 7, 1915. Republished Dec. 21.
Bits, augers, and screw drivers. Irwin Auger Bit Company. 428,109, Mar. 11, 1947. Republished Dec. 21.
Blades, Razor. W. Osiecky. 432,957, Sept. 23, 1947. Republished Dec. 21.
Blades, Razors and razor. Gillette Safety Razor Co. 70,856, re-renewed Oct. 13, 1948. O. G. Dec. 21.
Building equipment, Road. J. E. Ingram Equipment Company. 433,627, Oct. 21, 1947. Republished Dec. 21.
Calandrias, causticizers, and concentrators, etc. Buffalo Foundry & Machine Co. 192,253, Dec. 2, 1924. Republished Dec. 21.
Dishwashing machines. Fearless Dishwasher Company, Inc. 236,676, Dec. 20, 1927. Republished Dec. 21.
Driven stirrers, Pneumatic. Eclipse Air Brush Co. 409,800, Oct. 24, 1944. Republished Dec. 21.
Lawn mowers. R. H. Macy & Co., Inc. 252,368, renewed Feb. 5, 1949. O. G. Dec. 21.
Machinery shaft couplings. Morse Chain Company. 319,489, Nov. 27, 1934. Republished Dec. 21.
Machines for drying or evaporating liquids. Buffalo Foundry & Machine Co. 387,648, May 27, 1941. Republished Dec. 21.
Mobile machinery. Euclid Crane & Hoist Company. 283,610, June 2, 1931. Republished Dec. 21.
Presses, Printing. American Type Founders, Incorporated. 366,777, Apr. 22, 1941. Republished Dec. 21.
Presses, Printing. American Type Founders Sales Corporation. 324,342, May 14, 1935. Republished Dec. 21.
Presses, Printing, and printing industry accessories. American Type Founders Sales Corporation. 352,387, Nov. 30, 1937. Republished Dec. 21.
Razors, Safety, and safety-razor blades. Aktiebolaget Svensk Rakklinga. 218,077, Sept. 21, 1926. Republished Dec. 21.
Routing machines, bending machines, and gluing machines. Onsrud Machine Works, Inc. 360,044, Sept. 6, 1938. Republished Dec. 21.
Sewing machines. New Home Sewing Machine Co. 216,809, Aug. 24, 1926. Corrected. O. G. Dec. 21.
Spray guns. Eclipse Air Brush Co. 409,901-2, Oct. 31, 1944. Republished Dec. 21.
Tweezers, house scissors, pocket scissors, etc. Schnefel Brothers, Inc. 282,014, Apr. 7, 1931. Republished Dec. 21.

CLASS 24

Ironing machines. Electric Household Utilities Corporation. 347,157, June 15, 1937. Republished Dec. 21.
Ironing machines. Electric Household Utilities Corporation. 384,009, Dec. 31, 1940. Republished Dec. 21.
Ironing machines. Meadows Corporation. 377,161, Apr. 23, 1940. Republished Dec. 21.
Washing machines. Meadows Manufacturing Co. 226,309, Apr. 5, 1927. Republished Dec. 21.
Washing machines, Clothes, and ironing machines. Electric Household Utilities Corporation. 427,067, Jan. 28, 1947. Republished Dec. 21.
Washing machines, Clothes, ironing machines and clothes wringing machines. Hurley Machine Company, 119,454, Nov. 20, 1917. Republished Dec. 21.
Washing machines, Laundry. One Minute Washer Company. 305,578, Aug. 22, 1933. Republished Dec. 21.
Washing-machines, Laundry, wringers and mangles. Pittsburgh Gage & Supply Company. 109,950, Apr. 25, 1916. Republished Dec. 21.

CLASS 26

Cameras, Lithographic, portable cameras, and precision cameras. American Type Founders Sales Corporation. 417,643, Nov. 6, 1945. Republished Dec. 21.
Lenses, Ophthalmic. Bausch & Lomb Optical Company. 254,526, renewed Mar. 26, 1948. O. G. Dec. 21.
Potentiometers, automatic controlling instruments, etc. Brown Instrument Company. 249,730, renewed Nov. 20, 1948. O. G. Dec. 21.

CLASS 27

Watches and their parts and watch-movements. American Waltham Watch Company. 33,234, July 18, 1899. New certificate. O. G. Dec. 21.

CLASS 28

Chains for personal wear. General Chain Company. 196,421, Mar. 17, 1925. Republished Dec. 21.
Chains for personal wear, fobs, pendants, bracelets, etc. General Chain Company. 222,444, Jan. 4, 1927. Republished Dec. 21.
Chains for personal wear, Metal. W. Forstner Co. 106,318, Oct. 19, 1915. Republished Dec. 21.
Chains for personal wear, Metal. F. Speidel Co. 112,721, Sept. 19, 1916. Republished Dec. 21.

Hollow ware, flatware, and silver ware. Edward Prill & Sons. 424,634, Oct. 15, 1946. Republished Dec. 21.
Jewelry. F. Speidel Company. 102,314, Feb. 2, 1915. Republished Dec. 21.
Jewelry chains. American Jewelry Chain Company. 368,782, June 27, 1939. Republished Dec. 21.
Pearls. Syndicate Trading Company. 252,759, Feb. 12, 1929. Republished Dec. 21.
Pins, earrings, pendants, etc. R. Polumbaum. 411,411, Jan. 16, 1945. Republished Dec. 21.
Watch bracelets. C. Schaeffer. 424,638, Oct. 15, 1946. Republished Dec. 21.

CLASS 29

Coffee, chocolate, flour, and other named food products; candles, laundry articles and preparations, scouring and polishing compounds, matches, brooms, and brushes. Charles & Co. 32,514, re-renewed Feb. 21, 1948. O. G. Dec. 21.
Mops, Dust, and polish mops. Midway Chemical Company. 250,427, renewed Dec. 11, 1948. O. G. Dec. 21.

CLASS 31

Containers for dry-ice cooled shipping and delivery of ice cream and the like, Insulated paper board. Jiffy Manufacturing Company. 441,647, Dec. 21; Serial No. 510,434, published Sept. 16, 1947.
Filtering equipment for general industrial operations and replacement parts therefor. Mechanical liquid. Peterson Filters and Engineering Co. 441,620, Dec. 21; Serial No. 461,419, published Sept. 30, 1947.
Freezers, Ice cream. North Bros. Mfg. Co. 64,041, July 23, 1907. Republished Dec. 21.
Freezers, Ice cream. White Mountain Freezer Company. 127,164, Oct. 21, 1919. Republished Dec. 21.
Graded siliceous and other insoluble, unreactive granular materials. Elgin Softener Corporation. 433,872, Nov. 4, 1947. Republished Dec. 21.
Ion-exchange materials. Elgin Softener Corporation. 432,490, Sept. 2, 1947. Republished Dec. 21.
Refrigerated locker units. W. M. Baird. 504,936, Dec. 21; Serial No. 528,246, published Sept. 7, 1948.
Refrigeration apparatus. Linde Air Products Company. 441,626, Dec. 21; Serial No. 486,625, published Sept. 7, 1948.
Refrigerators and refrigerating equipment. L. H. Behrens. 505,116, Dec. 21; Serial No. 523,819.
Refrigerators, Household electric. Ranney Refrigerator Company. 504,982, Dec. 21; Serial No. 532,960, published Sept. 7, 1948.

CLASS 32

Beds and bedding. E. C. Johnson, Jr. 504,996, Dec. 21; Serial No. 534,637, published Sept. 14, 1948.
Beds, cribs, bed springs, etc. Crescent Bed Co., Ltd. 162,710, Dec. 26, 1922. Republished Dec. 21.
Cabinets, Storage, cupboards, chairs, etc. Griffin Engineering Company, Inc. 441,628, Dec. 21; Serial No. 490,430, published Sept. 14, 1948.
Cabinets, Storage, stands in the nature of furniture, cupboards, and cellarets. Griffin Engineering Company, Inc. 441,627, Dec. 21; Serial No. 390,429, published Sept. 14, 1948.
Chairs. C. F. Streit. 358,691, July 19, 1938. Republished Dec. 21.
Chairs and rockers, Household and office. C. F. Streit Mfg. Co. 283,122, May 19, 1931. Republished Dec. 21.
Chests, Cedar. Lane Company, Inc. 296,689, Aug. 16, 1932. Republished Dec. 21.
Furniture both wood and upholstered, Household and summer. Heywood-Wakefield Company. 504,980, Dec. 21; Serial No. 532,931, published Sept. 14, 1948.
Mattresses and cushions, Inflatable. Hedwin Corporation. 441,668, Dec. 21; Serial No. 525,844, published Sept. 14, 1948.
Mattresses, box springs, studio beds, and sofa beds. J. P. Micket. 441,655, Dec. 21; Serial No. 513,944, published Sept. 14, 1948.
Seats and mattresses, Resilient, and parts thereof. Seng Company. 303,253, May 16, 1933. Republished Dec. 21.
Spring assemblies for upholstery. Nachman Corporation. 505,115, Dec. 21; Serial No. 513,329.
Wardrobes, Cedar, cedar chifforobes, cedar closets, etc. Lane Company, Inc. 271,946, June 17, 1930. Republished Dec. 21.
Wardrobes, Cedar, cedar chifforobes, cedar closets, etc. Lane Company, Inc. 341,498, Dec. 8, 1936. Republished Dec. 21.

CLASS 33

Bowls made of glass, Gasoline strainer. Johnson Glass Company. 420,106, Mar. 26, 1946. Republished Dec. 21.

CLASS 34

Air conditioning apparatus. Cargocaire Engineering Corporation. 441,652, Dec. 21; Serial No. 511,794, published Jan. 6, 1948.
Condensers. Niagara Blower Company. 343,250, Feb. 16, 1937. Republished Dec. 21.
Cooking apparatus in the form of charcoal and wood burners and grills. C. Mannheimer. 504,938, Dec. 21; Serial No. 528,808, published Aug. 24, 1948.
Dehumidifying units. T. H. Urdahl. 441,644, Dec. 21; Serial No. 509,617, published Mar. 2, 1948.
Gas fired units. Mechanical Home Systems, Incorporated. 504,935, Dec. 21; Serial No. 528,218, published Aug. 24, 1948.
Gas, oil, and vapor hot-water storage and heating tanks and those adapted for heating by thermosiphon or coils; gas, oil, and vapor water heaters and thermostatic valves furnished parts of heating devices. Cleveland Heater Company. 249,071, renewed Nov. 6, 1948. O. G. Dec. 21.
Gas ranges. Avco Manufacturing Corporation. 504,921, Dec. 21; Serial No. 526,655, published Aug. 24, 1948.
Grilles. Uni-Flo Grille Corporation. 301,603, Mar. 7, 1933. Republished Dec. 21.
Heat economizers, Waste. National Engineering & Equipment Company. 505,058, Dec. 21; Serial No. 541,894, published Sept. 7, 1948.
Heat exchangers, Blower type evaporative. Niagara Blower Company. 408,162, July 25, 1944. Republished Dec. 21.
Heaters, Space. Jackes-Evans Manufacturing Company, 504,932, Dec. 21; Serial No. 527,705, published Aug. 31, 1948.
Heaters, Submerged water. Bell & Gossett Company. 226,588, Apr. 12, 1927. Republished Dec. 21.
Heating equipment. C. E. Johnson. 505,026, Dec. 21; Serial No. 538,420, published Aug. 24, 1948.
Lanterns, Gasoline and kerosene, and mantles, generator tubes, etc. American Gas Machine Company. 504,955, Dec. 21; Serial No. 530,365, published Aug. 24, 1948.

Cloth resembling artificial leather, Coated. Weymouth Art Leather Company. 434,158, Nov. 11, 1947. Republished Dec. 21.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ellis Drier Co., The, assignee: *See*—
Ellis, Hubert C.

Ellis, Hubert C., Evanston, assignor to The Ellis Drier Co., Chicago, Ill. Washing machine with pivotally supported outer and inner shells and power means on the outer shell for rotating the inner shell. Re. 23,065, Dec. 21.

Moseley, Francis L., Chevy Chase, Md., assignor to The Sperry Corporation. Electrical control system. Re. 23,066, Dec. 21.

Sperry Corporation, The, assignee: *See*—
Moseley, Francis L.

LIST OF DESIGN PATENTEES

Andres, Lloyd J., Itasca, assignor to Fidelitone Incorporated, Chicago, Ill. Tone arm. 152,133, Dec. 21.

Autogiro Company of America, assignee: *See*—
Knack, Frederick J.

Balcrank, Inc., assignee: *See*—
Field, Richard P.

Bauman, Howard A., assignor to Enger-Kress Company, West Bend, Wis. Combined billfold, purse, and memorandum pad holder. 152,134, Dec. 21.

Becker, Stephen P., Poughkeepsie, N. Y. Hot line tap. 152,135, Dec. 21.

Berry, James D., Los Angeles, Calif. Washing device or similar article. 152,136, Dec. 21.

Bersudsky, Sidney, Sidney, Nova Scotia, Canada. Flashlight or similar article. 152,137, Dec. 21.

Boston Stove Foundry Company, assignee: *See*—
Covey, Laird F.

Bradley, C. C., & Son, Inc., assignee: *See*—
During, William J., and Punke.

Braun, Gustav F.: *See*—
Dann, Charles W., Braun, and Somers.

Century Sportswear Co., Inc., assignee: *See*—
Cohen, Oscar H.

Cohen, Oscar H., Brighton, assignor to Century Sportswear Co., Inc., Boston, Mass. Skirt ensemble or similar article of wearing apparel. 152,138, Dec. 21.

Covey, Laird F., Stamford, Conn., assignor to Boston Stove Foundry Company, Reading, Mass. Combined top, back guard panel, timer and utility compartment for a cooking range. 152,139, Dec. 21.

Crawford, Marion B., Western Springs, and E. C. Mitchell, Oak Park, assignors to United Air Lines, Inc., Chicago, Ill. Cargo container. 152,140, Dec. 21.

Crawford, Marion B., Western Springs, and E. C. Mitchell, Oak Park, assignors to United Air Lines, Inc., Chicago, Ill. Cargo container. 152,141, Dec. 21.

Dann, Charles W., Malden, Mass., and G. F. Braun, Elizabeth, and R. M. Somers, assignors to Thomas A. Edison, Incorporated, West Orange, N. J. Dictating machine. 152,142, Dec. 21.

Douglas, Gordon, Los Angeles, Calif. Combination coffee table and bar. 152,143, Dec. 21.

Drewniak, Matthew L., Buffalo, N. Y. Glider swing. 152,144, Dec. 21.

During, William J., Fayetteville, and J. J. Punke, Dewitt, assignors to C. C. Bradley & Son, Inc., Syracuse, N. Y. Drink vending machine. 152,145, Dec. 21.

Edison, Thomas A., Incorporated, assignee: *See*—
Dann, Charles W., Braun, and Somers.

Eldridge, Joseph G., Spring Valley, assignor to Sears, Roebuck and Co., Chicago, Ill. Thermostat cover. 152,146, Dec. 21.

Ellesson, George M., Bridal Veil, Oreg., assignor to G. M. Ellesson Company, Chicago, Ill. Watch band clip. 152,147, Dec. 21.

Ellesson, G. M., Company, assignee: *See*—
Ellesson, George M.

Enger-Kress Company, assignee: *See*—
Bauman, Howard A.

Federal Telephone and Radio Corporation, assignee: *See*—
Kniep, Louis, Jr.

Fidelitone Incorporated, assignee: *See*—
Andres, Lloyd J.

Field, Richard P., Cincinnati, assignor to Balcrank, Inc., Disney, near Marburg, Cincinnati, Ohio. Cabinet for lubricating equipment. 152,148, Dec. 21.

Fine, Alex, assignor to Stuart Inc., St. Paul, Minn. Doll. 152,149, Dec. 21.

Glass, Marvin, Chicago, Ill. Toy figure. 152,150, Dec. 21.

Goodwin, Fred W., Berkeley, Calif. Fire grate. 152,151, Dec. 21.

Halvas, Andrew, Astoria, N. Y. Airplane toy. 152,152, Dec. 21.

Harvey, Norman J., Bellevue, Nebr. Step. 152,153, Dec. 21.

Hoffmann, William E., assignor to Timely Toys, Inc., St. Louis, Mo. Toy automobile. 152,154, Dec. 21.

International Business Machines Corporation, assignee: *See*—
Kress, George H.

Jacoff, Sydney, Kew Gardens, N. Y. Screw driver. 152,155, Dec. 21.

Jenks, Albert L., Dixon, assignor to Motorola, Inc., Chicago, Ill. Radio receiver cabinet. 152,156, Dec. 21.

Jones, Llewellyn T., Akron, Ohio. Hand protecting grip. 152,157, Dec. 21.

Karstadt, Clarence, Glen Ellyn, Ill. Food mixer. 152,158, Dec. 21.

Kemper, Robert J., San Carlos, Calif. Pitcher. 152,159, Dec. 21.

Klotz, Joseph, assignor to Mason-Williams Company, Chicago, Ill. Game table top. 152,160, Dec. 21.

Knack, Frederick J., New York, N. Y., assignor to Autogiro Company of America, Philadelphia, Pa. Rotary winged aircraft. 152,161, Dec. 21.

Kniep, Louis, Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Telephone hand set. 152,162, Dec. 21.

Kress, George H., Johnson City, assignor to International Business Machines Corporation, New York, N. Y. Record file. 152,163, Dec. 21.

Larsen, Henry E., Hollywood, Calif. Combination cigarette and match container. 152,164, Dec. 21.

Lowe, Joe, Corporation, assignee: *See*—
Roth, Ernest J.

Mabs, Inc., assignee: *See*—
Minger, Robert E.

Mason-Williams Company, assignee: *See*—
Klotz, Joseph.
Warner, Michael M.

Merrico, John, Amelia, Ohio. Whirling toy. 152,165, Dec. 21.

Minger, Robert E., Manhattan Beach, assignor to Mabs, Inc., Los Angeles, Calif. Textile fabric or similar article. 152,166, Dec. 21.

Mitchell, Edwin C.: *See*—
Crawford, Marion B., and Mitchell.

Montagne, Gerald C., Urbana, Ohio. Parts box. 152,167, Dec. 21.

Motorola, Inc., assignee: *See*—
Jenks, Albert L.

Murray Corporation of America, The, assignee: *See*—
Trombley, Bertrand N.

Potter, Berlee M., El Dorado, Kans. Fish lure. 152,168, Dec. 21.

Punke, John J.: *See*—
During, William J., and Punke.

Raney, Robert M., Euclid, assignor to Willard Storage Battery Company, Cleveland, Ohio. Storage battery cover. 152,169, Dec. 21.

Roth, Ernest J., Rockleigh, N. J., assignor to Joe Lowe Corporation, New York, N. Y. Automatic doughnut machine. 152,170, Dec. 21.

Russell, Peyton R., Beaver, Pa. Traffic signal or similar article. 152,171, Dec. 21.

Ryder, Lee H., Dover, N. H. Wheelbarrow. 152,172, Dec. 21.

Sears, Roebuck and Co., assignee: *See*—
Eldridge, Joseph G.

Seidler, William, New York, N. Y. Laundry bag or the like. 152,173, Dec. 21.

Shurebite Inc., assignee: *See*—
Sisco, Alexander.

Silverman, Max H., New York, N. Y. Game board. 152,174, Dec. 21.
Silverman, Max H., New York, N. Y. Game board. 152,175, Dec. 21.
Sisco, Alexander, assignor to Shurebite Inc., Bronson, Mich. Fish lure. 152,176, Dec. 21.
Somers, Richard M.: *See*—
Dann, Charles W., Braun, and Somers.
Stuart Inc., assignee: *See*—
Fine, Alex.
Timely Toys, Inc., assignee: *See*—
Hoffmann, William E.
Trombley, Bertrand N., Birmingham, assignor to The Murray Corporation of America, Detroit, Mich. Accessory lamp for a cook stove. 152,177, Dec. 21.
Trombley, Bertrand N., Birmingham, assignor to The Murray Corporation of America, Detroit, Mich. Splash back trim for a stove. 152,178, Dec. 21.
United Air Lines, Inc., assignee: *See*—
Crawford, Marion B., and Mitchell.
Valley, Earl M., Englewood, Ohio. Radio cabinet. 152,179, Dec. 21.
Wagner, Elmert A., Portland, Oreg. Lift truck. 152,180, Dec. 21.
Warner, Michael M., Winnetka, assignor to Mason-Williams Company, Chicago, Ill. Game table top. 152,181, Dec. 21.
Willard Storage Battery Company, assignee: *See*—
Raney, Robert M.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

AMP Corporation, assignee: *See*—
Thompson, Parke H.
Adams, Mozel A., Evangeline, La. Artificial bait. 2,456,665, Dec. 21.
Addressograph-Multigraph Corporation, assignee: *See*—
Curtis, Franklin E.
Hueber, Carl J.
Adel Precision Products Corp., assignee: *See*—
Kremilier, Arthur E.
Aeronca Aircraft Corporation, assignee: *See*—
Chaille, Charles J.
Aero Zipp Fasteners Limited, assignee: *See*—
Engel, Erich.
Agate, Charlton S., Esher, and A. H. Cooper, Iver, assignors to Electric & Musical Industries, Limited, Hayes, England. Radio direction finding system. 2,456,666, Dec. 21.
Agnew, A. Gifford: *See*—
De Simone, Michele G.
Agriculture, The United States of America as represented by the Secretary of, assignee: *See*—
Rehberg, Chessie E., and Fisher.
Woodward, Charles F., Saunders, and Provost.
Air Reduction Company, assignee: *See*—
Krohn, Emil F.
Alger, Harley C., Chicago, Ill. Type for gravure printing. 2,456,608, Dec. 21.
Allied Chemical & Dye Corporation, assignee: *See*—
Engel, Karl H.
Alter, Harry A., assignor to the W. W. Boes Company, Dayton, Ohio. Electrical measuring instrument. 2,456,667, Dec. 21.

Curtis, Austen M.
Mao, Yu-Yeh A.
Bemis, Kenneth E., Oakland, Calif. French frying apparatus. 2,456,810, Dec. 21.
Benignus, Paul G., Belleville, Ill., assignor to Monsanto Chemical Company, St. Louis, Mo. Fungus-proofing composition. 2,457,025, Dec. 21.
Berberich, Leo. J., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Overload relay. 2,456,907, Dec. 21.
Bergantino, Joseph F., San Francisco, Calif. Clothespin. 2,457,026, Dec. 21.
Bergh, Philip, Forest Hills, N. Y. Motion-picture target. 2,456,857, Dec. 21.
Berglund, Ralph M., Seattle, Wash., assignor to American Can Company, New York, N. Y. Making vent valves for containers. 2,456,615, Dec. 21.
Bertram, William A., Chicago, Ill. Bottle holder and carrier. 2,457,027, Dec. 21.
Better Packages, Inc., assignee: *See*—
Cullin, Jasper F.
Beynon, Nathan T., Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Cellulose compound wrinkle composition. 2,456,670, Dec. 21.
Beynon, Nathan T., Dayton, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Flexible material with wrinkle-textured coating. 2,456,671, Dec. 21.
Binkley, Stephen B.: *See*—
Doisy, Edward A., Thayer, MacCorquodale, McKee, and Binkley.
Bishop, Howard B., assignee: *See*—
Smiley, Lloyd D., and Lansing.
Blackburn, Richard K., East Hartford, assignor to Crystal Research Laboratories, Incorporated, Hartford, Conn. Piezoelectric temperature measuring and control system. 2,456,811, Dec. 21.
Blacker, Latham V. S., Fittleworth, Pulborough, England. Recoilless gun. 2,456,812, Dec. 21.
Blickman, S., Inc., assignee: *See*—
Clachko, Josiah S.
Bloch, Godfrey, Incorporated, assignee: *See*—
Moore, David P.
Bloch, Herman S., Chicago, and R. E. Schaad, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Conversion of hydrocarbons. 2,456,672, Dec. 21.

Blumlein, Alan D.: *See*—
Cork, Edward C. and A. D. and D. Blumlein.

Blumlein, Doreen, executrix: *See*—
Cork, Edward C., and A. D. and D. Blumlein.

Boes Company, The W. W., assignee: *See*—
Alter, Harry A.

Bollaert, Remi, Oakland, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Crane control. 2,456,908, Dec. 21.

Bolling, William F., Norton, Va. Combination knife, fork, and spoon. 2,456,858, Dec. 21.

Borell, George L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Hot-wire bridge overspeed controller. 2,456,765, Dec. 21.

Borg-Warner Corporation, assignee: *See*—
Campbell, John D., and Roth.

Bors, Zolton J., Tonawanda, N. Y. Immersion heater. 2,457,028, Dec. 21.

Boyce Thompson Institute for Plant Research, Inc., assignee: *See*—
Prill, Edward A.

Brasch, Arno, Brookiyn, N. Y., assignor, by mesne assignments, to Electronized Chemicals Corporation. Sterilizing and preserving. 2,456,909, Dec. 21.

Breuer Electric Mfg. Company, assignee: *See*—
Lanter, Clarence W.

Brockway, Wilhelm W., Los Angeles, Calif. Wall radio. 2,457,029, Dec. 21.

Brown, Harold J., Indianapolis, Ind., assignor to Electronic Laboratories Incorporated. Vibrator regulating system. 2,456,910, Dec. 21.

Bruce, William F., Penfield, Upper Darby, assignor to Wyeth Incorporated, Philadelphia, Pa. Disubstituted acetamidyl derivatives of amino-quinolines. 2,456,911, Dec. 21.

Brumby, Arnoldus S.: *See*—
Fontaine, John P. K., and Brumby.

Brush Development Company, The, assignee: *See*—
Kjellgren, Bengt R. F.
Robinson, Arthur M.
Surmatis, Joseph D.

Bryant Electric Company, The, assignee: *See*—
Hodgkins, Charles H.

Buckendale, Lawrence R., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Interchangeable front and rear drive axle. 2,456,616, Dec. 21.

Bugatti, Ettore, Paris, France. Chuck. 2,457,030, Dec. 21.

Bundren, Harry E., and V. A. Vicksell, Kansas City, Mo. Safety window lock. 2,456,766, Dec. 21.

Burch, Lyndon W., Detroit, Mich. Liquid level indicator. 2,456,617, Dec. 21.

Burrows, Edwin N., Detroit, Mich. Collapsible and adjustable filter and strainer. 2,456,912, Dec. 21.

Bush, A. G., assignee: *See*—
Criner, Harry J.

Butler, Matthew B., assignee: *See*
Graves, Michael, and Lankovski.

Buttner, William C., Evanston, and S. L. Sundstrom, assignors to The Bastian-Blessing Company, Chicago, Ill. Fitting. 2,456,913, Dec. 21.

Cairns, John E. I., Chalfont-St.-Peter, and C. D. Docherty, assignors to Electric & Musical Industries Limited, Hayes, England. Chuck. 2,456,914, Dec. 21.

Camerino, Ernest, New York, N. Y. Oil burner blower housing. 2,456,673, Dec. 21.

Campbell, John D., Lakewood, and J. M. Roth, Euclid, Ohio, assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Aircraft anti-icing arrangement. 2,457,031, Dec. 21.

Campbell, John H., Altamont, N. Y., assignor to General Electric Company. Electric discharge apparatus. 2,456,859, Dec. 21.

Campbell, John H., Altamont, N. Y., assignor to General Electric Company. Electric discharge apparatus. 2,456,860, Dec. 21.

Camras, Marvin, assignor to Armour Research Foundation of Illinois Institute of Technology, Chicago, Ill. Combination of magnetic transducing and erasing heads. 2,456,767, Dec. 21.

Carborundum Company, The, assignee: *See*—
Upper, Frederick A.

Carless, Lionel S., Mountain View, N. J. Ammunition booster control. 2,456,618, Dec. 21.

Carlisle Shoe Company, assignee: *See*—
Fennessy, William M.

Carlson, Wendell L., Princeton, N. J., assignor to Radio Corporation of America. Angle modulated wave detector. 2,456,915, Dec. 21.

Carter, John M., Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Generator and cathode construction for electricity of ultra high frequency. 2,456,861, Dec. 21.

Case, Emerson E., assignor to Robeson Cutlery Company, Inc., Perry, N. Y. Cutlery display board. 2,457,032, Dec. 21.

Caughey, Robert A., Wilton, N. H. Apparatus for drying finely divided materials while suspended in a gas. 2,456,674, Dec. 21.

Cavins, Omar A., Taft, Calif. Golf putting device. 2,456,813, Dec. 21.

Celanese Corporation of America, assignee: *See*—
Dreyfus, Camille, Rowley, and Thompson.

Chadwick, George A., Washington Grove, Md., and P. H. Gironard, Washington, D. C. Ammunition stowage and handling. 2,456,620, Dec. 21.

Chaille, Charles J., assignor to Aeronca Aircraft Corporation, Middletown, Ohio. Tube bender. 2,456,675, Dec. 21.

Chalberg, Harry W. A., Berne, N. Y., assignor to General Electric Company. Electric blanket control. 2,456,916, Dec. 21.

Chaney, David W., Nether Providence Township, Delaware County, Pa., assignor to American Viscose Corporation, Wilmington, Del. Polyfluorinated propionitriles. 2,456,768, Dec. 21.

Chapman, Mary E. H., Crane, Mo. Foldable kitchen table. 2,456,862, Dec. 21.

Cheek, Alvah R., Thurman, Iowa. Engine head lifting tool. 2,456,917, Dec. 21.

Cheney, Azro J., Jr., Upper Montclair, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Extruding polytetrafluoroethylene and coating articles therewith. 2,456,621, Dec. 21.

Chizek, Joseph, Franksville, and F. J. Gast, Racine, Wis. Harvesting machine for onions. 2,456,863, Dec. 21.

Chowns, William C., East Detroit, Mich. Slide indicator rule. 2,456,676, Dec. 21.

Christensen, Alfred C., Chicago, and R. L. McIlvaine, Glencoe, assignors, to H. S. Simpson, Evanston, Ill. Reclaiming foundry sand. 2,456,769, Dec. 21.

Church, Albert E., assignor to Union Manufacturing Company, New Britain, Conn. Power-operated wrench. 2,456,814, Dec. 21.

Church, Howard, Los Gatos, assignor to The Permanente Metals Corporation, Oakland, Calif. Distillation of volatilizable metals. 2,456,918, Dec. 21.

Cities Service Oil Company, assignee: *See*—
Morgan, John D., and Lowe.

Clachko, Josiah S., Ridgefield Park, assignor to S. Blickman, Inc., Weehawken, N. J. Chart carrier. 2,456,677, Dec. 21.

Clapham, Harry F., Wilmington, Del., and M. Harris, Bethesda, and A. L. Smith, Suitland, Md.; said Harris and said Smith assignors to Harris Research Laboratories, a partnership. Treatment of wool to impart shrinkage resistance thereto. 2,457,033, Dec. 21.

Clark, Reid M., Stoneville, N. C. Tobacco clip. 2,456,622, Dec. 21.

Clausing, Henry G., assignor to Vulcan Corporation, Portsmouth, Ohio. Graduating and measuring device for shoe lasts. 2,456,815, Dec. 21.

Coes, Loring, Jr., Brookfield, assignor to Norton Company, Worcester, Mass. Improving water-resistant characteristics of resins and resinous articles, and resinous products resulting therefrom. 2,456,919, Dec. 21.

Coes, Loring, Jr., Brookfield, assignor to Norton Company, Worcester, Mass. Improving water-resistant characteristics of resins and resinous articles, and resinous products resulting therefrom. 2,456,920, Dec. 21.

Coes, Loring, Jr., Brookfield, assignor to Norton Company, Worcester, Mass. Improving water-resistant characteristics of resins and resinous articles, and resinous products resulting therefrom. 2,456,921, Dec. 21.

Cogovan, Edward J., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y. Fabric. 2,456,922, Dec. 21.

Cogovan, Edward J., Amsterdam, and L. R. Jones, Broadalbin, assignors to Mohawk Carpet Mills, Inc., Amsterdam, N. Y. Making fabrics. 2,456,923, Dec. 21.

Cole, Frank B., Asheville, N. C. Gas flame regulator. 2,456,864, Dec. 21.

Cole, John D., Dayton, Ohio. Golf glove. 2,456,678, Dec. 21.

Collier-Keyworth Company, assignee: *See*—
Sheldrick, Henry W.

Collister, Hugh, Grand Rapids, Mich. Ice cube tray. 2,456,924, Dec. 21.

Colonial Sugars Company, assignee: *See*—
Swenson, Oscar J.

Colvin, Joseph H., assignee: *See*—
Goldberg, Ralph.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Patton, James G.

Cooper, Arthur H.: *See*—
Agate, Charlton S., and Cooper.

Cooper, William H., Atlanta, Ga. Hydraulic cylinder and packing holder. 2,456,623, Dec. 21.

Corey, Lorin A., Cleveland Heights, and T. S. Mayner, Willoughby Township, Lake County, assignors to Industrial Rayon Corporation, Cleveland, Ohio. Thread drying apparatus. 2,456,925, Dec. 21.

Cork, Edward C., Ealing, London, and A. D. Blumlein, deceased; by D. Blumlein, executrix, Lescudjack, Penzance, assignors to Electric & Musical Industries Limited, Hayes, Middlesex, England. High-frequency impedance bridge. 2,456,679, Dec. 21.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Cossor, A. C., Limited, assignee: *See*—
Bedford, Leslie H., Bell, and Langham.

Cottingham, Howard L., Racine, Wis. Flexible wheel drive. 2,456,865, Dec. 21.

Criner, Harry J., assignor of one-half to A. G. Bush, Davenport, Iowa. Bread slicing machine, including gangs of rotary disk knives. 2,456,866, Dec. 21.

Croft, Harry E., Chicago, Ill. Flashlight. 2,456,680, Dec. 21.

Crone, Thomas B., Tacoma, Wash. Soldering and tinning flux. 2,456,624, Dec. 21.

Crosley Motors, Inc., assignee: *See*—
Klotsch, Paul.

Crowley, John A., Jr.: *See*—
Utterback, Ernest, Sinclair, and Crowley.

Crystal Research Laboratories, Incorporated, assignee: *See*—
Blackburn, Richard K.

Cullin, Helen A., administratrix: *See*—
Cullin, Jasper F.

Cullin, Jasper F., deceased, Detroit, Mich.; H. A. Cullin, administratrix, assignor, by mesne assignments, to Better Packages, Inc., New York, N. Y. Tape dispensing mechanism. 2,456,625, Dec. 21.

Culver, Merlyn M., Dayton, Ohio. Handle assembly casting rod. 2,456,681, Dec. 21.

Cumming, James M., Turtle Creek, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,456,926, Dec. 21.

Curry, Robert S., Jr., Baldwin, A. W. Lane, Freeport, and S. E Woodbury, Mineola, N. Y., assignors to The Sperry Corporation. Gyroscopic controlling means. 2,456,619, Dec. 21.

Curtis, Austen M., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Direct-current voltage multiplier. 2,456,927, Dec. 21.

Curtis, Franklin E., Euclid, Ohio, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio. Latch operated clutch. 2,456,928, Dec. 21.

Curtis, Leslie F., Great Neck, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill. Arrangement for simulating a reactive impedance. 2,457,034, Dec. 21.

Cyril Bath Company, The, assignee: *See*—
Bath, Cyril J.

Da Costa, Bartholomew, Long Island City, N. Y. Bed table. 2,456,867, Dec. 21.

Dahl, Arthur: *See*—
Williams, Merlyn G., Jr.

Dahnke, Henry, Banning, Calif. Device for the control of flow of fluids. 2,456,626, Dec. 21.

Daly, Webster J., Los Angeles, Calif. Apparatus for inspection of articles by means of X-ray photographs. 2,456,816, Dec. 21.

Dapprich, William R., Baldwin Township, Allegheny County, Pa. Metal-working or like tool. 2,456,682, Dec. 21.

Darby, Joseph R., Richmond Heights, assignor, to Monsanto Chemical Company, St. Louis, Mo. Heat stabilized polyvinyl chloride compositions. 2,457,035, Dec. 21.

Davenport, James A., assignor to The Kroger Grocery & Baking Company, Cincinnati, Ohio. Portable checking counter. 2,456,817, Dec. 21.

Dawley, Clarence E.: *See*—
Arnott, Edward G. F., and Dawley.
Arnott, Edward G. F., Slack, and Dawley.

Day, Morgan R.: *See*—
Maeder, Henry G., Jr., and Day.

Deanesly, Richard M., Hinsdale, assignor to Universal Oil Products Company, Chicago, Ill. Oxidizing alcohols. 2,456,683, Dec. 21.

Dearing, John B., Haddonfield, N. J., assignor to Radio Corporation of America. Impedance matching device. 2,456,770, Dec. 21.

Deatherage, Fred E., Cincinnati, assignor to The Kroger Grocery & Baking Company, Hamilton County, Ohio. Rendering lard. 2,456,684, Dec. 21.

Dee, Herbert C., Kenilworth, Ill., assignor to Woodall Industries, Inc., Detroit, Mich. Tray structure. 2,456,929, Dec. 21.

De Lancey, Warren H., Springfield, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Fan housing construction. 2,456,930, Dec. 21.

Delmotte, Cyril J., assignor of one-half to E. J. Herrmann, Detroit, Mich. Warning signal conversion kit for standard flashlights. 2,456,685, Dec. 21.

De Long, Herbert K., assignor to The Dow Chemical Company, Midland, Mich. Anodizing magnesium alloys. 2,456,931, Dec. 21.

De Simone, Michele G., Stapleton, assignor to A. G. Agnew, New York, N. Y. Electromechanical mechanism for actuating calculating machines. 2,456,771, Dec. 21.

Dewey and Almy Chemical Company, assignee: *See*—
Maeder, Henry G., Jr., and Day.

Dickinson, Arthur H., Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y. Electronic trigger circuit with pulse output attenuating means. 2,456,818, Dec. 21.

Dinnick, George M.: *See*—
Slack, Charles M., and Dinnick.

Dobbs, Richard H., Atlanta, Kans. Posthole auger. 2,456,819, Dec. 21.

Docherty, Charles D.: *See*—
Cairns, John E. I., and Docherty.

Doisy, Edward A., Webster Groves, and S. A. Thayer, St. Louis, Mo., D. W. MacCorquodale, Highland Park, Ill., R. W. McKee, Newton, Mass., and S. B. Binkley, Detroit, Mich., assignors to President and Board of Trustees of St. Louis University, St. Louis, Mo. Obtaining vitamin K compounds. 2,456,686, Dec. 21.

Dominguez A, Roberto, assignor of twenty per cent to M. A. Ayestas, Tegucigalpa, D. C., Honduras. Fountain comb. 2,456,687, Dec. 21.

Dominic, Frank M., Duncombe, Iowa. Trailer for disking machines. 2,456,868, Dec. 21.

Dostal, Joseph B., Kansas City, Mo. Folding infant-carrying vehicle. 2,456,932, Dec. 21.

Dow Chemical Company, The, assignee: *See*—
De Long, Herbert K.

Doyle, Charles D., Schenectady, N. Y., assignor to General Electric Company. Making polysiloxane resins. 2,456,627, Dec. 21.

Dreyfus, Camille, New York, N. Y., R. D. Rowley and R. F. Thompson, Narrows, Va., assignor to Celanese Corporation of America. Cellulose ester stabilization in anhydrous medium. 2,456,688, Dec. 21.

Duffy, Philip A., Jr.: *See*—
Lee, Reuben, and Duffy.

Dunlop, Andrew P., Riverside, Ill., and E. A. Reineck, Appleton, Wis., assignors, to The Quaker Oats Company, Chicago, Ill. Condensation of polymerized furfuryl alcohol with an hydroxybenzene. 2,456,628, Dec. 21.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Cheney, Azro J., Jr.
Schmidt, Edgar H.
White, Jesse O.

Dyer, Maurice W., assignee: *See*—
Kitterman, Jesse C.

Dyrkacz, Wasil W., Schenectady, N. Y., assignor to General Electric Company. Brazing alloy. 2,456,933, Dec. 21.

Eastman, Fred C., Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Fluid pressure motor. 2,456,689, Dec. 21.

Eastman, Fred C., Marblehead, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Fluid-pressure-operated mechanism. 2,456,690, Dec. 21.

Eastman Kodak Company, assignee: *See*—
Knott, Edward B., and Stevens.
Stevens, Guy W. W.

Edwards, Masena E., Denver, Colo. Safety pin. 2,456,820, Dec. 21.

Eggleton, Charles W., Walton-on-Thames, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England. Coupled circuits for high impedance aerials. 2,456,772, Dec. 21.

Egry Register Company, The, assignee: *See*—
Ritzert, Robert W.

Eichorn, Robert N.: *See*—
Fitch, Clyde J., and Eichorn.

Eipper, William R., Philadelphia, Pa. Treating fatty materials. 2,456,691, Dec. 21.

Eitel-McCullough, Inc., assignee: *See*—
Williams, Paul D.

Electric & Musical Industries, Limited, assignee: *See*—
Agate, Charlton S., and Cooper.
Cairns, John E. I., and Docherty.
Cork, Edward C., and A. D. and D. Blumlein.
Eggleton, Charles W.

Electronic Laboratories Incorporated, assignee: *See*—
Brown, Harold J.

Electronized Chemicals Corporation, assignee: *See*—
Brasch, Arno.

Ellington, Alvin M., Watertown, Wis. Extension table. 2,456,821, Dec. 21.

Ellis-Foster Company, assignee: *See*—
Rust, John B.

Emerson Electric Manufacturing Company, The, assignee: *See*—
Hardey, Edwin F.

Engel, Erich, Tonteg, near Pontypridd, assignor to Aero Zipp Fasteners Limited, London, England. Slider for sliding fasteners. 2,456,822, Dec. 21.

Engel, Karl H., Teaneck, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Resolution of nitrogen base mixtures. 2,456,773, Dec. 21.

Engel, Karl H., Teaneck, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Isolation of quinoline from a mixture of nitrogen bases. 2,456,774, Dec. 21.

Epstein, Albert A., New York, N. Y. Coffee concentrate and producing it. 2,457,036, Dec. 21.

Evans, Louis P.: *See*—
Simpson, Thomas P., and Evans.

Fadeley, Herbert J., Jr., North Wales, Pa. Compound culinary implement. 2,457,037, Dec. 21.

Fairey Aviation Company, Ltd., The, assignee: *See*—
Snader, Ira J., and Forsyth.

Fargo Mfg. Company, Inc., assignee: *See*—
Becker, Stephen P.

Farkas, Adalbert, and A. F. Stribley, Jr., Long Beach, assignors to Union Oil Company of California, Los Angeles, Calif. Lubricating oil composition. 2,456,692, Dec. 21.

Farnsworth Research Coroporation, assignee: *See*—
Pressley, Jackson H.

Fausek, Arthur J. and I. F., Clayton, Mo. Heat exchanger. 2,456,775, Dec. 21.

Fausek, Irwing F.: *See*—
Fausek, Arthur J. and I. F.

Faust, Rudolph E., Brooklyn, N. Y. Eccentric chuck. 2,456,776, Dec. 21.

Feiertag, Karl M., Lagrange, Ind., assignor to General Electric Company. Casing and fastening means therefor. 2,456,934, Dec. 21.

Feinstein, Morris A., Chicago, Ill. Heating unit fastener. 2,456,823, Dec. 21.

Fennessy, William M., assignor to Carlisle Shoe Company, Carlisle, Pa. Platform shoe. 2,457,082, Dec. 21.

Filter, Chester G.: *See*—
Kretschmer, Frederick H., and Filter.
Fischer, Alfred, Bronx, N. Y., assignor to Nuodex Products Co., Inc., Elizabeth, N. J. Oil-soluble drier metal salt compositions. 2,456,824, Dec. 21.
Fisher, Charles H.; *See*—
Rehberg, Chessie E., and Fisher.
Fisher, Harmon F., Sunneyvale, assignor to The Permanente Metals Corporation, Oakland, Calif. Refining of volatilizable metals. 2,456,935, Dec. 21.
Fitch, Clyde J., Endicott, and R. N. Eichorn, Vestal, assignors to International Business Machines Corporation, New York, N. Y. Distributor. 2,456,825, Dec. 21.
Flory, Leslie E.: *See*—
Zworykin, Vladimir K., and Flory.
Foley Manufacturing Company, assignee: *See*—
Understood, Sylvester B. and L. M.
Fontaine, John P. K., and A. S. Brumby, Birmingham, Ala.; said Brumby assignor to said Fontaine. Trailer coupler. 2,456,826, Dec. 21.
Foote, Paul C.: *See*—
Knutson, Norman T., and Foote.
Forsyth, Archibald G.: *See*—
Snader, Ira J., and Forsyth.
Fowler, Clarence E., Hollywood, Calif. Hydraulic pulsator system. 2,456,869, Dec. 21.
Fox Products Company, assignee: *See*—
Medlar, Lewis A.
Fraga, Frank M., Fresno, Calif. Lifting hitch for implements. 2,456,693, Dec. 21.
Francis, Victor J., Aylesbury, and E. H. Nelson, Harrow Weald, England, assignors to The General Electric Company. Circuit for electric discharge devices. 2,456,870, Dec. 21.
Friden Calculating Machine Co., Inc., assignee: *See*—
Moody, John L.
Frostick, Harold G., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulator system. 2,456,936, Dec. 21.
Fry, Bruce M.: *See*—
La Mont, Elbert M., and Fry.
Funk Forging Company, assignee: *See*—
Powers, James T., Jr.
Garonis, Tom A., Santa Barbara, Calif. Sanitary sink strainer. 2,457,038, Dec. 21.
Gast, Frank J.: *See*—
Chizek, Joseph, and Gast.
Gaylord Container Corporation, assignee: *See*—
Rushing, Fred L.
Gaylord Products, Incorporated, assignee: *See*—
Norin, Allan A., and Reynolds.
Gehrenbeck, Gilbert B., White Bear Lake, assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Soluble and infusible synthetic resins and producing the same. 2,456,629, Dec. 21.
Geiger, Aaron, Brooklyn, N. Y. Cigar or cigarette lighter. 2,456,694, Dec. 21.
General Cable Corporation, assignee: *See*—
Smith, John H.
General Electric Company, assignee: *See*—
Campbell, John H.
Chalberg, Harry W. A.
Doyle, Charles D.
Dyrkacz, Wasil W.
Feiertag, Karl M.
Francis, Victor J., and Nelson.
Klnender, Edward C.
Ksim, Donald B.
Linde, Leonard J., Arone, and Spiro.
McConnell, Andrew J.
Merrill, Frank W.
Paluev, Konstantin K.
Pugsley, Donald W.
Spiro, Benjamin E.
Valentin, Andre.
Zelt, Elmer J.
General Motors Corporation, assignee: *See*—
Rossman, Edwin F.
Short, Brooks H.
General Sales Company of Cadillac, assignee: *See*—
Greeley, Leo O.
Gibler, John W., U. S. Army, Mattoon, Ill. Milk turning machine. 2,456,630, Dec. 21.
Gibson, Jefferson C., Chicago, Ill. Oscillating mechanism for swinging members. 2,456,777, Dec. 21.
Gilbert & Barker Manufacturing Company, assignee: *See*—
De Lancey, Warren H.
Gilchrist, John E., Chicago, Ill. Injection molding of plastic material. 2,456,778, Dec. 21.
Girouard, Philias H.: *See*—
Chadwick, George A., and Girouard.
Gluckin, Edwin W., Brooklyn, N. Y. Brassière and similar garments. 2,456,695, Dec. 21.
Goetzel, Claus G., assignor to American Electro Metal Corporation, Yonkers, N. Y. Composite material and shaped bodies therefrom. 2,456,779, Dec. 21.
Goldberg, Ralph, assignor of one-half to J. H. Colvin, Baltimore, Md. Variable pitch fluid transmission. 2,456,696, Dec. 21.
Goldschmidt, Rudolf, Sheffield, England. Percussion tool. 2,456,631, Dec. 21.
Gorham, Frank C., Los Angeles, Calif. Window lock. 2,456,780, Dec. 21.
Gould, William H.: *See*—
Reed, George F.
Graves, Michael, and A. Lankovski, assignors to M. B. Butler, Los Angeles, Calif. Self-loading truck. 2,457,039, Dec. 21.
Greeley, Leo O., assignor to General Sales Company of Cadillac, Cadillac, Mich. Sickle blade grinder. 2,456,827, Dec. 21.
Greenberg, Samuel R., New York, N. Y. Educational device for teaching correct penmanship. 2,456,632, Dec. 21.
Greenhalgh, John: *See*—
Taylor, Maurice K., and Greenhalgh.
Grondahl, Lars O., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway train emergency alarm apparatus. 2,456,871, Dec. 21.
Gruenwald, Andrew, assignor to Novelty Jewelry Corporation, New York, N. Y. Apparatus for forming glass beads and the like articles. 2,456,697, Dec. 21.
Gulf Research & Development Company, assignee: *See*—
Mori, Ernest A.
Gyorgy, Paul, Cleveland, and M. B. Williamson and E. T. Stiller, Chagrin Falls, Ohio, assignors to Wyeth Incorporated, Philadelphia, Pa. Stabilized fat compositions. 2,456,937, Dec. 21.
Haantjes, Johan, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Device adapted to produce saw tooth oscillations. 2,456,700, Dec. 21.
Haas, Otto R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe inseam sewing machine. 2,456,634, Dec. 21.
Haase, Wilbert W., assignor to Wilbert Manufacturers Association, Forest Park, Ill. Wheeled concrete burial vault. 2,456,939, Dec. 21.
Haensel, Vladimir, Clarendon Hills, assignor to Universal Oil Products Company, Chicago, Ill. Catalyst preparation. 2,456,633, Dec. 21.
Hall, Stanley W., Oshkosh, Wis., assignor to United States Motor Corporation. Electric water heater. 2,456,698, Dec. 21.
Hall, William P., Berwyn, Pa. Boring head. 2,457,040, Dec. 21.
Hansen Manufacturing Company, The, Inc., assignee: *See*—
Hansen, William L., and Hurst.
Hansen, William L., and I. N. Hurst, assignors to The Hansen Manufacturing Company, Inc., Princeton, Ind. Speed control mechanism for electric motors. 2,456,701, Dec. 21.
Hansen, William W.: *See*—
Snow, Donald L., and Hansen.
Hanson, Estyle D., and O. G. Nelson, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for shearing strips of plastic material. 2,456,699, Dec. 21.
Harder, Edwin L., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,456,938, Dec. 21.
Hardey, Edwin F., Kansas City, assignor to The Emerson Electric Manufacturing Company, St. Louis, Mo. Blower type radiant heater. 2,456,781, Dec. 21.
Haringx, Johannes A., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Film driving apparatus. 2,456,702, Dec. 21.
Harris, Milton: *See*—
Clapham, Harry F., Harris, and Smith.
Harris Research Laboratories, assignee: *See*—
Clapham, Harry F., Harris, and Smith.
Hartford National Bank and Trust Company, assignee, trustee: *See*—
Haantjes, Johan.
Haringx, Johannes A.
Van Geel, Willem C.
Ziegler, Marc.
Hartman, Peter C., Chicago, Ill. Washcloth and pad holder for the bath. 2,456,782, Dec. 21.
Harza, Leroy F., Highland Park, Ill. Pipe T. 2,457,041, Dec. 21.
Hatchette, Andrew H., Cleveland, Ohio. Automatic bath shower. 2,456,703, Dec. 21.
Hawe, Philip G., Weston, Ontario, Canada. Target practice apparatus. 2,456,828, Dec. 21.
Hays, Roy W., Rockford, Ill. Valve. 2,456,829, Dec. 21.
Hazeltine Research, Inc., assignee: *See*—
Curtis, Leslie F.
Markowitz, Jesse.
Stannow, Jörgen C.
Taylor, Maurice K., and Greenhalgh.
Wheeler, Harold A.
Heater, Charles L., Flossmoor, assignor to American Steel Foundries, Chicago, Ill. Truck. 2,456,635, Dec. 21.
Heil Co., The, assignee: *See*—
Wohlforth, Walter W.
Henning, George E., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for testing and marking insulated conductors, 2,456,704, Dec. 21.
Herbener, Henry M., Thomasville, Ga. Combination wallet. 2,456,830, Dec. 21.
Herring, Alice D., assignee: *See*—
Herring, Earl A.
Herring, Earl A., assignor of fifty per cent to A. D. Herring, Donaldson, Pa. Single hook weedless fishing plug. 2,456,705, Dec. 21.

Herrmann, Edward J., assignee: *See*—
Delmotte, Cyril J.
Hewit-Robins Incorporated: *See*—
Wantling, Joseph W.
Hickman, Robert W., assignor to F. B. Hinrichs, Chicago, Ill. Electrode for arc lights. 2,457,042, Dec. 21.
Hiltman, Laurence W.: *See*—
Horner, Kenneth K., and Hiltman.
Hinrichs, Frederick B., assignee: *See*—
Hickman, Robert W.
Histand, Albert R., Croyden, Pa. Lunch box. 2,457,043, Dec. 21.
Hodgkins, Charles H., Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Lamp holder for fluorescent lamps. 2,456,940, Dec. 21.
Hodnette, John K., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Transformer structure. 2,456,941, Dec. 21.
Hogan, Sidney S., assignee: *See*—
Mackey, George W.
Holbrook, John A., assignor to Worcester Polytechnic Institute, Worcester, Mass. Power transmission for helicopter rotors. 2,456,942, Dec. 21.
Hollar, John V., assignor to The La Resista Corset Company, Bridgeport, Conn. Brassière. 2,456,872, Dec. 21.
Hopkins, Richard W., Troy, N. Y. Dispenser for tooth powder and the like. 2,456,873, Dec. 21.
Horner, Kenneth K., Chicago, and L. W. Hiltman, Palos Heights, assignors to S. Karpen & Bros., Chicago, Ill. Tilting cushion structure. 2,456,874, Dec. 21.
Horsley, Caperton B., Stamford, Conn., assignor to Ultrasonic Corporation, Boston, Mass. Accoustic chamber. 2,456,700, Dec. 21.
Horton, Roger F., Hempstead, N. Y. Hydraulic motor with rotating radial cylinder block and reciprocated pistons reacting against outside annular grooved cam. 2,457,100, Dec. 21.
Horton, Roger F., Hempstead, N. Y. Hydraulic pump. 2,457,101, Dec. 21.
Houdry Process Corporation, assignee: *See*—
Milliken, Thomas H., Jr., and Welinsky.
Hower, Frank L., Rawson, Ohio. Breath diverter face mask. 2,457,044, Dec. 21.
Hueber, Carl J., Euclid, Ohio, assignor to Addressograph-Multigraph Corporation, Wilmington, Del. Printing device. 2,456,943, Dec. 21.
Hurayt, E. Paul.: *See*—
Mayner, Thomas S., and Hurayt.
Hurst, Ira N.: *See*—
Hansen, William L., and Hurst.
Huse, Hiram N., Providence, R. I. Ball winding machine. 2,456,944, Dec. 21.
Hutchison, William M., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control system. 2,456,875, Dec. 21.
Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Siloxane copolymers. 2,456,783, Dec. 21.
Hydraulic Equipment Company, assignee: *See*—
Schmiel, Herbert H.
Hydrocarbon Research, Inc., assignee: *See*—
Keith, Percival C.
Iglehart, Ferdinand C., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Relay. 2,456,945, Dec. 21.
Industrial Rayon Corporation, assignee: *See*—
Corey, Lorin A., and Mayner.
Mayner, Thomas S., and Hurayt.
Ingersoll-Rand Company, assignee: *See*—
Slater, Fred M.
International Business Machines Corporation, assignee: *See*—
Dickinson, Arthur H.
Fitch, Clyde J., and Eichorn.
Rutbell, Clarence C.
International Nickel Company, Inc., The, assignee: *See*—
McGuire, Ralph C.
Wise, Edmund M., and Vines.
Irwin, Frederick D., Warsaw, Ind. Venetian blind. 2,456,946, Dec. 21.
J. & L. Tool & Findings Co., assignee: *See*—
Lundsten, Everett H.
Jeffrey Manufacturing Company, The, assignee: *See*—
Whitney, Paul V.
Jenkins, Charles F.: *See*—
Rambo, Rawdon E., and Jenkins.
Jernstedt, George W., Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Corrosion resistant coating for metal surfaces. 2,456,947, Dec. 21.
Johnson, S. C., & Son, Inc., assignee: *See*—
McLoud, Elbert S.
Swenson, Oscar J.
Wilder, Edward A.
Jones, Alun R., Los Altos, and B. C. Look, Jr., Palo Alto, Calif. Coupling assembly. 2,456,636, Dec. 21.
Jones, Dwight E.: *See*—
Messinger, William, and Jones.
Jones, E. D., & Sons Company, assignee: *See*—
Messinger, William, and Jones.
Jones, Frank L., Millbank, London, assignor to Minister of Supply in His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England. Spark gap. 2,457,102, Dec. 21.
Jones, Homer W., Westfield, N. J., assignor to Union Carbide and Carbon Corporation. Blowpipe apparatus. 2,456,784, Dec. 21.
Jones, Lewis R.: *See*—
Cogevan, Edward J., and Jones.
Jordan, James F., Huntington Park, Calif. Controlling the flow of metallurgical liquids. 2,457,083, Dec. 21.
Karpen, S., & Bros., assignee: *See*—
Horner, Kenneth K., and Hiltman.
Kaye, Harriette K., Chicago, Ill. Lipstick case. 2,456,948, Dec. 21.
Kearny, Cresson H., United States Army, New York, N. Y. Oarlock support. 2,456,637, Dec. 21.
Kearsley, Edward P., Springfield, and E. J. Marciniak, Easthampton, assignors to A. G. Spalding & Bros. Inc., Chicopee, Mass. Golf club head. 2,457,084, Dec. 21.
Keim, Donsld B., Syracuse, N. Y., assignor to General Electric Company. Control device indicator. 2,456,949, Dec. 21.
Keith, Percival C., Peapack, N. J., assignor to Hydrocarbon Research, Inc., New York, N. Y. Stripping spent fluid catalysts. 2,456,707, Dec. 21.
Keller, Nellie G.: *See*—
Keller, William J and N. G.
Keller, William J. and N. G., St. Louis, Mo. Rake. 2,456,876, Dec. 21.
Kellogg, Edward W., Indianapolis, Ind., assignor to Radio Corporation of America. Apparatus for improving the durability of optical coatings. 2,456,708, Dec. 21.
Kemp, Charles L., Klamath Falls, Oreg. Micrometer attachment. 2,456,709, Dec. 21.
Kenyon, David E., Smithtown Branch, N. Y., assignor to The Sperry Corporation. Power supply filter and regulator. 2,456,638, Dec. 21.
Kern, Andrew, Orofino, Idaho. Fan blade. 2,456,710, Dec. 21.
Kidder, Monroe C., assignee: *See*—
Swanee, Elmo E.
King, George E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric hoist control system. 2,456,950, Dec. 21.
King, John A., Albany, assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y. Production of amides. 2,456,785, Dec. 21.
Kirkbride, John, Detroit, Mich. Soap dish. 2,456,877, Dec. 21.
Kitterman, Jesse C., assignor of one-half to M. W. Dyer, Croydon, Ind. Sanding block. 2,457,045, Dec. 21.
Kjellgren, Bengt R. F., University Heights, assignor to The Brush Development Company, Cleveland, Ohio. Crystal seed and obtaining it. 2,456,831, Dec. 21.
Kliever, Waldo H., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Carburetor ice responsive device. 2,457,085, Dec. 21.
Klotsch, Paul, assignor to Crosley Motors, Inc., Cincinnati, Ohio. Cooling system for internal-combustion engines. 2,456,951, Dec. 21.
Klnender, Edward C., Schenectady, N. Y., assignor to General Electric Company. Sensitivity time control. 2,456,952, Dec. 21.
Kniel, Ludwig, Scarsdale, assignor to The Lummus Company, New York, N. Y. Process and apparatus for heating hydrocarbon fluids. 2,456,787, Dec. 21.
Kniel, Ludwig, Scarsdale, and P. Lambert, Jackson Heights, N. Y., and H. R. Treat, Teaneck, N. J., assignors to The Lummus Company, New York, N. Y. Heating of hydrocarbon fluids. 2,456,786, Dec. 21.
Knott, Edward B., and G. W. W. Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic reversal processes. 2,456,953, Dec. 21.
Knott, Edward B., and G. W. W. Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic reversal processes. 2,456,954, Dec. 21.
Knott, Edward B., and G. W. W. Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic processes and light-sensitive elements therefor. 2,456,955, Dec. 21.
Knott, Edward B., and G. W. W. Stevens, Harrow, Wealdstone, England, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic processes and light-sensitive elements therefor. 2,456,956, Dec. 21.
Knutson, Norman T., Chicago, and P. C. Foote, Lake Bluff, assignors to Bell & Howell Company, Chicago, Ill. Adjustable condenser lens for projection systems. 2,456,711, Dec. 21.
Koch, Harold B., and J. U. Lehn, assignors to Animal Trap Company of America, Lititz, Pa. Gun trap. 2,456,957, Dec. 21.
Kremiller, Arthur E., Glendale, Calif., assignor to Adel Precision Products Corp. Hydraulic control mechanism. 2,456,712, Dec. 21.
Kretschmer, Frederick H., and C. G. Filter, assignors to Midland Laboratories, Dubuque, Iowa. Liquid dispenser. 2,456,958, Dec. 21.
Kritzer, Bernard, Chicago, Ill. Hair drier helmet. 2,456,788, Dec. 21.
Kroger Grocery & Baking Company, The, assignee: *See*—
Davenport, James A.
Deatherage, Fred E.
Krohn, Emil F., Centerville, Mich., assignor to Air Reduction Company, Incorporated. Auxiliary roller guide for templates. 2,456,789, Dec. 21.

Krupka, Helen G. and J. J., Fairmont, W. Va. Timberman's jack. 2,456,878, Dec. 21.

Krupka, Joseph J.: *See*—
Krupka, Helen G. and J. J.

Kucera, Barney J., Cleveland, Ohio, assignor to Automatic Electric Laboratories, Inc. Telephone signaling apparatus. 2,457,046, Dec. 21.

Kucera, Joseph B., Traer, Iowa. Loader machine. 2,456,879, Dec. 21.

Kyrides, Lucas P.: *See*—
Zienty, Ferdinand B., and Kyrides.

Kyrides, Lucas P., assignor to Monsanto Chemical Company, St. Louis, Mo. 2-(2'-thenyl)-4,5-dihydroimidazoles and making the same. 2,457,047, Dec. 21.

Kyrides, Lucas P., and F. B. Zienty, assignors to Monsanto Chemical Company, St. Louis, Mo. Making tertiary amines. 2,457,048, Dec. 21.

Lacey, Edward H., Sioux Falls, S. Dak. Tractor-mounted scoop control. 2,457,049, Dec. 21.

Lacrotte, Nazaire, deceased, Paris, France; Le Directeur des Domaines, temporary (provisional) executor or administrator of the estate. Fire hazard and safety device for airplanes. 2,457,103, Dec. 21.

La Fayette, Harry A.: *See*—
Stine, Ivan E., and La Fayette.

Lambert, Harry L., East Rochester, N. Y., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio. Printing mechanism for adding machines. 2,457,050, Dec. 21.

Lambert, Pierre: *See*—
Kniel, Ludwig, Lambert, and Treat.

La Mont, Elbert M., and B. M. Fry, Leavenworth, Kans. Lathe and motor base for watchmakers' lathes. 2,456,959, Dec. 21.

Lampert, Burnham, Sacramento, Calif. Tube and conduit bending hand tool. 2,456,880, Dec. 21.

Landis & Gyr, A. G., assignee: *See*—
Laternser, Albin.

Lane, Arthur W.: *See*—
Curry, Robert S., Lane, and Woodbury.

Lane, Fred A., Shelburn, assignor to Lane Motors, Inc., Terre Haute, Ind. Fluid-driven pump. 2,456,832, Dec. 21.

Lane Motors, Inc., assignee: *See*—
Lane, Fred A.

Langham, Eric M.: *See*—
Bedford, Leslie H., Bell, and Langham.

Lankvoskil, Anatoly: *See*—
Graves, Michael, and Lankvoskil.

Lansing, Edward S., assignee: *See*—
Smiley, Lloyd D., and Lansing.

Lanter, Clarence W., Bartlett, assignor to Breuer Electric Mfg. Company, Chicago, Ill. Vacuum cleaner. 2,456,639, Dec. 21.

La Resista Corset Company, The, assignee: *See*—
Hollar, John V.

Laternser, Albin, Horgen, Switzerland, assignor to Landis & Gyr, A. G. Pressure measuring instrument. 2,456,713, Dec. 21.

Law, Russel R., Princeton, N. J., assignor to Radio Corporation of America. Thermionic cathode and heater. 2,456,714, Dec. 21.

Leather, John H., Newton, N. J. Portable heater and drier. 2,456,881, Dec. 21.

Leatherman, Ward D., Akron, Ohio. Cigarette or like dispensing case. 2,456,963, Dec. 21.

Le Clair, Camille C. S., Acton, assignor to Tecalemit Limited, Brentford, England. Making reinforced porous metal members. 2,457,051, Dec. 21.

Le Clair, Camille C. S., Acton, assignor to Tecalemit Limited, Brentford, England. Coupling for use in fluid supply systems. 2,457,052, Dec. 21.

Le Directeur des Domaines, temporary (provisional) executor or administrator: *See*—
Lacrotte, Nazaire.

Ledure, Eleanor O.: *See*—
Ledure, Jacques E.

Ledure, Jacques E., assignor to E. O. Ledure, New York, N. Y. Separable hat rest or the like. 2,456,964, Dec. 21.

Lee, Reuben, Linthicum Heights, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Sawtooth wave generator. 2,456,961, Dec. 21.

Lee, Reuben, Linthicum Heights, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Induction heating apparatus with work conveyer. 2,456,962, Dec. 21.

Lee, Reuben, Linthicum Heights, and P. A. Duffy, Jr., Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Pulse shaping control system. 2,456,960, Dec. 21.

Leese, Charles P., assignor to Standard Car Truck Company, Chicago, Ill. Truck bolster spring. 2,456,790, Dec. 21.

Leffer, Frederick W., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Conversion of hydrocarbons. 2,456,715, Dec. 21.

Lehn, John U.: *See*—
Koch, Harold B., and Lehn.

Leitzel, Raymond H., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Valve. 2,456,965, Dec. 21.

Leverenz, Humboldt W., South Orange, N. J., assignor to Radio Corporation of America. Luminescent materials for electric discharge devices. 2,457,054, Dec. 21.

Lewinter, Sidney W., assignor to Philco Corporation, Philadelphia, Pa. Phase modulation system. 2,456,716, Dec. 21.

Lewis, Frederick D., Jr., Miami, Fla. Cigarette lighter. 2,457,053, Dec. 21.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Strong, John D.

Lima-Hamilton Corporation, assignee: *See*—
Schurr, Otto E.

Lindbeck, Simon L., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor synchronizing schemes. 2,456,966, Dec. 21.

Linde, Leonard J., Drexel Hill, and N. F. Arone, Upper Darby, and B. E. Spiro, Philadelphia, Pa., assignors to General Electric Company. Electrical apparatus bushing. 2,456,640, Dec. 21.

Lippmann, Arthur W., assignor to Lippmann Engineering Works, Milwaukee, Wis. Vibrating screen. 2,456,791, Dec. 21.

Lippmann Engineering Works, assignee: *See*—
Lippmann, Arthur W.

Livers, Carlos B., North Hollywood, assignor to Variety Development and Engineering Company, Los Angeles, Calif. Electric motor. 2,456,967, Dec. 21.

Longini, Richard L., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Outgassing photocells containing antimony. 2,456,968, Dec. 21.

Look, Bonne C., Jr.: *See*—
Jones, Alun R., and Look.

Loveless, Donald L., Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation. Production of stainless steel. 2,457,055, Dec. 21.

Lowden, William P., Pitman, N. J., assignor to Radio Corporation of America. Impregnating composition comprising coumarone indene resin, cetyl acetamide, and ethyl cellulose. 2,456,717, Dec. 21.

Lowe, Russell E.: *See*—
Morgan, John D. and Lowe.

Lummus Company, The, assignee: *See*—
Kniel, Ludwig.
Kniel, Ludwig, Lambert, and Treat.
Schutte, August H.

Lundsten, Everett H., assignor to J. & L. Tool & Findings Co., Attleboro, Mass. Bracelet hinge. 2,456,969, Dec. 21.

MacCorquodale, Donald W.: *See*—
Doisy, Edward A., Thayer, MacCorquodale, McKee, and Binkley.

Macdonald, Angus A., Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control circuit. 2,456,970, Dec. 21.

Mackey, George W., assignor of fifty per cent to S. S. Hogan, St. Louis, Mo. Insulation cutting tool. 2,456,882, Dec. 21.

MacNeill, John B., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,456,971, Dec. 21.

Macomber, Stanley, North Canton, Ohio. Roof truss. 2,457,056, Dec. 21.

Maeder, Henry G., Jr., Belmont, and M. R. Day, North Scituate, assignors to Dewey and Almy Chemical Company, North Cambridge, Mass. Container closure. 2,456,972, Dec. 21.

Mallory, Edward B., Tenafly, N. J. Waste purification process and apparatus. 2,457,057, Dec. 21.

Mao, Yu-Yueh A., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Trace blanking circuit for cathode-ray oscilloscopes. 2,456,973, Dec. 21.

Marciniak, Emil J.: *See*—
Kearsley, Edward P., and Marciniak.

Marinsky, Davis, deceased, Bronx, N. Y.; L. H. Morin executor of the estate. Compound knitting needle. 2,456,718, Dec. 21.

Markel Electric Products, Inc., assignee: *See*—
Ohm, Albert J.

Markowitz, Jesse, Forest Hills, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Supporting arrangement. 2,457,058, Dec. 21.

Marman Products, Co., Ins., assignee: *See*—
Woolsey, Theodore A.

Martin, Glenn L., Company, The, assignee: *See*—
Pepersack, Francis J.

Martin, William E., Kewanee, Ill. Vehicle tandem axle running gear. 2,456,719, Dec. 21.

Mayner, Thomas S.: *See*—
Corey, Lorin A., and Mayner.

Mayner, Thomas S., Willoughby Township, Lake County, and E. P. Hurayt, assignors to Industrial Rayon Corporation, Cleveland, Ohio. Thread drying apparatus. 2,456,974, Dec. 21.

McAllister, Sumner H., Lafayette, assignor to Shell Development Company, San Francisco, Calif. Production of motor fuel components. 2,456,975, Dec. 21.

McConnell, Andrew J., Albany, N. Y., assignor to General Electric Company. Phase responsive protective relaying system. 2,456,976, Dec. 21.

McCullough, Ira J., assignor to McCullough Tool Company, Los Angeles, Calif. Well casing perforating gun and cartridge. 2,456,977, Dec. 21.

McCullough Tool Company, assignee: *See*—
McCullough, Ira J.

McIlvaine, Robert L.: *See*—
Christensen, Alfred C., and McIlvaine.

McKee, Ralph W.: *See*—
Doisy, Edward A., Thayer, MacCorquodale, McKee, and Binkley.

McLoud, Elbert S., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Sugar cane wax refining. 2,456,641, Dec. 21.

McQuire, Ralph C., Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y. Bonding a nickel electrodeposit to a nickel surface. 2,457,059, Dec. 21.

McQuire, Ralph C., Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y. Bonding a nickel electrodeposit to a nickel surface. 2,457,060, Dec. 21.

McQuire, Ralph C., Port Colborne, Ontario, Canada, assignor to The International Nickel Company, Inc., New York, N. Y. Bonding nickel electrodeposit to a nickel surface. 2,457,061, Dec. 21.

Medlar, Lewis A., Oreland, assignor to Fox Products Company, Philadelphia, Pa. Battery charger. 2,456,978, Dec. 21.

Merck & Co., Inc., assignee: *See*—
Shabica, Anthony C.

Merker, Robert L., United States Navy. Grease composition. 2,456,642, Dec. 21.

Merrill, Frank W., Fort Wayne, Ind., assignor to General Electric Company. Speed governor. 2,456,979, Dec. 21.

Messinger, William, Philadelphia, Pa., and D. E. Jones, assignors to E. D. Jones & Sons Company, Pittsfield, Mass. Jordan apparatus. 2,456,883, Dec. 21.

Metal and Thermit Corporation, assignee: *See*—
Andrews, William.

Midland Laboratories, assignee: *See*—
Kretschmer, Frederick H., and Filter.

Mikula, George, Jr., Jersey City, N. J. Sliding block game. 2,456,884, Dec. 21.

Miles, Carrol C., Leominster, Mass. Easel picture frame. 2,456,720, Dec. 21.

Milliken, Thomas H., Jr., Maylan, Pa., and I. H. Wellnsky, Claymont, Del., assignors to Houdry Process Corporation, Wilmington, Del. Catalyst manufacture. 2,456,721, Dec. 21.

Milprint, Inc., assignee: *See*—
Baker, James A.

Mines Equipment Company, assignee: *See*—
Bach, Peter J., and Simpson.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Borell, George L.
Kliever, Waldo H.
Strother, Fred P.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Gehrenbeck, Gilbert B.

Mitchell, Pullan, Linthorpe, and U. R. Mitchell, Guiseley, England. Floor. 2,457,086, Dec. 21.

Mitchell, Uttley R.: *See*—
Mitchell, Pullan and U. R.

Mohawk Carpet Mills, Inc., assignee: *See*—
Cogovan, Edward J.
Cogovan, Edward J., and Jones.

Molloy, James F., Oakland, Calif. Toilet. 2,456,885, Dec. 21.

Monath, Paul E., Hewlett, N. Y. Self-stirring cooking utensil. 2,456,981, Dec. 21.

Monsanto Chemical Company, assignee: *See*—
Benignus, Paul G.
Darby, Joseph R.
Kyrides, Lucas P.
Kyrides, Lucas P., and Zienty.
Weinkauff, Oliver J.
Zienty, Ferdinand B., and Kyrides.

Montclair Research Corporation, assignee: *See*—
Rust, John B.

Moody, John L., Oakland, Calif., assignor to Friden Calculating Machine Co., Inc. Motor and clutch control mechanism. 2,456,980, Dec. 21.

Moore, David P., Roslyn, N. Y., assignor to Godfrey Bloch, Incorporated. Suction apparatus for knitting machines. 2,457,104, Dec. 21.

Moore, Raymond W., Edgewood, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control. 2,456,982, Dec. 21.

Moore, Robert C., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Quenched amplifier system. 2,457,062, Dec. 21.

Morelock, Oliver J., Short Hills, assignor to Weston Electrical Instrument Corporation, Newark, N. J. Mutual conductance tester. 2,456,833, Dec. 21.

Morgan, Agnes F., Berkeley, Calif., and B. M. Watts, Pullman, Wash., assignors to the United States of America as represented by the Secretary of War. Dehydrated meat scrapple and making the same. 2,457,063, Dec. 21.

Morgan, John D., South Orange, and R. E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y. Sealing compounds. 2,457,087, Dec. 21.

Mori, Ernest A., assignor to Gulf Research & Development Company, Pittsburgh, Pa. Apparatus for dry sump lubrication of engines. 2,456,886, Dec. 21.

Morin, Louis H., executor: *See*—
Marinsky, David.

Morrell, Charles E., Westfield, and M. W. Swaney, Cranford, N. J., assignors to Standard Oil Development Company. Selective copper solvent for diolefin extraction. 2,456,722, Dec. 21.

Morrison, Grover C., Huntington, W. Va. Collar support. 2,456,887, Dec. 21.

Morse, William H., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Damper-winding flexible connections. 2,456,983, Dec. 21.

Mouromtseff, Ilia E.: *See*—
Slack, Charles M., Mouromtseff, and Dinnick.

Mueller Co., assignee: *See*—
Mueller, Frank H.

Mueller, Frank H., assignor to Mueller Co., Decatur, Ill. Apparatus for quenching metallic articles. 2,456,984, Dec. 21.

Mullikin, Wilbur J., Washington, D. C. Respirator. 2,456,724, Dec. 21.

Napier, Henry, assignor to F. E. Schundler & Co., Inc., Joliet, Ill. Lightweight material and its preparation. 2,456,643, Dec. 21.

Napoli, John, Monterey, Calif. Propulsion means for boats. 2,456,834, Dec. 21.

Nash, John J., assignor to American Fixture & Manufacturing Co., St. Louis, Mo. Refectory table. 2,456,835, Dec. 21.

National Cash Register Company, The, assignee: *See*—
Lambert, Harry L.

Nelson, Evan H.: *See*—
Francis, Victor J., and Nelson.

Nelson, Oscar G.: *See*—
Hanson, Estyle D., and Nelson.

Netherton, Charles N., Gilman City, Mo. Inclined rail ball rolling chance device. 2,456,725, Dec. 21.

Neuhaus, Robert G., assignor to Teletype Corporation, Chicago, Ill. Translating device. 2,456,726, Dec. 21.

New Products Corporation, assignee: *See*—
Banker, Oscar H.

New Wrinkle, Inc., assignee: *See*—
Beynon, Nathan T.

Nikitin, Alexander A., College Park, Ga., assignor to Tennessee Copper Company, New York, N. Y. Copper fungicides and producing same. 2,456,727, Dec. 21.

Nordberg Manufacturing Co., assignee: *See*—
Anderson, Karl V.

Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Seamer for filled cans with countersunk bottoms. 2,456,644, Dec. 21.

Norin, Allan A., and F. D. Reynolds, assignors to Gaylord Products, Incorporated, Chicago, Ill. Hair curler. 2,456,645, Dec. 21.

Norton Company, assignee: *See*—
Coes, Loring, Jr.

Novelty Jewelry Corporation, assignee: *See*—
Gruenwald, Andrew.

Nuodex Products Co., Inc., assignee: *See*—
Fischer, Alfred.

Oglesby, Nicholas E., assignor to Behr-Manning Corporation, Troy, N. Y. Apparatus for the manufacture of abrasive webs. 2,456,985, Dec. 21.

Ohm, Albert J. D., assignor to Markel Electric Products, Inc., Buffalo, N. Y. Wall bracket electric light fixture. 2,456,792, Dec. 21.

Öhman, Karl Y., Saltsjobaden, assignor to Svenska Ackumulator Aktiebolaget Jungner, Stockholm, Sweden. Lens system with chromatic aberration and without noticeable magnification. 2,456,728, Dec. 21.

Okress, Ernest C., Montclair, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Magnetron. 2,456,888, Dec. 21.

Olson, Andrew R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Vaporizer. 2,456,889, Dec. 21.

O'Neil, William M., Oak Park, assignor to Teletype Corporation, Chicago, Ill. Manual unshift mechanism. 2,456,729, Dec. 21.

Pacific Coast Engineering Company, assignee: *See*—
Sjoberg, John G.

Paluev, Konstantin K., Pittsfield, Mass., assignor to General Electric Company. Protective arrangement for electrical windings. 2,456,986, Dec. 21.

Pangborn, Mary C., Albany, N. Y., assignor to The People of the State of New York. Recovering and refining cardiolipin. 2,456,836, Dec. 21.

Papermaster, Roy L., Los Angeles, Calif. Thermometer case with rotating means. 2,456,837, Dec. 21.

Parisi, Anthony, Brooklyn, N. Y. Hand knitting device. 2,457,064, Dec. 21.

Parmley, Harry M., Harrisburg, Pa. Electrical heating unit. 2,457,065, Dec. 21.

Patterson, Charles E., Los Angeles, Calif. Coupling. 2,457,105, Dec. 21.

Patterson, Julian E., Brownfield, Tex. Safety device for hoists. 2,456,646, Dec. 21.

Patton, James G., Fort Worth, Tex., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Milling machine attachment. 2,456,730, Dec. 21.

Peles, Julius S., New York, N. Y. Birdproofing. 2,456,731, Dec. 21.

People of the State of New York, The, assignee: *See*—
Pangborn, Mary C.

Pepersack, Francis J., Towson, assignor to The Glenn L. Martin Company, Middle River, Md. Access door for liquid containers. 2,457,066, Dec. 21.

Perkins, Ralph E., Ashland, Mass. Flatiron holder bracket. 2,456,987, Dec. 21.

Permanente Metals Corporation, The, assignee: *See*—
Church, Howard.
Fisher, Harmon F.

Perretti, Attilio, Milan, Italy. Atomizing oil burner. 2,457,067, Dec. 21.

Peterson, Albert and R., St. Clements, Manitoba, Canada. Pivoted pawl ratchet wrench with radially-slotted head and socket. 2,456,838, Dec. 21.

Peterson, Alfred, Wheaton, Ill. Antiskid chain. 2,457,068, Dec. 21.

Peterson, Robert: *See*—
Peterson, Albert.

Petro-Chem Process Company Incorporated, assignee: *See*—
Swanson, Harry R.

Philco Corporation, assignee: *See*—
Lewinter, Sidney W.
Moore, Robert C.

Phillips Petroleum Company, assignee: *See*—
Olson, Andrew R.
St. Clair, Theodore A.

Pierson, Charles A., Maumee, assignor to Associated Products, Inc., Toledo, Ohio. Broiler pan guard. 2,456,988, Dec. 21.

Pinney, Ernest F., Glen Cove, assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Production of candles. 2,457,088, Dec. 21.

Polcyn, Bernard H., Milwaukee, Wis. Tumbler. 2,456,989, Dec. 21.

Pottharst, John E., Jr., New Orleans, La. Combined evaporator and boiler. 2,456,732, Dec. 21.

Potts, Louis M., deceased; by M. W. C. Potts, executrix, Evanston, assignor to Teletype Corporation, Chicago, Ill. Cipher checking system. 2,456,733, Dec. 21.

Potts, Martha W. C., executrix: *See*—
Potts, Louis M.

Powers, James T., Jr., assignor to Funk Forging Company, Chicago Heights, Ill. Display appliance. 2,456,990, Dec. 21.

Pray, Lester W., Saco, Maine, assignor to Saco-Lowell Shops, Boston, Mass. Spindle brake mechanism. 2,457,089, Dec. 21.

President and Board of Trustees of St. Louis, assignee: *See*—
Doisy, Edward A., Thayer, MacCorquodale, McKee, and Binkley.

Pressley, Jackson H., Marion, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Phonograph apparatus. 2,457,106, Dec. 21.

Prill, Edward A., Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc. 3,4-methylenedioxyphenyl-propylene compound. 2,456,991, Dec. 21.

Princell, Joseph W., Minneapolis, Minn. Boat mooring device. 2,456,839, Dec. 21.

Provost, Raymond C., Jr.: *See*—
Woodward, Charles F., Saunders, and Provost.

Pugsley, Donald W., Bridgeport, Conn., assignor to General Electric Company. Frequency shift keying plus phase modulation. 2,456,992, Dec. 21.

Quaker Oats Company, The, assignee: *See*—
Dunlop, Andrew P., and Reineck.

Radio Corporation of America, assignee: *See*—
Carlson, Wendell L.
Dearing, John B.
Kellogg, Edward W.
Law, Russel R.
Leverenz, Humboldt W.
Lowden, William P.
Sziklai, George C.
Tolson, William A.
Usselman, George L.
Vilkomerson, Benjamin S.
Zworykin, Vladimir K., and Flory.

Rambo, Rawdon E., Pittsburgh, and C. F. Jenkins, Laughlintown, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Radial commutator assembly. 2,456,993, Dec. 21.

Ranco Incorporated, assignee: *See*—
Rauh, Herbert H.

Rauh, Herbert H., assignor to Ranco Incorporated, Columbus, Ohio. Alarm system for heat exchange devices. 2,457,069, Dec. 21.

Redding Manufacturing Company, Inc., assignee: *See*—
Ryan, Albert O.

Reed, George F., and W. H. Gould, Johannesburg, Transvaal, Union of South Africa. Safety retaining device for pivotal joints. 2,456,793, Dec. 21.

Reeves Hoffman Corporation, assignee: *See*—
Samuelson, Wallace H. E.

Rehberg, Chessie E., Glenside, and C. H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Acrylic esters of olefinic alcohols and polymers thereof and making them. 2,456,647, Dec. 21.

Reineck, Edward A.: *See*—
Dunlop, Andrew A.

Restall, Robert E., Hamilton, Ontario, Canada. Passenger operated roundabout. 2,456,648, Dec. 21.

Reynolds, Frank D.: *See*—
Norin, Allan A., and Reynolds.

Richardson, Ambrose M., Chicago, Ill. Convertible furniture unit. 2,456,794, Dec. 21.

Rigrod, William W., Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ignitor. 2,456,891, Dec. 21.

Riley, Lynn G., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control system. 2,456,892, Dec. 21.

Ringle, Charles J., and R. W. Smith, Buffalo, N. Y., assignors to Williams Gold Refining Company, Inc. Attachment for dental surveying instruments. 2,457,090, Dec. 21.

Ritzert, Robert W., New York, N. Y., assignor to The Egry Registry Company, Dayton, Ohio. Paper and ribbon feeding mechanism for manifolding machines. 2,456,734, Dec. 21.

Robeson Cutlery Company, Inc., assignee: *See*—
Case, Emerson E.

Robinson, Arthur M., Boston, Mass., assignor, by mesne assignments, to The Brush Development Company, Cleveland, Ohio. Piezoelectric crystal with moisture-proof coatings. 2,456,995, Dec. 21.

Robison, William M., Mount Holly, N. J. Fluid pressure switch. 2,456,994, Dec. 21.

Rogers, John C., and R. Sims, New Orleans, La. Household trash can. 2,456,840, Dec. 21.

Roselle, Walter A., New York, N. Y. Container. 2,456,735, Dec. 21.

Rossman, Edwin F., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Shock absorber. 2,456,736, Dec. 21.

Roth, Bert W., Riverdale, assignor to Trans-Lux Corporation, New York, N. Y. Switching arrangement for selectors. 2,456,893, Dec. 21.

Roth, Jay M.: *See*—
Campbell, John D., and Roth.

Rouse, Glenn F., Long Branch, N. J. Cathode. 2,456,649, Dec. 21.

Rowley, Robert D.: *See*—
Dreyfus, Camille, Rowley, and Thompson.

Rushing, Fred L., Tampa, Fla., assignor to Gaylord Container Corporation, St. Louis, Mo. Container. 2,456,841, Dec. 21.

Rust, John B., East Hanover, N. J., assignor of one-half to Montclair Research Corporation and one-half to Ellis-Foster Company. Dehydration of hydroxylated oils. 2,456,996, Dec. 21.

Rutbell, Clarence C., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Rotary cutter. 2,456,842, Dec. 21.

Ryan, Albert O., Oradell, N. J., assignor to Redding Manufacturing Company, Inc., Norwalk, Conn. Coating filaments. 2,456,650, Dec. 21.

Ryker, Elwood A., Spokane, Wash. Transmission for motorized vehicles. 2,456,894, Dec. 21.

Sachs, Morris, New York, N. Y. Electric fixture. 2,456,997, Dec. 21.

Saco-Lowell Shops, assignee: *See*—
Pray, Lester W.

St. Clair, Theodore A., Bartlesville, Okla., assignor to Phillips Petroleum Company. Vaporizer. 2,456,890, Dec. 21.

Samuelson, Wallace H. E., Weehawken, N. J., assignor, by mesne assignments, to Reeves Hoffman Corporation, Carlisle, Pa. Cathode sputtering apparatus for coating oscillator plates. 2,456,795, Dec. 21.

Sattler, Hugo, Doss, Tex. Wire stretcher. 2,456,895, Dec. 21.

Saunders, Donald H.: *See*—
Woodward, Charles F., Saunders, and Provost.

Savage Arms Corporation, assignee: *See*—
Smith, Wilfred I.

Schaad, Raymond E.: *See*—
Bloch, Herman S., and Schaad.

Scharwath, Herman J., assignee: *See*—
Scharwath, John A.

Scharwath, John A., Montclair, assignor of one-third to H. J. Scharwath, Union, N. J. Apparatus for making building units. 2,457,070, Dec. 21.

Scheuer, Clemens, Forest Hills, N. Y. Display fixture. 2,456,737, Dec. 21.

Schlesman, Carleton H., Allentown, Pa., assignor to Socony-Vacuum Oil Company, Incorporated. Gelation process involving supersonic treatment. 2,457,091, Dec. 21.

Schmidt, Edgar H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Variable-speed device. 2,456,738, Dec. 21.

Schmiel, Herbert H., assignor to Hydraulic Equipment Company, Cleveland, Ohio. Tank unit with submerged valve and external pump. 2,456,651, Dec. 21.

Schofield, Earl L., Rockford, Ill., assignor to Superior Coach Corporation, Lima, Ohio. Adjustable bier pin. 2,456,739, Dec. 21.

Schubel, Victor N., Dearborn, Mich. Control device. 2,456,998, Dec. 21.

Schuler, Reginald G., Highland Park, assignor to Teletype Corporation, Chicago, Ill. Tape perforator. 2,456,740, Dec. 21.

Schundler, F. E., & Co., Inc., assignee: *See*—
Napier, Henry.

Schurr, Otto E., assignor, by mesne assignments, to Lima-Hamilton Corporation, Hamilton, Ohio. Boring mill. 2,456,741, Dec. 21.

Schutte, August H., Hastings on Hudson, assignor to The Lummus Company, New York, N. Y. Hydrocarbon coking. 2,456,796, Dec. 21.

Segal, Irving, New York, N. Y. Extension table. 2,456,999, Dec. 21.

Semeyn, Leonard J., Lamont, Mich. Door stop. 2,456,843, Dec. 21.

Sevin, Clifford L., Houston, Tex. Buckle. 2,457,000, Dec. 21.

Shabica, Anthony C., assignor to Merck & Co., Inc., Rahway, N. J. Separation of isomers of amino acids. 2,456,742, Dec. 21.

Sheldrick, Henry W., assignor to Collier-Keyworth Company, Gardner, Mass. Chair iron for tiltable seats and backs. 2,456,797, Dec. 21.

Shell Development Company, assignee: *See*—
McAllister, Sumner H.

Short, Brooks H., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. High-frequency ignition system. 2,456,743, Dec. 21.

Shulman, Louis, New York, N. Y. Waistline control garment. 2,457,071, Dec. 21.

Simard, Gerald L., Stamford, and C. R. Stryker, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Method and apparatus for producnig electron diffraction spectra. 2,457,092, Dec. 21.

Simpson, Clarence E., Springfield, Mass., assignor to the United States of America as represented by the Secretary of War. Buffer mechanism for firearms. 2,456,652, Dec. 21.

Simpson, Herbert S., assignee: *See*—
Christensen, Alfred C., and McIlvaine.

Simpson, James H.: *See*—
Bach, Peter J., and Simpson.

Simpson, Thomas P., and L. P. Evans, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Apparatus for conversion of hydrocarbons. 2,457,093, Dec. 21.

Sims, Redding: *See*—
Rogers, John C., and Sims.

Sinclair, Edward L.: *See*—
Utterback, Sinclair, and Crowley.

Sjoberg, John G., Oakland, assignor to Pacific Coast Engineering Company, Alameda, Calif. Universal pipe coupling. 2,456,744, Dec. 21.

Slack, Charles M.: *See*—
Arnott, Edward G. F., Slack, and Dawley.

Slack, Charles M., Glen Ridge, I. E. Mouromtseff, Montclair, and G. M. Dinnick, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ultra high frequency device. 2,456,896, Dec. 21.

Slater, Fred M., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Mounting for rock drills. 2,456,745, Dec. 21.

Slick, Edwin E., Pittsburgh, Pa. Bottom structure for bessemer converters. 2,456,798, Dec. 21.

Smies, Malvin J., Sheboygan, Wis. Magneto cutout mercury switch for tractors. 2,456,799, Dec. 21.

Smiley, Lloyd D., Jackson Heights, and E. S. Lansing, New York, N. Y., assignors of one-half to said Lansing and one-half to H. B. Bishop, Summit, N. J. Electrolytic clarification apparatus 2,456,897, Dec. 21.

Smith, Arthur L.: *See*—
Clapham, Harry F., Harris, and Smith.

Smith, Bernard W., Hartford, Conn. Burglar alarm. 2,457,072, Dec. 21.

Smith Control and Instrument Corporation, assignee: *See*—
Smith, Norman J.

Smith, John H., Upper Darby, Pa., assignor to General Cable Corporation, New York, N. Y. Packaging wire. 2,457,094, Dec. 21.

Smith, Norman J., Medfield, assignor to Smith Control and Instrument Corporation, Needham, Mass. Pressure switch. 2,456,844, Dec. 21.

Smith, Roy W.: *See*—
Ringle, Charles J., and Smith.

Smith, Wilfred I., Chicopee Falls, Mass., assignor to Savage Arms Corporation, Utica, N. Y. Trigger action for automatic firearms. 2,457,001, Dec. 21.

Snader, Ira J., Detroit, Mich., assignor to Avco Manufacturing Corporation. Speed governor. 2,456,746, Dec 21.

Snader, Ira J., Detroit, Mich., assignor to Avco Manufacturing Corporation. Speed governor. 2,456,748, Dec. 21.

Snader, Ira J., Detroit, Mich., and A. G. Forsyth, Cheam, England, assignors of one-half to Avco Manufacturing Corporation, and one-half to The Fairey Aviation Company, Ltd., Hayes, Middlesex, England. Speed governor. 2,456,747, Dec. 21.

Snow, Donald L., Hempstead, and W. W. Hansen, Garden City, N. Y., assignors to The Sperry Corporation. Seal for high-frequency transmission lines. 2,456,653, Dec. 21.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Pinney, Ernest F.
Schlesman, Carleton H.
Simpson, Thompson P., and Evans.
Utterback, Ernest, Sinclair, and Crowley, Jr.

Soller, Walter, Cincinnati, Ohio, assignor of one-half to W. H. Woodin, Jr., San Mateo, Calif. Secondary electron emission tube. 2,456,654, Dec. 21.

Spalding, A. G., & Bros., Inc., assignee: *See*—
Kearsley, Edward P., and Marciniak.

Sperry Corporation, The, assignee: *See*—
Curry, Robert S., Jr., Lane, and Woodbury.
Kenyon, David E.
Snow, Donald L., and Hansen.

Spiro, Benjamin E.: *See*—
Linde, Leonard J., Arone, and Spiro.

Spiro, Benjamin E., Philadelphia, Pa., assignor to General Electric Company. Insulating housing for electrical apparatus. 2,457,002, Dec. 21.

Spo, Inc., assignee: *See*—
Young, Lester C.

Spokes, Ray E., Ann Arbor, Mich., assignor to American Brake Shoe Company, New York, N. Y. Friction element. 2,457,003, Dec. 21.

Standard Car Truck Company, assignee: *See*—
Leese, Charles P.

Standard Oil Development Company, assignee: *See*—
Beach, Leland K.
Morrell, Charles E., and Swaney.

Stannow, Jörgen C., Lidingo, Sweden, assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Tuning indicator in radio receivers. 2,457,004, Dec. 21.

Stearns, Kenneth R., Springfield, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Turbine cylinder joint. 2,457,073, Dec. 21.

Stelbel, James P., Racine, Wis. Bending means. 2,456,749, Dec. 21.

Stevens, Guy W. W.: *See*—
Knott, Edward B., and Stevens.

Stevens, Guy W. W., Harrow, Wealdstone, England, assignor to Eastman Kodak Company, Rochester, N. Y. Photographic process. 2,457,005, Dec. 21.

Stiller, Eric T.: *See*—
Gyorgy, Paul, Williamson, and Stiller.

Stine Ivan E., and H. A. La Fayette, Los Angeles, Calif. Combination bath and dressing table for infants. 2,456,845, Dec. 21.

Strandhagen, Harry I., Fort Lauderdale, Fla., assignor, by mesne assignments, of one-half to Bassett Research Corporation. Body restraint for infants. 2,456,898, Dec 21.

Strauss, Margaret B., New York, N. Y. Reaction products of pyridine and allergenic extracts of plants of the genus rhus. 2,456,750, Dec. 21.

Stribley, Arthur F., Jr.: *See*—
Farkas, Adalbert, and Stribley.

Strong, Cole, Estancia, N. Mex. Grease gun filler. 2,456,751, Dec. 21.

Strong, John D., Baltimore, Md., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Use of silicon compounds in producing quartz coatings in a vacuum. 2,456,899, Dec. 21.

Strother, Fred P., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Rheostat with rectilinear slide. 2,457,095, Dec. 21.

Stryker, Charles R.: *See*—
Simard, Gerald L., and Stryker.

Stuewe, Clarence C., Cleveland, Ohio. Stapling machine. 2,457,006, Dec. 21.

Sullivan, Harold J., Cranford, and E. G. F. Arnott, Upper Montclair, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Spark-gap device and electrode therefor. 2,456,900, Dec. 21.

Sundstrom, Savin L.: *See*—
Buttner, William C., and Sundstrom.

Superior Coach Corporation, assignee: *See*—
Schofield, Earl L.

Supply, In His Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, Minister of, assignee: *See*—
Jones, Frank L.

Surmatis, Joseph D., Nutley, N. J., assignor, by mesne assignments, to The Brush Development Company, Cleveland, Ohio. Resolution of racemic tartaric acid. 2,456,752, Dec. 21.

Sutherland, Ernest E., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric range surface unit 2,457,007, Dec. 21.

Svenska Ackumulator Aktiebolaget Jungner, assignee: *See*—
Ohman, Karl Y.

Swafford, Luther B., England, Ark. Cotton chopper with burners. 2,456,901, Dec. 21.

Swanee, Elmo E., San Francisco, assignor of two-thirds to M. C. Kidder, Los Angeles, Calif. Car wheel grinder. 2,456,753, Dec. 21.

Swaney, Miller W.: *See*—
Morrell, Charles E., and Swaney.

Swanson, Harry R., Katonah, assignor, by mesne assignments, to Petro-Chem Process Company, Incorporated, New York, N. Y. Heating fluids. 2,457,096, Dec. 21.

Swenson, Oscar J., Ithaca, assignor to Colonial Sugars Company, New York, N. Y., and S. C. Johnson & Son, Inc., Racine, Wis. Wax production. 2,456,655, Dec. 21.

Swenson, Oscar J., Ithaca, assignor to Colonial Sugars Company, New York, N. Y., and S. C. Johnson & Son, Inc., Racine, Wis. Wax production. 2,456,656, Dec. 21.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Electronic saw-tooth pulse generator. 2,456,754, Dec. 21.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Frequency converter circuit. 2,457,008, Dec. 21.

Tanner, Elo C., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Refrigeration apparatus. 2,457,009, Dec. 21.

Taylor, Maurice K. and J. Greenhalgh, Hollinwood, England, assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Impedance matching arrangement. 2,456,800, Dec. 21.

Tecalemit Limited, assignee: *See*—
Le Clair, Camille C. S.

Te Grotenhuis, Theodore A., Olmsted Falls, Ohio. Polymeric composition and making same. 2,457,097, Dec. 21.

Teletype Corporation, assignee: *See*—
Neuhaus, Robert G.
O'Neil, William M.
Potts, Louis M.
Schuler, Reginald G.

Tennessee Copper Company, assignee: *See*—
Nikitin, Alexander A.

Terrell, Claude J., Quincy, Ill. Helical coil butt ground winding machine. 2,456,755, Dec. 21.

Thayer, Sidney A.: *See*—
Doisy, Edward A., Thayer, MacCorquodale, McKee, and Blakley.

Thedick, John H., Oakland, Calif. Portable boat. 2,457,010, Dec. 21.

Thompson Grinder Company, The, assignee: *See*—
Wilson, John C.

Thompson, Parke H., Kirkwood, assignor to AMP Corporation, St. Louis, Mo. Intermittently vibrating electric motor. 2,456,846, Dec. 21.

Thompson, Robert F.: *See*—
Dreyfus, Camille, Rowley, and Thompson.

Tietig, Chester, Park Hills, Ky. Shoe tree. 2,456,756, Dec. 21.

Timken-Detroit Axle Company, The, assignee: *See*—
Buckendale, Lawrence R.

Tolson, William A., Princeton, N. J., assignor to Radio Corporation of America. Optical heat detection system. 2,456,801, Dec. 21.

Trans-Lux Corporation, assignee: *See*—
Roth, Bert W.

Treat, Herbert R.: *See*—
Kniel, Ludwig, Lambert, and Treat.

Treuthart, Robert L., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Contact and shorting mechanism. 2,456,902, Dec. 21.

Tubbs, Lester G., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric circuit for electromagnets. 2,457,011, Dec. 21.

Ultrasonic Corporation, assignee: *See*—
Horsley, Caperton B.

Underwood, Lulu M.: *See*—
Underwood, Sylvester B. and L. M.

Underwood, Sylvester B. and L. M., Santa Cruz, Calif., assignors to Foley Manufacturing Company, Minneapolis, Minn. Saw stabilizer for saw filing machines. 2,456,847, Dec. 21.

Union Carbide and Carbon Corporation, assignee: *See*—
Jones, Homer W.

Union Manufacturing Company, assignee: *See*—
Church, Albert E.

Union Oil Company of California, assignee: *See*—
Farkas, Adalbert, and Stribley, Jr.

Union Switch & Signal Company, The, assignee: *See*—
Grondahl, Lars O.

United Shoe Machinery Corporation, assignee: *See*—
Eastman, Fred C.
Haas, Otto R.

United States Motor Corporation, assignee: *See*—
Hall, Stanley W.

Universal Oil Products Company, assignee: *See*—
Bloch, Herman S., and Schaad.

Haensel, Vlandimir.
Leffer, Frederick W.

Universal Winding Company, assignee: *See*—
Winslow, Albert E.

Upper, Frederick A., assignor to The Carborundum Company, Niagara Falls, N. Y. Abrasive article and making. 2,457,012, Dec. 21.

Usselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Angle modulated wave discriminator. 2,457,013, Dec. 21.

Utterback, Ernest, Upper Darby, and E. L. Sinclair, Philadelphia, Pa., and J. A. Crowley, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Apparatus for conducting reactions in the presence of a contact mass. 2,457,098, Dec. 21.

Vagts, Hale F., San Jose, Calif. Explosive land mine. 2,456,657, Dec. 21.

Valenta, Frank C., Burbank, Calif. Poultry picker. 2,456,757, Dec. 21.

Valentin, André, Belfort, France, assigner to General Electric Company. Dynamoelectric machine. 2,457,014, Dec. 21.

Van der Veen, Tiemen, Amsterdam, Netherlands. Rubber heel. 2,457,015, Dec. 21.

Van Geel, Willem C., Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee. Blocking-layer electrode system. 2,456,758, Dec. 21.

Van Vulpen, John: *See*—
Yindrock, John J., and Van Vulpen.

Vapor Heating Corporation, assignee: *See*—
Yindrock, John J., and Van Vulpen.

Variety Development and Engineering Company, assignee: *See*—
Livers, Carlos B.

Verner, Stanley, Montreal, Quebec, Canada. Dispensing container. 2,457,107, Dec. 21.

Versen, Kurt, Tenafly, N. J. Lighting fixture. 2,456,903, Dec. 21.

Vicksell, Victor A.: *See*—
Bundren, Harry E.

Vilkomerson, Benjamin S., Camden, N. J., assignor to Radio Corporation of America. Frequency modulation receiver tuning aid. 2,457,016, Dec. 21.

Vines, Raymond F.: *See*—
Wise, Edmund M., and Vines.

Vulcan Corporation, assignee: *See*—
Clausing, Henry G.

Wahlström, Nils H., Stockholm, Sweden. Stamp. 2,456,904, Dec. 21.

Waldheim, John Elizabeth, N. J. Clothesline holder. 2,456,658, Dec. 21.

Walley, Omar C., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electromagnetic control device. 2,457,017, Dec. 21.

Walsh, James M., Los Angeles, Calif. Necktie accessory. 2,456,848, Dec. 21.

Walsh, Philip J., San Francisco, Calif. Oscillator system. 2,456,802, Dec. 21.

Wantling, Joseph W., Allwood, N. J., assignor, by mesne assignments, to Hewitt-Robins Incorporated. Dewatering screen. 2,457,018, Dec. 21.

War, the United States of America as represented by the Secretary of, assignee: *See*—
Morgan, Agnes F., and Watts.
Simpson, Clarence E.

Waters, Jesse E., Pratt, Kans. Highway signal. 2,456,849, Dec. 21.

Watts, Betty M.: *See*—
Morgan, Agnes F., and Watts.

Weber, Earl E., Greene Township, Hamilton County, Ohio. Signal lamp. 2,457,019, Dec. 21.

Weidner, William, New York, N. Y. Laminated midsole and outsole construction. 2,456,659, Dec. 21.

Weinkauff, Oliver J., assignor to Monsanto Chemical Company, St. Louis, Mo. Propenyl ethacol. 2,457,074, Dec. 21.

Wellnsky, Irving H.: *See*—
Milliken, Thomas H., Jr., and Wellnsky.

Werner, Le Roy L., Washington, D. C. Dispensing roll holder. 2,456,660, Dec. 21.

Weston Electrical Instrument Corporation, assignee: *See*—
Morelock, Oliver J.

Wheeler, Harold A., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. High-frequency energy leakage suppressor. 2,456,803, Dec. 21.

White, Jesse O., Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Acetylene tetramethacrylate and polymers thereof. 2,456,759, Dec. 21.

Whitney, Clarence G., Camden, N. J. Playing cards. 2,457,020, Dec. 21.

Whitney, Paul V., Columbus, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company. Endless conveyer, including movable cut-off and culling means in its feed structure. 2,456,760, Dec. 21.

Wilbert Manufacturers Association, assignee: *See*—
Haase, Wilbert W.

Wilder, Edward A., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Cane wax production. 2,456,661, Dec. 21.

Williams Gold Refining Company, Inc., assignee: *See*—
Ringle, Charles J., and Smith.

Williams, Merlyn G., Jr., Downers Grove, and A. Dahl, Chicago, Ill. Abrasive tool. 2,457,076, Dec. 21.

Williams, Paul D., Palo Alto, assignor to Eitel-McCullough, Inc., San Bruno, Calif. Rugged cathode. 2,456,761, Dec. 21.

Williams, Thomas J., Gas City, Ind. Fishing pole. 2,457,075, Dec. 21.

Williamson, Martha: *See*—
Gyorgy, Paul, and Williamson.

Willis, Robert L., Baltimore, Md. Article rack. 2,456,850, Dec. 21.

Wilson, John C., assignor to The Thompson Grinder Company, Springfield, Ohio. Apparatus for crush dressing grinding wheels. 2,456,762, Dec. 21.

Wines, Elmer J., South Gate, Calif. Fiber renovating machine. 2,456,905, Dec. 21.

Winslow, Albert E., Norwich, Conn., assignor, by mesne assignments, to Universal Winding Company, Cranston, R. I. Thread finishing machine. 2,456,804, Dec. 21.

Winthrop-Stearns Inc., assignee: *See*—
King, John A.

Wise, Edmund M., Westfield, N. J., and R. F. Vines, Queens Village, assignors to The International Nickel Company, Inc., New York, N. Y. Palladium plating. 2,457,021, Dec. 21.

Wohlforth, Walter W., San Francisco, Calif., assignor to The Heil Co., Milwaukee, Wis. Side gate elevator for trucks. 2,456,805, Dec. 21.

Wolffe, Erwin B., Chicago, Ill. Vaginal gauge. 2,456,806, Dec. 21.

Woodall Industries, Inc., assignee: *See*—
Dee, Herbert C.

Woodbury, Stephen E.: *See*—
Curry, Robert S., Jr., Lane, and Woodbury.

Woodin, William H., Jr., assignor: *See*—
Soller, Walter.

Woodward, Charles F., Abington, D. H. Saunders, Oreland, and R. C. Provost, Jr., Washington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Alkylnicotinium arylsulfonate pesticide. 2,456,851, Dec. 21.

Woolsey, Theodore A., Inglewood, Calif., assignor to Marman Products Co., Inc. Tube clamp. 2,457,077, Dec. 21.

Worcester Polytechnic Institute, assignee: *See*—
Holbrook, John A.

Wyeth Incorporated, assignee: *See*—
Bruce, William F.
Gyorgy, Paul, and Williamson.

Wymer, William C., U. S. Navy, Oregon City, Oreg. Hammering device. 2,456,662, Dec. 21.

Yindrock, John J., and J. Van Vulpen, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation. Antifreeze drain fitting. 2,456,807, Dec. 21.

Young, Lester C., Cleveland, Ohio, assignor to Spo, Inc. Jolt molding machine. 2,456,663, Dec. 21.

Yula, Henry F., New York, N. Y. Preheating apparatus. 2,457,022, Dec. 21.

Yurgensen, William P., Sharon Hill, Pa. Split chuck for electric welding guns. 2,456,664, Dec. 21.

Zelt, Elmer J., Fort Wayne, Ind., assignor to General Electric Company. Encasing assembly. 2,457,023, Dec. 21.

Ziegler, Marc, Buenos Aires, Argentina, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Frequency atabilization. 2,456,763, Dec. 21.

Zienty, Ferdinand B.: *See*—
Kyrides, Lucas P., and Zienty.

Zienty, Ferdinand B., assignor to Monsanto Chemical Company, St. Louis, Mo. Stabilization of 2-thenyl chloride. 2,457,079, Dec. 21.

Zienty, Ferdinand B., assignor to Monsanto Chemical Company, St. Louis, Mo. Stabilization of 2-thenyl chloride. 2,457,080, Dec. 21.

Zienty, Ferdinand B., assignor to Monsanto Chemical Company, St. Louis, Mo. Stabilization of 2-thenyl chloride. 2,457,081, Dec. 21.

Zienty, Ferdinand B., St. Louis, and L. P. Kyrides, Webster Groves, assignors to Monsanto Chemical Company, St. Louis, Mo. Brominating heterocyclic compounds. 2,457,078, Dec. 21.

Zworykin, Vladimir K., and L. E. Flory, Princeton, N. J., assignors to Radio Corporation of America. Electronic-reading aid for the blind. 2,457,099, Dec. 21.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Electrical control system. F. L. Mosley. Re. 23,066, Dec. 21.

Washing machine with pivotally supported outer and inner shells and power means on the outer shell for rotating the inner shell. H. C. Ellis. Re. 23,065, Dec. 21.

LIST OF DESIGN INVENTIONS

Accessory lamp for a cook stove. B. N. Trombley. 152,177, Dec. 21.
Aircraft, Rotary winged. F. J. Knack. 152,161, Dec. 21.
Airplane toy. A. Halvas. 152,152, Dec. 21.
Battery cover, Storage. R. M. Raney. 152,169, Dec. 21.
Billfold, purse, and memorandum pad holder, Combined. H. A. Bauman. 152,134, Dec. 21.
Box, Parts. G. C. Montague. 152,167, Dec. 21.
Cabinet for lubricating equipment. R. P. Field. 152,148, Dec. 21.
Clip, Watch band. G. M. Ellesson. 152,147, Dec. 21.
Coffee table and bar, Combination. G. Douglas. 152,143, Dec. 21.
Container, Cargo. M. B. Crawford and E. C. Mitchell. 152,140–1, Dec. 21.
Container, Combination cigarette and match. H. E. Larson. 152,164, Dec. 21.
Dictating machine. C. W. Dann, G. F. Braun, and R. M. Somers. 152,142, Dec. 21.
Doll. A. Fine. 152,149, Dec. 21.
Doughnut machine, Automatic. E. J. Roth. 152,170, Dec. 21.
Fire grate. F. W. Goodwin. 152,151, Dec. 21.
Fish lure. B. M. Potter. 152,168, Dec. 21.
Fish lure. A. Sisco. 152,176, Dec. 21.
Flashlight or similar article. S. Bersudsky. 152,137, Dec. 21.
Game board. M. H. Silverman. 152,174–5, Dec. 21.
Glider swing. M. L. Drewniak. 152,144, Dec. 21.
Grip, Hand protecting. L. T. Jones. 152,157, Dec. 21.
Laundry bag or the like. W. Seidler. 152,173, Dec. 21.
Mixer, Food. C. Karstadt. 152,158, Dec. 21.
Pitcher. R. J. Kemper. 152,159, Dec. 21.
Radio cabinet. E. M. Valley. 152,179, Dec. 21.
Radio receiver cabinet. A. L. Jenks. 152,156, Dec. 21.
Record file. G. H. Kress. 152,163, Dec. 21.
Screw driver. S. Jacoff. 152,155, Dec. 21.
Skirt ensemble or similar article of wearing apparel. O. H. Cohen. 152,138, Dec. 21.
Step. N. J. Harvey. 152,153, Dec. 21.
Table top, Game. J. Klotz. 152,160, Dec. 21.
Table top, Game. M. M. Warner. 152,181, Dec. 21.
Tap, Hot line. S. P. Becker. 152,135, Dec. 21.
Telephone hand set. L. Kniep, Jr. 152,162, Dec. 21.
Textile fabric or similar article. R. E. Minger. 152,166, Dec. 21.
Thermostat cover. J. G. Eldridge. 152,146, Dec. 21.
Tone arm. L. J. Andres. 152,133, Dec. 21.
Top, back guard panel, timer and utility compartment for a cooking range, Combined. L. F. Covey. 152,139, Dec. 21.
Toy automobile. W. E. Hoffmann. 152,154, Dec. 21.
Toy figure. M. Glass. 152,150, Dec. 21.
Traffic signal or similar article. P. R. Russell. 152,171, Dec. 21.
Trim for a stove, Splash back. B. N. Trombley. 152,178, Dec. 21.
Truck, Lift. E. A. Wagner. 152,180, Dec. 21.
Vending machine, Drink. W. J. During and J. J. Punke. 152,145, Dec. 21.
Washing device or similar article. J. D. Berry. 152,136, Dec. 21.
Wheelbarrow. L. H. Ryder. 152,172, Dec. 21.
Whirling toy. J. Merrico. 152,165, Dec. 21.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive article and making. F. A. Upper. 2,457,012, Dec. 21.
Abrasive tool. M. G. Williams, Jr., and A. Dahl. 2,457,076, Dec. 21.
Acetamidyl derivatives of amino-quinolines, Disubstituted. W. F. Bruce. 2,456,911, Dec. 21.
Acetylene tetramethacrylate and polymers thereof. J. O. White. 2,456,759, Dec. 21.
Acrylic esters of olefinic alcohols and polymers thereof and making them. C. E. Rehberg and C. H. Fisher. 2,456,647, Dec. 21.
Adjustable bier pin. E. L. Schofield. 2,456,739, Dec. 21.
Aircraft anti-icing arrangement. J. D. Campbell and J. M. Roth. 2,457,031, Dec. 21.
Alarm apparatus, Railway train emergency. L. O. Grondahl. 2,456,871, Dec. 21.
Alarm, Burglar. B. W. Smith. 2,457,072, Dec. 21.
Alarm system for heat exchange devices. H. H. Rauh. 2,457,069, Dec. 21.
Alcohols, Oxidizing. R. M. Deenesly. 2,456,683, Dec. 21.
Alkylnicotinium arylsulfonate pesticide. C. F. Woodward, D. H. Saunders, and R. C. Provost, Jr. 2,456,851, Dec. 21.
Amides, Production of. J. A. King. 2,456,785, Dec. 21.
Ammunition stowage and handling. G. A. Chadwick and P. H. Girouard. 2,456,620, Dec. 21.
Amplifier system, Quenched. R. C. Moore. 2,457,062, Dec. 21.
Antiskid chain. A. Peterson. 2,457,068, Dec. 21.
Apparatus for conducting reactions in the presence of a contact mass. E. Utterback, E. L. Sinclair, and J. A. Crowley, Jr. 2,457,098, Dec. 21.
Apparatus for conversion of hydrocarbons. T. P. Simpson and L. P. Evans. 2,457,093, Dec. 21.
Apparatus for crush dressing grinding wheels. J. C. Wilson. 2,456,762, Dec. 21.
Apparatus for dry sump lubrication of engines. E. A. Mori. 2,456,886, Dec. 21.
Apparatus for drying finely divided materials while suspended in a gas. R. A. Caughey. 2,456,674, Dec. 21.
Apparatus for forming glass beads and the like articles. A. Gruenwald. 2,456,697, Dec. 21.
Apparatus for improving the durability of optical coatings. E. W. Kellogg. 2,456,708, Dec. 21.
Apparatus for inspection of articles by means of X-ray photographs. W. J. Daly. 2,456,816, Dec. 21.
Apparatus for making building units. J. A. Scharwath. 2,457,070, Dec. 2.
Apparatus for quenching metallic articles. F. H. Mueller. 2,456,984, Dec. 21.
Apparatus for shearing strips of plastic material. E. D. Hanson and O. G. Nelson. 2,456,699, Dec. 21.
Apparatus for testing and marking insulated conductors. G. E. Henning. 2,456,704, Dec. 21.
Apparatus for the manufacture of abrasive webs. N. E. Oglesby. 2,456,985, Dec. 21.
Appliance, Display. J. T. Powers, Jr. 2,456,990, Dec. 21.
Arrangement for electrical windings, Protective. K. K. Paluev. 2,456,986, Dec. 21.
Arrangement for simulating a reactive impedance. L. F. Curtis. 2,457,034, Dec. 21.
Article rack. R. L. Willis. 2,456,850, Dec. 21.
Atomizing oil burner. A. Perretti. 2,457,067, Dec. 21.
Attachment for dental surveying instruments. C. J. Ringle and R. W. Smith. 2,457,090, Dec. 21.
Auger, Posthole. R. H. Dobbs. 2,456,819, Dec. 21.
Axle, Interchangeable front and rear drive. L. R. Buckendale. 2,456,616, Dec. 21.
Bait, Artificial. M. A. Adams. 2,456,665, Dec. 21.
Bath shower, Automatic. A. H. Hatchette. 2,456,703, Dec. 21.
Battery charger. L. A. Medlar. 2,456,978, Dec. 21.
Bed table. B. da Costa. 2,456,867, Dec. 21.
Bender, Tube. C. J. Chaille. 2,456,675, Dec. 21.
Bending means. J. P. Steibel. 2,456,749, Dec. 21.
Birdproofing. J. S. Peles. 2,456,731, Dec. 21.
Blade, Fan. A. Kern. 2,456,710, Dec. 21.
Blanket control, Electric. H. W. A. Chalberg. 2,456,916, Dec. 21.
Block: *See*—
  Bolster block.
  Sanding block.
Blowpipe apparatus. H. W. Jones. 2,456,784, Dec. 21.
Blower type radiant heater. E. F. Hardey. 2,456,781, Dec. 21.
Board: *See*—
  Cutlery display board.
Boat mooring device. J. W. Princell. 2,456,839, Dec. 21.
Boat, Portable. J. H. Thedick. 2,457,010, Dec. 21.
Body restraint for infants. H. I. Strandhagen. 2,456,898, Dec. 21.
Bonding a nickel electrodeposit to a nickel surface. R. C. McQuire. 2,457,059–61, Dec. 21.
Booster control, Ammunition. L. S. Carless. 2,456,618, Dec. 21.
Boring head. W. P.-G. Hall. 2,457,040, Dec. 21.
Boring mill. O. E. Schurr. 2,456,741, Dec. 21.
Bolster block. C. J. Bath. 2,456,856, Dec. 21.
Bottom structure for bessemer converters. E. E. Slick. 2,456,798, Dec. 21.
Box: *See*—
  Lunch box.
Bracket: *See*—
  Flatiron holder bracket.
Brake mechanism, Spindle. L. W. Pray. 2,457,089, Dec. 21.
Brassière. J. V. Hollar. 2,456,872, Dec. 21.
Brassière and similar garments. E. W. Gluckin. 2,456,695, Dec. 21.
Brazing alloy. W. W. Dyrkacz. 2,456,933, Dec. 21.
Bridge, High-frequency impedance. E. C. Cork and A. D. Blumlein. 2,456,679, Dec. 21.
Brominating heterocyclic compounds. F. B. Zienty and L. P. Kyrides. 2,457,078, Dec. 21.
Buckle. C. L. Sevin. 2,457,000, Dec. 21.
Burner: *See*—
  Atomizing oil burner.
Bushing, Electrical apparatus. L. J. Linde, N. F. Arone, and B. E. Spiro. 2,456,640, Dec. 21.
Can: *See*—
  Household trash can.
Candles, Production of. E. F. Pinney. 2,457,088, Dec. 21.
Carburetor ice responsive device. W. H. Kliever. 2,457,085, Dec. 21.
Cards, Playing. C. G. Whitney. 2,457,020, Dec. 21.
Carrier: *See*—
  Chart carrier.
Case: *See*—
  Cigarette or like dispensing case.
  Lipstick case.
Case with rotating means, Thermometer. R. L. Papermaster. 2,456,837, Dec. 21.
Casing and fastening means therefor. K. M. Feiertag. 2,456,934, Dec. 21.
Catalyst manufacture. T. H. Milliken, Jr., and I. H. Welinsky. 2,456,721, Dec. 21.
Catalyst preparation. V. Haensel. 2,456,633, Dec. 21.
Cathode. G. F. Rouse. 2,456,649, Dec. 21.
Cathode and heater, Thermionic. R. R. Law. 2,456,714, Dec. 21.
Cathode-ray tube. L. H. Bedford, J. Bell, and E. M. Langham. 2,456,809, Dec. 21.
Cathode, Rugged. P. D. Williams. 2,456,761, Dec. 21.
Cathode sputtering apparatus for coating oscillator plates. W. H. E. Samuelson. 2,456,795, Dec. 21.
Cellulose compound wrinkle composition. N. T. Beynon. 2,456,670, Dec. 21.
Cellulose ester stabilization in anhydrous medium. C. Dreyfus, R. D. Rowley, and R. F. Thompson. 2,456,688, Dec. 21.
Chain: *See*—
  Antiskid chain.
Chamber, Acoustic. C. B. Horsley. 2,456,706, Dec. 21.
Chart carrier. J. S. Clachko. 2,456,677, Dec. 21.
Checking system, Cipher. L. M. Potts. 2,456,733, Dec. 21.
Chopper with burners, Cotton. L. B. Swafford. 2,456,901, Dec. 21.
Chuck. E. Bugatti. 2,457,030, Dec. 21.
Chuck. J. E. I. Cairns and C. D. Docherty. 2,456,914, Dec. 21.
Chuck, Eccentric. R. E. Faust. 2,456,776, Dec. 21.
Chuck for electric welding guns, Split. W. P. Yurgensen. 2,456,664, Dec. 21.
Cigarette or like dispensing case. W. D. Leatherman. 2,456,963, Dec. 21.
Circuit: *See*—
  Control circuit.
  Frequency converter circuit.
Circuit breaker. J. B. MacNeill. 2,456,971, Dec. 21.
Circuit for cathode-ray oscilloscopes, Trace blanking. Y.-Y. A. Mao. 2,456,973, Dec. 21.
Circuit for electric discharge devices. V. J. Francis and E. H. Nelson. 2,456,870, Dec. 21.
Circuit for electromagnets, Electric. L. G. Tubbs. 2,457,011, Dec. 21.
Circuit interrupter. J. M. Cumming. 2,456,926, Dec. 21.
Circuit with pulse output attenuating means, Electronic trigger. A. H. Dickinson. 2,456,818, Dec. 21.
Circuits for high impedance aerials, Coupled. C. W. Eggleton. 2,456,772, Dec. 21.

Circulating means for pistons and connecting rods, Oil. K. V. Anderson. 2,456,668, Dec. 21.
Clamp: *See*—
Line tap clamp. Tube clamp.
Clarification apparatus, Electrolytic. L. D. Smiley and E. S. Lansing. 2,456,897, Dec. 21.
Cleaner: *See*—
Vacuum cleaner.
Clip: *See*—
Tobacco clip.
Clothesline holder. J. Waldheim. 2,456,658, Dec. 21.
Clothespin. J. F. Bergantino. 2,457,026, Dec. 21.
Clutch: *See*—
Latch operated clutch.
Coating for metal surfaces, Corrosion resistant. G. W Jernstedt. 2,456,947, Dec. 21.
Coating method and apparatus, Mold. T. J. Arbron. 2,456,853, Dec. 21.
Coffee concentrate and producing it. A. A. Epstein. 2,457,036, Dec. 21.
Collapsible tube holder. C. Arp. 2,457,024, Dec. 21.
Collar support. G. C. Morrison. 2,456,887, Dec. 21.
Comb, Fountain. A. R. Dominguez. 2,456,687, Dec. 21.
Composite material and shaped bodies therefrom. C. G. Goetzel. 2,456,779, Dec. 21.
Composition comprising coumarone indene resin, cetyl acetamide, and ethyl cellulose, Impregnating. W. P. Lowden. 2,456,717, Dec. 21.
Connections, Damper-winding flexible. W. H. Morse. 2,456,983, Dec. 21.
Connector: *See*—
Electrical connector.
Contact and shorting mechanism. R. L. Trenthart. 2,456,902, Dec. 21.
Container: *See*—
Dispensing container.
Container. W. A. Roselle. 2,456,735, Dec. 21.
Container. F. L. Rushing. 2,456,841, Dec. 21.
Container closure. H. G. Maeder, Jr., and M. R. Day. 2,456,972, Dec. 21.
Control circuit. A. A. MacDonald. 2,456,970, Dec. 21.
Control device. V. N. Schubel. 2,456,998, Dec. 21.
Control device, Electromagnetic. O. C. Walley. 2,457,017, Dec. 21.
Control device indicator. D. B. Keim. 2,456,949, Dec. 21.
Control mechanism for electric motors, Speed. W. L. Hansen and I. N. Hurst. 2,456,701, Dec. 21.
Control mechanism, Hydraulic. A. E. Kremiller. 2,456,712, Dec. 21.
Control mechanism, Motor and clutch. J. L. Moody. 2,456,980, Dec. 21.
Control system, Pulse shaping. R. Lee and P. A. Duffy, Jr. 2,456,960, Dec. 21.
Controlling means, Gyroscopic. R. S. Curry, Jr., A. W. Lane, and S. E. Woodbury. 2,456,619, Dec. 21.
Controller, Hot-wire bridge overspeed. G. L. Borell. 2,456,765, Dec. 21.
Coupling for use in fluid supply systems. C. C. S. Le Clair. 2,457,052, Dec. 21.
Conversion of hydrocarbons. H. S. Bloch and R. E. Schaad. 2,456,672, Dec. 21.
Conversion of hydrocarbons. F. W. Leffer. 2,456,715, Dec. 21.
Conveyer, including movable cut-off and culling means in its feed structure, Endless. P. V. Whitney. 2,456,760, Dec. 21.
Cooling system for internal-combustion engines. P. Klotsch. 2,456,951, Dec. 21.
Copper fungicides and producing same. A. A. Nikitin 2,456,727, Dec. 21.
Copper solvent for diolefin extraction, Selective. L. K. Beach. 2,456,723, Dec. 21.
Copper solvent for diolefin extraction, Selective. C. E. Morrell and M. W. Swaney. 2,456,722, Dec. 21.
Counter, Portable checking. J. A. Davenport. 2,456,817, Dec. 21.
Coupler, Trailer. J. P. K. Fontaine and A. S. Brumby. 2,456,826, Dec. 21.
Coupling: *See*—
Universal pipe coupling.
Coupling. C. E. Patterson. 2,457,105, Dec. 21.
Coupling assembly. A. R. Jones and B. C. Look, Jr. 2,456,636, Dec. 21.
Crane control. R. Bollaert. 2,456,908, Dec. 21.
Crystal seed and obtaining it. B. R. F. Kjellgren. 2,456,831, Dec. 21.
Crystal with moisture-proof coatings, Piezoelectric. A. M. Robinson. 2,456,995, Dec. 21.
Cushion structure, Tilting. K. K. Horner and L. W. Hiltman. 2,456,874, Dec. 21.
Cutlery display board. E. E. Case. 2,457,032, Dec. 21.
Cutter: *See*—
Rotary cutter.
Dehydration of hydroxylated oils. J. B. Rust. 2,456,996, Dec. 21.
Detection system, Optical heat. W. A. Tolson. 2,456,801, Dec. 21.
Detector, Angle modulated wave. W. L. Carlson. 2,456,915, Dec. 21.
Device adapted to produce saw tooth oscillations. J. Haantjes. 2,456,700, Dec. 21.
Device for hoists, Safety. J. E. Patterson. 2,456,646, Dec. 21.
Device for teaching correct penmanship, Educational. S. R. Greenberg. 2,456,632, Dec. 21.
Device for the control of flow of fluids. H. Dahnke. 2,456,626, Dec. 21.
Dewatering screen. J. W. Wantling. 2,457,018, Dec. 21.
Direction finding system, Radio. C. S. Agate and A. H. Cooper. 2,456,666, Dec. 21.
Discriminator, Angle modulated wave. G. L. Usselman. 2,457,013, Dec. 21.
Dish, Soap. J. Kirkbride. 2,456,877, Dec. 21.
Dispenser: *See*—
Liquid dispenser.
Dispenser for tooth powder and the like. R. W. Hopkins. 2,456,873, Dec. 21.
Dispensing container. S. Verner. 2,457,107, Dec. 21.
Dispensing mechanism, Tape. J. F. Cullin. 2,456,625, Dec. 21.
Dispensing roll holder. L. L. Werner. 2,456,660, Dec. 21.
Distributor. C. J. Fitch and R. N. Elchorn. 2,456,825, Dec. 21.
Door for liquid containers, Access. F. J. Pepersack. 2,457,066, Dec. 21.
Door stop. L. J. Semeyn. 2,456,843, Dec. 21.
Drain fitting, Antifreeze. J. J. Yindrock and J. Van Vulpen. 2,456,807, Dec. 21.
Drying apparatus, Thread. L. A. Corey and T. S. Mayner. 2,456,925, Dec. 21.
Dynamoelectric machine. R. A. Baudry. 2,456,612, Dec. 21.
Dynamoelectric machine. A. Valentin. 2,457,014, Dec. 21.
Easel picture frame. C. C. Miles. 2,456,720, Dec. 21.
Electric discharge apparatus. J. H. Campbell. 2,456,859, Dec. 21.
Electric discharge apparatus. J. H. Campbell. 2,456,860, Dec. 21.
Electric motor. C. B. Livers. 2,456,967, Dec. 21.
Electric water heater. S. W. Hall. 2,456,698, Dec. 21.
Electrical connector. P. J. Bach and J. H. Simpson. 2,456,764, Dec. 21.
Electrode system, Blocking-layer. W. C. van Geel. 2,456,758, Dec. 21.
Electrodes for arc lights. R. W. Hickman. 2,457,042, Dec. 21.
Electrodes, Welding. W. Andrews. 2,456,609, Dec. 21.
Electron diffraction spectra, Method and apparatus for producing. G. L. Simard and C. R. Stryker. 2,457,092, Dec. 21.
Electronic saw-tooth pulse generator. G. C. Szikiai. 2,456,754, Dec. 21.
Elevator for trucks, Side gate. W. W. Wohlforth. 2,456,805, Dec. 21.
Encasing assembly. E. J. Zelt. 2,457,023, Dec. 21.
Engine head lifting tool. A. R. Cheek. 2,456,917, Dec. 21.
Evaporator and boiler, Combined. J. E. Pottharst, Jr. 2,456,732, Dec. 21.
Exchanger, Heat. A. J. and I. F. Fausek. 2,456,775, Dec. 21.
Extension table. A. M. Ellington. 2,456,821, Dec. 21.
Extension table. I. Segal. 2,456,999, Dec. 21.
Extruding polytetrafluoroethylene and coating articles therewith. A. J. Cheney, Jr. 2,456,621, Dec. 21.
Fabric. E. J. Cogovan. 2,456,922, Dec. 21.
Fabrics, Making. E. J. Cogovan and L. R. Jones. 2,456,923, Dec. 21.
Fan housing construction. W. H. De Lancey. 2,456,930, Dec. 21.
Fastener: *See*—
Heating unit fastener.
Fatty materials, Treating. W. R. Eipper. 2,456,691, Dec. 21.
Feeding mechanism for manifolding machines, Paper and ribbon. R. W. Ritzert. 2,456,734, Dec. 21.
Fence post driver, Power-operated. C. N. Anderson 2,456,852, Dec. 21.
Fiber renovating machine. E. J. Wines. 2,456,905, Dec. 21.
Filaments, Coating. A. O. Ryan. 2,456,650, Dec. 21.
Filler, Grease gun. C. Strong. 2,456,751, Dec. 21.
Film driving apparatus. J. A. Haringx. 2,456,702, Dec. 21.
Filter and regulator, Power supply. D. E. Kenyon. 2,456,638, Dec. 21.
Filter and strainer, Collapsible and adjustable. E. N. Burrows. 2,456,912, Dec. 21.
Fire hazard and safety device for airplanes. N. Lacrotte. 2,457,103, Dec. 21.
Fishing pole. T. J. Williams. 2,457,075, Dec. 21.
Fitting. W. C. Buttner and S. L. Sundstrom. 2,456,913, Dec. 21.
Fixture, Display. C. Scheuer. 2,456,737, Dec. 21.
Fixture, Electric. M. Sachs. 2,456,997, Dec. 21.
Fixture, Lighting. K. Versen. 2,456,903, Dec. 21.
Fixture, Wall bracket electric light. A. J. D. Ohm. 2,456,792, Dec. 21.
Flashlight. H. E. Croft. 2,456,680, Dec. 21.
Flatiron holder bracket. R. E. Perkins. 2,456,987, Dec. 21.
Floor. P. and U. R. Mitchell. 2,457,086, Dec. 21.
Fluid-driven pump. F. A. Lane. 2,456,832, Dec. 21.
Fluid pressure motor. F. C. Eastman. 2,456,689, Dec. 21.

Fluid-pressure-operated mechanism. F. C. Eastman. 2,456,690, Dec. 21.
Fluid pressure switch. W. M. Robison. 2,456,994, Dec. 21.
Fluids, Heating. H. R. Swanson. 2,457,096, Dec. 21.
Flux, Soldering and tinning. T. B. Crone. 2,456,624, Dec. 21.
Foldable kitchen table. M. E. H. Chapman. 2,456,862, Dec. 21.
Folding infant-carrying vehicle. J. B. Dostal. 2,456,932, Dec. 21.
Frame: *See*—
Easel picture frame.
Frequency converter circuit. G. C. Szikiai. 2,457,008, Dec. 21.
Frequency shift keying plus phase modulation. D. W. Pugsley. 2,456,992, Dec. 21.
Frequency stabilization. M. Ziegler. 2,456,763, Dec. 21.
Friction element. R. E. Spokes. 2,457,003, Dec. 21.
Frying apparatus, French. K. E. Bemis. 2,456,810, Dec. 21.
Fuel components, Production of motor. S. H. McAllister. 2,456,975, Dec. 21.
Fungus-proofing composition. P. G. Benignus. 2,457,025, Dec. 21.
Furfuryl alcohol with an hydroxybenzene, Condensation of polymerized. A. P. Dunlop and E. A. Reineck. 2,456,628, Dec. 21.

Roundabout, Passenger operated. R. E. Restall. 2,456,648, Dec. 21.
Rule, Slide indicator. W. C. Chowns. 2,456,676, Dec. 21.
Safety pin. M. E. Edwards. 2,456,820, Dec. 21.
Safety window lock. H. E. Bundren and V. A. Vicksell. 2,456,766, Dec. 21.
Sanding block. J. C. Kitterman. 2,457,045, Dec. 21.
Saw-tooth wave generator. R. Lee. 2,456,961, Dec. 21.
Scoop control, Tractor-mounted. E. H. Lacey. 2,457,049, Dec. 21.
Screen: *See*—
  De-watering screen. Vibrating screen.
Seal for high-frequency transmission lines. D. L. Snow and W. W. Hansen. 2,456,653, Dec. 21.
Sealing compounds. J. D. Morgan and R. E. Lowe. 2,457,087, Dec. 21.
Seamer for filled cans with countersunk bottoms. R. E. J. Nordquist. 2,456,644, Dec. 21.
Secondary electron emission tube. W. Soller. 2,456,654, Dec 21.
Sewing machine, Shoe inseam. O. R. Haas. 2,456,634, Dec. 21.
Shock absorber. E. F. Rossman. 2,456,736, Dec. 21.
Shoe, Platform. W. M. Fennessy. 2,457,082, Dec. 21.
Shoe tree. C. Tietig. 2,456,756, Dec. 21.
Signal: *See*—
  Highway signal.
Signal lamp. E. E. Weber. 2,457,019, Dec. 21.
Signaling apparatus, Telephone. B. J. Kucera. 2,457,046, Dec. 21.
Silicon compounds in producing quartz coatings in a vacuum, Use of. J. D. Strong. 2,456,899, Dec. 21.
Siloxane copolymers. J. F. Hyde. 2,456,783, Dec. 21.
Single hook weedless fishing plug. E. A. Herring. 2,456,705, Dec. 21.
Slicing machine, including gangs of rotary disk knives, Bread. H. J. Criner. 2,456,866, Dec. 21.
Slider for sliding fasteners. E. Engel. 2,456,822, Dec. 21.
Spark gap. F. L. Jones. 2,457,102, Dec. 21.
Spark-gap device and electrode therefor. H. J. Sullivan and E. G. F. Arnott. 2,456,900, Dec. 21.
Spark-gap device, Unitary multiple. E. G. F. Arnott and C. E. Dawley. 2,456,855, Dec. 21.
Spring: *See*—
  Truck bolster spring.
Stabilized fat compositions. P. Gyorgy, M. B. Williamson, and E. T. Stiller. 2,456,937, Dec. 21.
Stabilizer for saw filing machines, Saw. S. B. and L. M. Underwood. 2,456,847, Dec. 21.
Stamp. N. H. Wahlström. 2,456,904, Dec. 21.
Stapling machine. C. C. Stuewe. 2,457,006, Dec. 21.
Steel, Production of stainless. D. L. Loveless. 2,457,055, Dec. 21.
Sterilizing and preserving. A. Brasch. 2,456,909, Dec. 21.
Strainer, Sanitary sink. T. A. Garonis. 2,457,038, Dec 21.
Stretcher, Wire. H. Sattler. 2,456,895, Dec. 21.
Stripping spent fluid catalysts. P. C. Keith. 2,456,707, Dec. 21.
Suction apparatus for knitting machines. D. P. Moore. 2,457,104, Dec. 21.

Support: *See*—
  Collar support. Oarlock support.
Supporting arrangement. J. Markowitz. 2,457,058, Dec. 21.
Surfaces for aircraft, Supporting. L. Béchereau. 2,456,906, Dec. 21.
Switch: *See*—
  Fluid pressure switch. Pressure switch.
Switch for tractors, Magneto cutout mercury. M. J. Smies. 2,456,799, Dec. 21.
Switching arrangement for selectors. B. W. Roth. 2,456,893, Dec. 21.
Table: *See*—
  Bed table. Folding kitchen table.
  Extension table. Refectory table.
Table for infants, Combination bath and dressing. I. E. Stine and H. A. La Fayette 2,456,845, Dec. 21.
Tank unit with submerged valve and external pump. H. H. Schmiel. 2,456,651, Dec. 21.
Tape perforator. R. G. Schuler. 2,456,740, Dec. 21.
Target, Motion-picture. P. Bergh. 2,456,857, Dec. 21.
Target practice apparatus. P. G. Hawe. 2,456,828, Dec. 21.
Temperature measuring and control system, Piezoelectric. R. K. Blackburn. 2,456,811, Dec. 21.
Tertiary amines, Making. L. P. Kyrides and F. B. Zienty. 2,457,048, Dec. 21.
Tester, Mutual conductance. O. J. Morelock. 2,456,833, Dec. 21.
Thread drying apparatus. T. S. Mayner and E. P. Hurayt, 2,456,974, Dec. 21.
Thread finishing machine. A. E. Winslow. 2,456,804, Dec. 21.
3,4-Methylenedioxyphenyl-propylene compound. E. A. Prill 2,456,991, Dec. 21.
Timberman's jack. H. G. and J. J. Krupka. 2,456,878, Dec. 21.
Time control, Sensitivity. E. C. Kluender. 2,456,952, Dec. 21.
Tobacco clip. R. M. Clark. 2,456,622, Dec. 21.
Toilet J. F. Molloy. 2,456,885, Dec. 21.
Tool: *See*—
  Abrasive tool. Metal working or like tool.
  Engine head lifting tool. Percussion tool.
  Insulation cutting tool.
Trailer for disking machines. F. M. Dominic. 2,456,868, Dec. 21.
Transformer structure. J. K. Hodnette. 2,456,941, Dec. 21.
Translating device. R. G. Neuhaus. 2,456,726, Dec. 21.
Transmission for motorized vehicles. E. A. Ryker. 2,456,894, Dec. 21.
Transmission, Variable pitch fluid. R. Goldberg. 2,456,696, Dec. 21.
Trap: *See*—
  Gun trap.
Tray, Ice cube. H. Collister. 2,456,924, Dec. 21.
Tray structure. H. C. Dee. 2,456,929, Dec. 21.
Treatment of wool to impart shrinkage resistance thereto. H. F. Clapham, M. Harris, and A. L. Smith. 2,457,033, Dec. 21.
Trigger action for automatic firearms. W. I. Smith. 2,457,001, Dec. 21.
Truck. C. L. Heater. 2,456,635, Dec. 21.
Truck bolster spring. C. P. Leese. 2,456,790, Dec. 21.
Truck, Self-loading. M. Graves and A. Lankovski. 2,457,039, Dec. 21.
Tube: *See*—
  Cathode-ray tube. Secondary electron emission tube.
  High-pressure modulator tube.
Tube and conduit bending hand tool. B. Lampert. 2,456,880, Dec. 21.
Tube clamp. T. A. Woolsey. 2,457,077, Dec. 21.
Tumbler. B. H. Polcyn. 2,456,989, Dec. 21.
Tuning aid, Frequency modulation receiver. B. S. Vilkomerson. 2,457,016, Dec. 21.
Turbine cylinder joint. K. R. Stearns. 2,457,073, Dec. 21.
2-thenyl chloride, Stabilization of. F. B. Zienty. 2,457,079–81, Dec. 21.
2-(2'-thenyl)-4,5-dihydroimidazoles and making the same. L. P. Kyrides. 2,457,047, Dec. 21.
Type for gravure printing. H. C. Alger. 2,456,608, Dec. 21.
Ultra high frequency device. C. M. Slack, I. E. Mouromtseff, and G. M. Dinnick. 2,456,896, Dec. 21.
Universal pipe coupling. J. G. Sjoberg. 2,456,744, Dec. 21.
Unshift mechanism, Manual. W. M. O'Neil. 2,456,729, Dec. 21.
Utensil, Self-stirring cooking. P. E. Monath. 2,456,981, Dec. 21.
Vacuum cleaner. C. W. Lanter. 2,456,639, Dec. 21.
Vaginal gauge. E. B. Wolffe. 2,456,806, Dec. 21.
Valve. R. W. Hays. 2,456,829, Dec. 21.
Valve. R. H. Leitzel. 2,456,965, Dec. 21.
Valves for containers, Making vent. R. M. Berglund. 2,456,615, Dec. 21.
Vaporizer. A. R. Olson. 2,456,889, Dec. 21.
Vaporizer. T. A. St. Clair. 2,456,890, Dec. 21.
Variable-speed device. E. H. Schmidt. 2,456,738, Dec. 21.
Vault, Wheeled concrete burial. W. W. Haase. 2,456,939, Dec. 21.
Vehicle: *See*—
  Folding infant-carrying vehicle.
Vehicle tandem axle running gear. W. E. Martin. 2,456,719, Dec. 21.
Venetian blind. F. D. Irwin. 2,456,946, Dec. 21.
Vibrating screen. A. W. Lippmann. 2,456,791, Dec. 21.
Vise, Quickly adjustable clamping. A. A. Archambault. 2,456,613, Dec. 21.
Vitamin K compounds, Obtaining. E. A. Doisy, S. A. Thayer, D. W. MacCorquodale, R. W. McKee, and S. B. Binkley. 2,456,686, Dec. 21.
Volatilizable metals, Refining of. H. F. Fisher. 2,456,935, Dec. 21.
Voltage multiplier, Direct-current. A. M. Curtis. 2,456,927, Dec. 21.
Wallet, Combination. H. M. Herbener. 2,456,830, Dec. 21.
Washcloth and pad holder for the bath. P. C. Hartman. 2,456,782, Dec. 21.
Wax production. O. J. Swenson. 2,456,655–6, Dec. 21.
Wax production, Cane. E. A. Wilder. 2,456,661, Dec. 21.
Wax refining, Sugar cane. E. S. McLoud. 2,456,641, Dec. 21.
Wheel drive, Flexible. H. L. Cottingham. 2,456,865, Dec. 21.
Winding machine, Ball. H. N. Huse. 2,456,944, Dec. 21.
Winding machine, Helical coil butt ground. C. J. Terrell. 2,456,755, Dec. 21.
Window lock. F. C. Gorham. 2,456,780, Dec. 21.
Wire, Packaging. J. H. Smith. 2,457,094, Dec. 21.
Wrench: *See*—
  Power-operated wrench.
Wrench with radially-slotted head and socket, Pivoted pawl ratchet. A. and R. Peterson. 2,456,838, Dec. 21.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 21, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

United States Court of Appeals
District of Columbia Circuit

BARRON-GRAY PACKING COMPANY
v.
LAWRENCE C. KINGSLAND, COMMISSIONER OF PATENTS

[— F.2d —; 79 USPQ 100]

No. 9634. Decided October 12, 1948

1. TRADE-MARKS—OPPOSITION—SUIT UNDER 4915 R. S. AGAINST COMMISSIONER ALONE — STATUS OF OPPOSER.

Where applicant brought an action under sec. 4915 R. S. against the Commissioner of Patents alone after the Commissioner had denied registration of applicant's mark on the ground of confusing similarity to the opposer's registered trade-mark, and where the district court dismissed the action on the ground that the successful opposer in the Patent Office was an indispensable party and therefore an action brought against the Commissioner alone was fatally defective, *Held* that the opposer is a proper but not an indispensable party.

2. SAME—SAME—SAME—SAME.

Where the district court dismissed an action under 4915 R. S. against the Commissioner alone on the erroneous ground that the opposer was an indispensable party, *Held* that the rights of the opposer may be fully protected by his intervention if he desires to do so, but the rights of an applicant for registration should not be defeated by reason of the failure or refusal of the opposer to appear.

APPEAL from the District Court of the United States for the District of Columbia (now United States District Court for the District of Columbia).

REVERSED AND REMANDED. Oppositions Nos. 20,680 and 20,681.

Mr. Curtis F. Prangley, with whom *Messrs. James Ballard Moore* and *Charles L. Sturtevant, Jr.*, were on the brief, for appellant.

Mr. Edwin L. Reynolds, United States Patent Office, with whom *Messrs. W. W. Cochran*, Solicitor, United States Patent Office, and *Walter J. Derenberg*, United States Patent Office, were on the brief, for appellee.

Before EDGERTON, CLARK and PRETTYMAN, *Associate Justices*

CLARK, *J.*:

This is a proceeding under R. S. section 4915.[1]

[1] It is agreed by both parties in the case that the sole question presented by this appeal is whether the successful opposer in a Patent Office trade-mark opposition proceeding is an indispensable party to a subsequent § 4915 action brought in the district court against the Commissioner of Patents alone after the Commissioner has denied registration of the applicant's mark on the ground of confusing similarity to the opposer's registered trade-mark.

The trial court dismissed the proceeding on the ground that the successful opposer in the Patent Office was an indispensable party and that therefore a suit against the Commissioner alone was fatally defective.

The facts in the case are simple and undisputed. Appellant adopted and began to use as sole and exclusive owner thereof two trade-marks for canned fruit juices consisting of pictures of animated apricots and prunes. The Commissioner at first held these trade-marks to be registerable and they were published in the OFFICIAL GAZETTE of the United States Patent Office on December 24, 1940.

Thereafter, opposition to this registration was filed in the Patent Office by Bruce's Juices, Inc., a Florida corporation, claiming that appellant's trade-marks are similar to its own registered marks. Appellant filed answers to such oppositions and, thereafter, the Assistant Commissioner of Patents rendered a decision holding that some likelihood of confusion might exist in the concurrent use of appellant's trade-marks and the opposer's marks.

Appellant filed a bill in equity under § 4915 in the district court alleging that its trade-marks are not confusingly similar to those of Bruce's Juices and that appellant's marks are not calculated to deceive or confuse the public.

The Commissioner filed an answer traversing the allegations of the bill and alleging that the trade-marks of the two competitors were confusingly similar. The Commissioner also filed a motion to dismiss on the ground that the opposer in the Patent Office was an indispensable party. The district court sustained the motion to dismiss and this appeal followed.

The question as to who are "proper" parties and who are "indispensable" parties in a proceeding brought under § 4915 is admittedly a difficult one. But the Congress, in enacting the applicable statute obviously intended that the applicant should have a right of access to the courts if his application was rejected. Since the applicant has no power to compel the appearance of a non-resident opposer in a District of Columbia court unless the opposer chooses to appear and intervene, if it be held that

[1] 16 Stat. 205 (1870), as amended, 35 U. S. C. § 63 (1946).

Vol. 617 • No. 3 Tuesday, December 21, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

the opposer is an indispensable party, as the district court has held in this case, it is obvious that the right of access intended by and provided for by Congress cannot be exercised except by sufferance. On the other hand, the Commissioner of Patents cannot be sued outside the District of Columbia without his consent. It is thus apparent that the net result of ruling that the non-resident opposer is an indispensable party to a 4915 action brought in this jurisdiction against the Commissioner alone would be to completely defeat the intent of Congress to afford the unsuccessful applicant for a trade-mark adequate access to the courts. We cannot condone such a result.

This question has been before this court in various forms several times and in none of these decisions is there anything to afford the slightest comfort to the contentions of appellee. See *Alexandrine* v. *Coe*, 63 App. D. C. 227, 71 F.2d 348 (1934); *Thorne, Neale & Co., Inc.* v. *Coe*, 79 U. S. App. D. C. 122, 143 F.2d 155 (1944); and *Speed Products Co., Inc.*, v. *Tinnerman Products, Inc. and Kingsland*, No. 9700, decided May 18, 1948. In the Speed Products case, the latest pronouncement of this court on the subject, we held expressly that the district court does have jurisdiction to proceed against the Commissioner alone in a suit brought under § 4915.

The case, however, which seems to us squarely in point and based on sound reasoning and sound legal practice is the case of *Tomlinson of High Point* v. *Coe*, 74 App. D. C. 364, 123 F.2d 65 (1941). There, as here, the appellant sought to register as a trade-mark a certain name. There, as here, the mark was first held to be registerable and there, as here, the Examiner of Interferences filed an opinion sustaining the opposition. There, as here, the Commissioner affirmed the decision of the Examiner. There, as here, the applicant brought suit in the district court under § 4915 naming the Commissioner alone as defendant and not joining the opposer. There, as here, the district court dismissed the action and there, as here, the dismissal was appealed to this court. And there, as here, as will presently transpire, the action of the district court was reversed.

While it is true that in the Tomlinson case the contention of the Patent Office was that the Commissioner was not even a *proper* party, the opinion of the court by Justice Justin Miller clearly takes cognizance of the fact that the Commissioner was the sole defendant and that the opposer was not named as party defendant.

Justice Miller, speaking for the court in that case, said:

"The proceeding by bill in equity under section 4915, R. S., is a part of the application for the patent, or for registration of the trade-mark. Accordingly, in the present case, appellant seeks relief which is properly sought under the provisions of section 4915, R. S., i. e., a decree authorizing and directing the Commissioner of Patents to register its trade-mark. Both the public interest and the necessities of the case *require* that the Commissioner be made a party when the issue to be determined is whether such relief shall be granted. *The opposer could not act to carry out a decree granting such relief*; and such relief should not be granted without opportunity for the Commissioner to present countervailing evidence; *hence, the public interest cannot properly be served without the participation of the Commissioner.*" [Italics supplied.] [123 F.2d at 66–7.]

Since, as has been noted, the Commissioner cannot be sued outside the District of Columbia without his consent, to hold that the opposer is an indispensable party is clearly to defeat the purpose of the statute.

The Commissioner, through his counsel, professes that he has no interest one way or the other in the outcome of this appeal except that he desires that the matter be cleared up and settled by this court.

[2] In order, therefore, that there may be no dispute as to the holding of this case, we hold that the opposer is a proper but not an indispensable party in such an action under § 4915 and thus that the dismissal of this action by the District Court was improper, based, as it was, on the erroneous ground that the opposer in this case was an indispensable party. The rights of the opposer may be fully protected by his intervention if he desires to do so but the rights of the appellant should not be defeated by reason of the failure or refusal of the opposer to appear.

The judgment is, therefore, reversed and the case remanded for trial on the merits in accordance with this opinion.

REVERSED AND REMANDED.

JUDGE EDGERTON concurs in the result only.

U. S. Court of Customs and Patent Appeals

KRASNOW ET AL. *v.* BENDER

No. 5402. Decided June 14, 1948. Petition for rehearing denied Sept. 30, 1948

[— F.2d —; 79 USPQ 78]

1. INTERFERENCE—RULE 124.

Where, pursuant to a decision of the Primary Examiner, based upon motions to dissolve, an interference instituted in July 1939 was reformed by striking therefrom two counts, which are the counts of the present interference, declared in January 1941, and where in said latter interference motions under Rules 109 and 122 filed by appellants were denied by the Examiner with the statement that there was no appeal (Rule 124 having been changed in September 1939 to eliminate appeals from all decisions rendered on motions brought under Rules 109 and 122, in all interferences, declared on or after October 5, 1939), *Held* that we do not agree with appellants' contention that the present interference is governed by the old practice and not by present Rule 124, for the present interference, even though the counts thereof originally appeared in another interference, is a separate distinct proceeding and should stand on its own merits.

2. SAME—RIGHT TO MAKE CLAIMS—THEORY OF OPERATION.

Held that whether or not appellee understood the scientific theory of his device is immaterial if in his application he sets forth enough of the operation of the device sco as to inform the public what to do with it.

3. SAME—SAME—OPERABILITY.

Held that it is fundamental that even though a device may be disclosed as incomplete or inoperative, it may be corrected if such correction be made by one skilled in the art in such manner as not to involve invention.

4. SAME—APPARATUS FOR MEASURING RADIO-ACTIVITY.

Held that, in view of the entire record, appellants have not established that appellee's disclosure is so defective that it would fail to teach one skilled in the art how to make an operable device, and *Held* that the decision of the Board of Interference Examiners awarding priority of invention to appellee is affirmed.

APPEAL from the Patent Office. Interference No. 78,980.

AFFIRMED.

Shelley Krasnow, pro se.

Richard K. Stevens (*Robert F. Davis* of counsel) for Bender.

JACKSON, *J.*:

This is an appeal in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding to appellee priority of invention of the subject matter embraced in two counts. The counts read as follows:

1. An apparatus for measuring the associated radioactivity of substances lining a deep narrow borehole comprising an electrical system adapted to give a series of electrical impulses, means to alter the frequency of the impulses in proportion to the intensity of the radioactivity proximate to the said means, a relay member actuated by the said system and the said means jointly, the electrical system, means, and relay member being held by a single relatively short holder so as to minimize leakage and capacity disturbances in the portion of the circuit connecting the said means and the said relay member, the holder further having narrow lateral dimensions so as to permit its insertion in deep narrow boreholes.

2. An apparatus for measuring radioactivity at inaccessible locations comprising a system employing feeble electric currents, means to alter the frequency of the said feeble currents in proportion to radioactive intensity, a relay means operated by the said feeble currents, a circuit employing relatively intense currents, a conducting member, and indicating means, the feeble currents cooperating with the relay means to cause pulses of relatively intense current, the conducting member serving to convey the pulses of intense current to the indicating means, the conducting member serving further to allow placing the system employing feeble electric currents and the relay means both remote from the indicating means, the relay means and system employing feeble electric currents being placed contiguous to each other so as to minimize disturbing effects.

The interference involves an application of appellants, Serial No. 137,380, filed April 16, 1937, assigned to Geophysical Development Corporation, and an application of appellee, Serial No. 359,816, filed October 4, 1940, for reissue of his patent, No. 2,133,776, dated October 18, 1939, on an application filed February 18, 1936. Wells Lane Company is the assignee of appellee.

[1] On July 13, 1939, an interference, No. 77,260, involving eight counts was declared between an application of Jacob Neufeld, Serial No. 161,350, filed August 27, 1937, and the involved application of appellants. Later that interference was redeclared to include the application of Lynn G. Howell, Serial No. 224,504, filed August 12, 1938. Pursuant to a decision of the Primary Examiner of August 16, 1940, based upon motions to dissolve, the interference was reformed by striking therefrom counts 4 and 5, which are the counts of the present interference, and, in accordance with the provisions of Rule 129, the involved reissue application of appellee was added and the interference again redeclared with the parties in the following order: *Howell* v. *Neufeld* v. *Krasnow et al.* v. *Bender*. That interference is still in the Patent Office for decision.

The instant interference, No. 78,980, was declared on January 16, 1941. It involved the parties Bender, Neufeld, and appellants in that order. The proceeding was terminated as to the party Neufeld, he having made no showing why judgment on the record should not be entered against him, as appears in a decision of the Board of Interference Examiners dated January 12, 1944.

During the motion period appellants moved to dissolve the interference as to Bender on the ground that his disclosure is inadequate to support the counts and that he does not disclose any method or apparatus which will operate. Appellants also filed a contingent motion to amend the interference by the addition of one proposed count.

The Primary Examiner denied both motions and stated that there was "No interlocutory appeal." With respect to the latter motion, he held the proposed count to be unpatentable over prior art which had been cited in the ex parte prosecution of appellants' application. Thereupon appellants appealed to the Board of Appeals stating that "The Examiner erred in denying the Krasnow et al. contingent motion to amend for a two party interference with Bender on proposed count K3." Appellants contended that they were entitled to appeal because the present interference was split off from interference No. 77,260 and that that interference had been declared under the old practice in which an appeal was permitted from the denial of a motion to amend and because they were parties to that interference they had the right of appeal in the present interference.

Appellants also filed in each of the beforementioned interferences a motion to take testimony and to suspend the proceeding. They further moved in each of the interferences to file interrogatories to be answered by an officer of appellee's assignee and by an officer of Wells Survey, Inc. The motions were denied. Appellants and their assignee thereupon brought a civil action, No. 12,170, in the District Court of the United States for the District of Columbia praying that the Commissioner be ordered to amend his decision denying plaintiff's motion to dissolve the interference between the applications which are here involved. The ground for plaintiff's contention in that action was that there had been no inadvertence, mistake, or excuse for delay in filing the reissue application. The district court granted defendants' motion to dismiss. *Geophysical Development Corporation et al.* v. *Coe, Com'r. Pats.*, 52 USPQ 610.

The opinion of Mr. Justice Bailey in that case is short and pertinent here, as it answers many of the allegations vigorously urged by appellants with respect to lack of good faith on the part of appellee. We are in complete accord with Justice Bailey's reasoning and quote the opinion as follows:

Interferences are declared solely for the purpose of determining priority of invention. If the plaintiff can show priority of invention he will be entitled to a patent: if he be the first inventor and otherwise complies with the law.

This right will not be defeated by any action of the Patent Office in allowing a reissue of the opponent's patent.

The procedure in the Patent Office in passing upon the question of reissue is one within the discretion of the Commissioner, and it does not appear that the practice adopted in this interference of not permitting proof to be taken on the question of good faith of the applicant for reissue other than his affidavit is contrary to the usual practice.

Even if the court had power to interfere in the action of the Commissioner in this case (which is only an intermediate step in the proceedings) I cannot see that the plaintiff can be irreparably injured. As said before, if the

plaintiff can show priority of invention he will be entitled to a patent.

Upon appeal, the judgment of the district court was affirmed by the United States Court of Appeals for the District of Columbia. 136 F.2d 275, 58 USPQ 50, 556 O. G. 711. Certiorari was denied by the Supreme Court.

It appears that in the brief filed on behalf of the Commissioner of Patents in the Supreme Court in the certiorari proceeding, there was a statement in a footnote that interferences 77,260 and 78,980 are governed by the statute as it appeared prior to the amendment of August 5, 1939. Because of that footnote, appellants contend here that the Patent Office is bound thereby, and it was cited here in support of appellants' contention that they have a right to appeal from the decision of the Examiner denying their motion to amend as aforesaid.

The Board of Appeals held that it had no jurisdiction to entertain the appeal and stated as follows:

> The instant interference, No. 78,980, was declared on January 16, 1941. In Order No. 3487, 507 O. G. 513–514, Rule 124 was changed to deny the right of appeal from all decisions rendered on motions brought under provisions of Rules 109 and 122, in all interferences declared on or after October 5, 1939.

Upon a request for reconsideration of its decision the Board of Appeals stated as follows:

> On reconsideration no reason is found for changing the conclusions stated. Under the provision of Rule 124 this interference is regarded as standing on its own merits and as having been declared January 16, 1941, per stamp of Examiner of Interferences found on the declaration sheet.
>
> Whatever may be considered to be the meaning of the statement made in the footnote to page 5 of the brief for respondent in the certiorari case, referred to by counsel for Krasnow et al., it does not appear that the statement was particularly relevant to the question before the Supreme Court, or at all relevant to the interpretation to be given Rule 124, since the statement referred only to the statute. The statute there in question is not concerned with interlocutory appeals.

Appellants then petitioned the Commissioner, in his supervisory capacity, to rule that the Board of Appeals had jurisdiction to entertain the appeal. The petition was denied. The Assistant Commissioner pointed out that new Rule 124 was in operation prior to the declaration of the involved interference and since the date when that rule became effective the Board of Appeals had consistently held it to be applicable to interferences according to the date and number thereof regardless of the past history of the counts. In that connection, the Assistant Commissioner stated:

> New Rule 124 has been in force for quite a long time, during all of which time the practice stated has been followed consistently, and no good reason appears why the practice should be changed at this late date for this particular case which, due to the length of time present Rule 124 has been in force is believed to be the last interference in which a similar situation can materialize.

Appellants still contend here that the present interference is governed by the old practice and not in accordance with present Rule 124. We do not agree with such contention. That interference, even though the counts thereof originally appeared in interference No. 77,260, is a separate, distinct proceeding. The counts herein were excised from interference No. 77,260 with the same force and effect as though they had never been there. The present interference, No. 78,980, was set up between the parties named therein and on its own facts after the said effective date of new Rule 124 and should certainly, as was held below, stand on its own merits. To agree with appellants' contention would, in our opinion, result in an unwarranted disturbance of orderly procedure.

As may be observed, appellants have sought to prevail by employing almost every available technical means at their disposal. That was undoubtedly their right. We do not deem it necessary to discuss their many contentions attacking the good faith and technical ability of appellee which are generously sprinkled throughout their brief. They also continued such an attack by filing a motion in this court on April 26, 1948, to correct diminution of the record by adding thereto two affidavits, one by appellant Krasnow, and the other by one Edward Lipson, dated December 29, 1947. The motion was urged as an alternative to one remanding the case to the Patent Office for such further consideration as the affidavits might require. Both affidavits impugn the good faith of appellee. This appeal was argued and submitted to this court on May 3, 1948. It may be noted that the date of the Lipson affidavit is almost five months prior to the date of argument so that it may well be inferred that appellants, to say the least, took their time in that attack. It seems to us that appellants paid little attention to the opinion of Mr. Justice Bailey, quoted herein. The issue here is priority of invention so we deny the motion in all respects.

We are certain that the United States Patent Office, acting through its proper officials, never knowingly or carelessly permits a patent to issue until it is convinced that measured by all proper standards, an applicant is entitled to his patent. The Patent Office is not bound to issue a patent to an applicant who prevails in an interference proceeding nor to a successful applicant in a court proceeding. *The Jeffrey Manufacturing Co.* v. *Kingsland, Comr. Pats.*, 77 USPQ 500. There may be good legal reasons why a prevailing application in a proceeding such as this, in the light of knowledge acquired by the Patent Office when such application is returned for an ex parte proceeding, should not be allowed to ripen into a patent, and when any such reason exists under those circumstances, it will, in our opinion, be recognized by that Office.

This appeal will be decided by us on the only issues that were before the Board of Interference Examiners: namely, the sufficiency of the disclosure of appellee to support the counts and the operativeness of that disclosure. We do not deem it improper to state at this point that we have not been helped in any great degree by the briefs filed by the parties. We have here a record containing almost eight hundred pages, comprising in great part the sundry and various motions and decisions, not always appearing in logical or chronological sequence. The briefs of the parties are voluminous but do not contain enough record citations. Therefore we have been compelled to perform a great deal of unnecessary labor.

While both parties took testimony, none of it was directed to priority of invention. Appellants being junior to appellee have the burden of proving priority of invention by a preponderance of the evidence.

The involved invention is succinctly described by the Primary Examiner as follows:

> The invention defined in the counts relates to a method of or apparatus for measuring the radioactivity of the geological formations traversed by a drill hole. Changes in radioactivity indicate changes in conditions or in geological formation and from the data obtained it is probable that useful information can be derived concerning the nature of the strata traversed by the drill hole. It is entirely possible, for example, that oil bearing strata may be located by this method, since such strata are likely to have radioactive characteristics differing from those of the adjoining strata. Each of the counts recites or implies means for measuring the radioactivity of formations traversed by a bore hole *in situ*, as distinguished from the taking of core samples to the surface and there measuring the radioactivity. Measurement of radioactive intensity in a drill hole at depths measured sometimes in thousands of feet presents a particular problem. The detecting apparatus must be sufficiently small to be lowered into the drill hole, the diameter of which is in the neighborhood of six or eight inches. Indications of radioactivity must be capable of transmission to the surface in some manner and there made observable. In the embodiment of the invention which is common to all of the parties, *the detector of the radiations is a Geiger-Muller counter or the equivalent*, by which the radiations are transformed into feeble electrical impulses, the number of impulses per second being proportional to the radioactive intensity. *An important feature is the provision of an amplifier which is lowered into the drill hole with the detector*, whereby the impulses are amplified before being transmitted to the surface. The recorder or other receiver of the impulses is located at the surface. [Italics quoted.]

While the disclosure in appellee's application is not lengthy and the drawings practically all diagrammatic, with no detailed showing of circuit arrangements or device structure, it discloses a container designed to be lowered into the borehole of an oil well by means of a cable. Within the container is an X-ray tube and associated apparatus to provide a source of primary radiation. There is also within the container a detector of radiations emanating from the pierced earth formations in the borehole. The detector consists of a Geiger-Muller counter, an amplifier, and a battery supply source. A means to record or indicate impulses from the counter is located above the surface of the earth. It is said that the X-ray tube makes radioactive strata more radioactive and that such activity is detected by the counter and its associated apparatus.

Contrary to the insistent contention of appellants, we are of opinion that the disclosure of appellee supports the counts. With respect to count one, the application of appellee discloses a Geiger-Muller counter, an amplifier, a battery, and cable terminals. Those elements are "adapted to give a series of electrical impulses" as required by the count. The limitation "means to alter the frequency of the impulses in proportion to the intensity of the radioactivity proximate to the said means" is met by the Geiger-Muller counter. The "relay member actuated by the said system and the said means jointly," is appellee's amplifier. In the limitation "the electrical system, means, and relay member" the "system" is met by appellee's counter, amplifier, and battery, "means" by the counter, and the "relay member" by appellee's amplifier. Those elements are "held by a single relatively short holder" shown by appellee's container, "so as to minimize leakage and capacity disturbances in the portion of the circuit connecting the said means [appellee's Geiger-Muller counter] and the said relay member [appellee's amplifier], the holder [appellee's container] further having narrow lateral dimensions so as to permit its insertion in deep narrow boreholes."

As to count 2, the Geiger-Muller counter and an input circuit "employing feeble electric currents" is disclosed by appellee; "means to alter the frequency of the said feeble currents in proportion to radioactive intensity," is shown in the Geiger-Muller counter; "a relay means operated by the said feeble currents" is shown by appellee's amplifier; "a circuit employing relatively intense currents" appears in appellee's output current; "a conducting member" is appellee's cable to which the container is attached; "indicating means" is shown in appellee's above the earth recorder hereinbefore mentioned; "the feeble currents" from the counter of appellee "cooperating with the relay means" is met by appellee's amplifier, "to cause pulses of relatively intense current"; "the conducting member" is appellee's cable, "and indicating means" is appellee's recorder or indicator; "the feeble currents cooperating with the relay means" is shown by appellee's amplifier "to cause pulses of relatively intense current"; "the conducting member" appears in appellee's cable "serving to convey the pulses of intense current to the indicating means," which is appellee's recorder; "the conducting member" is appellee's cable, "serving further to allow placing the system employing feeble electric currents" is appellee's Geiger-Muller counter and the indicator; "the relay means" is appellee's amplifier, "both remote from the indicating means" is the distance between appellee's recorder or indicator and the counter and amplifier; "the relay means" is appellee's amplifier, "and system employing feeble electric currents" is appellee's Geiger-Muller counter and amplifier "being placed contiguous to each other so as to minimize disturbing effects."

Appellants vigorously urge that the application of appellee makes no disclosure of a relay as such, and that in order to construct a relay member from his application disclosure, it is necessary to read the amplifier as being a part of the electrical system and also as a relay member. They further insist that there is no showing of an alteration of frequency of impulses proportionate to the intensity of the radiation and that appellee does not disclose that his container is a short holder which is said to minimize leakage and capacity disturbances. There is no requirement in the counts for a mechanical relay. It seems to us, as was held by the Board, that appellants' amplifier may be considered a relay and certainly appellee discloses such amplifier. It further appears to us that the amplifier need not be included in the electrical system adapted to send impulses from the Geiger-Muller counter with its battery supply. It seems clear to us that "The number of impulses from the counter increases with exposure to increased radioactivity." The only element of the system of appellee which is not placed in the housing or container is the recorder. All of the other elements are in the container which is adopted to be lowered into the oil well. In our opinion, the housing or container of appellee is

shown to be "relatively short" and it necessarily follows that a container of such "relative shortness" inherently minimizes leakage and capacity disturbances.

Since the disclosure of appellee reads directly on the counts, it is clear that there was no error in the decision of the Board of Interference Examiners in so holding.

The contentions made by appellants with respect to the operativeness of appellee's disclosure is that the X-ray tube device is incapable of producing any secondary radiations in the strata of the borehole which are detectable. It will be observed that neither of the counts require that the bore strata be treated with primary radiations in order to produce secondary radiations and, therefore, it becomes unnecessary for us to decide whether or not such contention of appellants is well taken.

[2] The application of appellee is not confined to the use of primary radiation. In his application it is stated: "In some instances only the detector may be used and the normal radioactivity of the formation detected if desired."

Unquestionably, according to the record, the Geiger-Muller counter is well known in the art as a detector of any radioactivity that may be in its vicinity. While it is true that Bender in his disclosure referred in certain places to the Geiger-Muller counter as detecting incoming electrons from the strata of the borehole, the term "secondary radiations" was substituted for the word "electron" after his application had been filed.

It is clear from a reading of appellee's application that he did not intend to restrict his system to the detection of electrons but that he intended to include the detection of radioactivity. In his specification it is stated that his device may be used "to detect the location of radioactive formations"; "for locating radioactive materials by detecting the location of the radiant energy discharged by such materials"; "a radiant energy detecting device so that the radiant energy detected can be recorded."

Whether or not appellee understood the scientific theory of his detector is immaterial if in his application he sets forth enough of the operation of the device so as to inform the public what to do with it.

[3] It is fundamental that even though a device may be disclosed as incomplete or inoperative, it may be corrected if such correction be made by one skilled in the art in such manner as not to involve invention. *Creed et al.* v. *Potts*, 25 CCPA (Patents) 1084, 96 F.2d 317, 37 USPQ 512, 496 O. G. 9; and *Wheeler, Hoover, and Kirkes* v. *Kleinschmidt and Colman*, 32 CCPA (Patents) 975, 149 F.2d 161, 65 USPQ 407, 577 O. G. 875.

[4] It was contended by appellants that because there is no connection between the battery and the oscillograph or recorder of appellee, that his disclosure is inoperative. The drawing in appellee's application shows that the battery is grounded at one point and the receiver is grounded at another. It is not stated that the grounding of the battery is made to the casing or container or that the casing is so insulated as to prevent a circuit through the ground wire. In our opinion the Board was correct in its statement that anyone skilled in the art would readily recognize the conventional showing of the grounds from the battery and the recorder as indicating the forming of the same electrical circuit.

Appellants repeatedly argue that appellee should not prevail in this proceeding for the alleged reason that he admitted his disclosure to be inoperative and further that his attorneys repeatedly asserted inoperativeness thereof. We do not think that in view of the record that such contention is sound. It appears that appellee, who was subpoenaed as a witness on behalf of appellants, could not be brought to admit under a vigorous examination that his entire disclosure was inoperative. He did admit he had been unable to get his device to work with an X-ray tube, radium, or uranium, and further that when he used an FP54 tube in the amplifier an additional stage of amplification would have to be employed. He testified plainly and unequivocally that one skilled in the art could take his patent disclosure and cause it to operate so as to pick up natural radiations in well bore formations.

It was stipulated by the parties that if a certain witness were called, he would testify that appellee stated to him that the disclosure of his patent was inoperative. Even if appellee had so stated, there is nothing in the stipulation to indicate that appellee admitted that it was totally inoperative nor does it appear in the stipulation that appellee stated whether or not he told that witness that such defects as might appear in his disclosure could not be cured by the exercise of ordinary skill in the art. With respect to those admissions, we agree with the Board that they are not conclusive of inoperativeness with respect to the subject matter of this interference.

The Bender disclosure was stated to be inoperative by one of his attorneys in another proceeding but such statement was not directed to the subject matter in issue here by merely to the use of the X-ray tube as a source of primary radiation.

Counsel for appellee did not appear as counsel of record during the prosecution of his original application. They did appear in several cases, which were not assigned to the Bender assignee, against which cases the Bender patent was cited as a reference. As is usually done in patent litigation, they attempted to avoid the Bender patent as a reference and in so doing, argued as to the inoperativeness and insufficiency of appellee's disclosure. The best that can be said of such an argument is that it was merely the opinion of counsel as of the time it was made and, of course, such opinion would be subject to change. As any statement made in said argument could not be made on behalf of appellee or his assignee, it is not an admission against interest. Furthermore, there is nothing in the record to show that the Primary Examiner agreed with such arguments as were then made in those cases by the present counsel of appellee.

Inter partes tests were made by appellants for the purpose of demonstrating that the device of appellee's disclosure was inoperative. Some circuit arrangements were set up and tested and alleged to be strictly in conformity with the disclosure of appellee. Some of the tests had modified circuit arrangements said by appellants to be favorable to the operability of the disclosure of appellee. None of the circuits so set up were found to be operative. In all of the tests, however, a relatively low potential was applied to the Geiger-Muller counter but in testing the counter itself to determine if it would operate, a much higher potential was used. It seems that in order to successfully operate a Geiger-Muller tube it is necessary to employ ordinary voltage in excess of 500 volts. That was well known to the art prior to the filing of the original application by appellee. The Board stated that on the basis of the voltage necessary to operate the counter tube, the tests conducted by appellee were not conclusive with respect to inoperativeness of the disclosure of appellee because skill in the art was not used in performing the tests even if it were conceded that appellee disclosed the use of a low potential on the counter tube. We are unable to see any error in such holding of the Board.

In appellee's diagrammatic disclosure he does not set out any particular voltage as applied to a counter tube. The drawing simply shows two wires leading from the counter tube to a position which is described in the specification as an amplifier which may take various forms. It seems clear to us that anyone skilled in the art, in attempting to use a device such as appellee's disclosure, would employ the known and accepted voltage on the counter.

The board in its decision stated that it did not understand from appellee's showing of his indicator or recorder, as being connected to two terminals on the box called battery source, that the said instrument was to be connected directly across the battery terminals as was done in one of the tests made by appellants. In that connection, the Board stated "certainly this is not such a connection as one ordinarily skilled in the art would make." We can not say that the Board was wrong in such holding.

There is much testimony in the record on behalf of appellants concerning the use only of a FP54 tube in the amplifier but the specification of appellee does not so limit the amplifier. It is stated in his application that "The amplifier 47 may take various forms but it has been found that when it is equipped with a General Electric Company tube type F. P. 54 that satisfactory results are obtained." In view of the entire record on behalf of appellants, we are of opinion, as was the Board of Interference Examiners, that appellants have not established that appellee's disclosure is so defective that it would fail to teach one skilled in the art how to make an operable device.

While appellee took testimony with respect to the operability of his device and made several inter partes tests, in view of our holding that appellants have not convinced us that appellee's device is so incomplete that a person skilled in the art could not make an operative system therefrom, it is unnecessary to discuss the record on behalf of appellee.

For the reasons hereinbefore set out, the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

NOTICES

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,405,242, G. C. Southworth, Microwave radio transmission, decided Nov. 30, 1948, claims 13, 14, and 20.

Pat. 2,417,829, A. C. Keller, Compressional wave signaling device, decided Nov. 26, 1948, claim 4.

Pat. 2,411,972, W. Melin, Centerless grinding machine, decided Nov. 29, 1948, claim 2.

Pat. 2,326,940, P. H. Granger, Oil well tool, decided Oct. 7, 1948, claims 3, 6, 8, and 9.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I. Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 15,136 through 15,539) are the balance of Schedule 4 and part of Schedule 5, Groups 28; 34.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 4—Continued

Section 9

Finishes for Flexible Substrates Including Paper, Leather, Fabrics, Etc. (Except Fully Coated Fabrics)

Pat. 1,894,050. Coating Composition. Jan. 10, 1933. Nitrocellulose coating compositions for leather containing neat's-foot oil and lactic acid.

Pat. 1,911,937. Leather Finish. May 30, 1933. A lacquer for coating leather containing a high ratio of wax, so that the resulting finish has a plurality of small cracks, to provide suppleness.

Pat. 1,912,200. Floor Covering and Process of Making Same. May 30, 1933. A linoleum-like floor covering comprising pigment, inert wood cellulose, and alkyd resin modified with a monobasic acid of more than 10 carbon atoms.

Pat. 1,915,301. Water-Repellent Coating Composition. June 27, 1933. A lacquer for imparting water repellency to a fabric comprising a cellulose derivative, a non-volatile oil, and a wax.

Pat. 1,942,736. Coating Composition. Jan. 9, 1934. Fast drying, alkali resistant primer paint for linoleum-like floor coverings comprising a rosin modified alkyd resin-drying oil varnish as the vehicle.

Pat. 1,954,750. Manufacture of Patent Leather. Apr. 10, 1934. A patent leather product having a flexible base having an undercoat comprising pyroxylin and a top coat of oil modified polyhydric alcohol-polybasic acid resin.

Pat. 1,959,363. Coated Material. May 22, 1934. In a floor covering, the combination of a base material and a print paint decoration, the vehicle of said print paint being a drying oil modified alkyd resin.

Pat. 1,960,220. Coated Material. May 22, 1934. In a decorated material of the group which consists of floor coverings, wall coverings and oil cloth, the combination of a base material and a print paint decoration comprising a drying oil modified glycol polyester resin.

Pat. 2,022,004. Paper Sizing. Nov. 26, 1935. Water repellent paper and preparation by sizing with aqueous emulsions of certain acidic alkyd resins (such as a 65–90% stearic acid glyceride modified alkyd).

Pat. 2,073,796. Coating Composition. Mar. 16, 1937. A nitrocellulose lacquer composition for use on labels in which the softener is a semi-drying vegetable such as cottonseed oil.

Pat. 2,075,333. Treatment of Paper. Mar. 30, 1937. Paper treated with the resinous reaction product of a substantially unpolymerizable polyhydric phenol and an organic polyhalide.

Pat. 2,092,817. Impregnated Cigarette. Sept. 14, 1937. Cigarette paper treated with polymeric methyl methacrylate and related resins.

Pat. 2,102,207. Coated Paper and Paper Coating Composition. Dec. 14, 1937. Coating compositions containing mixed cellulose ethers of the "lorol"-ethyl cellulose type, and paper coated therewith.

Pat. 2,109,931. Paper Sizing. Mar. 1, 1938. Process for sizing paper containing alkaline filler which includes the step of mixing the sized pulp with an aqueous slurry of the alkaline filler treated with a plasticized resin size insensitive to the alkalinity.

Pat. 2,109,944. Paper Sizing. Mar. 1, 1938. Sizing calcium carbonate-filled paper with an oil-plasticized resin in emulsion form.

Pat. 2,118,522. Carpet Seam. May 24, 1938. The use of a textile fabric woven from soluble and insoluble fibers such as cotton and cellulose acetate, in connection with a cellulose adhesive as a backing for the carpet seam.

Pat. 2,128,962. Coated Objects. Sept. 6, 1938. A rigid fibrous cellulosic material primed with a deacetylated chitin composition and coated thereover with a water-impermeable organic film-forming surface coating.

Pat. 2,137,706. Impregnated Cigarette. Nov. 22, 1938. Cigarette paper treated with vinyl resins.

Pat. 2,179,953. Cigarette Paper. Nov. 14, 1939. A waterproof cigarette paper comprising a discontinuous coating of a wax and a mineral oil.

Pat. 2,184,307. Manufacture of Paper. Dec. 26, 1939. An improved process of preparing greaseproof paper comprising the steps of precipitating a size containing deacetylated chitin on paper pulp, forming the wet paper sheet and treating the precipitated size with acid swelling agents before drying the paper.

Pat. 2,184,312. Manufacture of Paper. Dec. 26, 1939. A process of manufacturing greaseproof paper comprising the new steps of sizing with a hydrophilic colloid of specified minimum viscosity characteristics, such as deacetylated chitin size, forming the wet paper sheet, drying and swelling the colloid with a surface size.

Pat. 2,201,892. Leather Finish. May 21, 1940. A patent leather finish comprising the resinous reaction product of urea-formaldehyde and an aliphatic monohydric alcohol, said resinous product containing said alcohol in combined form in amount from about one-half to about one molecule of alcohol for each molecule of urea.

Section 10

Finishes for Wood Surfaces—Including Furniture

Pat. 1,973,649. Sanding Sealer. Sept. 11, 1934. A sanding sealer comprised of cellulose nitrate, alkyd resin modified with natural resin acids and saturated fatty acids having more than 8 carbon atoms, and a sanding aid, such as stearate soaps and wax.

Pat. 2,011,130. Burnproof Material. Aug. 13, 1935. A scorch proof surface comprising a laminated wood veneer underlaid with a metal foil to carry away the heat.

Pat. 2,075,025. Coating Compositions and Processes of Preparing the Same. Mar. 30, 1937. A substantially clear coating composition consisting of a natural high acid number resin in a solvent with an alkaline neutralising agent sufficient to reduce the acid number but insufficient to cause precipitation of the resin.

Pat. 2,117,085. Process of Preparing Laminated Material. May 10, 1938. Metal veneered with wood in which the metal is first coated with a metal primer before the wood veneer is attached to it.

Pat. 2,168,040. Coating Composition. Aug. 1, 1939. A clear, brilliant, durable finish for wood surfaces, comprising low viscosity nitrocellulose, a vegetable oil previously heated with an oxide of a metal of Group 2 of Periodic Table (e. g., magnesium), resins or gums, solvents and diluents.

Pat. 2,201,914. Finishing System. May 21, 1940. Wood finishes comprising a urea-formaldehyde-alcohol resinous material, a plasticizer and a fossil resin.

Pat. 2,204,981. Coating Composition. June 18, 1940. A flat lacquer comprising silica-gel as a flatting agent in a cellulose derivative vehicle.

Pat. 2,225,262. Wood Filler. Dec. 17, 1940. A wood finishing filler consisting essentially of a polyhydric alcohol-polybasic acid resin modified with 50–80% drying oil, a siliceous filler in amount of from 4 parts to 9 parts filler for each part of said resin, solvent and a drier.

Pat. 2,260,889. Coating Composition. Oct. 28, 1941. A scratch-resistant finish for wood comprising cellulose nitrate, plasticizer and 40 to 55% oil length hydrogenated castor oil modified alkyd resin within a specified range of ratios.

Pat. 2,292,468. Finishing Composition. Aug. 11, 1942. Compositions comprising urea-formaldehyde-alcohol resinous material, a plasticizer and a maleic anhydride rosin modified alkyd type resin.

Pat. 2,293,558. Coating Composition. Aug. 18, 1942. A scratch-resistant, highly adhesive, penetrating primer for wood, comprising polyvinyl butyral resin, cellulose nitrate and shellac within specified ratios for the three essential components.

Pat. 2,294,479. Process for Polishing Coatings. Sept. 1, 1942. Process for imparting a high lustre to lacquered articles by exposing them to the vapors of nitrocellulose solvents and chlorinated hydrocarbons.

Pat. 2,316,752. Coated Wooden Forms for Concrete. Apr. 20, 1943. A concrete form comprising a wooden member coated at least on the moulding surface with a lacquer containing a cellulose derivative and at least one wax-like, water-repelling, adhesion-resisting agent.

Pat. 2,357,458. Coating Composition. Sept. 5, 1944. A bowling pin lacquer containing cellulose ethers and cellulose esters and an anti-dirt collecting agent consisting of cetyl pyridinium bromide.

Pat. 2,363,658. Finishing System. Nov. 28, 1944. A process of coating wood surfaces which comprises preheating the wood in the range of 150° F. to 325° F., applying heat stable finish and maintaining the elevated temperature until the finish is dry.

Section 11

Organic Coatings for General Use Including Intermediates Therefor

Pat. 1,898,088. Coating Composition Containing Beta-Eleostearin. Feb. 21, 1933. Heat-treated beta-eleostearin, process of making it from Chinawood oil, and use in coatings.

Pat. 1,900,507. Cellulose Ether Composition. Mar. 7, 1935. A coating composition comprising a cellulose ether, a varnish resin, composite softener and solvent, said softener comprising petrolatum and a non-volatile cellulose ether solvent compatible therewith.

Pat. 1,920,297. Crotyl Cellulose and Crotyl Cellulose Compositions. Aug. 1, 1933. A composition comprising an unsaturated cellulose ether from the group consisting of crotyl and allyl cellulose, and a drier.

Pat. 1,938,662. Coating Composition. Dec. 12, 1933. Coating composition containing a polymerized vinyl ester and Chinawood oil, linseed oil, perilla oil, or hempseed oil.

Pat. 1,939,676. Cellulose Nitrate Coating Composition. Dec. 19, 1933. A mother-of-pearl lacquer comprising pearl essence from fish scales, and a stabilizer of the iron butyl phthalate type. These metal half esters are designed to impart color to the compositions.

Pat. 1,942,413. Varnish Composition and Shellac Substitute. Jan. 9, 1934. A shellac substitute comprising a mixture of Batu gum, rosin, and sufficient lime to neutralize the rosin, which mixture has been heated to over 600° F., dissolved in a varnish thinner.

Pat. 1,942,757. Resinous Coating Composition. Jan. 9, 1934. An alkyd resin coating composition comprising a petroleum hydrocarbon solvent having a boiling range not greater than about 30° C. which lies within the range of temperature of about 150° C. to about 250° C.

Pat. 1,970,572. Aqueous Emulsion. Aug. 21, 1934. Making aqueous emulsions by colloiding cellulose derivatives with oil, adding solvent and an emulsifying agent, then water to invert the mixture.

Pat. 1,975,783. Oil Paint Resistant to Yellowing. Oct. 9, 1934. Paint resistant to yellowing made from light colored pigments and sunflower seed oil, heated in non-oxidizing gas, then air-blown at lower temperature.

Pat. 1,985,896. Coating Composition Retaining Flexibility and Antioxidant Therefor. Jan. 1, 1935. Normal-drying, flexibility-retentive coatings containing a drying oil, a drier, and an aryl-substituted guanidine.

Pat. 2,028,758. Varnish Composition. Jan. 28, 1936. A varnish comprising a mixture obtained by heating 20–40 parts of Batu gum, about 4 parts of limed rosin, and 2–8 parts of Chinawood oil, to a temperature of 450–490° F., said mixture being dissolved in a varnish thinner.

Pat. 2,047,220. Chemical Compositions and Processes for Mixing the Same. July 14, 1936. Aqueous dispersions of finely-divided, unreactive, water-insoluble solid materials in an aqueous solution of a salt of deacetylated chitin, the latter becoming insoluble on heating.

Pat. 2,047,597. Varnish. July 14, 1936. Varnishes containing drying oils and alcohols obtained by hydrogenating natural acidic resins.

Pat. 2,047,642. Stabilization of Animal and Vegetable Fats and Oils. July 14, 1936. Tyrosine esters as antioxidants for fatty oils.

Pat. 2,069,983. Coating Composition. Feb. 9, 1937. Coating composition comprising polymeric methyl methacrylate and an alkyd coumarone, or phenol-formaldehyde resin.

Pat. 2,075,376. Resinous Compositions. Mar. 30, 1937. Lacquers comprising ethyl cellulose, a plasticizer, and a selected phenol-formaldehyde resin, e. g., p-tertiary-amylphenol formaldehyde resin.

Pat. 2,088,052. Coating Composition. July 27, 1937. Cellulose derivative-vinyl resin compositions which possess improved resistance to chalking and bronzing in service, preferably consisting of cellulose nitrate compositions containing a vinyl chloride/acetate copolymer resin.

Pat. 2,097,339. Resinous Compositions. Oct. 26, 1937. Mold-resistant paints containing selected organic mercurials, such as phenyl mercury hydroxide.

Pat. 2,112,354. Treatment of Oils of the Type of China-Wood Oil and Oiticica Oil. Mar. 29, 1938. Process for preparing non-wrinkling fast drying finishes from tung oil, the new steps of which comprise bodying the oil in contact with air to 3 to 150 poises, adding solvent and aging in contact with air.

Pat. 2,120,083. Solid-Gelled Oil Composition and Process of Preparing Same. June 7, 1938. Dispersion of solid gelled castor oil into a nitrocellulose plastic mixture on the two roll mill.

Pat. 2,120,089. Process of Preparing Oil Compositions. June 7, 1938. Dispersion of solid-gelled oil into a liquid medium by first rolling the gelled oil on a two roll mill until it becomes a semi-plastic mass and then dispersing it in the liquid.

Pat. 2,190,705. Cellulose Derivative Emulsions. Feb. 20, 1940. A paste-like oil-in-water cellulose derivative emulsion for use as a coating material or adhesive using two different emulsifying agents one being of the polar type and the other of the water colloidable viscous type.

Pat. 2,207,967. Paint and Varnish Remover. July 16, 1940. Paint and varnish remover made by preparing a gel dispersion of an alkaline earth metal soap in an aromatic hydrocarbon to which is added suitable waxes while hot and subsequently active solvent.

Pat. 2,216,233. Cellulose Derivative Emulsions. Oct. 1, 1940. A high solids, high stability nitrocellulose emulsion using gum ghatti in the aqueous phase.

Pat. 2,243,220. Apparatus for the Application of Coating Compositions. May 27, 1941. A process for applying nitrocellulose lacquers at an elevated temperature which comprises passing the lacquer through an electrically heated hose to raise the temperature before it reaches the spray gun.

Pat. 2,260,880. Coating Composition. Oct. 28, 1941. Stable zinc oxide containing coating compositions made by the addition of organic silicates to coating composition vehicles containing zinc oxide.

Pat. 2,291,284. Coating Composition. July 28, 1942. Blush resistant, high solids lacquer comprising cellulose nitrate and a volatile vehicle having high solvent power and characterized by a specified temperature depression during spraying.

Pat. 2,293,761. Polyamid Solution. Aug. 25, 1942. Unsaturated alcohol solution of polyamide interpolymers.

Pat. 2,308,879. Coating Composition and Process of Making the Same. Jan. 19, 1943. A water paint containing rubber latex, having resistance to washing.

Pat. 2,328,249. Coating Composition. Aug. 31, 1943. Coating compositions containing anhydrous calcined vermiculite which has been calcined at 600° C. to 750° C.

Pat. 2,328,625. Process of Preparing Pigmented Nitrocellulose Coating Compositions. Sept. 7, 1943. Process for filtering pigmented cellulose nitrate enamels by the addition of a fractional percentage of diatomaceous filter aid of effective pore size, characterized by an inherent permeability coefficient prior to filtering.

Pat. 2,330,337. Alpha-Beta Unsaturated Ketones as Drying Accelerators for Oil Modified Coating. Sept. 28, 1943. Oleoresinous coating compositions characterized by accelerated drying rate comprising an oleoresinous film forming material, a drier and an alpha-beta-ethylenically unsaturated ketone.

Pat. 2,339,775. Coating Composition. Jan. 25, 1944. A coating composition comprising a vinyl halide polymer, a light colored pigment and from 1% to 7.5% of material selected from the group consisting of lecithin and cephaline.

Pat. 2,346,755. Emulsion Composition. Apr. 18, 1944. Stable emulsions of water insoluble polymeric organic film forming material dispersed in the water phase containing polyvinyl alcohol and water soluble chromium Werner organic complex, the latter being an insolubilizing and crosslinking agent for the vinyl derivative.

Pat. 2,362,876. Coating Composition and Process for Preparing the Same. Nov. 14, 1944. A coating composition with improved pigment settling characteristics comprising an oleoresinous vehicle, a pigment and a small percentage of ethyl cellulose precipitated in situ in the form of flocculent curds.

Pat. 2,364,172. Coating Compositions. Dec. 5, 1944. A coating composition containing vinyl chloride-vinyl acetate copolymer, methyl ethyl ketone, butyl alcohol soluble alcohol modified urea-formaldehyde resin intermediate.

Pat. 2,371,094. Nonfogging Coating Compositions. Mar. 6, 1945. Nonfogging coating compositions used for interior decorative and protective purposes in building in which photographic emulsions are used or prepared.

Pat. 2,374,067. Resinous Compositions and Articles of Manufacture Comprising Them. Apr. 17, 1945. A composition of matter having electrical insulating properties comprising low hydroxyl type polyvinyl acetal resin and unsaturated cycloaliphatic hydrocarbons derived from petroleum-refining acid sludge.

Pat. 2,381,880. Ester. Aug. 14, 1945. A polyhydric alcohol mixed ester having film forming characteristics comprising a polyhydric alcohol esterified partially with a monocarboxylic acid having conjugated ethylenic double bonds and partially with a monofunctional, monocarboxylic acid of another type.

Pat. 2,381,881. Mixed Esters. Aug. 14, 1945. A film forming composition of matter comprising polyhydric alcohol mixed ester of a beta-furfurylacrylic acid and a mono-functional mono-carboxylic acid of a different structure, such as acids of natural fatty oils.

Pat. 2,381,882. Ester. Aug. 14, 1945. A film forming composition of matter comprising a polyhydric alcohol mixed ester of a cyano unsaturated monocarboxylic acid having conjugated ethylenic double bonds and a monofunctional, monocarboxylic acid of a different structure, such as acids of natural fatty oils.

Pat. 2,381,883. Ester. Aug. 14, 1945. A film forming composition of matter comprising the polyhydric alcohol ester of cinnamalacetic acid; also, the polyhydric alcohol mixed ester of cinnamalacetic acid and another monofunctional, monocarboxylic acid, such as acids of natural fatty oils.

Pat. 2,381,884. Synthetic Resins and Coating Compositions Containing Them. Aug. 14, 1945. Alkyd resin and coating compositions prepared therefrom comprising the condensation product of a polyhydric alcohol, a polybasic acid and a beta-furfurylacrylic acid.

Pat. 2,381,885. Mixed Esters. Aug. 14, 1945. A film forming composition of matter comprising a polyhydric alcohol ester of an alpha, beta ethylenic-alpha-alken-1-yl monofunctional, monocarboxylic acid and another monofunctional monocarboxylic acid, such as the acids of natural fatty oils.

Pat. 2,381,886. Esters. Aug. 14, 1945. A film forming composition of matter comprising the polyhydric alcohol ester of an acylacrylic acid; also, the polyhydric alcohol mixed ester of an acylacrylic acid and another monofunctional, monocarboxylic acid, such as acids of natural fatty oils.

Pat. 2,381,887. Mixed Esters. Aug. 14, 1945. Film forming compositions of matter comprising the polyhydric alcohol mixed ester of a monofunctional alpha, beta ethylenic-beta, -aryl monocarboxylic acid and another monofunctional, monocarboxylic acid, such as acids of natural fatty oils.

Pat. 2,381,888. Process of Making Mixed Esters. Aug. 14, 1945. Process of preparing film forming polyhydric alcohol mixed esters comprising the direct interaction of a natural fatty glyceride, a polyhydric alcohol and the alpha, beta unsaturated, monofunctional, monocarboxylic acid.

Pat. 2,381,889. Esters. Aug. 14, 1945. Film forming composition of matter comprising a polyhydric alcohol ester of a thienylacrylic acid; also, a polyhydric alcohol mixed ester of a thienylacrylic acid and another monofunctional, monocarboxylic acid, such as acids of natural fatty oils.

Pat. 2,382,297. Floor Coverings. Aug. 14, 1945. A linoleum-type floor covering comprising an asphalt impregnated base and a coating therefore containing a gelled polyhydric alcohol mixed ester of a polyunsaturated monocarboxylic acid, having both conjugated and unconjugated unsaturation, and the acids of a natural drying oil and a pigment.

Pat. 2,389,708. Coating Composition. Nov. 27, 1945. A putty comprising ethyl cellulose, a drying oil modified alkyd resin, pigment and filler.

Pat. 2,418,479. Process for Orienting Ferromagnetic Flakes in Paint Films. July 8, 1947. A process for orienting ferromagnetic flakes in a paint film by exposing the wet paint film to the action of a magnetic field, and at short intervals varying the directional angle of the field through 90° C. until the film is dry.

Pat. 2,425,756. Method of Making Varnishes From Polyhydric Alcohol Mixed Esters of Beta Furylacrylic Acid and an Acidic Natural Resin. Aug. 19, 1947. Method for making varnishes from a polyhydric alcohol mixed ester, the acidic radicals of which comprise a beta furylacrylic acid and a natural resin acid.

Pat. 2,433,910. Putty Composition Comprising a Polymethacrylate and Filler. Jan. 6, 1948. An aircraft putty composition comprising a polymerized methacrylate ester and a filler comprising colloidal china clay and talc at specified ratios.

Section 12

Solvents and Plasticizers—Manufacture and Use

Pat. 1,900,693. Metal Salts of Half Acid Esters of Fatty Hydroxylated Oil and Process of Making Them. Mar. 7, 1933. A lacquer softener consisting of metal salts of hydroxylated oil acid esters of polybasic acids, e. g., ferric castor oil phthalate.

Pat. 1,909,196. Ester of Dibasic Acid. May 16, 1933. Esters of dibasic acids in which at least one acid group is esterified with hydrocarbon esters of aliphatic polyalcohols, having more than two hydroxyls, e. g. butyl monoethylin phthalate.

Pat. 1,933,697. Modified Castor Oils and Coating Compositions Containing the Same. Nov. 7, 1933. Polycarboxylic acid esters of castor oil. Castor oil phthalate useful as non-exuding plasticizer for nitrocellulose.

Pat. 1,949,267. Production of Esters of Organic Acids. Feb. 27, 1934. Aliphatic monohydroxy alcohol-aliphatic moncarboxylic esters freed from impurities, by pretreatment of the organic acid with a reducing agent such as zinc or sodium hypophosphite.

Pat. 1,955,348. Modified Castor Oil. Apr. 17, 1934. Products obtained by heating castor oil with selenium to improve its stability.

Pat. 1,955,885. Uncatalyzed Oxidation of Acetylene. Apr. 24, 1934. Reaction between oxygen and acetylene by heating at a temperature too low to cause an explosion.

Pat. 1,963,968. Purification of Esters. June 26, 1934. Process for the removal of aldehydes from organic esters by treatment with aniline.

Pat. 1,967,955. Coating Composition. July 24, 1934. Coating comprising cellulose derivative, and a resinous polybasic acid ester of an alkyl ether containing a polyhydric alcohol of at least three hydroxyl groups.

Pat. 1,972,887. Method of Purification of Alcoholic Mixtures. Sept. 11, 1934. Separation of crotonyl alcohol from the dehydrogenation products of ethyl alcohol, by passing dry hydrochloric acid through the mixture of dehydrogenation products, and then distilling off the crotonyl chloride thus formed.

Pat. 1,986,787. Cellulose Derivative Composition. Jan. 8, 1935. Coating composition comprising nitrocellulose and castor oil esters of polycarboxylic acids (castor oil phthalate).

Pat. 1,987,601. Purification of Alcohols. Jan. 15, 1935. Process for the removal of aldehydes from alcohol by treatment with aniline.

Pat. 2,010,426. Esterification Process. Aug. 6, 1935. Process of esterification in which the water-carrier is an alkylene dichloride.

Pat. 2,015,145. Ester Derived From Hydrogenated Castor Oil. Sept. 24, 1935. Esters and their preparation by alcoholysis of hydrogenated castor oil and a polyhydric alcohol followed by complete esterification of the alcoholic hydroxyls of the alcoholysis product.

Pat. 2,018,557. Resinous Coating Composition. Oct. 22, 1935. An oil modified alkyd resin dissolved in cracked petroleum having specific boiling points, aniline points, and dilution values.

Pat. 2,020,356. Process for the Manufacture of Dicarboxylic Acid Esters. Nov. 12, 1935. Use of the alcohol of the reaction as a water-carrier in the manufacture of phthalate plasticizers (butyl alcohol as the water-carrier in the manufacture of dibutyl phthalate).

Pat. 2,027,466. Composition Containing Castor Oil Derivative. Jan. 14, 1936. Cellulose derivative compositions containing polycarboxylic acid esters of hydrogenated castor oil.

Pat. 2,027,467. Oil Derivative. Jan. 14, 1936. The oily esters of polycarboxylic acid and hydrogenated castor oil, such as hydrogenated castor oil phthalate.

Pat. 2,029,851. Product and Process of Preparing Same. Feb. 4, 1936. Pentaerythritol esters of unsaturated fatty oil acids, having at least 16 carbon atoms and an iodine number of at least 120, process for making them, and coating compositions therefrom.

Pat. 2,047,598. Cellulose Derivative Compositions. July 14, 1936. A composition comprising a cellulose derivative and as a low boiling solvent therefor, difluorodichloroethane.

Pat. 2,073,011. Peracetylated Oil. Mar. 9, 1937. Peracetylated olive oil and process for making it, under selected conditions.

Pat. 2,091,988. Process for Producing Lauric-Acetic Glyceride. Sept. 7, 1937. Process for making lauric-acetic glyceride, useful as nitrocellulose plasticizer.

Pat. 2,109,943. Esters of Unsaturated Aliphatic Monocarboxylic Acids. Mar. 1, 1938. Esters of drying oil acids and long chain saturated primary monohydric alcohols, such as, e. g. dodecyl linoleate.

Pat. 2,121,684. Artificial Leather. June 21, 1938. An artificial leather product having a coating thereof comprising cellulose nitrate plasticized with a polyester oil derived from phthalic acid, a dihydric alcohol and the glyceride of coconut oil.

Pat. 2,131,925. Purification of Organic Compounds. Oct. 4, 1938. Separation of undesirable impurities from lacquer solvents which comprises removing sulfur compounds from organic solvents, plasticizers, and diluents, by agitation with 5% of its weight of powdered lime, at 80–90° C.

Pat. 2,142,989. Abietyl Esters of Polycarboxylic Acids. Jan. 10, 1939. Polycarboxylic esters of an alcohol derived from natural acid resins whereof the carboxyl group has been reduced to the carbinol.

Pat. 2,165,450. Production of Colorless Liquid Organic Esters. July 11, 1939. Removal of color from liquid organic esters, such as amyl acetate, butyl propionate, etc., by treatment with sodium hydroxide solution.

Pat. 2,168,024. Cleaning Composition. Aug. 1, 1939. A cleaning composition to be used in preparing previously coated surfaces for refinishing, comprised of hydrocarbon diluents having a boiling range of 135–225° C., 5–10% of a cellulose nitrate solvent of specified solvency, and about 1% non-volatile cellulose nitrate pasticizer.

Pat. 2,208,769. Process for Continuous Esterification. July 23, 1940. Apparatus and process for continuous esterification of lower monocarboxylic aliphatic acids and aliphatic monohydric alcohols having 3 to 5 carbon atoms with the acid being considerably in excess; the acid and alcohol being fed into the reaction in equivalent amounts.

Pat. 2,208,770. Process for Continuous Esterification. July 23, 1940. Process of esterification at a reaction ratio of 20–40 parts of acid for each part of alcohol, the acid and alcohol being fed continuously into the reaction vessel at equivalent proportions.

Pat. 2,230,549. Treatment of Castor Oil. Feb. 4, 1941. A light color, low acid number dehydrated castor oil obtained by heating castor oil or the acids derived therefrom in a non-reactive hydrocarbon solvent in the presence of a neutral polyvalent metal sulfate and phosphorous pentoxide.

Pat. 2,267,360. Solvent Treatment. Dec. 23, 1941. The treatment of solvents, to be used in finishes with free oxygen, oxygen containing gases or nascent oxygen liberating materials in the presence of a soluble metallic soap of the metals comprising cobalt and manganese

Pat. 2,274,061. Esterification Process. Feb. 24, 1942. Process for the continuous manufacture of butyl acetate, ethyl acetate, isobutyl acetate, etc., in which the desired ester is removed from the distilling column at a specific point.

Pat. 2,396,129. Plasticizers and Method of Making the Same. Mar. 5, 1946. A fabric coating composition comprising cellulose nitrate and a non-exuding plasticizer consisting of the reaction product of blown corn oil and a dicarboxylic acid selected from phthalic and maleic acids or their anhydrides.

Section 13

Hand Creams, Insect Repellents and Finger Nail Polishes

Pat. 2,021,131. Coating Composition. Nov. 19, 1935. A skin protective coating composition consisting of a saponaceous solution comprising substantially 1600 parts by weight of water and 288 parts by weight sodium stearate, 1155 parts by weight glycerine, and 906 parts by weight sodium silicate.

Pat. 2,032,042. Fingernail Polish Remover. Feb. 25, 1936. A fingernail polish remover comprising a lacquer solvent and a non-drying oil which reduces nail embrittlement, and nullifies the affinity of the solvent for the natural oil of the nails.

Pat. 2,195,971. Fingernail Enamel Composition. Apr. 2, 1940. A fingernail enamel composition comprising cellulose nitrate, a plasticizer and a polymerized acrylic acid ester.

Pat. 2,261,623. Fingernail Enamel. Nov. 4, 1941. Non-settling opaque fingernail polish comprising a cellulose nitrate vehicle and a lake pigment consisting of dye chemically precipitated on 0.12 to 0.18 micron size zinc oxide.

Pat. 2,286,687. Fingernail Enamel Remover. June 16, 1942. A creamy consistency lacquer remover composition comprising a major proportion of active solvent, and the modifying agents wax, lanolin, alkali metal soap and water in specific percentages.

Pat. 2,351,195. Fingernail Enamel Remover Composition. June 13, 1944. A creamy consistency lacquer remover composition comprising a major proportion of active solvent and the modifying agents stearic acid, ethyl cellulose, oily cosmetic aid and aqueous ammonia in specific percentages.

Pat. 2,404,698. Insect Repellent Composition. July 23, 1946. A non-aqueous insect repellent of gel-like consistency comprising a cellulose derivative and a liquid repellent.

Section 14

Synthetic Resins and Their Intermediates

Pat. 1,909,195. Resin-Like Ester. May 16, 1933. Resin-like esters of monoalkyl ethers of glycerin with acids such as benzoylbenzoic.

Pat. 1,909,197. Polybasic Acid-Polyhydric Alcohol Ether Resin and Process for Preparing Same. May 16, 1933. Resin-like esters consisting of hydrocarbon ethers of polyhydroxy compounds containing 2 or more free hydroxyls, and a polycarboxylic organic acid, e. g., a phthalate of monoethylin.

Pat. 1,920,980. Process of Making Synthetic Resins and Coating Compositions Containing Them. Aug. 8, 1933. Modified alkyd resin prepared from polyhydric alcohol, polybasic organic acid and substantially pure beta-eleostearic acid derived from China-wood oil esterified in the absence of sulfuric acid.

Pat. 1,925,935. Synthetic Resin. Sept. 5, 1933. A process for making alkyd resins in which the fatty oil is split by enzyme action before esterification.

Pat. 1,932,688. Synthetic Resin. Oct. 31, 1933. Alkyd resins modified with beta-form non-drying and semi-drying oils derived by conversion of said oils having an iodine number of at least 70 and separation of the unconverted alpha-form.

Pat. 1,942,531. Low Viscosity Vinyl Polymer. Jan. 9, 1934. The product obtained by polymerizing vinyl esters or styrene in the presence of rosin or rosin esters.

Pat. 1,944,887. Esters and Method of Preparing Same. Jan. 30, 1934. Esters of aliphatic monobasic acids containing 6 to 13 carbon atoms and aliphatic primary monohydric alcohols with 12 to 18 carbon atoms.

Pat. 1,974,742. Synthetic Resin and Process of Making Same. Sept. 25, 1934. In the process of making alkyd resins, the step which comprises carrying out the reaction in the presence of an inert gas.

Pat. 1,975,959. Polymerization of Vinyl Compounds in the Presence of Film Forming Materials. Oct. 9, 1934. Preparation of resinous compositions, for example, styrenated alkyds by polymerizing in a mutual inert solvent styrene or a vinyl ester in the presence of another film forming material such as a drying oil, a resin or a cellulose derivative.

Pat. 1,979,260. Mixed Synthetic Oil and Product Derived Therefrom. Nov. 6, 1934. Modified alcoholysis method for making mixed drying oil modified alkyds from frosting and nonfrosting oils.

Pat. 1,980,441. Resinous Metal Compounds. Nov. 13, 1934. A special alkyd resin, in which the polyhydric alcohol is partly esterified with a fatty oil acid, then reacted with a polybasic organic acid, then neutralized with metallic compounds such as ferric chloride, cupric sulfate and ceric sulfate.

Pat. 1,986,423. Process for the Production of Diphenyl Methanes. Jan. 1, 1935. Condensation of a phenol with an aldehyde or a ketone using a boron compound catalyst.

Pat. 1,984,153. Synthetic Resin and Composition Containing It. Dec. 11, 1934. Improving drying oil modified alkyd resins by treatment with litharge during manufacture.

Pat. 1,993,828. Synthetic Resin. Mar. 12, 1935. Improved water-resistant alkyd resins prepared by condensation with a ketone and coating compositions containing said improved alkyd resin

Pat. 2,006,043. Synthetic Resin. June 25, 1935. A phenol aldehyde resin comprising the reaction product of formaldehyde and a phenol containing unsaturated side chains.

Pat. 2,009,029. Resinous Compositions. July 23, 1935. The resinous reaction product of a protein and a polyhydric alcohol-condensed in an alkaline medium at a temperature of at least 140° C.

Pat. 2,009,432. Resinous Compositions. July 30, 1935. Modified alkyd resins containing in combined form a polyhydric alcohol ester of an aminocarboxylic acid.

Pat. 2,011,908. Cured Tung Oil Acid. Aug. 20, 1935. A method of making polyhydric alcohol-polybasic acid resins which comprises curing tung oil acids by heating them at a temperature of about 540° F. to 585° F. and heating the cured acids with an organic polybasic acid and polyhydric alcohol until resinification takes place.

Pat. 2,019,510. Modified Polyhydric Alcohol-Polybasic Acid Resins and Compositions Containing Them. Nov. 5, 1935. Alkyd resins modified with partial hydrocarbon ethers of polyhydric alcohols, process of preparation and coating compositions therefrom.

Pat. 2,022,011. Resinous Composition. Nov. 26, 1935. Resins made from non-cellulosic polyhydric alcohol and reaction product of organic polybasic acid and a cellulose derivative

Pat. 2,025,612. Resinous Composition and Process for Making the Same. Dec. 24, 1935. Alkyd resins chemically modified with natural ester-waxes and their preparation involving the step of alcoholysis of the said waxes.

Pat. 2,025,642. Arylated Esters and Synthetic Resinous Compositions. Dec. 24, 1935. Arylated esters and their preparation from aromatic hydrocarbons and natural resin acids or their esters, or esters of unsaturated fatty acids; alkyd resins therefrom.

Pat. 2,035,348. Resinous Compositions. Mar. 24, 1936. Resins obtained by reacting polycarboxylic acids with protein-polyhydric alcohol-alkali fusion products.

Pat. 2,035,528. Synthetic Resin. Mar. 31, 1936. Higher alcohol modified alkyd resins, and their preparation from saturated and unsaturated, high molecular weight monohydric, aliphatic alcohols.

Pat. 2,044,747. Resinous Bodies and Varnishes Obtained Therewith. June 16, 1936. A process for preparing alkyd resins involving the new step of partially esterifying the polyhydric alcohol with a monobasic acid and then resinously condensing the partially acylated polyhydric alcohol with a polycarboxylic acid.

Pat. 2,046,318. Synthetic Resin. July 7, 1936. Resins from C_7 and higher o- or p-tertiary alkyl mononuclear phenols and formaldehyde, and varnishes made therefrom with oils or alkyds.

Pat. 2,047,668. Synthetic Resins. July 14, 1936. Preparation of alkyd resins modified with polyfunctional reactants containing at least one cyano group hydrolizable to the carboxyl group.

Pat. 2,048,774. Synthetic Resins. July 28, 1936. Alkyd resins from alicyclic dihydric secondary alcohols and polycarboxylic acids.

Pat. 2,048,778. Amine Modified Polyhydric Alcohol-Polybasic Acid Resins. July 28, 1936. Making amine modified alkyd resins from aliphatic amines.

Pat. 2,057,765. Polyhydric Alcohol-Polybasic Acid Resins and Compositions Containing Them. Oct. 20, 1936. Process for the preparation of alkyd resins involving resinification of the components in the presence of a non-reactive, water-immiscible solvent without an esterification catalyst.

Pat. 2,057,766. Dispersed Gelled Resins. Oct. 20, 1936. Gelled alkyds dispersed in an inert volatile liquid and their preparation of resinification of the components in a solvent for the resin in the ungelled state, continually removing both water and solvent during the esterification thereafter replenishing the solvent and continuing to reaction to form a jelly-like dispersion.

Pat. 2,059,850. Synthetic Resins. Nov. 3, 1936. Alkyd resins prepared from ketone-alcohols and/or keto-acids.

Pat. 2,059,943. Synthetic Resins. Nov. 3, 1936. Naphthanone-formaldehyde resins and coating compositions therefrom.

Pat. 2,066,363. Resinous Compositions. Jan. 5, 1937. Mold-resistant coating containing an oil-modified alkyd resin and an organic compound of mercury.

Pat. 2,069,275. Phenolic Compounds. Feb. 2, 1937. Resin forming polyhydric derivative prepared by condensation of naphthanone with a mononuclear monohydric phenol.

Pat. 2,069,560. Tertiary Alkyl-Cyclohexyl Phenols and Process of Preparing Same. Feb. 2, 1937. Product and preparation of alkyl cyclohexyl phenols.

Pat. 2,069,573. Phenolic Compounds. Feb. 2, 1937. Resin forming polyhydric derivatives prepared by condensing 3,5 dimethyl cyclohexanone with a mononuclear, monohydric phenol.

Pat. 2,074,782. Resinous Compositions and Process of Making Same. Mar. 23, 1937. A resinous composition comprising a homogeneous combination of urea-aldehyde condensation product and the product obtained by dissolving with heat treatment an organic peroxide in a fatty oil modified polyhydric alcohol-polybasic acid resin.

Pat. 2,074,814. Resinous Compositions and Process of Making Same. Mar. 23, 1937. Blends of urea-formaldehyde resins with non-hydroxylated fatty oil modified alkyd prepared with excess polyhydric alcohol.

Pat. 2,079,616. Resinous Coating Compositions. May 11, 1937. A process which comprises heating polyhydric alcohol with the varnish obtained by heating drying oil with oil soluble phenol-aldehyde resin, until the two phases merge into a single phase, and heating the resulting product with polycarboxylic acid.

Pat. 2,079,633. Synthetic Resins. May 11, 1937. Preparation of heat-hardening oil soluble phenol-formaldehyde resins by reacting a phenol and formaldehyde in presence of a mildly acid catalyst and a volatile solvent.

Pat. 2,086,458. Polyhydric Alcohol-Polybasic Acid Resins. July 6, 1937. A resinous ester of a polyhydric alcohol with a mixture of acids comprising a hydrogenated acidic gum and a fatty oil acid and/or an organic polybasic acid.

Pat. 2,097,345. Resinous Compositions. Oct. 26, 1937. Resins from formaldehyde and selected polynuclear phenolic monocarboxylic acids.

Pat. 2,097,348. Synthetic Resins. Oct. 26, 1937. Making aryl carbinol resins by condensing an aryl carbinol under selected conditions of temperature and acidity.

Pat. 2,098,869. Artificial Resins and Method of Making. Nov. 9, 1937. Acid-soluble primary amine-phenol-formaldehyde resins.

Pat. 2,101,534. Urea-Formaldehyde Condensation Products. Dec. 7, 1937. Dehydration of crude dimethylol urea with a nonsolvent for the dimethylol urea to remove the impurities and to condition the product to an improved physical state.

Pat. 2,103,238. Synthetic Resin Manufacture. Dec. 28, 1937. An organic compound of copper used in the reaction mixture to produce alkyd resins of low acid number.

Pat. 2,110,042. Resinous Composition. Mar. 1, 1938. An oil modified alkyd resin having a predetermined drying time prepared by separating the resin into a slow drying and a fast drying fraction, and these fractions then mixed in the proportions necessary to obtain the desired results.

Pat. 2,112,556. Resinous Compositions and Process of Making Same. Mar. 29, 1938. A resinous composition comprising an oxidized-oil modified alkyd resin and a urea-formaldehyde condensation product.

Pat. 2,123,206. Synthetic Resins and Compositions Containing Them. July 12, 1938. The process of preparing synthetic resins which comprises the alcoholysis of oils of the drying or semi-drying type with polyhydric alcohol in the presence of an inorganic basic catalytic material, and the esterification of the resulting product with a polybasic carboxylic acid.

Pat. 2,124,151. Synthetic Resins. July 19, 1938. Reaction product of urea and a saturated non-hydroxylated aliphatic aldehyde condensed without a catalyst in the presence of a monohydric alcohol.

Pat. 2,126,773. Manufacture of Synthetic Resins. Aug. 16, 1938. Urea-formaldehyde compatible, non-frosting, non-gelling drying oil modified alkyd resin made by heating the resin in hydrocarbon solvents under pressure.

Pat. 2,132,442. Synthetic Resins. Oct. 11, 1938. Insoluble acidic alkyd resins rendered soluble and of low acid number by reaction with gaseous ammonia and condensation of the product with formaldehyde.

Pat. 2,147,789. Resins From Aminophenols and Formaldehyde. Feb. 21, 1939. Resins prepared by reacting at least one mole of aliphatic aldehyde with one of selected tertiary aminophenols.

Pat. 2,181,893. Synthetic Resins. Dec. 5, 1939. Alkyd resins modified by linseed oil acids and Chinawood oil in selected amounts and ratios.

Pat. 2,190,829. Phenol Carboxylic Acid Amide-Formaldehyde Resins. Feb. 20, 1940. Amide-modified phenol-formaldehyde resins.

Pat. 2,191,587. Polyether Resins. Feb. 27, 1940. A soluble, thermo-hardening resin comprising the reaction product of formaldehyde and a thermoplastic ether resin derived from the reaction of an unpolymerizable monomeric polyhydric ether and an organic polyhalide.

Pat. 2,191,957. Resinous Composition and Method of Preparing Same. Feb. 27, 1940. The resinous reaction product of urea-formaldehyde and an aliphatic monohydric alcohol, said product containing said alcohol in combined form in amount of from about one-half to about one molecule of alcohol for each molecule of combined urea and at least two molecules of urea having been eliminated during condensation.

Pat. 2,191,974. Diethers of Dimethyol Urea and Process for Making Same. Feb. 27, 1940. Dialkyl diethers of dimethylol urea prepared by reacting substantially dry dimethylol urea with the alcohol by heating in the presence of anhydrous magnesium sulphate.

Pat. 2,201,926. Resin Solutions From Diethers of Dimethylol Urea. May 21, 1940. Process for preparing urea-formaldehyde resinous solutions made by heating crystalline di-ether of di-methylol urea alone under a reflux condenser and continuing the heating therein of the molten di-ether until the polymeric ether of methylene urea is formed and the liberated hydroxylated solvent dissolves said last mentioned ether.

Pat. 2,201,927. Methylol Urea Ethers and Process for Making Same. May 21, 1940. Alkyl and aryl ethers of methylol ureas made by reacting alcohols with methylol compounds wet with water in the presence of an acid catalyst with a suitable alkali.

Pat. 2,213,921. Dialkyl Ethers of Dimethylol Urea and Process for Making Same. Sept. 3, 1940. Higher dialkyl ethers of dimethylol urea made by reacting in acid, neutral or basic medium a dialkyl ether of dimethylol urea with an alcohol containing a larger number of carbon atoms than contained in either of the alcohol radicals of the ether.

Pat. 2,225,534. Copolymers of Styrene With Frosting Drying Oil Varnishes. Dec. 17, 1940. Interpolymers of styrene and preformed, heat-blended rosin-wood oil varnishes.

Pat. 2,247,419. Monoethers of Dimethylol Urea and Process for Making Same. July 1, 1941. A process which comprises reacting, in alkaline medium, formaldehyde and an alkyl ether of a monomethylol urea.

Pat. 2,260,890. Method of Preparing Resinous Compositions. Oct. 28, 1941. Improved process for making monohydric alcohol modified urea-formaldehyde resins involving the step of adding urea to the resinous reaction mixture after a major proportion of water has been removed and continuing the reaction until two molecules of water for each combined molecule of urea have been removed.

Pat. 2,276,176. Copolymers of Esters of Alpha-Methylene Open Chain Aliphatic Monocarboxylic Acids With Frosting Oil. Mar. 10, 1942. Interpolymers of methacrylic esters and preformed, heat-blended tung oil-varnish resin varnishes.

Pat. 2,279,764. Process for Distillation. Apr. 14, 1942. Apparatus for carrying out the solution/alcoholysis process for making alkyd resins.

Pat. 2,280,862. Coating Composition and Method of Preparation. Apr. 28, 1942. The process of preparing modified oils and resinous materials which comprises refluxing fatty unsaturated non-hydroxylated oils containing substantially no conjugation, and maleic acid esters of unsaturated alcohols.

Pat. 2,313,799. Coating Composition. Mar. 16, 1943. An air-drying alkyd resin enamel containing cyclohexene oxide, isobutylene oxide, pentene oxide and hexene oxide.

Pat. 2,321,627. Phenol-Formaldehyde Resin. June 15, 1943. Resinous products from formaldehyde and di(hydroxyaryl) alkanes.

Pat. 2,343,483. Interpolymers of Styrene and the Reaction Product of Maleic Esters and Relatively Non-Conjugated Drying Oils and Process of Preparing the Same. Mar. 7, 1944. The process of preparing resinous materials suitable for preparing varnishes and the like which comprises interpolymerizing styrene and a linseed oil-diallyl maleate reaction product and the products resulting therefrom.

Pat. 2,346,858. Interpolymer. Apr. 18, 1944. Interpolymers of vinyl esters and the heat-reaction products of Chinawood oil and selected types of alpha, beta-ethylenically unsaturated compounds, such as acids and esters.

Pat. 2,358,235. Hydrogenation of Rosin Compounds. Sept. 12, 1944. Process for the hydrogenation of abetic acid.

Pat. 2,374,077. Resins Obtained From Ureas and Alkylol Amines. Apr. 17, 1945. Dilute hydrochloric acid soluble urea-amine resin prepared by condensing a bis alkoxymethyl urea with an alkylolamine having at least two and not more than three hydroxyl groups, each of which is separated from the amino nitrogen by at least two carbon atoms.

Pat. 2,374,598. Alkyd Resins. Apr. 24, 1945. Hydroxyacetic acid-linseed oil modified alkyd resins.

Pat. 2,389,682. Ketone-Urea-Formaldehyde Condensation Products. Nov. 27, 1945. A modified urea-formaldehyde resin prepared by condensation of dimethylol urea, a methylol ketone, a lower aliphatic monohydric alcohol in the presence of an acidic catalyst, said ketone comprising the reaction product of formaldehyde and a methyl allyl ketone.

Pat. 2,395,550. Modified Alkyd Resins. Feb. 26, 1946. Coating compositions comprising a fatty oil modified alkyd resin and an organic solvent soluble ester of a lower, saturated, aliphatic alcohol and a polysilicic acid, said ester containing unesterified silicic acid hydroxyl groups.

Pat. 2,401,769. Synthetic Drying Oils. June 11, 1946. Copolymers of furylethylene and drying or semi-drying fatty oils.

Pat. 2,401,776. Resinous Reaction Products of Polyhydric Alcohols and Alpha-Methylene Aldehydes. June 11, 1946. Resinous condensation products of unsaturated aldehydes and selected polyhydric alcohols.

Pat. 2,411,954. Treatment of Polyunsaturated Esters With Polythiols and Products Produced Thereby. Dec. 3, 1946. A polyunsaturated ester such as cellulose acetate-methacrylate heated with a monomeric hydrocarbon thiol to form a new insoluble substance.

Section 15

Compositions for Treatment of Automotive Cooling Systems

Pat. 2,293,546. Leak-Sealing Composition. Aug. 18, 1942. A stop-leak composition for automobile radiators comprising a dispersion of a resin formed by reacting a partial ester of a polyhydric alcohol and a fatty acid with at least twice as much rosin as is necessary to react with the remaining free hydroxyl groups of the partial ester.

Pat. 2,315,321. Leak-Sealing Composition. Mar. 30, 1943. A stop-leak composition for automobile radiators containing water, a mucilaginous binder, a resin, a fibre, sodium silicate and a water soluble phosphate salt.

SCHEDULE 5

Patents Relating to Ammonium Phosphate and Sulfate

Pat. 1,989,124. Process of Making Ammonium Sulfate. Jan. 29, 1935. Producing ammonium sulfate by contacting sulfur dioxide, ammonia and oxygen containing gases with nitrogen oxides as a catalyst.

Pat. 2,031,909. Soldering Flux. Feb. 25, 1936. Thermally decomposable phosphate, specifically diammonium phosphate, as soldering flux.

Patents Relating to Chlorosulfonates and Chlorine

Pat. 2,218,729. Process for the Production of Chlorosulfonates. Oct. 22, 1940. Metal or ammonium chloride vaporized, then condensed; then SO_3 added to form $NaClSO_3$ etc. Suspend salt in a gas and then react with SO_3 to make $NaClSO_3$.

Pat. 2,219,103. Process of Manufacturing Alkali and Ammonium Chlorosulfonates. Oct. 22, 1940. Grind NaCl and pass SO_3 thru to form chlorosulfonate.

Pat. 2,240,920. Sulfonation of Organic Compounds. May 6, 1941. Reaction of sodium chlorosulfonate with unsaturated organic compounds.

Pat. 2,259,248. Processes for the Production of Sulfuryl Chloride. Oct. 14, 1941. Sodium chlorosulfonate heated at 500–600° C.—passed thru active carbon to produce sulfuryl chloride. $2NaClSO_3$—$Na_2SO_4 + SO_2Cl_2$.

Pat. 2,276,041. Method of Manufacturing Chlorosulfonates. Mar. 10, 1942. HCl or SO_3HCl used as catalyst in producing chlorosulfonates by attrition of a chloride with SO_3.

Pat. 2,312,413. Manufacture of Fluosulfonates. Mar. 2, 1943. Fluosulfonates are prepared by grinding fluorides in SO_3 or by suspending ground fluorides in SO_3. Calcium fluosulfonate is claimed per se as is its preparation broadly.

Pat. 2,375,000. Manufacture of Sodium Sulfate and Chlorine. May 1, 1945. SO_3 and NaCl reacted in space reactor.

Pat. 2,375,001. Manufacture of Chlorine and Sodium Sulfate. May 1, 1945. Separation of SO_2 and Cl_2, oxidize the SO_2 and liquefy and fractionate the resulting Cl_2—SO_2 mixture.

Pat. 2,375,002. Process for Making Sodium Sulfate and Chlorine. May 1, 1945. Separation of SO_2 and Cl_2 oxidation and absorption of SO_3—vanadium catalyst.

Pat. 2,375,011. Manufacture of Chlorine. May 1, 1945. Separation of SO_2 and Cl_2—selective sorption of SO_2 on activated silica gel.

Pat. 2,381,876. Process of Separating Sulphur Dioxide and Chlorine by Distillation. Aug. 14, 1945. Mixtures of chlorine and sulphur dioxide are separated by successive distillations at different pressures.

Pat. 2,401,644. Method for Producing Chlorine. June 4, 1946. Separation of SO_2 and Cl_2—one component is removed as sulfuryl chloride.

Patents Relating to Electroplating Products

Pat. 1,963,302. Spark Plug. June 19, 1934. Cadmium plated spark plug.

Pat. 2,058,684. Anode. Oct. 27, 1936. Gear-like anode and basket.

Pat. 2,058,702. Anode. Oct. 27, 1936. Hollow anode like cylinder used in basket.

Pat. 2,080,479. Plating of Zinc. May 18, 1937. Rhenium or manganese used in zinc plating baths.

Pat. 2,080,483. Electrodeposition of Zinc. May 18, 1937. Thiourea and substituted thioureas as addition agents for zinc plating with Group VIII, series 4: iron, cobalt, nickel.

Pat. 2,085,754. Addition Agents for Nickel Plating. July 6, 1937. Aldehydes and ketones and cyanide reaction products as addition agents for nickel.

Pat. 2,086,224. Anode. July 6, 1937. Ball anodes move down support as they are used and are so caused to rotate.

Pat. 2,086,226. Plating Apparatus. July 6, 1937. Apparatus rotates record partly immersed in plating solution:—rubs with squeegee to get cadmium coating for sound recording.

Pat. 2,149,344. Apparatus and Process for the Study of Plating Solutions. Mar. 7, 1939. Effect of an infinite number of C. D.'s determined by placing anode at angle in test cell.

Pat. 2,154,451. Bright Dip. Apr. 18, 1939. Zinc bright dip acidic hydrogen peroxide.

Pat. 2,154,455. Cadmium Bright Dip. Apr. 18, 1939. Hydrogen peroxide + acid or acidulous salt as bright dip for Cd.

Pat. 2,154,468. Bright Dip. Apr. 18, 1939. Peroxygen compounds + acid material (specifically $H_2O_2 + H_2SO_4$) as bright dip for cadmium.

Pat. 2,154,469. Bright-Dip. Apr. 18, 1939. Oxidizing solution with pH below 7 as bright-dip for zinc.

Pat. 2,164,924. Electroplating. July 4, 1939. Add gypsum to cyanide electroplating baths to remove sodium carbonate.

Pat. 2,214,331. Electrodeposition of Zinc. Sept. 10, 1940. Zinc-calcium anode. Calcium decreases efficiency of anode in cyanide bath.

Pat. 2,277,664. Zinc Plating Ferrous Articles. Mar. 31, 1942. Treat malleable or cast iron prior to plating with Zn or Cd. Wash in HF then in NaCN.

Pat. 2,277,668. Zinc Plating. Mar. 31, 1942. Glycollic acid and its salts as addition agents for sodium zincate plating baths.

Pat. 2,297,766. Anode Production. Oct. 6, 1942. Nickel anodes are quenched with sulfuric acid which may or may not include hydrochloric acid.

Pat. 2,312,097. Electroplating. Feb. 23, 1943. Sulfite cellulose waste together with an aromatic sulfonic acid, preferably methyl naphthalene nickel sulfonate, used as addition agents for bright nickel plating.

Pat. 2,315,607. Anode. Apr. 6, 1943. Solubility of anode metal (copper) decreased by including magnesium in the anode.

Pat. 2,318,592. Electrodeposition. May 11, 1943. Use sulfamate electrolyte for electrodeposition. Sulfamates of nickel, copper and lead.

Pat. 2,351,639. Electroplating. June 20, 1944. Polyhydric alcohols specifically glycerine used as an addition agent in black molybdenum plating.

Pat. 2,372,032. Process for Producing Fluorides. Mar. 20, 1945. Sodium fluostannate sludge from a fluoride-tin bath can be reduced by the use of various reducing agents such as molten tin.

Pat. 2,374,289. Electroplating. Apr. 24, 1945. Copper cyanide is used as an addition agent for acid-copper plating baths.

Pat. 2,380,044. Process for Producing Electrodeposits. July 10, 1945. Black deposits produced from ammonium molybdate baths which may contain Ni, Co. Sn, or Zn.

Pat. 2,402,185. Tin Electrodepositing Composition and Process. June 18, 1946. A soluble thiocyanate is used alone or in combination with a ferricyanide or ferrocyanide to stabilize a stannous electrodepositing bath.

Pat. 2,407,489. Electrodeposition of Zinc. Sept. 10, 1946. Electroplating zinc with an anthraquinone sulfonate as addition agent.

Pat. 2,407,579. Electrodeposition of Tin. Sept. 10, 1946. Stannous chloride-alkali fluoride composition for electroplating tin.

Pat. 2,417,133. Electrodepositing and Heat-Treating Molybdenum-Oxygen Deposits. Mar. 11, 1947. Electroplating an oxygen compound of molybdenum from a molybdenum-nickel bath and then heating the deposit to improve adherence and resistance to abrasion.

Pat. 2,417,203. Electroplating Nickel. Mar. 11, 1947. Electroplating bath containing nickel sulfate-nickel chloride electrolyte with sulfurized gelatine as addition agent.

Pat. 2,426,416. Electroplating Nickel. Aug. 26, 1947. Electroplating nickel from a specific nickel chloride-nickel sulfate bath containing metasulfobenzaldehyde as addition agent.

Pat. 2,427,280. Nickel Electroplating Composition. Sept. 9, 1947. Electroplating nickel from a nickel chloride-nickel sulfate bath containing 2-phenyl ethylene sulfonic acid as addition agent.

Pat. 2,430,304. Anodizing Iron Group Metals in Lead Sulfamate Bath. Nov. 4, 1947. Anodically treating iron group metals with a lead sulfamate solution to produce coatings.

Patents Relating to Hydrochloric Acid and Salt Cake

Pat. 2,086,206. Production of Salt Cake and Hydrogen Chloride. July 6, 1937. Salt cake HCl furnace direct heat applied above pot-combustion gases go along top of muffle—then back to heat bottom of pot.

Pat. 2,127,571. Absorption of Hydrochloric Acid in Liquids. Aug. 23, 1938. HCl absorbed and drawn into absorber by entraining it at venturi with jet of absorbing medium.

Pat. 2,206,528. Manufacture of Hydrochloric Acid. July 2, 1940. Water introduced into HCl gas so that SO_2 is oxidized in liquid. Best done by spraying coke of coke box.

Pat. 2,213,544. Manufacture of Chemically Pure Hydrochloric Acid. Sept. 3, 1940. Free Cl in HCl removed by adding hydrogen and passing over heated catalyst.

Pat. 2,213,556. Manufacture of Hydrochloric Acid. Sept. 3, 1940. Coke-box acid returned to scrubber where it is stripped of HCl. No furnace acid produced.

Pat. 2,220,570. Hydrochloric Acid Absorption. Nov. 5, 1940. Air dilution of HCl gas prior to absorption. Ambient air effects cooling.

Pat. 2,287,094. Muffle Furnace. June 23, 1942. Insulation applied at bottom of hearth of muriatic furnaces to reduce scaling of salt cake. Hot gases passing under the hearth are caused to diverge under the pot.

Pat. 2,303,537. Production of Hydrogen Chloride. Dec. 1, 1942. Muriatic and chlorosulfonic acid are mixed to produce a dry HCl gas.

Patents Relating to Inhibitors and Metal Pickling Compositions

Pat. 1,905,915. Condensation Product of Cinchona Bark Alkaloids With Thiuram Sulphides as Inhibitors. Apr. 25, 1933. Condense cinchona bark with thiuram sulfide as pickling inhibitor.

Pat. 1,923,055. Aldehydeamine Cinchona Bark Alkaloid Inhibitors. Aug. 15, 1933. Cinchona bark alkaloid reacted with aldehydeamine specifically acetaldehydeaniline.

Pat. 1,923,056. Condensation Product of Cinchona Bark Alkaloids With Thiuram Sulfides. Aug. 15, 1933. Condensation of cinchona bark alkaloid with thiuram sulfide.

Pat. 1,923,057. Aldehydeamine Cinchona Bark Alkaloid Condensation Product. Aug. 15, 1933. Condensation of cinchona bark alkaloid and aldehydeamine compound per se.

Pat. 1,949,921. Cleaning and Protecting Metals Against Rusting. Mar. 6, 1934. Metal cleaning and rust preventive solution containing phosphoric acid and isopropyl ether.

Pat. 1,957,488. Acid Inhibitor. May 8, 1934. React aldehyde, a primary or secondary amine and carbon bisulfide to make acid inhibitor.

Pat. 1,992,045. Phosphoric Acid Metal Cleaning and Rust Preventing Solution. Feb. 19, 1935. Metal cleaning and rust preventive solution containing phosphoric acid, a sulfonated oil and alcohol.

Pat. 2,031,895. Carboxylic Acid Derivatives of Sulfurized Cinchona Bark Alkaloids. Feb. 25, 1936. Pickling inhibitor composition reacts concentrated carboxylic acid upon sulfurized cinchona bark alkaloid.

Pat. 2,044,956. Inhibitor and Process Employing the Same. June 23, 1936. Pickling inhibitors comprising quinazoline derivatives—viz. thioquinazolines.

Pat. 2,070,487. Metal Cleaning. Feb. 9, 1937. Add sulfonated alcohols to phosphoric acid for rustproofing.

Pat. 2,071,966. Pickling Inhibitor and Process. Feb. 23, 1937. Dimethylcyclohexylthiourea-inhibitor.

Pat. 2,071,989. Inhibitor for Pickling and Cleaning Solutions. Feb. 23, 1937. Grain steep water, sulfurized and thio sulfate treated steep water, as inhibitor for metal pickling.

Pat. 2,072,003. Condensation Products of Cinchona Bark Alkaloid. Feb. 23, 1937. Condensation product of cinchona bark alkaloids, or their sulfurization products, with aldehydes or ketones.

Pat. 2,072,004. Cinchona Bark Alkaloid Derivative. Feb. 23, 1937. Carboxylic acid derivatives of cinchona bark alkaloids and sulfurization products of the same: as inhibitors.

Pat. 2,097,512. Inhibitor. Nov. 2, 1937. Cinchona bark is sulfurized in presence of concentrated sulfuric acid to make a completely soluble inhibitor.

Pat. 2,111,227. Inhibitor. Mar. 15, 1938. Quaternary cinchona bark alkaloid derivatives—Lorol quinoidinium chloride, benzyl quinoidium thiocyanate, reaction of quinoidine with dichloro-diethyl ether, etc. as inhibitor.

Pat. 2,127,147. Metal Cleaning and Pickling. Aug. 16, 1938. React aldehyde as croton aldehyde, with $(NH_4)_2S$: dissolve product in concentrated H_2SO_4 as inhibitor.

Pat. 2,165,852. Process and Bath for Cleaning Metals. July 11, 1939. Phenol aldehyde-ammonia condensation products including amines if desired used as acid inhibitors.

Pat. 2,383,800. Metal Cleaning Composition and Process. Aug. 28, 1945. The residue of the ether extraction of fermentation lactic acid made from starch or molasses is an inhibitor. This is used with hydrochloric acid or other mineral acids and may contain also oxalic acid.

Pat. 2,402,596. Pickling Solution for Metals. June 25, 1946. Metal pickling baths containing polyhydroxy-thiols such as thiosorbitol.

Patents Relating to Insecticides, Fungicides and Bactericides

Pat. 1,911,867. Combined Fungicide and Insecticide. May 30, 1933. Fungicidal and insecticidal dust containing sulfur, manganese and arsenate and an amphoteric adhesive, e. g. aluminum sulfate.

Pat. 1,911,868. Fungicide. May 30, 1933. Fungicidal dust containing sulfur and an amphoteric substance, e. g. aluminum sulfate, zinc sulfate.

Pat. 1,915,334. Fluosilicate of Organic Heterocyclic Bases and Processes of Making It. June 27, 1933. Organic heterocyclic base reacted with fluosilicic acid to give new compound.

Pat. 1,917,463. Fluosilicates of Organic Aliphatic Bases. July 11, 1933. Fluosilicates of organic aliphatic base as new compound.

Pat. 1,931,367. Noncorrosive Insecticidal Compositions. Oct. 17, 1933. Noncorrosive insecticidal composition containing barium fluosilicate and a neutral fluoride having the property of imparting to water suspension a pH of 4.0 plus.

Pat. 1,955,891. Parasiticides and Methods of Mothproofing. Apr. 24, 1934. Fluornaphthalenes, fluor diphenyls, fluoranilides, fluorphenols, fluoracetic acid and phenylfluoroform as parasiticides.

Pat. 1,961,840. Insecticide. June 5, 1934. Thiazoles. An insecticide comprising an organic substance containing in its molecule a five membered ring composed of three carbons, one sulfur, and one nitrogen atom, one of said carbon atoms carrying a salt forming group.

Pat. 1,962,109. Fungicides and Bactericides. June 5, 1934. Thiazoles for wood preserving specifically mercaptobenzothiazole.

Pat. 1,984,305. Making Arsenate of Lead. Dec. 11, 1934. Producing lead arsenate by adding kerosene to the suspension before filtering and drying.

Pat. 1,992,053. Oxidation of Arsenious Acid. Feb. 19, 1935. Producing arsenic acid by oxidizing arsenious acid with air at superatmospheric pressure and at 100° C. + with oxidation promoting catalyst, e. g. iodine.

Pat. 1,993,040. Parasiticide Derived From Higher Alcohols. Mar. 5, 1935. Parasiticide compound R-(CNX), R being aliphatic and CNX being thiocyanate or isothiocyanate.

Pat. 2,006,227. Contact Insecticide. June 25, 1935. Contact insecticide composition lecithin and dispersing agent specifically butyl alcohol or sulfonates fish oil.

Pat. 2,030,093. (Re. 20,869). Parasiticides. Feb. 11, 1936. Parasiticide compounds lauryl alcohol, lauryl esters and lauryl amines. Specifically lauryl xanthate.

Pat. 2,044,934. Insecticidal Spray Materials. June 23, 1936. Insecticide compound RmPbXn R—unsaturated hydrocarbon, X—acid radical, m—at least 2, n—at least 1, m + n = 4. Specifically triethyl lead oleate.

Pat. 2,058,664. Barium Fluosilicate. Oct. 27, 1936. React BaS with H_2SiF_6 to leave excess of neither, decant off liquid and SiO_2 and dry precipitant.

Pat. 2,062,911. Insecticidal Compositions and Processes Using the Same. Dec. 1, 1936. Salts of Reineche's acid as stomach poisons.

Pat. 2,075,359. Insecticide. Mar. 30, 1937. Insecticidal compositions comprised of the fluosilicates of organic bases.

Pat. 2,098,942. Protection of Materials Subject to Parasitic Attack. Nov. 16, 1937. Salts of amino-polymers, especially "Daktose," as fixatives for parasiticides.

Pat. 2,112,381. Stabilized Parasiticidal Compositions. Mar. 29, 1938. Prevent atmospheric inactivation of thiodiarylamines. Specifically uses phenolic compound or aromatic amine.

Pat. 2,112,688. Fly Spray. Mar. 29, 1938. Decyl thiocyanate and a fly spray comprising same, also fly spray comprising mixtures of alkyl-thiocyanates in which the alkyl radical contains 8 to 14 carbon atoms.

Pat. 2,122,781. Parasiticides. July 5, 1938. Naphthenyl thiocyanate, alicyclic terpene thiocyanates, cyclic terpene thiocyanates and insecticidal compositions containing same.

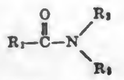
Pat. 2,123,928. Stabilized Parasiticidal Composition. July 19, 1938. Reducing derivative of stable, lower sulfur acid used to stabilize thiodiphenylamine.

Pat. 2,123,929. Photochemically Stabilized Thio-Diarylamine Parasiticidal Composition. July 19, 1938. Thiodiarylamine stabilized against photochemical inactivation by use of ultra violet opacifier.

Pat. 2,146,007. Alkylated Resorcinol. Feb. 7, 1939. Decyl resorcinol, its preparation, and germicidal compositions containing it.

Pat. 2,149,332. Wood Preservation. Mar. 7, 1939. Zinc chloride + sodium dichromate—insoluble residue dissolved by adding chromic acid.

Pat. 2,150,601. Long Chain Alkyl Quaternary Ammonium Fluosilicates. Mar. 19, 1939. Long chain quaternary ammonium fluosilicates and use as pesticides.



Pat. 2,154,433. Process for Preserving Wood. Apr. 18, 1939. Treat wood with steam to "fix" chromated zinc chloride.

Pat. 2,163,104. Chemical Compounds. June 20, 1939. Amino polymer fluosilicates and use as insecticides.

Pat. 2,165,030. Pest Control Composition. July 4, 1939. Equimolar-sulfurized nicotine and its use as pesticide.

Pat. 2,166,118. Insecticide Compositions Containing Heterocyclic Amides. July 18, 1939. Insecticide composition. A carboxylic acid amide having a heterocyclic radical and an aliphatic hydrocarbon residue of at least six carbon atoms.

Pat. 2,166,119. Insecticide. July 18, 1939. Insecticide fly sprays—

R_1, R_2, and R_3 are hydrogen and an aliphatic radical—at least one R having at least 8 carbon atoms.

Pat. 2,166,120. Insecticidal Composition. July 18, 1939. Acid amide + pyrethrum fly spray.

Pat. 2,166,246. Manufacture of Calcium Arsenate. July 18, 1939. Fast mixing and improved control in reacting arsenic acid with lime to produce calcium arsenate low in CO_2-water soluble arsenic.

Pat. 2,194,517. Contact Insecticide. Mar. 26, 1940. Negatively substituted alkyl thiocyanates as insecticides.

Pat. 2,204,066. Preservation of Fibrous Cellulosic Material. June 11, 1940. Treat wallboard pulp with sodium dichromate-zinc chloride.

Pat. 2,208,253. Insecticidal and Fungicidal Composition. July 16, 1940. Copper propional acetonate, copper acetyl acetonate insecticides and fungicides.

Pat. 2,218,181. Pest Control. Oct. 15, 1940. The fungicides of this invention comprise certain esters of maleic and fumaric acids such as diethyl maleate, dimethyl fumarate and diallyl fumarate.

Pat. 2,220,156. Condensation Process and Product. Nov. 5, 1940. Reacting formaldehyde, an ammonium salt and a soluble sulfide to produce the compound $C_6H_{12}N_2S_3$ melting at 183°, useful as a fungicide.

Pat. 2,228,096. Insecticidal Composition. Jan. 7, 1941. "Loro" tobacco dust bentonite mixture.

Pat. 2,262,454. Pest Control. Nov. 11, 1941. Rosin residue dissolved in ethyl alcohol + a wetting agent makes spreader-sticker which promotes good suspension.

Pat. 2,263,254. Fatliquoring Process. Nov. 18, 1941. Leather preserved with phenyl mercury oleate dispersed in fat liquor.

Pat. 2,273,664. Pest Control. Feb. 17, 1942. Ammonia + hydrogen sulfide + formaldehyde reaction product as fungicide and bactericide. Formothialdine, pentamethylene-diaminodisulfide, 3,7-dithia-1,5-diazabicyclo (3.3.1) nonane.

Pat. 2,277,660. Process for Preserving Wood. Mar. 31, 1942. Zinc meta arsenite fixed in wood by heating with steam.

Pat. 2,277,680. Insecticide. Mar. 31, 1942. Insecticidal composition containing a sulfurized N,N-diaryl-arylenediamine in which at least one aryl group is linked to the arylene group in a 1,4-thiazine ring.

Pat. 2,285,184. Pest Control. June 2, 1942. Pest control compositions containing 1-allyl-3-phenyl-thiourea.

Pat. 2,285,409. Pest Control. June 9, 1942. 1,2,4-dithiazoles used for pest control. Specifically xanthane hydride and phenyl thiuret.

Pat. 2,285,410. Pest Control. June 9, 1942. 1,2,4-thiadiazoles used for pest control. Specifically perthiocyanates.

Pat. 2,287,235. Pest Control. June 23, 1942. Cupric chelates of o-(alpha-oxoalkyl)-phenols as fungicides, specifically cupric chelates of salicylaldehyde.

Pat. 2,287,249. Chlorine Derivatives of Benzyl Phenyl Ether. June 23, 1942. A polychlorinated benzyl phenyl ether e. g. trichlorobenzyl phenyl ether.

Pat. 2,307,775. Pest Control. Jan. 12, 1943. N-diethylamines as mothproofing agents, specifically dimethyl cetyl amine, dimethyl stearyl amine, and dimethyl stenyl amine.

Pat. 2,310,789. Linear Polymeric Amidine Salts. Feb. 9, 1943. Linear polymeric amidine salts.

Pat. 2,310,799. Pest Control Composition. Feb. 9, 1943. Pest control compositions containing linear polymeric amidine salts.

Pat. 2,335,384. Pest Control. Nov. 30, 1943. Aryl nitroethylene pesticides

Ar is aromatic, substituted or unsubstituted, R is hydrogen or lower alkyl group.

Pat. 2,336,605. Pesticide. Dec. 14, 1943. Bactericides and fungicides containing linear polymeric guanidine salts.

Pat. 2,342,448. Pest Control. Feb. 22, 1944. 1,6-dithiocyanohexane, 1,10-dithiocyanodecane and dithiocyanoisooctane are potential fly spray candidates.

Pat. 2,347,260. Pest Control. Apr. 25, 1944. Fly spray containing N-isobutylundecyleneamide, pyrethrum, and octyl thiocyanate.

Pat. 2,347,393. Pest Control. Apr. 25, 1944. Polyaryl ethers and thiol ethers as insecticides. Diphenyl ether of hydroquinone and its chlorinated derivatives.

Pat. 2,347,827. Linear Polymeric Isothiourea and Salts Thereof. May 2, 1944. Linear polymeric isothioureas, their acid addition salts and pesticides containing them.

Pat. 2,364,074. Carbonamidine Derivatives. Dec. 5, 1944. Polymethylene-bis-C-(long chain amidine) salts.

Pat. 2,364,075. Disinfectant Compounds. Dec. 5, 1944. Polymethylene-bis-N-(long chain amidine) salts.

Pat. 2,365,047. Pest Control. Dec. 12, 1944. Phenyl xenyl ethers are used as pesticides particularly mothproofing and as a stomach poison.

Pat. 2,377,626. Pest Control. June 5, 1945. Ammonium sulfamate for the control of nematodes.

Pat. 2,387,336. Pest Control. Oct. 23, 1945. Pest control adhesive composition comprising a water insoluble aliphatic amine of at least eight carbon atoms in a linear chain and a cationic dispersing agent.

Pat. 2,388,614. Disinfectant Compositions. Nov. 6, 1945. Bactericides containing long chain basic nitrogen compounds, e. g. amidines and long chain betaines.

Pat. 2,392,733. Mothproofing. Jan. 8, 1946. Polychlorinated benzyl phenyl ethers as mothicides, e. g. trichlorobenzyl phenyl ether.

Pat. 2,402,530. Chemical Process. June 25, 1946. N-isobutyliricinoleamide and its manufacture.

Pat. 2,402,541. Chemical Process. June 25, 1946. Isobutyl undecylenamide prepared by first reacting the castor oil to produce N-isobutyl ricinoleic amide which can then be cracked to give high yields of the undecylenic acid amide and heptaldehyde.

Pat. 2,402,584. Chemical Process. June 25, 1946. Crack N-isobutyl ricinoleic amide to N-isobutylamide of undecylenic acid and heptaldehyde. Form the ricinoleic amide by reflux with excess isobutylamine sufficient to control temperature.

Pat. 2,411,253. Pest Control. Nov. 19, 1946. Compositions containing an acyclic alpha-alamino sulfide useful for pest control.

Pat. 2,420,295. 4,4'Dichlorodiphenyl-1,1,1-Trichlorethane Dispersed in Polyvinyl Acetate. May 13, 1947. Compositions containing DDT dispersed in water solution of hydrolyzed polyvinyl acetate. Useful as insecticide.

Pat. 2,430,288. Hydrophobic Insecticidal Powder. Nov. 4, 1947. Compositions with water repellent properties containing DDT and tricalcium phosphate and an aliphatic amine.

Pat. 2,430,576. Pest Control Composition and Method. Nov. 11, 1947. Pest control composition containing a toxic and a long chain aliphatic amine to impart hydrophobic properties.

Pat. 2,433,106. 2,4-Dinitrophenyl Thiocyanate as a Fungicide. Dec. 23, 1947. Fungicidal composition containing 2,4-dinitrophenyl thiocyanate, mineral oil and an aromatic hydrocarbon solvent.

Patents Relating to Iron Sulfate

Pat. 2,086,237. Manufacture of Ferric Sulfate. July 6, 1937. SO_3 passed over iron sulfate to oxidize to ferric sulfate.

Pat. 2,196,584. Manufacture of Ferric Sulfate. Apr. 9, 1940. Ferric sulfate made by oxidizing ferrous sulfate slurry with HNO_3 above 60° C. May be under pressure. Nitrogen oxides oxidized and recovered as NHO_3.

Patents Relating to Lactic Acid

Pat. 2,013,082. Deodorization of Lactates. Sept. 3, 1935. Purify lactic acid or derivatives by passing ozone thru it.

Patents Relating to Lithium Salts

Pat. 2,021,986. Production of Pure Lithium Compounds From Impure Solutions. Nov. 26, 1935. Treat Li, Na, K solutions with alkali metal silicate to precipitate Li as silicate, then dissolve in acid.

Pat. 2,021,987. Recovery of Values From Lithium Bearing Ores. Nov. 26, 1935. Dissolve Li, Na, and K values from ore-precipitate Li as carbonate, separate precipitate, cool solution to separate Na and K values, return solution containing Li, Na, and K to the leaching step.

Pat. 2,021,988. Production of Lithium Compounds. Nov. 26, 1935. Precipitate Li as carbonate—preferentially dissolve Li in acid. Solution of carbonate precipitate treated to precipitate Li as Li_3PO_4 and Li returned to an ore leaching step.

Pat. 2,022,003. Recovery of Lithium Values From Lithium Bearing Ores. Nov. 26, 1935. Calcine Li ore with $CaCl_2$ to solubilize Li values.

Patents Relating to Nitric Acid

Pat. 1,927,963. Catalyst for Ammonia Oxidation. Sept. 26, 1933. Catalyst for ammonia oxidation compound screen of rhodium or rhodium-platinum alloy.

Pat. 1,994,499. Engraver's Etching Acid of Increased Efficiency. Mar. 19, 1935. Etching acid contains HNO_3 and dissolved Cu, Ag, or Pt.

Pat. 1,994,500. Etching Zinc Plates. Mar. 19, 1935. Etching compound HNO_3 and carboxylic acid, specifically citric, or tartaric. Also their sulfonic acids or saccharids.

Pat. 2,000,576. Mordant. May 7, 1935. Engravers HNO_3 containing ammonium sulfate.

Patents Relating to Pigments

Pat. 2,006,219. Blanc Fixe. June 25, 1935. React barium sulfide and ammonium sulfate to leave no excess of either, wash, dry to volatilize absorbed ammonium sulfide.

Pat. 2,044,954. Alkaline Earth Metal Sulphate. June 23, 1936. React soluble alkaline earth metal compound and a soluble sulfate in presence of a dispersing agent. Specifically soap or goulac and an anion specifically sodium meta phosphate.

Pat. 2,139,013. Pigments. Dec. 6, 1938. Leaded zinc oxide calcined with phosphatic material in furnace having a non-siliceous lining.

Pat. 2,194,526. Paint. Mar. 26, 1940. A basic lead sulfate with a $PbO : PbSO_4$ ratio above 2 : 1, specifically 2 : 1 or 3 : 1 or 4 : 1. This is used in a paint with a drying oil vehicle to improve consistency.

Patents Relating to Plant Regulants and Herbicides

Pat. 2,284,002. Composition and Method (Plant Stimulant). May 26, 1942. Alkali salts of naphthyl-alkane sulfonates may be used as root growth stimulants. Sodium 1-naphthylmethane-sulfonate.

Pat. 2,297,904. Propagation. Oct. 6, 1942. 1,4-dihydronaphthalene-1,4-dicarboxylic acid as a plant growth stimulant.

Pat. 2,300,948. Composition and Method (Plant Stimulant). Nov. 3, 1942. Beta-(1-naphthyl)-ethanol as a plant growth stimulant.

Pat. 2,326,471. Composition and Method. Aug. 10, 1943. Haloaryl acids as plant growth stimulants.

Pat. 2,339,789. Process for Producing Beta-(1-Naphthoyl) Propionic Acid. Jan. 25, 1944. Beta-(1-naphthoyl)-propionic acid is prepared by reacting naphthalene and succinic acid in monochlorobenzene with aluminum chloride catalyst. Concentrated hydrochloric acid is added and the mixture purified.

Patents Relating to Refractories

Pat. 1,923,769. Refractory Material for Use in Metal Casting. Aug. 22, 1933. Baked refractory compound: sand, silicate and zinc oxide.

Pat. 1,999,382. Refractory Material for Use in Metal Castings and Process for Making the Same. Apr. 30, 1935. Bake sand, soluble silicate, and hydrated aluminum oxide.

Pat. 2,031,538. Process for Metal Casting. Feb. 18, 1936. Molds lined with sand the grains of which are bonded thru anhydrous unfused alkali metal silicate and an alkaline earth metal silicate, specifically calcium silicate.

Patents Relating to Resins and Polymers

Pat. 1,995,970. Polymeric Lactide Resins. Mar. 26, 1935. Polymerized lactide resins and process of making them.

Pat. 2,127,248. Process for Preparing Resinous Material and Product. Aug. 16, 1938. Polymerized lactic acid resins reacted with esterifying agents.

Pat. 2,241,900. Preparation of Modified Olefin-Sulphur Dioxide Polysulfones. May 13, 1941. Copolymers of olefins, SO_2 and vinyl-type compounds.

Pat. 2,261,002. Organic Nitrogen Compounds. Oct. 28, 1941. Polymeric quaternary ammonium compounds from ditertiary diamines and dihalides.

Pat. 2,268,620. Insoluble Ammonia-Hydrocarbon Dihalide Condensation Products. Jan. 6, 1942. Resins from polymethylene dihalides and ammonia or certain amines.

Pat. 2,286,726. Process of Flameproofing Cellulosic Material and Product Thereof. June 16, 1942. Flameproofing of polyethyleneimine treated cellulosic materials with fire retardant acids.

Pat. 2,348,705. Ethylene Sulfonyl Polymer. May 16, 1944. Monomeric and polymeric esters of ethylene sulfonic acid.

Patents Relating to Shipping Packages

Pat. 2,149,377. Apparatus for Capping Bottles. Mar. 7, 1939. Mechanism with a number of fingers used to stretch rubber cap evenly and apply it.

Pat. 2,149,378. Process of Packaging. Mar. 7, 1939. Rubber cap applied to bottle, molten paraffin injected inside cap with needle.

Patents Relating to Sodium Phosphates

Pat. 1,967,830. Mold Lubricant for Clay Products. July 24, 1934. In molding clay products, wetting the molds with an aqueous solution of the salt of a polyvalent weak acid, e. g. citric, phosphoric, boric.

Pat. 1,968,544. Phosphoric Acid Purification by Solvent Extraction. July 31, 1934. Extract H_3PO_4 with oxygenated cycloparaffin specifically cyclohexanone.

Pat. 2,165,948. Preparation of Soluble Phosphates. July 11, 1939. React calcium metaphosphate with sodium sulfate to make sodium phosphate.

Pat. 2,174,158. Phosphoric Acid Purification. Sept. 26, 1939. Sulfide, specifically Na_2S used to remove As and Pb from phosphates.

Pat. 2,204,357. Lamellar Trisodium Phosphate Hydrate. June 11, 1940. Thin voluminous TSP flakes made by adding sodium silicate to molten TSP—crystallization inhibited.

Pat. 2,204,358. Lamellar Trisodium Phosphate Hydrate. June 11, 1940. Thin TSP flake includes borax, abopon, etc. as crystallization inhibitors.

Pat. 2,204,364. Lamellar Trisodium Phosphate Hydrate. June 11, 1940. Thin TSP flake includes $SO_4 + CO_3$ as crystallization inhibitors.

Pat. 2,326,949. Formed Tetrasodium Pyrophosphate Composition and Process for Making Same. Aug. 17, 1943. Shotted or flaked TSP is prepared by dispersing in a fluid magma of TSP.

Pat. 2,326,950. Chemical Process and Product. Aug. 17, 1943. Water-softening and detergency is effected by successively using TSPP and then sodium borate, sodium metasilicate, or DSP.

Pat. 2,349,943. Process for Purifying Disodium Phosphate. May 30, 1944. In crystallizing disodium phosphate duohydrate insoluble impurities can be avoided by a preliminary treatment with a soluble barium salt which removes the impurities.

Pat. 2,375,054. Manufacture of Trisodium Phosphate. May 1, 1945. Silica is removed from TSP by the addition of sodium aluminate.

Pat. 2,381,960. Chemical Processes and Products. Aug. 14, 1945. Detergency or water-softening is effected with an alkali such as TSP, sodium hydroxide, sodium carbonate, sodium silicate, etc. and then TSPP.

Dedicated Patents

The following patents and applications held by United States Pipe and Foundry Company, having its principal place of business at Burlington, N. J., have been dedicated to the public of the United States.

Pat. 1,833,025. METHOD FOR HARDENING THE INNER SURFACE OF CYLINDRICAL METAL BODIES. Patented Nov. 24, 1931. Method is especially applicable for hardening the inner surfaces of centrifugal pipe molds. Mold is charged with a multitude of metal balls and then rotated so that balls leave contact with inner surface of mold and then strike opposite side. In this way inside of mold is subjected to hammering action from the balls until its entire inner surface is hardened to a desired point. Groups 33—21—22—23—24; 39—98.

Pat. 1,834,128. METHOD AND APPARATUS FOR IMPROVING THE TEXTURE OF HOLLOW METAL BODIES. Patented Dec. 1, 1931.

Pat. 1,856,874. MANUFACTURE OF CENTRIFUGAL PIPE MOLDS. Patented May 3, 1932.

Pat. 2,349,646. APPARATUS FOR RADIALLY CONTRACTING TUBULAR METAL BODIES. Patented May 23, 1944.

These three patents relate to reclaiming of old metal molds employed for centrifugally casting bell-ended pipes, and the manufacture of such molds which are formed of two or more welded sections. A mandrel is inserted in a welded mold or an old mold, and mold and mandrel inserted in a high-pressure cylindrical container, with packing forming fluid-tight joints between outer surface of mold and inner surface of container. Hydraulic pressure is then applied to exterior surface of mold to effect permanent radial contraction and simultaneous elongation of mold. The mandrel limits deformation of mold. In Pat. 2,349,646 the inventor claims that used molds may be reclaimed by this treatment in one operation. Groups 33—12—21—22—23—24; 39—98.

Pat. 1,845,127. CONVEYER MECHANISM. Patented Feb. 16, 1932. Endless conveyer for moving groups of pipes of different diameters through an annealing furnace has links of varying length connected end to end to form an endless chain for engaging sprocket wheels having link-engaging faces of multiple pitch. Unevenly spaced pipe-engaging fingers connected to the links extend upwardly through bottom of furnace and above runways to engage rear surface of pipes and roll them through furnace. Groups 33—12—21—22—23—24.

Pat. 1,849,072. RUNNER TROUGH FOR CENTRIFUGAL CASTING MACHINES. Patented Mar. 15, 1932. Runner for centrifugal pipe casting machines has longitudinally extending channels in its sides and bottom which are closed by a jacket embracing sides and bottom of runner. A cooling fluid is circulated through the channels. Group 33—12—31—22—23—24.

Pat. 1,856,863. PIPE ANNEALING FURNACE. Patented May 3, 1932. The runways of this furnace and the fingers of an endless conveyer are constructed and arranged so that groups of pipes being transported through furnace will not strike the fingers in front of them. The runways slant upwardly from entrance to exit end of furnace. The pipe-engaging ends of the fingers are formed with considerable rearward slant. The rear undersides of the pipes maintain constant contact with the slanting ends of the fingers as the fingers push and roll pipes forwardly on the runways through furnace. Group 33—12—25.

Pat. 1,856,890. PIPE JOINT PACKING. Patented May 3, 1932. Resilient packing ring for joints between bell and spigot-ended pipes consists of a fibrous ring thoroughly impregnated and saturated with a plastic compound which has the characteristics of partially liquefying when sufficiently heated and congealing at normal temperatures. Compound consists of a mixture of glue and glycerin having sufficient phenol added to render compound non-reactive to chemicals in fluids flowing through pipe. Groups 32—93; 33—24.

Pat. 1,890,498. RUNWAY FOR PIPES. Patented Dec. 13, 1932. Runway is especially adapted to receive hot cast pipes after removal from centrifugal pipe casting molds. Runway consists of a plurality of vertically adjustable pivoted frames having tracks extending upwardly from the frames on opposite sides of their pivotal lines of support. This permits frames and tracks to automatically adjust themselves under weight of a supported pipe so that all tracks are maintained in constant contact with pipe regardless of whether pipe is straight or not. Group 33—12—21—22—23—24.

Pat. 1,897,631. METHOD FOR CASTING PIPES. Patented Feb. 14, 1933.

Pat. 1,899,383. CENTRIFUGAL PIPE CASTING APPARATUS. Patented Feb. 28, 1933.

These two patents show a method and apparatus for centrifugally casting pipes. The speed of the mold is automatically increased during casting of the final end of a pipe to counteract the tendency of the metal to flow by gravity to lower end of mold during this stage of casting operation. This greatly diminishes objectionable thinning down of end of pipe. Groups 33—12—24; 36—19.

Pat. 1,903,220. FLANGE PROTECTOR. Patented Mar. 28, 1933. Protector prevents machine surface of flanged end of a pipe from becoming marred during handling. It consists of a metal disc (with a large hole in its center) for abutting face of pipe flange, and a metal ring for surrounding edge of flange. Bendable tabs welded at spaced points to margin of disc are adapted to be bent over ring and downwardly against back of pipe flange to hold assembly in place. Group 33—73.

Pat. 1,939,703. FEEDING DEVICE FOR FINELY DIVIDED MATERIAL. Patented Dec. 19, 1933.

Pat. 1,949,433. METHOD AND APPARATUS FOR CASTING PIPES CENTRIFUGALLY. Patented Mar. 6, 1934.

Pat. 1,954,892. CENTRIFUGALLY CAST CAST IRON PIPE. Patented Apr. 17, 1934.

Pat. 1,963,146. METHOD OF CASTING CENTRIFUGAL PIPES. Patented June 19, 1934.

Pat. 1,963,147. CENTRIFUGAL PIPE CASTING APPARATUS. Patented June 19, 1934.

Pat. 1,963,148. CENTRIFUGAL PIPE CASTING MACHINE. Patented June 19, 1934.

Pat. 1,963,149. CENTRIFUGAL PIPE CASTING APPARATUS. Patented June 19, 1934.

Pat. 1,963,150. CENTRIFUGAL PIPE CASTING MACHINE. Patented June 19, 1934.

Pat. 1,971,385. CAST IRON PIPE. Patented Aug. 28, 1934.

Pat. 1,982,762. METHOD FOR CASTING METALLIC ANNULI. Patented Dec. 4, 1934.

Pat. 2,018,025. METHOD OF CENTRIFUGALLY CASTING PIPE. Patented Oct. 22, 1935.

Pat. 2,162,829. MOLD COATING MECHANISM FOR METALLIC CENTRIFUGAL PIPE MOLDS. Patented June 20, 1939.

These twelve patents relate to methods and apparatus particularly adapted for centrifugally casting bell-ended pipes in which finely divided dry coating material is progressively applied to a rotating mold by directing a jet of dry air charged with the dry coating against adjacent areas of mold surface. Centrifugal force created by rotation of mold uniformly distributes the coating and holds it in place during the casting operation. The jet of air is discharged from a jet nozzle secured to one side of either runner or dump trough.

In Pat. 1,949,433 the charged jet progressively applies the coating in a helical band to mold slightly in advance of inflowing molten metal issuing from spout of runner so that the coating and casting operation are performed during a single outward run of the mold carriage.

In Pat. 1,963,149 entire mold is progressively coated as dump trough is projected into operative position within mold.

Pat. 2,162,829 has two jet nozzles secured to side of runner, one to coat bell end of mold and the other to coat remainder of mold.

Pat. 1,939,703 shows an adjustable dispensing device for uniformly charging the jet of air with coating material prior to its discharge from nozzle.

In Pat. 1,963,147 entire mold is coated immediately prior to dumping of molten metal from a dump trough into mold by directing the charged jet of air against successive longitudinal areas of mold. The jet of air is charged with coating material as it issues from nozzle by dumping coating material from a tiltable V-shaped container into path of jet before it contacts mold. Nozzle and container are almost as long as the mold to be coated. Group 33—12—21—22—23—24.

Pat. 1,953,180. CAST IRON ANNULUS AND METHOD OF MANUFACTURING THE SAME. Patented Apr. 3, 1934. This patent provides a method of annealing pipes of cast iron which consists of the following steps: (1) raising temperature of the pipes to a point above 1625° F. but not exceeding 1725° F. and maintaining the temperature at approximately 1700° F. for a definite period; (2) reducing temperature to a range between 1450° F. and 1350° F. and maintaining it within such range for a definite period; (3) further reducing the temperature to approximately 1200° F.; and (4) thereafter cooling to atmospheric temperature in any convenient way. Group 33—12—21—22—23—24.

Pat. 1,971,376. APPARATUS FOR COATING CENTRIFUGAL PIPE MOLDS. Patented Aug. 28, 1934. This patent shows an elongated tapered nozzle suitable for discharging a jet of air loaded with dry powdered coating material laterally from one side to coat a centrifugal pipe mold. The nozzle, formed with an elongated internal chamber, has three parallel rows of closely spaced holes in one side, the center row being staggered with respect to the other rows. Group 33—24.

Pat. 1,979,141. PIPE JOINT AND PIPE JOINT GASKET. Patented Oct. 30, 1934. Elastic and compressible tapered gasket for insertion into a joint between bell and spigot ends of pipes has its butt end embraced and reinforced with impregnated canvas so that it may be expanded into joint without injurious distortion. When an annular gland is forced inwardly to expand gasket, gasket is progressively expanded first into its tapered seat and then into firm contact between cylindrical portions of joint adjacent seat. Groups 30—31; 32—93.

Pat. 1,982,044. PIPE JOINT. Patented Nov. 27, 1934. In this pipe joint between bell and spigot ends of pipes an elastic and compressible gasket is expanded into its seat by an annular gland and molten metal poured into joint. Bell end of pipe and gland are formed with lugs so that, when metal solidifies, gland is firmly anchored in place. After solidification, split rings and bolts and a dam having a pouring gate are removed. Modification is shown for coupling cylindrical ends of pipes together. Groups 30—31; 32—93.

Pat. 1,986,985. COATED METALLIC CENTRIFUGAL PIPE MOLD. Patented Jan. 8, 1935. Metallic centrifugal pipe mold has a composite coating of dry, powdered material admixed with sand applied progressively to its inner surface by a carrier jet of air. Sand in deposited coating contacts surface of mold and contacts molten metal poured into mold. Inventor claims the sand is not sufficiently embedded in the finished casting to impair its smoothness, and that it may be easily brushed away. Group 33—12—21—22—23—24.

Pat. 1,988,470. CENTRIFUGAL PIPE CASTING APPARATUS. Patented Jan. 22, 1935.

Pat. 1,988,471. CENTRIFUGAL PIPE CASTING APPARATUS. Patented Jan. 22, 1935.

These two patents show an annular centrifugal pump secured to and surrounding a mold for rotation therewith to circulate fluid in water box to insure proper cooling of mold, especially bell end of mold to which a driving sleeve is connected. The space between driving sleeve and mold is divided by a partition into an inner and outer annular chamber so that pump will circulate water through the chambers and then back into box. In Pat. 1,988,471 intake end of pump is connected to an annular channel formed by the space between outer surface of mold and inner surface of a perforated bracing sleeve surrounding center of mold. Modification shown. Group 33—12—21—22—23—24.

Pat. 2,027,453. CENTRIFUGAL PIPE CASTING APPARATUS. Patented Jan. 14, 1936. This patent shows a chute for delivering molten metal to an aligned trough in which the interior curvature of the chute is such as to cause a stream of molten metal to flow through chute and trough with a minimum of turbulence. This greatly lessens tendency of stream flowing through chute to throw out sprays, and also reduces splashing of metal over edges of trough, which would result in defective castings. Diagrams illustrating convenient ways of laying out interior curvature of chute as well as examples of chutes of different size are given in patent. Group 33—12—21—22—23—24.

Pat. 2,032,576. PIPE JOINT. Patented Mar. 3, 1936. Pipe joint between bell and spigot ends of very large pipes may be caulked from inside pipe. Bell and spigot ends are slightly tapered and annularly grooved. A gasket lining of lead is cast into bell end of pipe at foundry. Spigot end is forced into bell end with a jamming fit. Gasket is then expanded by a caulking tool into grooves in spigot end. Group 33—24.

Pat. 2,128,327. METHOD AND APPARATUS FOR COATING MOLDS. Patented Aug. 30, 1938. In this patent particles of dry granular coating material entrained in a jet of air are electrically charged prior to contact with an electrically grounded rotating mold. The jet loaded with the coating material is passed through a field of high potential static electricity, which is preferably created and maintained between nozzle and inner surface of mold. Group 33—12—21—22—23—24.

Pat. 2,165,051. FLEXIBLE PIPE JOINT. Patented July 4, 1939. In this flexible joint of the ball and socket type the socket member has a seat in the form of a spherical segment to receive inner portion only of ball. Outer end of socket is flared to provide a packing chamber surrounding outer portion of ball. When a resilient gasket is expanded into packing chamber by edge of an annular gland, the gasket forms a compressed resilient seat for outer portion of ball. Groups 30—31; 32—9; 33—24.

Pat. 2,165,052. FLEXIBLE PIPE JOINT. Patented July 4, 1939. In this flexible joint of the ball and socket type the inner surface of socket member is spaced from ball member with a resilient gasket, of substantially I-shape in cross section, expanded in the space between them. An annular V-shaped spring is inserted between each pair of arms at opposite sides of gasket. Outer arms of gasket seat in an annular recess in socket member, and inner arms seat on ball member. The wedge-shaped inner edge of an annular gland is forced into outer spring of gasket to expand and hold gasket in place. Line pressure through joint will tend to exert lateral thrust upon gasket to increase tightness of joint. Groups 30—31; 32—93; 33—24.

Pat. 2,239,530. LINING COMPOSITION FOR CENTRIFUGAL CASTING MOLDS. Patented Apr. 22, 1941. This patent shows a coating composition of refractory material consisting of a mixture of fibrous particles and sand to form a sponge-like compressible lining for centrifugal pipe molds. Binding agents may be added to the lining if desired. Group 33—12—21—22—23—24.

Pat. 2,246,063. METHOD OF PRODUCING REFRACTORY LININGS OF CENTRIFUGAL CASTING MOLDS. Patented June 17, 1941.

Pat. 2,255,896. PROCESS FOR THE PRODUCTION OF CENTRIFUGAL CASTINGS. Patented Sept. 16, 1941.

Pat. 2,289,681. MOLD FOR CENTRIFUGAL CASTINGS. Patented July 14, 1942.

In these three patents a rotating mold is coated with loose, dry, sand-like material by a jet of air charged with the coating material. After formation of the coating on entire surface of mold, a binder is introduced into the rotating mold to cause innermost particles of the coating to adhere to each other without closing the spaces between them. Pat. 2,289,681 shows a mold having sponge-like walls coated in this way which permits escape of gases radially through coating and walls of mold during casting operation. Group 33—12—21—22—23—24.

Pat. 2,262,184. METHOD AND APPARATUS FOR COATING MOLDS. Patented Nov. 11, 1941. This patent shows a rectangular expansion chamber with baffle means in chamber so that when a jet of air loaded with dry coating material is discharged from chamber to progressively coat a rotating mold, the velocity of the jet is substantially reduced. Inventor claims this makes possible a more uniform depositing of coating material on mold surface without any substantial disturbance of deposited coating by jet of air issuing from expansion chamber. Group 33—12—21—22—23—24.

Pat. 2,267,896. CENTRIFUGAL CASTING APPARATUS. Patented Dec. 30, 1941.

Pat. 2,267,958. CENTRIFUGAL CASTING APPARATUS. Patented Dec. 30, 1941.

These two patents show a movable auxiliary support for supporting and guiding outlet end of a runner into a centrifugal mold prior to casting operation. Support also steadies runner and supports it against lateral movement during casting operation. The support (which is carried by water box) has a pair of rods or plungers telescoped within tubular supports on opposite sides of water box, and a grooved roller on lower end of a resilient hanger for engaging under side of trough. At beginning of casting operation, the support moves outwardly with box until

it is stopped at a pre-determined point. Support then remains stationary as box continues its outward movement so that support will be spaced from box when outlet end of trough is withdrawn from mold. Group 33—12—21—22—23—24.

Pat. 2,278,555. CENTRIFUGAL CASTING APPARATUS. Patented Apr. 7, 1942. In this patent all necessary adjustment of rollers, which support a centrifugal mold in a water box, can be made exteriorly of box. Each pivoted roller supporting frame has three adjusting rods extending outwardly through one side of box near its bottom. One of the rods connected to top of roller frame may be adjusted to move roller towards or away from center of box. The other rods connected to spaced adjustable bearings in base of roller frame may be adjusted to bring roller into alignment with outer surface of mold, or vary such alignment to so cant roller as to provide an end thrust upon mold in one direction or other, as may be desired. Group 33—12—21—22—23—24.

Pat. 2,313,926. CENTRIFUGAL CASTING APPARATUS. Patented Mar. 16, 1943. In this patent a driving sleeve is clamped to bell end of mold by a flange ring. A metal ring interposed between sleeve and mold provides satisfactory driving connection between sleeve and mold, and acts as an effective water seal between sleeve and mold. The ring also eliminates the necessity of changing the driving sleeve when a mold of one size is replaced by a mold of another size. All that is necessary is to substitute a ring of different thickness and a flange ring conforming to change in diameter of mold. Group 33—12—21—22—23—24.

Pat. 2,346,861. METHOD AND APPARATUS FOR GRINDING MOLDS. Patented Apr. 18, 1944. Apparatus is designed primarily for taper-grinding the bore of heavy steel molds used in centrifugally casting pipe and the like. A mold to be ground is supported on and rotated by roller units of the apparatus. An air-cooled grinding wheel rotating in a direction opposite to that of mold is reciprocated from end to end of bore of mold while in gravitational contact with surface of mold. Reciprocating movement of grinding wheel is automatically controlled so that it moves inwardly within bore of mold from one end to other at a uniformly decreasing speed, and at a uniformly increasing speed in reverse direction. Grinding wheel is mounted on the end of a long shaft inside a tubular support connected to a reciprocating wheeled carriage, which is hydraulically driven. A motor mounted on carriage drives grinding wheel. Groups 33—21—22—23—24; 35—41.

Pat. 2,437,626. METHOD OF RECLAIMING USED METAL MOLDS. Patented Mar. 9, 1948. Method of reclaiming used metal molds employed in centrifugally casting pipe consists in removing a longitudinal strip from wall of mold, then applying extraneous pressure to outer surface of mold at various points to bring the edges into abutting relation, then welding the edges together. This partially closes fissures in mold bore, so that it is not necessary to machine away as much material to renew casting surface. Groups 33—12—21—22—23—24; 39—98.

Application Serial No. 585,467. SLURRY DISTRIBUTING SYSTEMS. Filed Mar. 29, 1945. This application relates to apparatus whereby a slurry for coating molds may be prepared at a central mixing and pumping station and distributed to a plurality of spray heads for a battery of centrifugal pipe casting machines. The slurry from a supply tank is continuously circulated through a manifold and through the spray heads and discharged back into supply tank to maintain solids in the slurry in suspension at all times. Individual supply pipes from manifold are connected to the spray heads, but individual return pipes from spray heads discharge directly into the supply tank. Stoppage in any of the supply or return pipes of spray heads may be readily determined by an operator observing discharge of slurry from return pipes. Group 33—12—21—22—23—24.

Application Serial No. 729,219. APPARATUS FOR LINING HOLLOW BODIES WITH MORTAR. Filed Feb. 18, 1947. This application relates to apparatus for lining the interior surface of hollow fittings, such as T's, Y's, and L's, with a protective coating of mortar or the like. A constant stream of prepared mortar is conveyed to the interior of a rapidly rotating distributor head which applies coating as the head is reciprocated through fitting. Group 33—21—22—23—24.

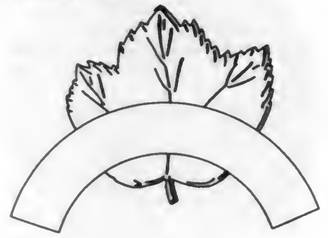
Application Serial No. 22,375. CENTRIFUGAL CASTING APPARATUS. Filed Apr. 21, 1948. Application relates to centrifugal pipe casting apparatus wherein a coating of refractory material is progressively applied in a helical band to entire surface of a rotating mold prior to casting operation. The coating device and runner of this apparatus are mounted in parallel spaced-apart relation on a carriage. The carriage may be shifted transversely back and forth relative to mold carriage to selectively bring either the coating device or runner into or out of alignment with inner end of mold. Coating device and runner are alternately projected into and out of mold to perform their functions. Thus, the coating device is outside the water box during casting operation so that it is not subjected to intense heat of molten metal. To prevent collisions, automatic controls are provided so that when mold carriage is moving, other carriage cannot move, and vice versa. Group 33—12—21—22—23—24.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 21, 1948

[VOL. 617. No. 3]

ACT OF 1905



The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 499,008. POLORON PRODUCTS, INC., New Rochelle, N. Y. Filed Mar. 26, 1946.

FOR CHARCOAL.
Claims use since May 1939.

CLASS 2

RECEPTACLES

Ser. No. 519,857. COHOES ENVELOPE COMPANY, INC., Cohoes, N. Y. Filed Mar. 31, 1947.

Corsetvelope

FOR PAPER MERCHANDISE ENVELOPES PARTICULARLY FOR CORSETS.
Claims use since July 1935.

Ser. No. 519,858. COHOES ENVELOPE COMPANY, INC., Cohoes, N. Y. Filed Mar. 31, 1947.

Tievelope

FOR PAPER MERCHANDISE ENVELOPES PARTICULARLY FOR TIES.
Claims use since 1937.

Ser. No. 519,861. COHOES ENVELOPE COMPANY, INC., Cohoes, N. Y. Filed Mar. 31, 1947.

Shirtvelope

FOR PAPER MERCHANDISE ENVELOPES PARTICULARLY FOR SHIRTS.
Claims use since 1936.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 492,000. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Nov. 21, 1945.

FARM MASTER

The portrait shown in the drawing is fanciful.

FOR PHARMACEUTICAL AGENTS USED IN ANIMAL AND PLANT HUSBANDRY, AND AGAINST HOUSEHOLD AND FARM PARASITES, INCLUDING, LIVESTOCK INSECTICIDE (DRY), PHENOTHIAZINE (DRENCH), NICOTINE SULPHATE INSECTICIDE, POULTRY DIETARY MINERAL, LIVESTOCK DIETARY MINERAL, CODLIVER OIL, PINE OIL DISINFECTANT, LIGHT MINERAL OIL (MEDICINAL), POULTRY WORM TABLETS, MILD TINCTURE OF IODINE, ANIMAL DIETARY MINERAL BLOCKS, PETROLATUM, SODIUM FLUORIDE (LICE KILLER), TOBACCO POWDER FOR USE AGAINST ANIMAL AND PLANT PARASITES, MANGANESE SULPHATE, WOUND DRESSING, WHEAT GERM OIL, WORM BOMBS FOR INTERNAL VETERINARY ADMINISTRATION, POULTRY INHALANT, VITAMIN A AND D FEEDING OIL, VITAMIN "D" B-G MIX, DEHORNING STICKS (SODIUM HYDROXIDE), FLY SPRAY, SULFANILAMIDE UREA OINTMENT, EGG PRESERVATIVE (WATER GLASS), SCREW WORM KILLER, DISINFECTANT, UDDER OINTMENT, CATTLE GRUB DUST (FOR EXTERNAL TREATMENT AGAINST LIVESTOCK PARASITES SUCH AS WEATHER FLIES, GRUBS, AND LICE), DIP AND DISINFECTANT, HOUSEHOLD INSECT SPRAY, PINE ODOR DISINFECTANT, ROOST PAINT (INSECTICIDE), DEHORNING PASTE, PINK EYE POWDER, STIPTIC POWDER, SULFANILAMIDE-IODINE DUSTING POWDER, SARCOPTIC AND PSOROPTIC MANGE OIL.

Claims use since Jan. 15, 1941, on livestock insecticide, phenothiazine (drench), and petrolatum; since July 15, 1941, on nicotine sulphate insecticide, poultry mineral, livestock mineral, codliver oil, sodium fluoride (lice killer), tobacco powder, and manganese sulphate; since Jan. 15, 1942, on pine oil disinfectant, light mineral oil, vitamin "D" B-G mix, and pine odor disinfectant; since July 15, 1942, on poultry worm tablets, dehorning sticks, and dehorning paste; since Jan. 15, 1943, on mild tincture of iodine, mineral blocks, fly spray, and household insect spray; since July 15, 1943, on wound dressing, and sulfanilamide urea ointment; since Jan. 15, 1944, on poultry inhalant, vitamin A and D feeding oil, egg preservative, screw worm killer, disinfectant, cattle grub dust, dip and disinfectant, and roost paint (insecticide); since July 15, 1944, on pink eye powder; and since Aug. 15, 1944, on wheat germ oil, worm bombs, udder ointment, stiptic powder, sulfanilamide-iodine dusting powder, and sarcoptic and psoroptic mange oil.

Ser. No. 516,835. MAX HAEFELI, Basel, Switzerland. Filed Feb. 3, 1947.

PONTHACRYL

FOR DENTIFRICES, DENTURE POWDERS, DENTAL PLATE SECURING PREPARATIONS, AND CHEMICO-PHARMACEUTICAL PREPARATIONS USED IN DENTAL PRACTICE.
Claims use since 1944.

Ser. No. 518,986. ANTHONY SMITH AND COMPANY, Elmhurst, N. Y. Filed Mar. 13, 1947.

No claim is made to the word "Salve" apart from the mark as shown. The portrait is that of Anthony Francis Smith, deceased.
FOR HEALING SALVE.
Claims use since Nov. 29, 1898.

Ser. No. 525,162. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed June 28, 1947.

P-A-D

FOR MEDICINAL PREPARATION FOR USE AS A VASOCONSTRICTOR AND ANTISPASMODIC.
Claims use since Apr. 10, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 503,374. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed June 6, 1946.

ILCO

FOR BUILDER'S HARDWARE AND PARTS THEREOF—NAMELY, KNOBS, HANDLES, ESCUTCHEONS, BUTTS, HINGES; WINDOW HARDWARE UNITS AND PARTS THEREOF—NAMELY, ADJUSTERS, LIFTS, BARS, SASH PULL RINGS, SASH PULL SOCKETS, CASEMENT WINDOW OPERATORS, SASH PIVOTS, DOOR CHECKS, CLOSERS; AND DOOR AND FINISHING HARDWARE—NAMELY, ESCUTCHEON PLATES, GRILLES, DOOR KNOCKERS, DOOR STOPS, DOOR PULLS, MORTICE BOLTS, EXTENSION BOLTS, BARREL BOLTS, CHAIN AND FOOT BOLTS.
Claims use since Jan. 1, 1921.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 489,412. PASSAIC ANALYTICAL LABORATORIES, INC., Passaic, N. J. Filed Oct. 4, 1945.

The words "Passaiac Analytical Laboratories, Inc., Passaic, N. J." are disclaimed apart from the mark as shown.
FOR ELECTRICAL APPARATUS—NAMELY, COMBINED AIR-HEATER AND SPRAYER FOR DETERGENTS; AIR HEATERS, DEHYDRATING APPARATUS AND AIR PURIFYING APPARATUS FOR USE WITH SPRAYERS FOR DETERGENTS.
Claims use since Sept. 17, 1945.

Ser. No. 503,362. GENERAL LUMINESCENT CORPORATION, Chicago, Ill. Filed June 6, 1946.

LUMI-TONE

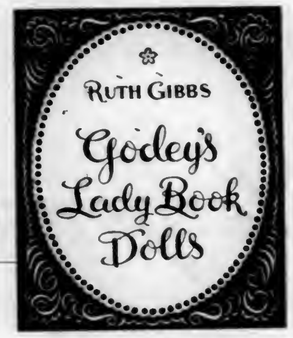
The word "Tone" is disclaimed apart from the mark.
FOR GLASS TUBING PRE-COATED WITH FLUORESCENT CHEMICALS FOR ASSEMBLY WITH ELECTRODES AND OTHER PARTS TO FORM COMPLETE FLUORESCENT LAMP TUBES.
Claims use since Jan. 1, 1940.

Ser. No. 506,720. M. L. ABRAMS COMPANY, Cleveland, Ohio. Filed Aug. 2, 1946.

JOG-A-WAY

The words "Abrams" and "Jog" are disclaimed apart from the mark.
FOR ELECTRICALLY OPERATED AGITATING AND PAPER ALIGNING MACHINES.
Claims use since Feb. 25, 1946.

Ser. No. 513,562. THE GENERAL TIRE & RUBBER COMPANY, Akron, Ohio. Filed Dec. 2, 1946.



No claim is made to the words "The Battery," "Fast Charger," or "Super" apart from the mark.
FOR STORAGE BATTERY CHARGERS.
Claims use since Aug. 1, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 524,702. RUTH GIBBS, INC., Flemington, N. J. Filed June 24, 1947.

The words "Ruth Gibbs Godey's" and "Dolls" are disclaimed except as a part of the mark.
FOR DRESSED DOLLS.
Claims use since May 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 498,894. GEORGE LEO HALL, doing business as Jenny Equipment Service, Atlanta, Ga. Filed Mar. 25, 1946.

JEN-E-QUIP

FOR RADIATOR FLUSHING GUNS AND A DEGREASER UTILIZED AS A CLEANER ELECTRICALLY OPERATED BY CIRCULATING A SOLVENT OR SOLVENT VAPOR OVER GREASE LADEN AUTOMOTIVE TRANSMISSIONS AND DIFFERENTIALS.
Claims use since July 15, 1945.

Ser. No. 521,367. SPECIALLOID LIMITED, London, England. Filed Apr. 25, 1947.

SPECIALLOID

FOR PISTONS FOR ENGINES AND FOR AIR COMPRESSORS; AND CYLINDER LINERS AND VALVES FOR INTERNAL COMBUSTION ENGINES.
Claims use since 1935.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 492,164. TRENDICATOR SYSTEMS CO., Berkeley, Calif., assignor to Trendicator Systems Co., San Francisco, Calif., a corporation of California. Filed Nov. 24, 1945.

The drawing is lined to represent the colors green and red.
FOR VISUAL CONTROL BOARDS COMPRISING A MECHANICAL DEVICE INVOLVING APPARATUS FOR MOVABLY SUPPORTING SLIDABLE TAPES ACROSS AN INFORMATION PANEL TO VISUALLY INDICATE CURRENT TRENDS RELATING TO INVENTORY, PRODUCTION, AND OTHER MANAGEMENT PROBLEMS.
Claims use since Aug. 8, 1945.

Ser. No. 509,037. MYER ROSENBERG, Chicago, Ill. Filed Sept. 13, 1946.

MAGNI-CAL-RULE

The syllable "Rule" is disclaimed except when used in the mark as shown.
FOR DESK ARTICLE COMPRISING A RULE AND CALENDAR ASSOCIATED WITH IT.
Claims use since July 1, 1946.

Ser. No. 511,200. CARDINAL STRITCH COLLEGE, Milwaukee, Wis. Filed Oct. 21, 1946.

MAGIC-EYE

FOR CABINET FACED BY AN ELECTRICAL CONTACT BOARD, TOPPED BY A LIGHT SIGNAL, AND ALSO CONTAINING RACKS FOR RETAINING INDICIA-BEARING CARDS, THE ENTIRE UNIT BEING DESIGNED FOR EDUCATIONAL PURPOSES.
Claims use since Feb. 27, 1946.

Ser. No. 511,211. GROVER PHOTO PRODUCTS, Los Angeles, Calif. Filed Oct. 21, 1946.

FOTO SURE

The word "Foto" is disclaimed apart from the mark shown.
FOR PHOTOGRAPHIC SAFE LIGHTS.
Claims use since Aug. 1, 1946.

Ser. No. 514,572. TIKERN CORPORATION, Brooklyn, N. Y. Filed Dec. 19, 1946.

LUMENATE

FOR OPTICAL FILTERS.
Claims use since Nov. 25, 1946.

Ser. No. 517,019. THE SPRAGUE METER COMPANY, Bridgeport, Conn. Filed Feb. 5, 1947.

ZEPHYR

FOR GAS METERS AND COMBINATION GAS METERS AND UNITS FOR CONTROLLING AND REGULATING GAS PRESSURE.
Claims use since December 1946.

Ser. No. 522,791. VOGUE OPTICAL MFG. COMPANY, INC., New York, N. Y. Filed May 22, 1947.

Topper

FOR OPTICAL FRAMES.
Claims use since Feb. 21, 1947.

Ser. No. 525,729. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 2, 1947.

FOR TEMPERATURE INDICATORS, TEMPERATURE RECORDERS, THERMOSTATS, THERMO-SWITCHES, AND THERMO-RESPONSIVE ELECTRIC CIRCUIT CONTROLS AND PARTS THEREOF.
Claims use since on or about January 1945.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 502,134. HAMILTON WATCH COMPANY, Lancaster, Pa. Filed May 15, 1946. Under 10-year proviso.

HAMILTON

FOR MEN'S AND WOMEN'S POCKET WATCHES AND WRIST WATCHES.
Claims use since 1892 for the word "Hamilton"; and since Jan. 1, 1909, as to the mark as presented.

STYRATOP

FOR LAMINATED PLASTIC FACED TABLE TOPS.
Claims use since June 27, 1946.

Ser. No. 517,030. ALLIED DISPLAY MATERIALS, INC., New York, N. Y. Filed Feb. 6, 1947.

AD
ALLIED DISPLAY

FOR DISPLAY STANDS FOR DISPLAYING MERCHANDISE IN STORES OR STORE WINDOWS, SHELVES FOR THE SAME.
Claims use since Dec. 1, 1944.

Ser. No. 525,480. FEDERAL BUSINESS PRODUCTS, INC., New York, N. Y. Filed July 1, 1947.

Vue-fax

FOR FILING CABINETS.
Claims use since Mar. 21, 1947.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 509,340. THE GRISCOM RUSSELL COMPANY, New York, N. Y. Filed Sept. 19, 1946.

R-FIN

The word "Fin" is disclaimed apart from the mark.
FOR PIPES AND TUBING OF COPPER, ALUMINUM, IRON, STEEL, AND OTHER METALS PROVIDED WITH HEAT RADIATING FINS.
Claims use since Aug. 21, 1946.

CLASS 35

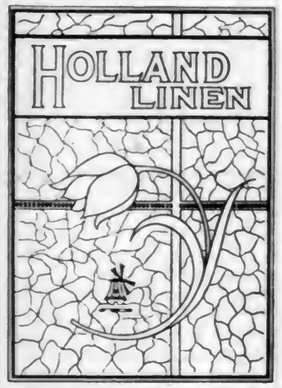
BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 525,394. OAKES & COMPANY, Chicago, Ill. Filed July 1, 1947.

FARMITT

FOR LEATHER BELTS FOR USE ON INDUSTRIAL, DOMESTIC, AND AGRICULTURAL MACHINERY; BELT LACINGS FOR USE ON ALL FLAT BELTS FOR TRANSMISSIONS AND CONVEYORS; WASHERS MADE OF FIBER, RUBBER, AND LEATHER; AND BLOWOUT PATCHES, RUBBER BELTING, FAN BELTS, GARDEN HOSE, COTTON AND LEATHER MACHINE BELTING, AND GASKETS.
Claims use since May 22, 1947.

CLASS 37



PAPER AND STATIONERY

Ser. No. 526,051. WESTERN TABLET & STATIONERY CORPORATION, Dayton, Ohio. Filed July 3, 1947.

Helmet

FOR BLANK BOOKS, I. E., ACCOUNT, DATA, AND ORDER BOOKS.
Claims use since 1926.

Ser. No. 526,055. WESTERN TABLET & STATIONERY CORPORATION, Dayton, Ohio. Filed July 3, 1947.

FOR PAPER TABLETS; PAPETERIES, I. E. STATIONERY COMPRISING ENVELOPES AND/OR PAPER EITHER FLAT OR FOLDED PUT UP IN BOXES, PORTFOLIOS, OR BANDED PACKAGES; AND ENVELOPES.
Claims use since Feb. 15, 1942.

Ser. No. 526,061. WESTERN TABLET & STATIONERY CORPORATION, Dayton, Ohio. Filed July 3, 1947.

The silhouette of the human head shown in the drawing is merely fanciful.
FOR PAPER TABLETS.
Claims use since 1927.

Unicar

FOR POCKETBOOKS, BILLFOLDS, AND WALLETS.

Claims use since Jan. 20, 1948.

Ser. No. 550,428. MORRIS, MANN & REILLY, INC., Chicago, Ill. Filed Feb. 24, 1948. Under section 2f of the act of 1946.

Sac-de-Perle

FOR HANDBAGS, WALLETS, OVERNIGHT BAGS, TOILET CASES, AND PORTFOLIOS, FOR MEN AND WOMEN.

Claims use since February 1936.

CLASS 4

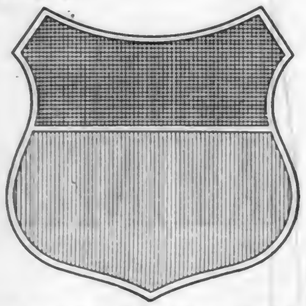
ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 534,398. VALLEY CHEMICALS CO., Germantown, Ohio. Filed Sept. 12, 1947.

XONOX

FOR DETERGENT CLEANING COMPOUND IN LIQUID FORM ADAPTED FOR USE AS AN ALL-PURPOSE CLEANER.

Claims use since Aug. 16, 1947.



Ser. No. 541,928. FULD BROS., INC., Baltimore, Md. Filed Nov. 21, 1947.

POWERPHYL

FOR SCRUB SOAP.

Claims use since Sept. 16, 1947.

Ser. No. 545,343. CONGOLEUM-NAIRN, INC., Kearny, N. J. Filed Dec. 24, 1947.

The upper portion is cross lined to indicate black and the lower portion is vertically lined to indicate red. Applicant claims ownership of registrations Nos. 247,213, 291,477, 299,946, 330,215, 368,487, 368,488, and 369,035.

FOR LIQUID COMPOUNDS FOR CLEANING LINOLEUM, ASPHALT TILE, AND SIMILAR FLOOR AND WALL COVERINGS.

Claims use since Apr. 5, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 501,921. MUTUAL DEALERS WHOLESALE, INC., St. Paul, Minn. Filed July 14, 1947.

Worthmore

FOR METHYL ALCOHOL ANTI-FREEZE, NON-FREEZE LIQUID FOR TRACTOR TIRE BALLAST, MEDICATED HOG OIL, STOCK DIP, INSECT BLIGHT CONTROL POWDER AND DICHLORODIPHENYL-TRICHLOROETHANE POWDER.

Claims use since Oct. 1, 1936.

Ser. No. 519,812. JULIUS GOLDNER, doing business as Excel Chemical Company, Brooklyn, N. Y. Filed Oct. 1, 1947.

The face of the letters and the lines within the outline are colored blue.

FOR HYDRAULIC BRAKE FLUID.

Claims use since 1939.

Ser. No. 528,404. ARMOUR AND COMPANY, Chicago, Ill. Filed July 12, 1947.

GLANOID

FOR ANIMAL GLANDULAR PRODUCTS FOR THERAPEUTIC ADMINISTRATION FOR RELIEF OF GLANDULAR DEFICIENCIES.

Claims use since August 1936.

Ser. No. 529,495. H. KENT SEANEY, doing business as Kent Cosmetics, Highland Park, Ill. Filed July 25, 1947.

SUN-SECT

FOR INSECT REPELLANTS.

Claims use since Apr. 4, 1947.

Ser. No. 530,401. FRANK X. HESS, doing business as Hess Hair Milk Laboratories, St. Paul, Minn. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

HAIR MILK

Applicant disclaims exclusive use of the word "Hair" apart from the mark. Applicant claims ownership of registration No. 379,488.

FOR PREPARATION FOR USE AS A HAIR TONIC AND DANDRUFF REMOVER AND TO IMPART COLOR TO GRAY OR FADED HAIR.

Claims use since September 1906.

Ser. No. 530,797. BENLO CHEMICALS, Milwaukee, Wis. Filed Aug. 8, 1947.

BENLO Industrial Chemicals

The pictorial matter and the words "Industrial Chemicals" are disclaimed apart from the mark.

FOR INDUSTRIAL CHEMICALS—NAMELY, ACIDS, IN BOTH LIQUID AND CRYSTAL FORM AND COMPRISING ACETIC, BORIC, CHROMIC, FORMIC, HYDROFLUORIC, MURIATIC, NITRIC, OLEIC, OLEUM, OXALIC, PERCHLORIC, SULFURIC; DENATURED INDUSTRIAL ALCOHOL; ALUMINUM SULFATE; AMMONIUM CHLORIDE; AMMONIUM HYDROXIDE; AMMONIUM OLEATE; AMMONIUM PHOSPHATE; AMMONIUM SULFATE; CADMIUM SULFIDE; CALCIUM CARBONATE; CALCIUM HYPOCHLORITE; CARBON TETRACHLORIDE; CASTOR OIL FOR INDUSTRIAL USES; CHLORAMINE COMPOUNDS; CHLORINE; CITRONELLA; COPPER SULFATE; FORMALDEHYDE; GLYCERINE USED AS A SOLVENT IN DYEING AND PRINTING TEXTILES; MAGNESIUM CARBONATE; METASILICATE OF SODA; NAPHTHALENE; PARADICHLOROBENZENE; PHOSPHATES; DISODIUM PHOSPHATE; TETRA SODIUM PYRO; SODIUM TETRA PHOSPHATE; POTASSIUM CHLORATE; POTASSIUM HYDROXIDE; POTASSIUM NITRATE; POTASSIUM SILICATE; SAL SODA; SODIUM BICARBONATE; SODIUM BICHROMATE; SODIUM BISULFATE; SODIUM BISULFITE; SODIUM BORATE; SODIUM CARBONATE; SODIUM CHLORIDE; SODIUM FLUORIDE; SODIUM HYDROXIDE; SODIUM HYPOSULFITE; SODIUM NITRITE; SODIUM SESQUICARBONATE; SODIUM SILICATES; SODIUM SULFATE; SODIUM SULFIDE; SULFUR; SULFUR DIOXIDE; ULTRA-MARINE BLUE; COMPOUNDED PRODUCTS FOR USE AS: BLEACHING AGENTS, DEFOAMING AGENTS, FIRE EXTINGUISHER FLUIDS, LUMBER-TREATING PREPARATIONS TO PREVENT GROWTH OF FUNGUS, WETTING AGENTS; AND ALSO CAUSTIC SOLUTIONS, PHENYL TYPE ORGANOMERCURIALS AND CHLORINATED PHENOLS FOR THE CONTROL OF SLIME, SULFONATED OILS, AND TANNERS ALKALI.

Claims use since Oct. 21, 1944.

Ser. No. 531,734. SOUTHERN OXYGEN COMPANY, INC., Bladensburg, Md. Filed Aug. 18, 1947.

SOUTHERN OXYGEN

The term "Oxygen" is disclaimed apart from the mark.

FOR OXYGEN, HYDROGEN, ACETYLENE, NITROGEN, CARBON DIOXIDE, PROPANE, MIXTURES OF CARBON DIOXIDE AND OXYGEN, AND MIXTURES OF HELIUM AND OXYGEN.

Claims use on oxygen since July 21, 1916; on hydrogen since July 21, 1916; on acetylene since Oct. 15, 1919; on nitrogen since Apr. 10, 1922; on carbon dioxide since May 12, 1935; on propane since Nov. 20, 1939; on mixtures of carbon dioxide and oxygen since Aug. 1, 1935; and on mixtures of helium and oxygen since Aug. 6, 1942.

Ser. No. 534,502. AMERICAN SCIENTIFIC LABORATORIES, INC., Madison, Wis., and Polo, Ill. Filed Sept. 15, 1947.

FOR MEDICINAL AND PHARMACEUTICAL PREPARATIONS—NAMELY, VACCINES, BACTERIN AND ANTIGENS FOR THE PREVENTION, TREATMENT, AND DIAGNOSIS OF DISEASES OF POULTRY AND ANIMALS.

Claims use since July 1923.

Ser. No. 536,582. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Oct. 3, 1947.

ESTERCIDE

FOR PARASITICIDES—NAMELY, INSECTICIDES, FUNGICIDES, AND HERBICIDES.

Claims use since Aug. 11, 1947.

Ser. No. 537,941. SCHENLEY LABORATORIES, INC., New York, N. Y. Filed Oct. 15, 1947.

CONFETS

FOR FLAVORED MEDICATED TABLETS, CONTAINING PENICILLIN BUFFERED WITH CALCIUM CARBONATE, SOLD IN CANDY OR CONFECTION FORM.
Claims use since Sept. 8, 1947.

Ser. No. 538,539. THE GUERLAIN PERFUMERY CORPORATION, New York, N. Y. Filed Oct. 21, 1947. Under section 2f of the act of 1946.

POUDRE
SUPER DULCI

Applicant disclaims the word "Poudre" apart from the mark as shown. Applicant claims ownership of registration No. 412,068.
FOR FACE POWDER.
Claims use since 1912.

Ser. No. 538,540. THE GUERLAIN PERFUMERY CORPORATION, New York, N. Y. Filed Oct. 21, 1947. Under section 2f of the act of 1946.

ELIXIR
DE
GUERLAIN

Applicant disclaims the word "Elixir" apart from the mark as shown. Applicant claims ownership of registration No. 412,600.
FOR DENTIFRICES AND MOUTH WASHES.
Claims use since February 1923.

Ser. No. 539,173. DONALD D. KENYON, doing business as Kondon Manufacturing Company, Minneapolis, Minn. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

KONDON'S

The portrait shown is that of Norma Kenyon Hunter, consent given.
FOR NASAL JELLY.
Claims use since 1889.

Ser. No. 542,286. CLOROX CHEMICAL CO., Oakland, Calif. Filed Nov. 25, 1947.

The words "Exclusive" and "Ultra-Refined" are disclaimed apart from the mark. The drawing is lined for the colors blue and orange. Applicant claims ownership of registrations Nos. 102,650, 251,292, 279,405, 287,293, and 290,449.
FOR BLEACHING, CLEANSING, ANTISEPTIC, AND GERMICIDAL COMPOUNDS.
Claims use since May 1940.

Ser. No. 543,871. ATLAS POWDER COMPANY, Wilmington, Del. Filed Dec. 10, 1947.

BRIJ

FOR EMULSIFYING, DISPERSING, SOLUBILIZING, AND WETTING AGENTS.
Claims use since Nov. 13, 1947.

Ser. No. 547,077. WALKER VITAMIN PRODUCTS, INC., Mount Vernon, N. Y. Filed Jan. 14, 1948.

FOLIFEROL

FOR MEDICINAL TABLETS CONTAINING FOLIC ACID AND FERROUS SULFATE, EXSICCATED.
Claims use since Dec. 2, 1947.

Ser. No. 547,281. REED & CARNRICK, Jersey City, N. J. Filed Jan. 16, 1948.

Chobeline

FOR PREPARATION FOR THE TREATMENT OF PATHOLOGIC CONDITIONS OF THE LIVER.
Claims use since Dec. 23, 1947.

Ser. No. 547,398. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed September 23, 1947.

Seal Brand

Applicant claims ownership of registration No. 79,518.
FOR SILICATE OF SODA.
Claims use since 1909.

Ser. No. 547,787. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Jan. 22, 1948.

ELECTRIC

Applicant claims ownership of registration No. 193,780.
FOR SULPHUR.
Claims use since July 21, 1924.

Ser. No. 550,156. GEORGE A. LAWRENCE, New York, N. Y. Filed Feb. 19, 1948.

BEAUTINA

FOR FACE POWDER AND POWDER BASES—NAMELY, LIQUID POWDER FOUNDATION, FOUNDATION CREAMS, NIGHT CREAMS; CLEANSING CREAMS—NAMELY, MILKY LIQUID CLEANSER; EYE CREAMS—NAMELY, EYE LASH OIL, FACE LOTIONS, AND FACE CREAMS.
Claims use since Feb. 6, 1948.

Ser. No. 553,505. THE NEW JERSEY ZINC COMPANY, New York, N. Y. Filed Mar. 31, 1948.

PROTOX

FOR ZINC OXIDE USED FOR INDUSTRIAL PURPOSES, PARTICULARLY IN COMPOUNDING RUBBER.
Claims use since Mar. 4, 1948.

Ser. No. 553,566. ATOMIC DISTRIBUTORS, INC., Miami, Fla., and Columbus, Ohio. Filed Apr. 1, 1948.

ATOMIC

FOR LAXATIVE COMPOUND, IRON TONIC, LINIMENT.
Claims use since Oct. 28, 1945.

Ser. No. 553,768. PLUTO CORPORATION, French Lick, Ind. Filed Jan. 10, 1948.

PLUTO

The stippling on the representation of the figure in the drawing represents shading. Applicant claims ownership of registrations Nos. 47,749, 47,750, and 47,879.
FOR EFFERVESCENT CRYSTALS USED AS AN ANTACID AND GENTLE LAXATIVE AND LAXATIVE PILLS.
Claims use since Oct. 27, 1947, on effervescent crystals; and since Dec. 18, 1947, on laxative pills.

Ser. No. 555,719. WYETH INCORPORATED, Philadelphia, Pa. Filed May 26, 1948.

WYCILLIN

FOR ANTIBIOTIC.
Claims use since May 8, 1948.

Ser. No. 556,723. ABBOTT LABORATORIES, North Chicago, Ill. Filed Jan. 20, 1948.

METAPHEN

Applicant claims ownership of registration No. 205,507.
FOR CONCENTRATIONS OF A CHEMICAL COMPOUND SUITABLE FOR USE AS AN ANTISEPTIC, AS A GERMICIDE, AND/OR AS A DISINFECTANT.
Claims use since October 1923.

Ser. No. 557,284. LANMAN & KEMP-BARCLAY & CO., INCORPORATED, New York, N. Y. Filed May 18, 1948. Under section 2f of the act of 1946.

REUTER'S

Applicant claims ownership of registrations Nos. 33,059, 69,488, 125,187, 338,876, and 339,359.
FOR PILLS FOR THE RELIEF OF CONSTIPATION, DYSPEPSIA, HEADACHE, BILIOUSNESS, FLATULENCY, LIVER DISEASE, DIZZINESS, NAUSEA, AND DISTRESS; TOILET CREAMS; PERFUME; TOILET WATER; TALCUM POWDER; FACE POWDER; DUSTING POWDER; AND SACHET POWDER.
Claims use since July 1, 1890, for pills; since Aug. 11, 1920, for toilet creams; since December 1920, for face powder; and since May 23, 1945, for the remaining goods.

CLASS 7

CORDAGE

Ser. No. 533,638. ST. REGIS PAPER COMPANY, New York, N. Y. Filed Sept. 5, 1947.

ST. REGIS

FOR WIRE TIES ADAPTED FOR TYING BAGS AND OTHER PURPOSES.
Claims use since May 1, 1931.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 507,243. EVANS CASE CO., North Attleboro, Mass. Filed Aug. 5, 1947. Under section 2f of the act of 1946.

Evans

FOR PYROPHORIC LIGHTERS FOR CIGARS, CIGARETTES, PIPES, AND THE LIKE.
Claims use since 1940.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 550,153. KEE LOX MANUFACTURING COMPANY, Rochester, N. Y. Filed Feb. 19, 1948.

KEE LECTRIC

Applicant claims ownership of registration No. 69,307.
FOR CARBON PAPER.
Claims use since Sept. 24, 1947.

Ser. No. 551,432. BANKERS & MERCHANTS STAMP WORKS, Chicago, Ill. Filed Mar. 8, 1948.

Faymus

FOR INDELIBLE AND OPAQUE INKS, STENCIL INK, RUBBER STAMP INK, NUMBERING MACHINE INK, FOOD PACKAGE INK, MEAT BRANDING INK, CHECK PROTECTOR INK, FINGERPRINT INK, AND SIGN MARKER INK.
Claims use since Jan. 15, 1948.

Ser. No. 551,523. THE CARTER'S INK COMPANY, Cambridge, Mass. Filed Mar. 9, 1948. Under section 2f of the act of 1946.

CARTER'S

Applicant claims ownership of registrations Nos. 48,946, 50,451, and 104,815.
FOR INDELIBLE AND MARKING INKS AND SETS CONTAINING PRIMARILY INK, AND INCIDENTALLY A MARKING PEN AND PENHOLDER.
Claims use since May 1898.

Ser. No. 551,525. THE CARTER'S INK COMPANY, Cambridge, Mass. Filed Mar. 9, 1948. Under section 2f of the act of 1946.

Carter's

Applicant claims ownership of registrations Nos. 48,946, 50,451, and 104,815.
FOR STAMP PADS AND STAMP INKS.
Claims use since July 1898.

Ser. No. 552,197. F. S. WEBSTER COMPANY, Cambridge, Mass. Filed Mar. 17, 1948.

WEB-STAR

Applicant claims ownership of registrations Nos. 245,776 and 299,409.
FOR CARBON PAPER.
Claims use since March 1937.

Ser. No. 555,715. WESTERN NEWSPAPER UNION, Omaha, Nebr., and Dover, Del. Filed Apr. 27, 1948.

FOR PRINTING INKS.
Claims use since 1921.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 514,737. UNION ALUMINUM COMPANY, INC., Sheffield, Ala., assignee of Union Aluminum Company. Filed Nov. 10, 1947. Under section 2f of the act of 1946.

FOR ALUMINUM WINDOW SASHES, CASEMENTS, AND WINDOW FRAMES.
Claims use since July 17, 1946.

Ser. No. 528,739. PRESTILE MANUFACTURING COMPANY, Chicago, Ill. Filed July 16, 1947.

PRESTILE

FOR FURRING AND MOLDING STRIPS, CHANNEL AND DIVIDER STRIPS, CORNER MOLDING STRIPS, WALL BASE MOLDING AND WALL CAP MOLDING SECTIONS MADE OF BASE METAL OR COMPOSITION MATERIAL.
Claims use since April 1946.

Ser. No. 528,740. PRESTILE MANUFACTURING COMPANY, Chicago, Ill. Filed July 16, 1947.

PRESTILE

The word "Tile" and the representation of the goods are disclaimed apart from the mark.
FOR PANELS OF HIGH TENSILE STRENGTH MADE OF HARD BOARD, PRESSED BOARD AND THE LIKE FOR USE AS WALL STRUCTURES.
Claims use since July 2, 1945.

Ser. No. 530,407. THE KINNEAR MANUFACTURING COMPANY, Columbus, Ohio. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

ROL-TOP

Applicant claims ownership of registration No. 289,896.
FOR ROLLING DOORS AND SLIDING DOORS OF WOOD OR METAL TO BE USED FOR INDOOR AND OUTDOOR CONSTRUCTION, INCLUDING GARAGES, SERVICE STATIONS, WAREHOUSES, FACTORY RECEIVING PLATFORMS, BOATHOUSES, AND ANY OTHER BUILDINGS.
Claims use since Aug. 1, 1930.

Ser. No. 530,733. CLARENCE C. HALL, Lakewood, Ohio. Filed Aug. 7, 1947.

FOR HOLLOW BUILDING BLOCKS COMPOSED ESSENTIALLY OF AGGREGATE AND CEMENTITIOUS MATERIAL.
Claims use since Jan. 2, 1945.

Ser. No. 530,907. BARBER-COLMAN COMPANY, Rockford, Ill. Filed Aug. 9, 1947.

BARCOL

FOR DOORS FOR BUILDINGS.
Claims use since December 1929.

Ser. No. 531,738. THE TERACITE CORPORATION, Scranton, Pa. Filed Aug. 18, 1947.

Teracite

FOR CHEMICALLY PROCESSED BOARD WHICH IS USED BOTH AS STRUCTURAL AND CABINET MATERIAL AND FOR ALL GENERAL PURPOSES FOR WHICH WALLBOARD MAY BE USED.
Claims use since June 1, 1947.

Ser. No. 533,562. HAMPDEN COLOR AND CHEMICAL COMPANY, Springfield, Mass. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

Hampden

Applicant claims ownership of registrations Nos. 124,306, 140,821, and 298,667.
FOR WATERPROOFING COMPOUNDS FOR CONCRETE, WOOD, PLASTER, STUCCO, AND MASONRY.
Claims use since 1925.

Ser. No. 536,336. BAKER PAINT & VARNISH CO., Jersey City, N. J. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

QUICKSET

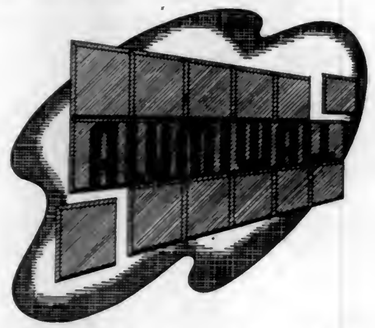
Applicant claims ownership of registration No. 186,986.
FOR PUTTY.
Claims use since Jan. 1, 1923.

Ser. No. 540,723. THE F. E. SCHUMACHER COMPANY, Hartville, Ohio. Filed Nov. 10, 1947. Under section 2f of the act of 1946.

"REDDY-LOC"

Applicant claims ownership of registration No. 291,563.
FOR WINDOW SCREENS.
Claims use since Dec. 27, 1930.

Ser. No. 541,187. RUTLAND FIRE CLAY COMPANY, Rutland, Vt. Filed Nov. 14, 1947. Under section 2f of the act of 1946.



The figure in the drawing is fanciful. The words "Concrete" and "Patcher" are disclaimed apart from the mark as shown. Applicant claims ownership of registrations Nos. 152,978, 161,832, 324,155, and 324,156.
FOR PATCHING PLASTER TO BE MIXED WITH WATER FOR CLOSING CRACKS, BREAKS, AND HOLES IN CONCRETE WALLS, WALKS, ROOFS, ETC.
Claims use since Oct. 15, 1927.

Ser. No. 541,256. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Nov. 15, 1947. Under section 2f of the act of 1946.

PLASTIC WOOD

Applicant claims ownership of registration No. 207,843.
FOR A PLASTIC PREPARATION COMPOSED CHIEFLY OF CELLULOSE AND SOLD AS A SUBSTITUTE FOR WOOD AND USED IN GLAZING OPERATIONS AND SIMILAR WORK OF HOUSE CONSTRUCTION.
Claims use since Sept. 18, 1924.

Ser. No. 543,413. BESTILE MANUFACTURING COMPANY, Ontario, Calif. Filed Dec. 5, 1947.

The representation of the tile is disclaimed apart from the mark as shown. The drawing is lined for shading only.
FOR WALL COVERING—NAMELY, SIMULATED TILE, BEING INDIVIDUAL PLASTIC COATED ALUMINUM WALL TILES ABOUT FIVE INCHES SQUARE AND SMALLER, SLIGHTLY BEVELED ON ALL FOUR FACE SIDES.
Claims use since Sept. 1, 1947.

Ser. No. 544,349. INDIANAPOLIS PLYWOOD COMPANY, Indianapolis, Ind. Filed Dec. 15, 1947.

Indianapolis Plywood IPCO

Applicant disclaims the words "Indianapolis" and "Plywood" apart from the mark.
FOR PLYWOOD.
Claims use since Nov. 25, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 527,939. KIENE DIESEL ACCESSORIES, INC., Franklin Park, Ill. Filed July 5, 1947.

KIENE

FOR VALVES AND ADAPTER CONNECTIONS FOR USE WITH TESTING INSTRUMENTS FOR USE WITH INTERNAL COMBUSTION ENGINES.
Claims use since Mar. 19, 1940.

Ser. No. 533,085. UNIVERSAL WINDOW CO., Berkeley, Calif. Filed Sept. 2, 1947. Under section 2f of the act of 1946.

DONOVAN

Applicant claims ownership of registration No. 202,818.
FOR WINDOW ADJUSTERS FOR AWNING AND CASEMENT TYPE WINDOWS.
Claims use since February 1924.

Ser. No. 534,299. MALLEABLE IRON FITTINGS COMPANY, Branford, Conn. Filed Sept. 12, 1947. Under section 2f of the act of 1946.

BRANFORD

FOR PIPE FITTINGS—NAMELY, PIPE UNIONS.
Claims use since 1922.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 528,286. KENSINGTON STEEL COMPANY, Chicago, Ill. Filed July 10, 1947. Under section 2f of the act of 1946.

KENSINGTON

FOR MANGANESE AND STEEL, AND ROUGH AND PARTLY FINISHED MANGANESE AND STEEL CASTINGS.
Claims use since July 29, 1926.

Ser. No. 553,245. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948.

STAINLEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Jan. 3, 1939.

Ser. No. 553,251. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948.

MONEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Jan. 8, 1945.

Ser. No. 553,253. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948.

MANGANEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Feb. 23, 1930.

Ser. No. 553,255. ARCOS CORPORATION, Philadelphia, Pa. Filed Mar. 29, 1948.

NICKEND

FOR CONSUMABLE METAL WELDING ELECTRODES.
Claims use since Feb. 23, 1930.

CLASS 15

OILS AND GREASES

Ser. No. 537,090. SMITH & NICHOLS, INC., New York, N. Y. Filed Oct. 7, 1947.

PIONEER

Applicant claims ownership of registration No. 229,113.
FOR WAX CANDLES.
Claims use since November 1926.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 536,463. ALFRED SUTTER, Oberhofen-Münchwilen, Canton of Thurgau, Switzerland. Filed Oct. 1, 1947.

SKIWA

Applicant claims ownership of Swiss registration No. 86,354 dated July 19, 1935.
FOR COMPOUNDS FOR PREPARING THE SLIDE SURFACE OF SKIS, THESE BEING WAXES, TALLOWS, VARNISHES, AND PAINTS.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 529,779. D. EMIL KLEIN CO., INC., New York, N. Y. Filed July 28, 1947. Under section 2f of the act of 1946.

MARQUETTE

Applicant claims ownership of registration No. 102,516.
FOR CIGARS, CIGARETTES, AND SMOKING TOBACCO.
Claims use since April 1907.

Ser. No. 530,632. FABER, COE & GREGG, INC., New York, N. Y. Filed Aug. 6, 1947. Under section 2f of the act of 1946.

Brindley's Mixture

Applicant does not claim the word "Mixture" apart from the mark. Applicant claims ownership of registration No. 382,922.
FOR SMOKING TOBACCO.
Claims use since Jan. 1, 1918.

Ser. No. 530,633. FABER, COE & GREGG, INC., New York, N. Y. Filed Aug. 6, 1947. Under section 2f of the act of 1946.

GRAHAM-COURTNEY

FOR CIGARS.
Claims use since Jan. 15, 1907.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 518,110. STITT IGNITION COMPANY, Columbus, Ohio. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

STITT

FOR AUTOMOTIVE AND GAS ENGINE SPARK PLUGS, AND PARTS THEREFOR.
Claims use since June 4, 1918.

Ser. No. 520,922. CLAY BARTON, Whittier, Calif. Filed Dec. 6, 1947.

HONORBILT

FOR FLUORESCENT LIGHTING FIXTURES.
Claims use since Nov. 1, 1941.

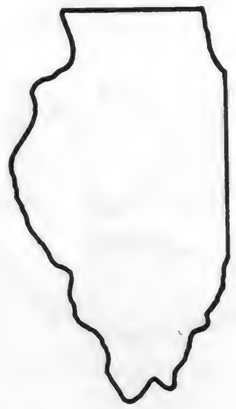
Ser. No. 526,681. MARK SHOELD, Baltimore, Md. Filed July 5, 1947.

NYTON

FOR ELECTRICAL BLANKETS.
Claims use since May 27, 1947.

Ser. No. 528,683. AVCO MANUFACTURING CORPORATION, Cincinnati, Ohio. Filed July 16, 1947.

Carrollton



FOR RADIO RECEIVERS.
Claims use since June 1947.

Ser. No. 532,796. BARBER-COLMAN COMPANY, Rockford, Ill. Filed Aug. 29, 1947.

BARCOL

FOR ELECTRIC MOTORS.
Claims use since October 1931.

Ser. No. 532,934. ILLINOIS ELECTRIC PORCELAIN COMPANY, Macomb, Ill. Filed Aug. 30, 1947. Under section 2f of the act of 1946.

The mark comprises an outline of the State of Illinois.
FOR ELECTRIC INSULATORS.
Claims use since 1926.

Ser. No. 534,482. SPRAGUE ELECTRIC COMPANY, North Adams, Mass. Filed Sept. 13, 1947.

FOR ELECTROLYTIC CONDENSERS, ELECTROSTATIC CONDENSERS, ELECTRICAL FILTERS, AND ELECTRICAL RESISTORS.
Claims use since September 1932.

Ser. No. 536,482. AUTOMATIC MANUFACTURING CORPORATION, East Newark, N. J. Filed Oct. 2, 1947.

K-TRAN

FOR COIL AND CONDENSER ASSEMBLIES USED IN ELECTRICAL CIRCUITS.
Claims use since Aug. 1, 1945.

Ser. No. 537,017. RALPH H. CRANE, Eugene, Oreg. Filed Oct. 7, 1947.

FOR AUTOMATIC ELECTRIC WATER HEATERS OF THE TYPE TO BE ATTACHED TO THE EXTERIOR OF STORAGE TANKS OR OTHER CONTAINERS TO BE HEATED.
Claims use since May 1, 1946.

Ser. No. 537,372. THE THOMPSON MANUFACTURING CO., Chicago, Ill. Filed Oct. 9, 1947.

Silver-King

FOR DOMESTIC VACUUM CLEANERS.
Claims use since Sept. 22, 1947.

Ser. No. 537,736. S & M LAMP CO., INCORPORATED, Los Angeles, Calif. Filed Oct. 13, 1947.

"RED CAP"

Applicant claims ownership of registration No. 303,894.
FOR ELECTRICAL FLOOD LIGHTS.
Claims use since Jan. 31, 1933.

Ser. No. 544,556. ELECTRIC MACHINERY MFG. COMPANY, Minneapolis, Minn. Filed Dec. 17, 1947.

EM

Applicant claims ownership of registrations Nos. 408,777 and 408,778.
FOR ELECTRICAL MACHINES AND APPARATUS—NAMELY, SYNCHRONOUS GENERATORS, SYNCHRONOUS MOTORS, DIRECT-CURRENT GENERATORS, INDUCTION MOTORS, VERTICAL HOLLOW-SHAFT SYNCHRONOUS MOTORS, DIRECT-CURRENT MOTORS, DUAL-VOLTAGE SYNCHRONOUS GENERATORS, SYNCHRONOUS CONDENSERS, AUTOMATIC SYNCHRONIZERS, VOLTAGE REGULATORS, FREQUENCY-RESPONSIVE SYNCHRONOUS-MOTOR CONTROLS, POLARIZED FIELD-FREQUENCY SYNCHRONOUS-MOTOR CONTROLS, PART-WINDING-STARTING MOTOR CONTROLS, AUTOMATIC CONTROLS FOR INDUCTION MOTORS, SWITCH MAGNETS, OVERLOAD RELAYS, AUTOTRANSFORMERS, CURRENT TRANSFORMERS, UNDERVOLTAGE RELEASE RELAYS, FIELD DISCHARGE RESISTORS, DISCONNECTING SWITCHES, CONTROL TRANSFORMERS, REACTORS, RHEOSTATS, MAGNETIC DRIVES, SLIP RING INDUCTION MOTORS, INCHING CONTROLS FOR ELECTRIC MOTORS, AND TWO SPEED INDUCTION MOTORS.
Claims use on induction motors and on dual-voltage synchronous generators since on or about Jan. 1, 1919; on synchronous generators since Jan. 1, 1917; on synchronous motors since Jan. 1, 1917; on direct-current generators since Jan. 1, 1917; on direct-current motors since Jan. 1, 1917; on vertical hollow-shaft synchronous motors since Feb. 3, 1936; on synchronous condensers since June 1, 1929; on automatic synchronizers since Oct. 1, 1939; on voltage regulators since Dec. 18, 1938; on field-frequency responsive synchronous-motor controls since Jan. 1, 1925; on polarized field-frequency synchronous-motor controls since Mar. 1, 1939; on part-winding-starting controls since Feb. 1, 1930; on automatic controls for induction motors since July 8, 1943; on switch magnets since Oct. 28, 1930; on overload relays since

Sept. 14, 1930; on autotransformers since Jan. 25, 1930; on current transformers since Oct. 29, 1930; on undervoltage release relays since Oct. 1, 1933; on field discharge resistors since Feb. 1, 1936; on disconnecting switches since Sept. 1, 1932; on control transformers since Apr. 1, 1935; on reactors since Sept. 2, 1932; on rheostats since May 1, 1940; on meter reading multipliers since Mar. 18, 1939; on unloaders for compressors since Feb. 11, 1932; on magnetic drives since Mar. 15, 1940; on slip ring induction motors since Jan. 1, 1946; on inching controls since Jan. 1, 1938; and on two-speed induction motors since July 1, 1944.

Ser. No. 544,557. ELECTRIC MACHINERY MFG. COMPANY, Minneapolis, Minn. Filed Dec. 17, 1947.

EM

Applicant claims ownership of registrations Nos. 408,777 and 408,778.

FOR ELECTRICAL MACHINES AND APPARATUS—NAMELY, SYNCHRONOUS GENERATORS, SYNCHRONOUS MOTORS, DIRECT-CURRENT GENERATORS, INDUCTION MOTORS, VERTICAL HOLLOW-SHAFT SYNCHRONOUS MOTORS, DIRECT-CURRENT MOTORS, DUAL-VOLTAGE SYNCHRONOUS GENERATORS, SYNCHRONOUS CONDENSERS, AUTOMATIC SYNCHRONIZERS, VOLTAGE REGULATORS, FREQUENCY-RESPONSIVE SYNCHRONOUS-MOTOR CONTROLS, POLARIZED FIELD-FREQUENCY SYNCHRONOUS-MOTOR CONTROLS, PART-WINDING-STARTING MOTOR CONTROLS, AUTOMATIC CONTROLS FOR INDUCTION MOTORS, SWITCH MAGNETS, OVERLOAD RELAYS, AUTO-TRANSFORMERS, CURRENT TRANSFORMERS, UNDERVOLTAGE RELEASE RELAYS, FIELD DISCHARGE RESISTORS, DISCONNECTING SWITCHES, CONTROL TRANSFORMERS, REACTORS, RHEOSTATS, MAGNETIC DRIVES, SLIP RING INDUCTION MOTORS, INCHING CONTROLS FOR ELECTRIC MOTORS, AND TWO SPEED INDUCTION MOTORS.

Claims use on induction motors and on dual-voltage synchronous generators since on or about Jan. 1, 1919; on synchronous generators since Jan. 1, 1917; on synchronous motors since Jan. 1, 1917; on direct-current generators since Jan. 1, 1917; on direct-current motors since Jan. 1, 1917; on vertical hollow-shaft synchronous motors since Feb. 3, 1936; on synchronous condensers since June 1, 1929; on automatic synchronizers since Oct. 1, 1939; on voltage regulators since Dec. 18, 1938; on field-frequency responsive synchronous-motor controls since Jan. 1, 1925; on polarized field-frequency synchronous-motor controls since Mar. 1, 1939; on part-winding-starting controls since Feb. 1, 1930; on automatic controls for induction motors since July 8, 1943; on switch magnets since Oct. 28, 1930; on overload relays since Sept. 14, 1930; on autotransformers since Jan. 25, 1930; on current transformers since Oct. 29, 1930; on undervoltage release relays since Oct. 1, 1933; on field discharge resistors since Feb. 1, 1936; on disconnecting switches since Sept. 1, 1932; on control transformers since Apr. 1, 1935; on reactors since Sept. 2, 1932; on rheostats since May 1, 1940; on meter reading multipliers since Mar. 18, 1939; on unloaders for compressors since Feb. 11, 1932; on magnetic drives since Mar. 15, 1940; on slip ring induction motors since Jan. 1, 1946; on inching controls since Jan. 1, 1938; and on two-speed induction motors since July 1, 1944.

Ser. No. 546,126. RADIO CORPORATION OF AMERICA, New York, N. Y. Filed Jan. 3, 1948.

RCA

FOR INTERNAL COMBUSTION ENGINE-DRIVEN ELECTRICAL GENERATORS.
Claims use since January 1947.

Ser. No. 546,610. JOHN A. ROEBLING'S SONS COMPANY, Trenton, N. J. Filed Jan. 9, 1948.

ROECLAD

FOR ELECTRICAL WIRE AND CABLE.
Claims use since Mar. 15, 1934.

Ser. No. 546,612. JOHN A. ROEBLING'S SONS COMPANY, Trenton, N. J. Filed Jan. 9, 1948.

ROEPRENE

FOR ELECTRICAL WIRE AND CABLE.
Claims use since 1941.

Ser. No. 546,615. JOHN A. ROEBLING'S SONS COMPANY, Trenton, N. J. Filed Jan. 9, 1948.

ROEWELD

FOR ELECTRICAL WIRE AND CABLE.
Claims use since Aug. 4, 1939.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 527,837. THE AMERICAN FORK AND HOE COMPANY, Cleveland, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

SPEEDLOCK

Applicant claims ownership of registration No. 318,268.
FOR FISHING RODS AND FISHING ROD HANDLES.
Claims use since Sept. 1, 1933.

Ser. No. 527,871. THE WORTHINGTON BALL COMPANY, Elyria, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

WORTHY

Applicant claims ownership of registration No. 331,502.
FOR GOLF BALLS.
Claims use since Nov. 30, 1934.

Ser. No. 533,276. CYCLOID CORPORATION, Chicago, Ill. Filed Sept. 4, 1947.

CYCLOID

FOR FISHING REELS.
Claims use since January 1946.

Ser. No. 533,277. CYCLOID CORPORATION, Chicago, Ill. Filed Sept. 4, 1947.

"MICROMATIC"

FOR FISHING REELS.
Claims use since December 1945.

Ser. No. 540,237. ALBANY BILLIARD BALL COMPANY, Albany, N. Y. Filed Nov. 6, 1947. Under section 2f of the act of 1946.

HYATT

Applicant claims ownership of registration No. 219,727.
FOR BILLIARD BALLS, POCKET BILLIARD BALLS, AND CUE BALLS.
Claims use since 1897.

Ser. No. 541,015. GEORGE E. MOUSLEY, INC., New York, N. Y. Filed Nov. 13, 1947.

KING-O-BRICK

Applicant disclaims the word "Brick" apart from its use with the mark.
FOR TOY BRICK SETS TO BE USED TO BUILD MODEL HOUSES AND STRUCTURES.
Claims use since June 15, 1947.

Ser. No. 547,230. CADACO-ELLIS, Chicago, Ill. Filed Jan. 16, 1948.

Tripoley

Applicant claims ownership of registration No. 298,330.
FOR GAME—THE GAME IS PLAYED BY TWO OR MORE PERSONS WITH PLAYING CARDS, CHIPS, AND A TABLE LAY-OUT UNDER RULES SIMILAR TO A COMBINATION OF THE RULES OF THE CARD GAMES OF POKER AND MICHIGAN.
Claims use since Mar. 9, 1932.

Ser. No. 548,063. RUFUS C. GIBBS, doing business as Gibbs Tool & Stamping Works, Vancouver, British Columbia, Canada. Filed Jan. 27, 1948.

GIBBS

Applicant claims ownership of Canadian registration No. N. S. 9603, dated Mar. 19, 1938.
FOR FISHING SPOONS, FISHING RODS, FISHING REELS, FISHING SINKERS, FISHING FLIES, AND FISH LINE SWIVELS.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 500,225. KERR MANUFACTURING COMPANY, Detroit, Mich., by change of name from Kerr Dental Manufacturing Company. Filed Oct. 10, 1947.

VACUMATIC

FOR MACHINES FOR REMOVING AIR FROM REFRACTORY MATERIAL IN METAL CASTING PROCESS.
Claims use since Dec. 3, 1945.

Ser. No. 511,043. SYRACUSE SUPPLY COMPANY, Syracuse, N. Y. Filed Oct. 21, 1947.

SYCO

FOR MACHINES FOR DRILLING, TAPPING, AND MILLING METAL PARTS AND FOR SAWING, MILLING, DRILLING, AND ROUTING WOOD.
Claims use since May 1938.

Ser. No. 532,249. FRANK D. PALMER, INC., Chicago, Ill. Filed Aug. 23, 1947. Under section 2f of the act of 1946.

PALMER

FOR PACKAGING MACHINERY, I. E., MACHINES FOR FORMING PAPER AND LIKE BOXES AND CARTONS FROM BLANKS, MACHINES FOR SETTING UP PREFABRICATED BUT COLLAPSED BOXES AND CARTONS, MACHINES FOR FILLING CARTONS OR BOXES WITH FLUENT MATERIALS IN EITHER WET OR DRY FORM, AND MACHINES FOR CLOSING AND/OR SEALING BOXES OR CARTONS.
Claims use since October 1938.

Ser. No. 532,465. THE LOFSTRAND COMPANY, Rockville, Md. Filed Aug. 26, 1947. Under section 2f of the act of 1946.

LOFSTRAND

FOR GLASS WASHING MACHINES AND TRAYS USED IN CONJUNCTION THEREWITH FOR HOLDING GLASSES BEFORE, DURING AND AFTER WASHING IN SAID MACHINE, FIRE EXTINGUISHERS, INSECTICIDE SPRAYERS, MOBILE WOODWORKING SHOPS, SAID SHOPS SOLD AS A UNIT AND BEING EQUIPPED WITH WOOD AND METAL WORKING BENCHES, SAWS, LATHES, HAMMERS, CUTTING TOOLS, WRENCHES, DRILLS, AND SANDING MACHINES, AND CHAIN SAW SHARPENERS.
Claims use since 1937.

Ser. No. 532,917. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill. Filed Aug. 30, 1947. Under section 2f of the act of 1946.

Davidson

The drawing is lined for shading only. Applicant claims ownership of registration No. 406,634.
FOR DUPLICATING MACHINES, MORE PARTICULARLY, PRINTING PRESSES, FOLDING MACHINES, PAPER HANDLING MACHINES, AND THE LIKE.
Claims use since Nov. 20, 1940.

Ser. No. 533,748. THE KRECT RAZOR CO., Portland, Oreg. Filed Sept. 8, 1947.

KRECT

FOR SAFETY RAZORS AND BLADES.
Claims use since July 1, 1947.

Ser. No. 533,780. M. W. ROBINSON CO. INC., New York, N. Y. Filed Sept. 8, 1947. Under section 2f of the act of 1946.

CAREW'S

Applicant claims ownership of registration No. 157,626.
FOR MECHANICS' TOOLS—NAMELY, NIPPERS.
Claims use since 1902.

Ser. No. 534,165. MARION POWER SHOVEL COMPANY, Marion, Ohio. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

MARION

Applicant claims ownership of registrations Nos. 141,294 and 141,772.
FOR POWER OPERATED EXCAVATING AND HOISTING MACHINES—NAMELY, POWER SHOVELS, DIPPER DREDGES, HYDRAULIC DREDGES, ELEVATOR DREDGES, TRACTOR DREDGES, RAILROAD DITCHERS, DRAGLINE EXCAVATORS, ORANGE PEEL EXCAVATORS, CLAM SHELL EXCAVATORS, FRENCH DIGGING MACHINES, BALLAST UNLOADERS, LOG LOADERS AND CRANES.
Claims use since 1902.

Ser. No. 535,383. CHRISTMAN & FAUST, Columbus, Ohio. Filed Sept. 23, 1947.

CYCLENED

FOR MOTORCYCLE ENGINE EXHAUST PIPES, EXHAUST PIPE BAFFLES, EXHAUST PIPE DEFLECTOR PLATES, TUBULAR METALLIC SHIELDS FOR ENCLOSING THE COIL SPRINGS OF MOTORCYCLES.
Claims use since Aug. 18, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 532,666. VOSS BROTHERS MANUFACTURING CO., Davenport, Iowa. Filed July 22, 1947. Under section 2f of the act of 1946.

VOSS

Applicant claims ownership of registration No. 269,235.
FOR CLOTHES WASHING MACHINES.
Claims use since 1911.

Ser. No. 533,003. E. L. CHRISMAN COMPANY, INC., Los Angeles, Calif. Filed Sept. 2, 1947.

ELCCO

FOR EQUIPMENT FOR DRY CLEANING AND COMMERCIAL LAUNDRY—NAMELY, GARMENT PRESSES, SPOTTING BOARDS, FINISHING BOARDS, PUFF SETS, GRID PLATES AND VALVES.
Claims use since July 1, 1943.

CLASS 25

LOCKS AND SAFES

Ser. No. 533,545. HAROLD W. CRAMER, doing business as Cramer Safe & Office Equipment Co., Kansas City, Mo. Filed Sept. 5, 1947.

THE CRAMER DROPOSITORY

The word "Cramer" is disclaimed apart from the mark.
FOR DEPOSIT-OPENING CLOSURES FOR SAFES, VAULTS, AND THE LIKE.
Claims use since Aug. 6, 1947.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 526,607. PRECISION APPARATUS CO., INC., Elmhurst, Long Island, N. Y. Filed July 5, 1947.

Tube Master

No claim is made to the word "Tube" apart from the mark.
FOR VACUUM TUBE TESTING AND BATTERY TESTING INSTRUMENTS.
Claims use since Apr. 1, 1947.

Ser. No. 526,608. PRECISION APPARATUS CO., INC., Elmhurst, Long Island, N. Y. Filed July 5, 1947.

Test Master

No claim is made to the word "Test" apart from the mark.
FOR VACUUM TUBE TESTING AND CIRCUIT ANALYZING INSTRUMENTS.
Claims use since Apr. 1, 1947.

Ser. No. 527,087. SPENCER THERMOSTAT COMPANY, Attleboro, Mass. Filed July 5, 1947.

KLIXON

Applicant claims ownership of registrations Nos. 208,219, 204,291, 284,829, and 285,709.
FOR THERMOSTATIC CONTROLS FOR ACTUATING VALVES AND ELECTRIC SWITCHES.
Claims use since Aug. 11, 1925.

Ser. No. 530,909. BARBER-COLMAN COMPANY, Rockford, Ill. Filed Aug. 9, 1947.

Econostat

FOR THERMOSTATIC AND TIME CONTROLLED SWITCHING MECHANISM FOR ADAPTATION TO AND CONTROL OF TEMPERATURE REGULATING SYSTEMS IN RESPONSE TO TEMPERATURE CHANGES.
Claims use since September 1939.

Ser. No. 531,945. FOSTER M. POOLE, doing business as Poole Manufacturing Engineers, Dallas, Tex. Filed Aug. 20, 1947.

Applicant claims ownership of registration No. 428,411.
FOR REMOTE-READING MICROMETERS; AN APPARATUS, CONSISTING OF A TANK GAUGER'S REEL AND TAPE WITH A METAL PLUMB BOB, AND A MILLIAMMETER IN THE CIRCUIT THROUGH THE PLUMB BOB AND TANK SO THAT THE MILLIAMMETER DEFLECTS WHEN THE PLUMB BOB PASSES THROUGH THE LINE OF DEMARCATION BETWEEN THE OIL AND THE WATER IN THE TANK, AND USED FOR INDICATING SAID LINE; SPECIFIC GRAVITY METERS, AND VOLUME MEASURING APPARATUS—NAMELY, AN ACOUSTIC RESONATOR FOR A CAVITY TO BE MEASURED AND ELECTRICAL APPARATUS FOR MEASURING THE RESULTING RESONANT FREQUENCY WHICH IS A MEASURE OF THE CAVITY VOLUME.
Claims use since Aug. 22, 1938; since Nov. 15, 1938, on remote-reading micrometers; since Aug. 22, 1938, on devices for indicating the line of demarcation between the water and oil in an oil storage tank; since Oct. 16, 1940, on specific gravity meters; and since Dec. 16, 1946, on volume measuring apparatus.

Ser. No. 535,392. CLUB ALUMINUM PRODUCTS COMPANY, Chicago, Ill. Filed Sept. 23, 1947.

Club Aluminum

The word "Aluminum" is disclaimed apart from the mark.
FOR TOP-OF-STOVE THERMOMETER.
Claims use since Nov. 30, 1936.

Ser. No. 535,619. PRECIAS A. G., Zurich, Switzerland. Filed Sept. 24, 1947.

Precisa

Applicant claims ownership of Swiss registration No. 119,370.
FOR CALCULATING MACHINES.

Ser. No. 544,170. THE KONO MANUFACTURING COMPANY, Woodside, N. Y. Filed Dec. 12, 1947.

SEVENTEEN

FOR EYEGLASS AND SPECTACLE FRAMES.
Claims use since Nov. 28, 1947.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 537,479. FABRIQUE D'HORLOGERIE SILVANA S. A., Tramelan, Switzerland. Filed Oct. 10, 1947.

SILVANA

Applicant claims ownership of Swiss registration No. 113,182 dated Nov. 9, 1945.
FOR POCKET WATCHES, WRIST WATCHES, DIALS, AND ALL PARTS OF WATCHES.

Ser. No. 541,960. PARKER WATCH CO., INC., New York, N. Y. Filed Nov. 21, 1947. Under section 2f of the act of 1946.

Parker

Applicant claims ownership of registrations Nos. 244,474 and 408,997.
FOR WATCHCASES, CLOCKS, WATCHES, AND PARTS THEREOF.
Claims use since Jan. 1, 1927.

Ser. No. 542,134. I. D. WATCH CASE CO. INC., Jamaica, N. Y. Filed Nov. 24, 1947.

I·d.

Applicant claims ownership of registration No. 323,943.
FOR WATCH CASES.
Claims use since 1936.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 532,381. TRIFARI, KRUSSMAN & FISHEL, INC., New York, N. Y. Filed Aug. 25, 1947. Under section 2f of the act of 1946.

TRIFARI

Applicant claims ownership of registration No. 357,174.
FOR JEWELRY FOR PERSONAL WEAR, NOT INCLUDING WATCHES—NAMELY, EARRINGS, CLIPS, PINS, NECKLACES, BRACELETS, CUFF LINKS, TIARAS, BRACELET CHARMS, AND THE FOLLOWING ITEMS MADE IN WHOLE OF, IN PART OF, OR PLATED WITH, PRECIOUS METAL—NAMELY, BUTTONS, BELT BUCKLES, SHOE BUCKLES, HAT PINS, HAIR BARRETTES, AND HAIR COMBS.
Claims use since Dec. 20, 1937.

Ser. No. 532,751. S. PACKALES & CO., New York, N. Y. Filed Aug. 28, 1947.

CUFF-PACT

COSTUME JEWELRY—NAMELY, BRACELETS EQUIPPED WITH LIPSTICK AND OTHER MAKE-UP COMPARTMENTS.
Claims use since July 2, 1947.

Ser. No. 535,868. PAKULA AND COMPANY, Chicago, Ill. Filed Sept. 26, 1947.

Enchantress

FOR PEARLS, AND JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES)—NAMELY, EXPANSION, CHARM, IDENTIFICATION, AND WATCH BRACELETS; ANKLETS; CHARMS; ORNAMENTAL PINS; EARRINGS; LOCKETS; NECK, WALDEMEAR, AND DICKENS CHAINS; ROSARIES; FINGER RINGS; AND THE FOLLOWING ITEMS MADE IN WHOLE OF, IN PART OF, OR PLATED WITH, PRECIOUS METAL: COMPACTS AND FOUNTAIN PENS.
Claims use since July 1, 1946.

Ser. No. 542,293. THE ELLMORE SILVER CO., INC., Meriden, Conn. Filed Nov. 25, 1947.

CHICO

FOR FORKS, KNIVES, SPOONS, AND SIMILAR TABLE FLATWARE MADE OF SILVER OR SILVER-PLATE.
Claims use since Oct. 2, 1947.

Ser. No. 542,295. THE ELLMORE SILVER CO., INC., Meriden, Conn. Filed Nov. 25, 1947.

NANCY

FOR FORKS, KNIVES, SPOONS, AND SIMILAR TABLE FLATWARE MADE OF SILVER OR SILVER-PLATE.
Claims use since July 2, 1947.

Ser. No. 542,296. THE ELLMORE SILVER CO., INC., Meriden, Conn. Filed Nov. 25, 1947.

LEONA

FOR FORKS, KNIVES, SPOONS, AND SIMILAR TABLE FLATWARE MADE OF SILVER OR SILVER-PLATE.
Claims use since July 2, 1947.

Ser. No. 549,556. MARVEL JEWELRY MFG. COMPANY, Providence, R. I. Filed Feb. 12, 1948.

Tootsie

FOR JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES) MADE WHOLLY OR PARTLY OF PRECIOUS METAL—NAMELY, ALL TYPES OF BRACELETS.
Claims use since Jan. 9, 1948.

CLASS 30

CROCKERY, EARTHENWARE, AND PORCELAIN

Ser. No. 528,394. WILLIAM ADAMS & SONS (POTTERS) LIMITED, Tunstall, England. Filed July 12, 1947.

Calyx

Applicant claims ownership of British registration No. 657,600 dated Mar. 25, 1947.
FOR DINNER WARE, TEA WARE, BREAKFAST WARE, DESSERT WARE, AND WARE SUPPLEMENTARY THERETO, SUCH AS BOWLS, PLATTERS, AND SERVING DISHES, MADE OF VARIOUS COMBINATIONS OF CLAYS, FLINT, AND STONE WITH A GLAZE APPLIED THERETO.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 524,550. MELCHIOR, ARMSTRONG, DESSAU CO. OF DELAWARE, INC., Ridgefield, N. J. Filed Jan. 27, 1948.

MELCO

Applicant claims ownership of registrations Nos. 392,362, 307,740, and 334,295.
FOR CONDENSING UNITS FOR ELECTRIC DOMESTIC AND COMMERCIAL REFRIGERATORS AND REPLACEMENT AND REPAIR PARTS THEREFOR; COIL-PAN COMBINATIONS FOR ELECTRIC DOMESTIC AND COMMERCIAL REFRIGERATION AND REPLACEMENT AND REPAIR PARTS THEREFOR; REPLACEMENT AND REPAIR PARTS FOR ELECTRIC DOMESTIC AND COMMERCIAL REFRIGERATORS; COOLERS-CARBONATORS; AND UNIT-COOLERS FOR REFRIGERATION.
Claims use since Oct. 1, 1935.

Ser. No. 524,551. MELCHIOR, ARMSTRONG, DESSAU CO. OF DELAWARE, INC., Ridgefield, N. J. Filed Feb. 5, 1948. Under section 2f of the act of 1946.

MELCHIOR, ARMSTRONG, DESSAU CO. MELCO ...OF DEL. INC...

Applicant claims ownership of registrations Nos. 307,740, 334,295, and 392,362.
FOR CONDENSING UNITS FOR ELECTRIC DOMESTIC AND COMMERCIAL REFRIGERATORS AND REPLACEMENT AND REPAIR PARTS THEREFOR; COIL-PAN COMBINATIONS FOR ELECTRIC DOMESTIC AND COMMERCIAL REFRIGERATION AND REPLACEMENT AND REPAIR PARTS THEREFOR; REPLACEMENT AND REPAIR PARTS FOR ELECTRIC DOMESTIC AND COMMERCIAL REFRIGERATORS; COOLERS-CARBONATORS; AND UNIT-COOLERS FOR REFRIGERATION.
Claims use since Oct. 15, 1935.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 509,985. VERNON E. HAROLDSON, doing business as Vern Haroldson Sales Co., Seattle, Wash. Filed Nov. 28, 1947.

Duraframe

FOR UPHOLSTERED FURNITURE—NAMELY, DAVENPORTS, CHAIRS, BENCHES, AND BEDS; FRAMES FOR SAID TYPES OF UPHOLSTERED FURNITURE; STOOLS—NAMELY, FOOT STOOLS AND KITCHEN STOOLS; BEDS, TABLES, STANDS, AND LUGGAGE RACKS, ALL IN THE NATURE OF FURNITURE.
Claims use since Mar. 1, 1946.

Ser. No. 519,419. SALMANSON & CO. INC., New York, N. Y. Filed Oct. 30, 1947.

ARISTO-BILT

Applicant disclaims the word "Bilt" except as used in the mark. Applicant claims ownership of registration No. 355,888.
FOR BOOK CASES, BOOK SHELVES, CHESTS FOR CLOTHING AND LINENS, CHESTS OF DRAWERS, CABINETS HAVING SHELVES AND/OR DRAWERS, AND/OR PARTITIONING WALLS, PHONOGRAPH AND RECORD CABINETS, WARDROBES, KITCHEN, LIVING ROOM, BEDROOM AND BATHROOM CHAIRS, KITCHEN TABLES, NIGHT TABLES, END TABLES, OCCASIONAL TABLES, DRESSING TABLES, MAGAZINE RACKS, BEDS, CRIBS, ROCKING CHAIRS, AND DESKS, NONE OF WHICH ARTICLES ARE UPHOLSTERED.
Claims use since December 1941.

Ser. No. 523,057. A. BRANDWEIN & COMPANY, Chicago, Ill. Filed Nov. 25, 1947.

Granada

FOR MATTRESSES.
Claims use since March 1937.

Ser. No. 539,370. VIRGINIA METAL PRODUCTS CORPORATION, Orange, Va. Filed Oct. 28, 1947.

vmp CORPORATION

No claim is made to the word "Corporation" apart from the mark as shown. The drawing is lined to denote the color orange.
FOR SHELVING IN KNOCK-DOWN FORM.
Claims use since Aug. 4, 1947.

Ser. No. 539,510. FOSTER BROTHERS MANUFACTURING COMPANY, Utica, N. Y. Filed Oct. 30, 1947. Under section 2f of the act of 1946.

IDEAL

Applicant claims ownership of registrations Nos. 45,483 and 46,024.
FOR BEDS, BED SPRINGS, MATTRESSES, AND COUCHES.
Claims use since July 1, 1888, on beds and springs; since Feb. 25, 1932, on mattresses; and since Dec. 20, 1934, on couches.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 528,133. TYPHOON AIR CONDITIONING CO., INC., Brooklyn, N. Y. Filed July 8, 1947.

TYPHOON PROP-R-TEMP

FOR SELF CONTAINED AIR CONDITIONING UNITS—NAMELY, AIR CONDITIONING SYSTEMS COMPLETELY CONTAINED IN CABINETS; LOW SIDE AIR CONDITIONING UNITS—NAMELY, CABINETS CONTAINING EVAPORATORS, CIRCULATING FANS, AND AIR FILTERS; AND HIGH SIDE AIR CONDITIONING UNITS—NAMELY, THE COMPRESSING AND CONDENSING PORTIONS OF REFRIGERATION CYCLES CONSISTING OF COMPRESSORS, MOTORS, CONDENSERS, AND PRESSURE CONTROLS.
Claims use since March 1939.

Ser. No. 530,476. DEARBORN STOVE COMPANY, Dallas, Tex. Filed Aug. 5, 1947.

Dearborn

FOR SPACE HEATING GAS STOVES.
Claims use since Feb. 1, 1938.

Ser. No. 532,164. C. A. SCOGIN, doing business as Scogin Turbulator Mfg. Co., Kansas City, Mo. Filed Aug. 22, 1947.

Turbulator

FOR SPACE HEATERS.
Claims use since Aug. 15, 1945.

Ser. No. 533,430. CENTURY ENGINEERING CORPORATION, Cedar Rapids, Iowa. Filed July 5, 1947.

ZONE MASTER

Applicant claims ownership of registration No. 389,141.
FOR BOILERS AND FURNACES AND PARTS THEREOF, FOR BURNING SOLID AND FLUID FUELS.
Claims use since Jan. 29, 1938.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 84,158. Registered Nov. 14, 1911. AMERICAN REFRACTORIES COMPANY, Chicago, Ill. Republished by American-Austrian Magnesite Corporation, Pittsburgh, Pa., a corporation of Delaware.

FOR MAGNESITE.
Claims use since June 1910.

Reg. No. 210,557. Registered Mar. 16, 1926. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

PARADURA

FOR ASPHALTS AND COMPOSITIONS EMBODYING ASPHALTS AND LIKE BITUMINOUS MATERIALS SOLD AS A RAW OR PARTLY PREPARED MATERIAL.
Claims use since Sept. 19, 1924.

Reg. No. 327,138. Registered Aug. 20, 1935. J. LICHTMAN & SONS, Newark, N. J., a corporation of New Jersey. Republished by registrant.

SWAGGER BUK

The word "Buk" is disclaimed apart from the mark as shown.

FOR LEATHER.

Claims use since Mar. 1, 1935.

Reg. No. 400,260. Registered Feb. 23, 1943. FRANCIS C. STOKES COMPANY, Vincentown, N. J., a corporation of New Jersey. Republished by registrant.

Stokes'

FOR TOMATO SEEDS.

Claims use since 1881.

CLASS 2

RECEPTACLES

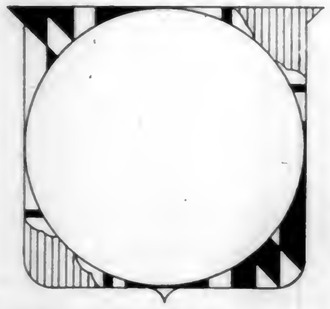
Reg. No. 99,326. Registered Aug. 25, 1914. LYON METALLIC MANUFACTURING COMPANY, Montgomery, Ill. Republished by Lyon Metal Products, Incorporated, Aurora, Ill., a corporation of Illinois.

LYON

FOR METAL BOXES, LOCKERS, AND TOOL-BOXES.

Claims use since about Dec. 1, 1913.

Reg. No. 230,609. Registered Aug. 2, 1927. FARMERS MANUFACTURING COMPANY, Norfolk, Va. Republished by Farmers Incorporated, Norfolk, Va., a corporation of Virginia.



FARMCO PRODUCTS

The word "Products" is disclaimed apart from the mark as shown.

FOR FRUIT AND VEGETABLE WOODEN PACKAGES AND PARTS THEREOF.

Claims use since Mar. 11, 1927.

Reg. No. 429,060. Registered Apr. 15, 1947. THE MARYLAND CONTAINER COMPANY, Baltimore, Md., a corporation of Maryland. Republished by registrant.

FOR CORRUGATED FIBREBOARD SHIPPING BOXES, CARTONS, AND CASES.

Claims use since August 1934.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 434,049. Registered Nov. 4, 1947. E. J. WILKINS COMPANY, Gloversville, N. Y., a corporation of New York. Republished by registrant.

Key Valet

The word "Key" is disclaimed apart from the mark as shown.

FOR KEY CASES.

Claims use since Jan. 3, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 64,090. Registered July 23, 1907. GEORGE WILLIAM HOFFMAN, Indianapolis, Ind. Republished by Marie R. Miller, doing business as The Walter W. Miller Company, Indianapolis, Ind.

U.S. METAL POLISH

FOR COMPOUND FOR POLISHING METALS AND OTHER HARD MATERIALS.

Claims use since January 1884.

Reg. No. 274,639. Registered Sept. 2, 1930. THE LEA MANUFACTURING COMPANY, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

LEA

FOR FINISHING COMPOSITIONS FOR BUFFING AND POLISHING METALLIC AND OTHER SURFACES.

Claims use since February 1924.

Reg. No. 290,745. Registered Dec. 20, 1932. THE SOLVAY PROCESS COMPANY, Geddes, N. Y. Republished by The Solvay Process Company, a corporation of New York, now by merger Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

SOLVAY

FOR CLEANSING AND SCOURING COMPOUND AND FOR A CLEANING COMPOUND FOR REMOVING CASEIN AND MILKSTONE, PARTICULARLY FOR USE IN DAIRIES AND CREAMERIES.

Claims use since Sept. 29, 1930.

Reg. No. 304,157. Registered June 20, 1933. THE LEA MANUFACTURING COMPANY, Waterbury, Conn., a corporation of Connecticut. Republished by registrant.

LEAROK

FOR ABRASIVE COMPOSITION FOR BUFFING, COLORING, ABRADING, AND CUTTING SURFACES OF METAL OR OTHER MATERIALS.

Claims use since Jan. 4, 1931.

Reg. No. 433,573. Registered Oct. 21, 1947. REILLY-WHITEMAN-WALTON COMPANY, Conshohocken, Pa., a corporation of Pennsylvania. Republished by registrant.

POLYSAN

FOR FATTY OILS, MODIFIED BY ALCOHOLYSIS TO PRODUCE COMPOUNDS READILY SELF-EMULSIFIABLE IN WATER AND SUITABLE IN WATER EMULSION AS RESPECTS LEATHER FOR USE AS A FAT LIQUOR FOR THE PURPOSE OF INCORPORATING INTO FINISHED LEATHER A CERTAIN AMOUNT OF OIL OR FAT TO REPLACE THAT WHICH IS NECESSARILY REMOVED IN TANNING OPERATION.

Claims use since Nov. 16, 1945.

Reg. No. 433,972. Registered Nov. 4, 1947. THE MORTON S. PINE CO., Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SPLIT-SECOND

FOR CLEANING PREPARATION HAVING INCIDENTAL WATER-SOFTENING QUALITIES.

Claims use since Nov. 20, 1945.

CLASS 5

ADHESIVES

Reg. No. 70,257. Registered Aug. 18, 1908. DENNISON MANUFACTURING COMPANY, Boston, Mass. Republished by Dennison Manufacturing Company (1911), Framingham, Mass., a corporation of Massachusetts.

Dennison's

FOR SEALING-WAX.

Claims use since Jan. 1, 1889.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

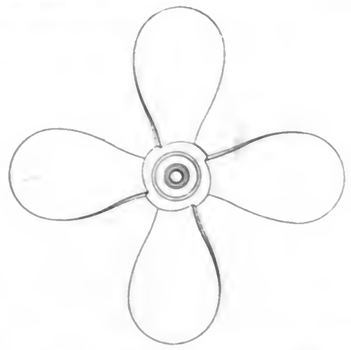
Reg. No. 20,193. Registered Oct. 6, 1891. REED & CARNRICK, New York, N. Y., a corporation of New Jersey. Republished by registrant, present address Jersey City, N. J.

ZYMOCIDE.

FOR AN ANTISEPTIC AND DETERGENT MEDICAL COMPOUND, ESPECIALLY VALUABLE IN THE TREATMENT OF DISEASES OF THE MUCOUS MEMBRANES. IT IS A NON-TOXIC ANTISEPTIC IN LIQUID FORM AND CAN BE BENEFICIALLY USED AS AN APPLICATION FOR ECZEMA, BURNS, RHUS POISONING, &c. FOR INTERNAL USE IT IS AN EFFICIENT ANTI-FERMENT IN CHOLERA INFANTUM OR SUMMER COMPLAINT OF CHILDREN, DYSPEPSIA, AND TYPHOID FEVER.

Claims use since June 20, 1890.

Reg. No. 36,131. Registered Mar. 26, 1901. WILLIAM D. DUNCAN, Ottawa, Ill. Republished by Jennie Duncan Peltier, Ottawa, Ill.



DUNCAN'S

32 CALIBRES

FOR INTERNAL REMEDIES FOR HEADACHE, NEURALGIA, DYSPEPSIA, LA GRIPPE, AND PAINS.

Claims use since Feb. 1, 1890.

Reg. No. 50,995. Registered Apr. 3, 1906. THE BIRD-ARCHER COMPANY, New York, N. Y. Republished by The Bird-Archer Company, New York, N. Y., a corporation of New York.

FOR CHEMICAL COMPOUNDS FOR THE REMOVAL OF GREASE, OIL, AND SCALE FROM BOILERS, AND THE PREVENTION OF THE FORMATION OF NEW SCALE, ETC., IN BOILERS.
Claims use since Apr. 30, 1903.

Reg. No. 150,348. Registered Jan. 3, 1922. ENOZ CHEMICAL COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

RAT FINIS

FOR RODENT POISON.
Claims use since November 1920.

Reg. No. 150,349. Registered Jan. 3, 1922. ENOZ CHEMICAL COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

Feno

FOR INSECTICIDE.
Claims use since March 1920.

Reg. No. 150,350. Registered Jan. 3, 1922. ENOZ CHEMICAL COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

Vico

FOR INSECTICIDE.
Claims use since May 1911.

Reg. No. 189,968. Registered Sept. 30, 1924. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, a corporation of New York, now by merger Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FLUF

FOR SODA ASH (SODIUM CARBONATE).
Claims use since Feb. 21, 1924.

Reg. No. 270,526. Registered May 6, 1930. ALBERT LEMUEL WHITING, Urbana, Ill. Republished by registrant.

Hi-lo-fosfate

The word "Fosfate" is disclaimed apart from the mark as shown.
FOR CHEMICAL SOLUTION USED FOR DETERMINING THE AVAILABLE PHOSPHATES IN SOILS.
Claims use since Sept. 6, 1929.

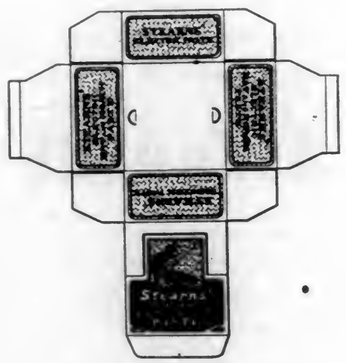
Reg. No. 287,475. Registered Sept. 29, 1931. SCHNEFEL BROS., INC., Newark, N. J. Republished by Schnefel Bros. Corporation, Newark, N. J., a corporation of New Jersey.

La Cross

FOR CUTICLE REMOVER IN FORM OF LIQUID APPLICABLE TO THE NAILS TENDING TO REMOVE THE CUTICLE; FINGER NAIL ENAMEL, FINGER NAIL POLISH, NAIL BLEACH, NAIL WHITE, AND NAIL CREAMS FOR STRENGTHENING THE NAILS.
Claims use since 1922.

Reg. No. 304,350. Registered July 4, 1933. STEARNS' ELECTRIC PASTE COMPANY, INC., Chicago, Ill. Republished by Stearns' Electric Paste Co., Chicago, Ill., a copartnership.

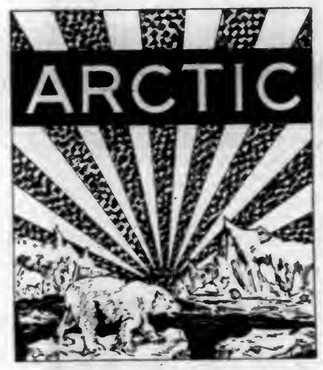
The drawing is lined for the colors black and yellow. The label and all of the wording on the drawing except



"Stearns' Electric Rat and Roach Paste, Sure Death, Stearns' Electric Paste Co." and the signature "J. J. Kearney" are disclaimed apart from the mark as shown.
FOR POISON IN PASTE FORM FOR RATS, MICE, SQUIRRELS, GOPHERS, PRAIRIE DOGS, COYOTES, WOLVES, FOXES, LAND CRABS, COCKROACHES, WATER BUGS, AND CROTON BUGS.
Claims use since Dec. 22, 1932.

Reg. No. 304,982. Registered July 25, 1933. THE UBIKO MILLING COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant, present address St. Bernard, Ohio.

Life Guard



FOR MINERAL INGREDIENT FOR MIXING WITH DAIRY FEEDS, POULTRY FEEDS AND LIVE STOCK FEEDS TO SUPPLY DIGESTIBLE MINERALS IN THE FEEDS.
Claims use since Jan. 1, 1933.

Reg. No. 305,025. Registered July 25, 1933. STEARNS' ELECTRIC PASTE COMPANY, INC., Chicago, Ill. Republished by Stearns' Electric Paste Co., Chicago, Ill., a copartnership.

The drawing is lined for the colors yellow, black, and orange. The representation of a carton is disclaimed.
FOR POISON IN PASTE FORM FOR VERMIN AND INSECTS.
Claims use since June 1928.

Reg. No. 308,037. Registered Nov. 21, 1933. WORCESTER SALT COMPANY, New York, N. Y. Republished by Worcester Salt Company, New York, N. Y., a corporation of Delaware.

The drawing is lined for the color orange.
FOR ICE CREAM SALT.
Claims use since Oct. 17, 1931.

Reg. No. 312,711. Registered May 8, 1934. BETTER DRUG PRODUCTS, INC., Tulsa, Okla., a corporation of Oklahoma. Republished by registrant.

San-O-Safe

The word "Safe" is disclaimed apart from the mark as shown.
FOR DOUCHE POWDER.
Claims use since April 1933.

Reg. No. 314,697. Registered July 3, 1934. WESTERN PHARMACAL COMPANY, Salt Lake City. Utah. Republished by Karl Maeser Pack, Salt Lake City, Utah, assignor to Western Pharmacal Company, a partnership.

FEDROLIN

FOR INHALANT USEFUL TO SHRINK CONGESTED MEMBRANES AND PROMOTE DRAINAGE OF THE NOSE AND SINUSES.
Claims use since Oct. 2, 1931.

Reg. No. 316,033. Registered Aug. 14, 1934. THE RALPH L. DOMBROWER COMPANY, INC., Richmond, Va. Republished by Sorbtex Foundation, Inc., Richmond, Va., a corporation of Virginia.

Sorbtex

FOR CHEMICAL PREPARATION TO INCREASE THE ABSORBENCY OF TEXTILES, FABRICS, PAPER, AND OTHER CELLULOSE PRODUCTS.
Claims use since Nov. 1, 1933.

Reg. No. 327,129. Registered Aug. 20, 1935. SIROIL LABORATORIES, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

EXOIL

FOR PREPARATION FOR THE TREATMENT OF PSORIASIS AND SIMILAR SKIN AFFECTIONS.
Claims use since December 1934.

Reg. No. 335,033. Registered May 19, 1936. BETTER DRUG PRODUCTS, INC., Tulsa, Okla., a corporation of Oklahoma. Republished by registrant.

ORCHID-EL

FOR FACE AND HAND LOTION.
Claims use since May 15, 1934.

Reg. No. 337,780. Registered Aug. 18, 1936. BETTER DRUG PRODUCTS, INC., Tulsa, Okla., a corporation of Oklahoma. Republished by registrant.

IRPD

FOR DEODORANT.
Claims use since October 1935.

Reg. No. 343,961. Registered Mar. 9, 1937. ENOZ CHEMICAL COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

DRAIN-ZIT

FOR DRAIN PIPE FLUSH.
Claims use since Sept. 16, 1936.

Reg. No. 347,556. Registered June 29, 1937. AMERICAN TYPE FOUNDERS SALES CORPORATION, Elizabeth, N. J., a corporation of New Jersey. Republished by registrant.

ATF NON-OFFSET MIX

The words "Non-Offset Mix" are disclaimed apart from the mark as shown.
FOR COMPOUNDS TO BE SPRAYED ON SHEETS AFTER THEY HAVE BEEN PRINTED TO PREVENT OFFSETTING.
Claims use since April 1936.

Reg. No. 353,103. Registered Dec. 28, 1937. JOHN H. BRECK, INC., Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

BRECK'S BABY-LAVO

FOR SHAMPOO PREPARATIONS.
Claims use since Feb. 17, 1936.

Reg. No. 365,326. Registered Mar. 7, 1939. HOME DRUG COMPANY, Chicago, Ill. Republished by Valentine Laboratories, Inc., Chicago, Ill., a corporation of Illinois.

ALKADENE

FOR MEDICINE, AS A STOMACHIC PREPARATION.
Claims use since Apr. 1, 1938.

Reg. No. 384,140. Registered Jan. 7, 1941. WALGREEN CO., Chicago, Ill. Republished by Carrel, Ltd., Chicago, Ill., a corporation of Illinois.

AMORAY

FOR COSMETIC PREPARATIONS—NAMELY, BATH CRYSTALS, DUSTING POWDER, TALCUM POWDER, COLOGNE.
Claims use since June 1940.

Reg. No. 385,237. Registered Feb. 18, 1941. TINIT MANUFACTURING CO., Denver, Colo., a corporation of Colorado. Republished by registrant.

TINIT

FOR SOLDERING FLUX.
Claims use since Apr. 1, 1930.

Reg. No. 399,407. Registered Jan. 5, 1943. H. R. NAPP LIMITED, London, England, a limited liability company of Great Britain. Republished by registrant.

ABECEDIN

FOR MEDICINAL TONIC PREPARATIONS CONTAINING VITAMINS.
Claims use since Feb. 15, 1939.

Reg. No. 399,939. Registered Feb. 9, 1943. VALENTINE LABORATORIES, INC., Chicago, Ill. Republished by Olafsen Vitamins, Inc., Chicago, Ill., a corporation of Illinois.

AY-TOL

FOR VITAMIN PREPARATION FOR INTERNAL USE FOR THE TREATMENT OF VITAMIN DEFICIENCY.
Claims use since June 18, 1941.

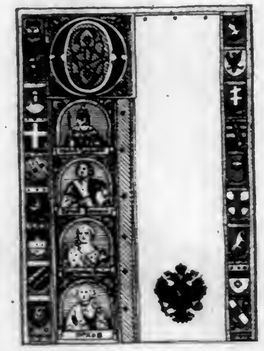
Reg. No. 411,392. Registered Jan. 16, 1945. OLAFSEN VITAMINS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

AYTINAL

FOR VITAMIN PREPARATION FOR INTERNAL USE FOR TREATMENT OF VITAMIN DEFICIENCY.
Claims use since June 4, 1944.

Reg. No. 421,354. Registered May 28, 1946. SAVERITE ENGINEERING COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

SAVERITE



FOR CHEMICAL PREPARATION FOR THE PREVENTION OF RUST, AND USED AS A COATING IN BOILERS AND TANKS.
Claims use since April 1939.

Reg. No. 430,100. Registered June 10, 1947. ENOZ CHEMICAL COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

ANT FINIS

The word "Ant" is disclaimed apart from the mark as shown.
FOR INSECTICIDES.
Claims use since June 19, 1934.

Reg. No. 433,170. Registered Sept. 30, 1947. MAURICE HANDMAN, doing business as Maurella Products Co., New York, N. Y., assignor to Maurella Products Company, Inc. Republished by Maurice Handman, doing business as Maurella Products Company, New York, N. Y.

The lining denotes the colors, blue, green, and red.
FOR ASTRINGENTS, ASTRINGENT CERATES, BLEACH CREAMS, BEAUTY CREAMS, COLD CREAMS, CLEANSING CREAMS, OBESITY CREAMS, REFRESHING CREAMS, OBESITY ASTRINGENTS, DRY ROUGES, FACE BLEACHES, LIQUID ROUGES, FACE PACKS, SKIN WHITENER IN LIQUID AND SOLID FORMS, EYEBROW AND EYELASH GROWER, EYE DROPS, EYEBROW PENCILS, HAND LOTIONS, SKIN LOTIONS, AFTER-SHAVING LOTIONS, POMADES, FACE POWDERS, TALCUM POWDERS, BODY POWDER, CHEMICAL PREPARATIONS SUITABLE FOR THE DARKENING OF EYELASHES AND EYEBROWS, PACKAGES CONTAINING SACHET POWDER, HAIR SALVES, HAIR ELIXIRS, DANDRUFF PREPARATIONS, HAIR TONICS, HAIR OILS, SHAMPOOS, HAIR DYES, BATH SALTS, SMELLING SALTS, LIPSTICKS, INCENSE, TOOTH PASTES, MOUTH WASHES, DENTIFRICES, DEPILATORIES, TOOTH POWDER, NAIL POWDER, NAIL CREAMS, NAIL POLISHES, NAIL BLEACHES, WITCH HAZEL, PEROXIDE, PETROLEUM JELLIES, WITCH HAZEL SALVES, CAMPHOR CREAMS, FOOT POWDERS, CORN SALVES, DEODORANTS, BAY RUM, PERFUMES, TOILET WATERS, EAU DE COLOGNES, AND FACE LOTIONS.
Claims use since May 1, 1924.

Reg. No. 433,593. Registered Oct. 21, 1947. WEST DISINFECTING COMPANY, Long Island City, N. Y., a corporation of New York. Republished by registrant.

SANITOR

FOR DISINFECTANTS.
Claims use since 1912.

CLASS 7

CORDAGE

Reg. No. 301,640. Registered Mar. 7, 1933. FREYDBERG BROTHERS, INCORPORATED, New York, N. Y. Republished by Freydberg Bros.-Strauss, Inc., New York, N. Y., a corporation of New York.

EXCELLO

FOR RIBBON COMPOSED OF CELLULOSE COMPOSITION MATERIAL FOR TYING PACKAGES AND OTHER USES.
Claims use since Oct. 20, 1932.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 41,599. Registered Dec. 8, 1903. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Republished by The Ohio Match Company, Wadsworth, Ohio, a corporation of Delaware.

HOUSEHOLD

FOR FRICTION MATCHES.
Claims use since Jan. 8, 1900.

Reg. No. 209,806. Registered Mar. 2, 1926. FRANK H. FROMM, Philadelphia, Pa. Republished by registrant, present address New York, N. Y.

BLUE FEATHER

FOR MATCHES.
Claims use since Oct. 1, 1925.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 313,863. Registered June 12, 1934. AMERICAN TYPE FOUNDERS COMPANY, Jersey City, N. J. Republished by American Type Founders, Incorporated, Jersey City, N. J., a corporation of New Jersey.

AMTYCO

FOR PRINTING INKS.
Claims use since May 1, 1929.

Reg. No. 327,104. Registered Aug. 13, 1935. AMERICAN TYPE FOUNDERS SALES CORPORATION, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

The words "Sold by Branches Everywhere" are disclaimed apart from the mark as shown.
FOR PRINTING INKS.
Claims use since Jan. 2, 1934.

CLASS 12

CONSTRUCTION MATERIALS

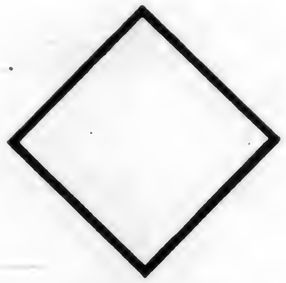
Reg. No. 57,415. Registered Nov. 13, 1906. THE PROTECTED METAL COMPANY, Canton, Mass. Republished by H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania.

DUCKBACK

FOR METAL SHEETS COVERED WITH ASBESTOS AND USED FOR ROOFING, SIDING AND CEILINGS.
Claims use since May 1, 1906.

Reg. No. 57,472. Registered Nov. 13, 1906. THE PROTECTED METAL COMPANY, Canton, Mass. Republished by H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania.

APM



FOR METAL SHEETS COVERED WITH ASBESTOS AND USED FOR ROOFING, SIDING AND CEILINGS.
Claims use since May 1, 1906.

Reg. No. 57,535. Registered Nov. 13, 1906. J. B. KING & CO., New York, N. Y. Republished by The United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

DIAMOND

FOR PLASTER OF PARIS.
Claims use since November 1876.

Reg. No. 80,662. Registered Jan. 17, 1911. J. B. KING & Co., New York, N. Y. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

FOR PLASTER OF PARIS AND CALCINED PLASTER.
Claims use since on or about November 1876.

Reg. No. 97,258. Registered May 26, 1914. MARBLEHEAD LIME COMPANY, Chicago, Ill. Republished by Marblehead Lime Company, Chicago, Ill., a corporation of Delaware.

FOR LIME.
Claims use since Aug. 25, 1911.

Reg. No. 113,381. Registered Oct. 17, 1916. HAWKEYE PORTLAND CEMENT COMPANY, Des Moines, Iowa. Republished by Marquette Cement Manufacturing Company, Chicago, Ill., a corporation of Illinois.

FOR PORTLAND CEMENT.
Claims use since 1907.

Reg. No. 114,837. Registered Jan. 2, 1917. SOUTHERN CEMENT COMPANY, Birmingham, Ala., a corporation of Alabama. Republished by registrant.

MAGNOLIA

FOR HYDRAULIC CEMENT.
Claims use since Mar. 20, 1901.

Reg. No. 153,293. Registered Mar. 14, 1922. H. H. Robertson Company, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR PROTECTED METAL SHEETS FOR BUILDING CONSTRUCTIONS, FLASHINGS, GUTTERS, SKYLIGHTS, SHINGLES, PREFORMED GYPSUM SLABS FOR ROOFS AND FLOORS, ROLLED ROOFING, PAVING JOINTS, PLASTIC CEMENTS, AND ASPHALTS.
Claims use since July 17, 1919.

Reg. No. 196,139. Registered Mar. 10, 1925. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ORIENTAL

FOR STUCCO AND WALL PLASTER.
Claims use since January 1912.

Reg. No. 221,319. Registered Nov. 30, 1926. MCHENRY-MILLHOUSE MFG. CO., South Bend, Ind. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

SUPER-TITE

FOR ASPHALT ROOFING SHINGLES.
Claims use since on or about Mar. 1, 1924.

Reg. No. 238,812. Registered Feb. 14, 1928. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

Sheet-Lite

FOR SKYLIGHTS AND WINDOWS IN ROOF AND SIDING MATERIAL.
Claims use since Aug. 16, 1927.

Reg. No. 267,938. Registered Mar. 4, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SILICO

FOR PLASTER.
Claims use since 1897.

Reg. No. 277,606. Registered Nov. 18, 1930. MARBLEHEAD LIME COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

CROWN

FOR WHITE LIME AND HYDRATED LIME.
Claims use since on or about Jan. 1, 1895.

Reg. No. 312,626. Registered May 1, 1934. VALENTINE & COMPANY, New York, N. Y. Republished by Valentine & Company, Inc., New York, N. Y., a corporation of Delaware.

VALENITE

FOR VARNISH ENAMELS, CLEAR VARNISHES, PAINT PRIMERS, PAINT SURFACERS, PAINT PRIMER-SURFACERS, PAINT PRIMER-GROUNDS, AND PUTTIES.
Claims use since Sept. 19, 1918.

Reg. No. 344,256. Registered Mar. 16, 1937. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PROTOKOTE

FOR ASPHALT ROOF CEMENT AND ASPHALT ROOF COATINGS.
Claims use since August 1935.

Reg. No. 347,781. Registered July 6, 1937. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

Galbestos

FOR PROTECTED METAL ARTICLES USED FOR BUILDING PURPOSES AND PARTICULARLY FOR ROOFING SHEETS, SIDING SHEETS, RIDGE CAPS, ALL FORMS OF BUILDING TRIM, DOORS, ROLLED STRUCTURAL METAL SECTIONS, AND LAMINATED METAL SHEETS.
Claims use since Sept. 6, 1935.

Reg. No. 365,535. Registered Mar. 14, 1939. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

Hubbellite

FOR BUILDING CEMENT.
Claims use since on or about Oct. 13, 1936.

Reg. No. 395,248. Registered May 19, 1942. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

Q

FOR CELLULAR STEEL BEAM UNITS FOR BUILDING PURPOSES.
Claims use since on or about March 1941.

Reg. No. 405,119. Registered Jan. 11, 1944. H. H. ROBERTSON COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

HUBBELLITE

FOR BUILDING CEMENT.
Claims use since on or about Feb. 23, 1942.

Reg. No. 408,772. Registered Aug. 29, 1944. BUFFALO FOUNDRY & MACHINE CO., Buffalo, N. Y. Republished by Blau-Knox Company, Buffalo, N. Y., a corporation of New Jersey.

BUFLOKAST

FOR CASTINGS—NAMELY, GRAY IRON AND ALLOYED IRON CASTINGS.
Claims use since about Mar. 1, 1913.

Reg. No. 412,810. Registered Mar. 27, 1945. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

TOOLFACE

FOR WELDING RODS AND METAL ALLOYS HAVING A FERROUS BASE.
Claims use since May 1944.

Reg. No. 413,237. Registered Apr. 17, 1945. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

FARMFACE

FOR METALLIC WELDING MATERIALS IN THE FORM OF BARE RODS OR COATED ELECTRODES.
Claims use since June 13, 1943.

Reg. No. 414,309. Registered June 5, 1945. AMERICAN BRAKE SHOE COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant.

MO-MANG

FOR BARE AND COATED METALLIC WELDING RODS.
Claims use since June 12, 1940.

Reg. No. 417,629. Registered Nov. 6, 1945. SUMET CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant.

SUMET

FOR BEARING METALS, CORED AND SOLID BARS, GEAR BLANKS, CASTINGS AND DRAWN RODS, ALL MADE OF BRONZE.
Claims use since about Oct. 19, 1923.

Reg. No. 418,356. Registered Dec. 18, 1945. SUMET CORPORATION, Buffalo, N. Y. a corporation of New York. Republished by registrant.

The word "Products" is disclaimed apart from the mark as shown.
FOR BEARING METALS, CORED AND SOLID BARS, GEAR BLANKS, CASTINGS AND DRAWN RODS; ALL MADE OF BRONZE.
Claims use since about Oct. 19, 1923.

CLASS 15

OILS AND GREASES

Reg. No. 72,380. Registered Jan. 19, 1909. NEW YORK LUBRICATING OIL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

MONOGRAM

FOR LUBRICATING GREASES AND LUBRICATING OILS FOR MACHINERY, ENGINES, MOTORS, AND DYNAMOS.
Claims use since June 22, 1901.

Reg. No. 371,187. Registered Sept. 19, 1939. OIL WORKERS INTERNATIONAL UNION, Fort Worth, Tex., a voluntary union. Republished by registrant.

FOR GASOLINE, MOTOR OILS, LUBRICATING GREASES, KEROSENE, FUEL OIL, WAXES, PARAFFIN.
Claims use since July 1922.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 77,737. Registered May 3, 1910. H. B. FRED. KUHLS, Brooklyn, N. Y. Republished by Hilma J. Kuhls, executrix of the estate of H. B. Fred. Kuhls, Brooklyn, N. Y.

ELASTIC SEAM-COMPOSITION

FOR PLASTIC COMPOSITION FOR FILLING SEAMS IN WOODWORK.
Claims use since about January 1890.

Reg. No. 97,293. Registered May 26, 1914. VALENTINE & COMPANY, New York, N. Y. Republished by Valentine & Company, Inc., New York, N. Y., a corporation of Delaware.

VALSPAR

FOR ENAMELS, READY-MIXED PAINTS, VARNISHES AND VARNISH REMOVERS.
Claims use since May 7, 1907.

Reg. No. 104,251 Registered May 11, 1915. DETROIT GRAPHITE CO., Detroit, Mich. Republished by Detroit Graphite Company, Detroit, Mich., and New York, N. Y., a corporation of Delaware.

IRON-GARD

FOR MIXED PAINTS.
Claims use since on or about Dec. 15, 1914.
